We as a people can keep out of war in Europe if we have the resolute will to do so. Our will can be weakened by propaganda. It can be insidiously undermined by sitting in the game of European power politics.

We hear much of laws that will preserve our neutrality. But the question is not legalisms; it is our will to stay out. Staying out is a matter of tactics and strategy almost as difficult as the strategy and tactics of war. And, if there is not the adamant will to stay out, no amount of law can keep us out. The first thing required is a vigorous, definite statement from all who have responsibility, both publicly and privately, that we are not going to war with anybody in Europe unless they attack the Western Hemisphere. The second thing is not to sit in this game of power politics.

These are the American policies that will make sure that we do not send our youth to Europe for war.

South Dakota

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, July 29 (legislative day of Tuesday, July 25), 1939

ADDRESS BY IVAN A. BICKELHAUPT

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered on June 14, before the Gyro Club of the City of Washington, by a former South Dakotan by the name of Ivan A. Bickelhaupt.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This year South Dakota celebrates its golden jubilee of statehood. In the galaxy of States it is one of the youngest, but in progress it ranks with the foremost. Although modest in size among Western States—250 miles wide by 450 miles long—it would, if superimposed, completely blanket the six New England States, with enough left over to cover all of the habitable land in the State of Texas.

Few places on this earth have the diversity of scenery that generous Nature has allotted to South Dakota. In the midst of fertile farming sections of the eastern half of the State are wooded lakes, surrounded by gentle elevations which give way to extensive sweeps of prairie, broken here and there by clusters of verdant hills. Beyond the Missouri River is a land of ranches whose bounds are beyond the reach of the eye, with cairns topping the buttes to guide the ranchers on their rounds. Overlooking all are the Black Hills, their lofty peaks interrupting the rays of the rising sun to cast shadows over the plains of Wyoming and in the evening laying a gentle blanket of shade over the range country of South Dakota.

South Dakota is not an old State, but energy and enterprise has brought it in one short generation to leadership. The territory which was to become South Dakota has a history dating back over a century before its admittance to the Union. In 1743 Francois and Louis Joseph Verendyre reached the Missouri River at a point where the Bad River enters. On a high bluff above the river they buried a lead plate claiming the territory for France. That plate can now be viewed in our State Historical Museum.

Shortly after the Revolutionary War fur traders established trading posts along the Missouri River and for a century this river was the main artery of travel into the untamed expanses of the region. Broad-beamed mackinaws and sharp-prowed bateaux labored up its restless course and returned with fabulous fortunes in gold, silver, and furs.

In 1803 President Jefferson bought the Louisiana Territory from Napoleon and South Dakota became a part of the United States. Lewis and Clark, on their mission to explore this vast country included in this purchase, passed through South Dakota. Sakakawea, the "bird woman" who guided them on their exploration, and to whom they attributed much of their success, lies buried on the banks of the Missouri in South Dakota. In 1825 Gen. Henry Atkinson and his troops were established at Fort Pierre (now the capital of the State). Permanent settlement was first established in 1857, preceding by 15 years the first railroad to reach the State's borders. With the coming of the railroads the eastern part of the State settled rapidly and the rich farm lands there drew hardy pioneers from every part of the world. At the same time discovery of gold in the Black Hills precipitated a gold rush that became historic. While the gold fever still seethed cattlemen discovered the lush grazing lands that surround the mountains and range cattle from the South took possession of the grass lands criss-crossed by the paths of millions of buffaloes.

On the strength of rapidly increasing population South Dakota petitioned Congress for statehood in the early 80's. Refused then and again in 1885, these hardy pioneers persisted, and in 1889 President Benjamin Harrison signed the act making South Dakota a State.

Today South Dakota annually produces $20,000,000 worth of gold, silver, and other minerals. From its 2,000,000 head of beef and dairy cattle choice meat and dairy products are produced. It markets 2,000,000 head of fat hogs annually; 10,000,000 pounds of wool come from its 1,300,000 sheep, besides the Dakota lamb—well known to epicures the world over. Its 30,000,000 bushels of wheat are reserved to make the finest flour. Corn, oats, barley, alfalfa, sweet clover, flax, and other crops give it a high rank among great agricultural States of the Nation. Under its sun-kissed plains a billion tons of lignite coal lie awaiting development by industry.

South Dakota is a land of sportsmen and for sportsmen. One person out of every 10 South Dakotans, including residents of all ages and both sexes, take out hunting licenses each fall. Thousands come from other States. The annual bag of pheasants is 1,500,000. It is believed that the pheasants alone eat more grain each year than Texas raises. In a recent hunting season 800 buck deer were shot. South Dakota trout fishing is famous (since President Coolidge's visit).

Many personalities have passed across the pages of South Dakota history. The names of Wild Bill Hickok, Calamity Jane, Deadwood Dick, General Custer, and others are well known. Rushmore Memorial, in the Black Hills, is the greatest piece of sculpture ever undertaken by man. The busts of Washington, Jefferson, Lincoln, and Theodore Roosevelt are proportionate to men 450 feet high. (Parenthetically I might say that if it were not for our delightfully cool climate the perspiration from the brows of these great figures would, if piped to Texas, send the Rio Grande roaring out of its banks.)

Visit South Dakota. Its history is a pageant of great adventure.

Black Hawk War Anniversary

REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. BOLLES. Mr. Speaker, 107 years ago, on August 2, there occurred an event which had wide historical and economic significance to this entire Naticn. On that day in 1832 came the defeat of Black Hawk, the last Indian tribal head, militant and menacing, east of the Mississippi River. But there was something else in this Indian war which has a wider, more personal signficance. It lies in the personnel of those who participated.

From that war came two Presidents of the United States—Abraham Lincoln and Zachary Taylor. One was a captain, then a private of militia who had three times enlisted. The other a colonel in the Regular Army. And then a third, whose name is deeply carved upon the tablets of historical chronicle, Jefferson Davis, a Regular Army officer, who had at Fort Crawford, in Wisconsin, married the daughter of Zachary Taylor.

Strange are the mysteries of fate. Among those who participated in this war were others whose names are inscribed in deathless memory in history. There was Joseph E. Johnston, great Confederate commander, who fought to the finish in the War between the States. There was Albert Sydney Johnson, who died at Shiloh. There was Robert Anderson, who commanded at Fort Sumter and surrendered. There was Col. William Hamilton, son of Alexander Hamilton, who swore Lincoln into service in his third enlistment. There was Gen. Winfield S. Scott, in general command, first commander of United States forces in the Civil War. E. D. Baker, picturesque Senator from Oregon, who died at Balls Bluff, was a part of this flower and chivalry of the Nation in this campaign against Black Hawk.

Mr. Speaker, there are a score of other names who in their after life, following the Black Hawk war, helped to write glorious pages of history.

When the Black Hawk war came to reality all the country involved was chiefly wilderness. Only a small area in the lead mines around Galena, Ill., or a few isolated settlements existed. The rest was a forest, silent except for the songs nature might sing and a maze of trails known only to the Indians.

The ruling Indian of these trails was Black Hawk, a Sac Indian. He was not the chief of a confederation or the head

of organized tribes. He was more potential for trouble than active in warfare. He had always hated and suspected the American white man. He was a British agent. He wore British medals. He received British pay long after the treaty of 1814. His spies kept the last lingering British outpost commanders supplied with information of Yankee movements.

Black Hawk had fought with Tecumseh. He had taken many white scalps. He met intrigue with intrigue and craft with craft. He finally settled in the Sac and Fox lands at the mouth of the Rock River. On this stream he depended for food. His people went up the river to make gardens around Lake Koshkonong in Wisconsin, where the soil was easy to hoe and the larder could be filled from lake with fish or wild fowl.

Black Hawk was the symbol of Indian power. He was the dam, the barricade across the highway of civilization—the unstoppable western movement of white people, the inevitable pioneer who dared and lost and dared again. For 20 years Black Hawk held in check the peaceful settlement of that entrancing country between the Mississippi River and the Great Lakes on the east.

There had to come a time when the question of domination should be settled forever. The United States Government prepared a place of pilgrimage for the Sacs west of the Great River. Keokuk, one of the subchiefs, drunk on United States Government whisky, sold his tribe across that river. Black Hawk, angry, refused to agree. White men destroyed his gardens at Rock Island. They pettily persecuted the Indian people.

Black Hawk did not go on the warpath. He started to move from Rock Island to some other place, probably Koshkonong. But, whatever was in his path, he slew.

There has always been a lure to southern Wisconsin. It beckoned to Indians; it invited the white adventurer. It was the garden of the savage red man, the fishing ground and supply station for his sustenance. Long before the feet of white man trod the trailless woods or moved across the flower-filled prairies, Indians paddled canoes up and down the rivers and creeks, along lake shores, planted their beans and corn, gathered the honey from the wild bees' storehouse, and lived in a barbaric paradise. For centuries they had buried their dead in strangely architectured mounds, many still in existence and now annually visited by thousands of tourists—and generation had succeeded generation.

From the day, now more than 300 years ago, when Nicollet, in the colorful panoply of the Court of France, landed at Green Bay to the time of the treaty with Great Britain which gave Wisconsin as a part of the Northwest Territory, there had filtered into the East some of the stories of these glories which God and nature had given to this land west of Lake Michigan.

Of course, the Indian did not want to give it up. Of course, he did not want to leave his corn and bean patches, his hunting and fishing preserves, and be pushed out into the prairies of Iowa, unfamiliar lands, to pine and die of homesickness.

So Black Hawk started north. He could no longer remain at the mouth of Rock River. The Illinois River was gradually becoming a forbidden thoroughfare. He sharpened his tomahawk, got new bullets for his rifle, furnished by the British agents, honed his scalping knife, and began the trek.

Black Hawk knew there was no turning back. The land in southern Wisconsin, its fish and deer, its flowers, its garden spots and village sites, its glories of woodland trails and prairie beauty would either be his or the Indian would be conquered, a subject race, forever disappearing, a vanished race into the obscurity of yesterday. His indignities from white people who had lied and stolen from him had reached the climax of murderous hate and a homicidal praecox.

On the other hand, settlers with rifles, axes, cows, horses, oxen, plows, bibles, few articles of furniture, hungry for land, looking to the sunsets out of the sunrises, were waiting for this exaggerated barricade of threat to be removed.

Black Hawk's march north was the trail of tragedy. He was unwelcomed by Winnebago Indians who were devoid of principle and ready to sell either way. They could see the hopelessness of the Black Hawk revolt. They saw in it the last act of the Indian's tragic drama. Whatever refuge Black Hawk sought there was no such refuge. It was as inevitable for defeat and destruction of these fugitive Indians as is told in the story of Waterloo for Napoleon written by Victor Hugo.

For these Indians were fugitives, rather than a war party. None knew it better than Black Hawk when he reached Koshkonong. His only hope then was to either find asylum with the Winnebagos or get west of the Mississippi. Between him and the Great River was Fort Crawford, on the Mississippi, at the mouth of the Wisconsin River. From there came Jefferson Davis and Zachary Taylor, names to conjure with. Such a reader of the future could have looked at the awkward 6-plus-footer from the Sangamon River valley down in "Illinoy" and known that in a nation's crisis he was to be President, to meet extreme national danger, and save the Union, in the end would rest in the Valhalla of the gods, forever the greatest of America's national heroes—Abraham Lincoln.

Coming up out of Illinois along Rock River, one may follow from Dixon to Fort Atkinson the path that Lincoln trod. You may see the heroic statue of Black Hawk, by Lorado Taft, face turned down the river, forever looking, forever hoping that out of the sunshine or mists there will come the thousand canoes of his dreams, manned at paddles by his warrior Indian people, to reclaim the land he lost—the Land of Black Hawk. Lost of him, yes, but regained by thousands of happy, prosperous people, city dwellers and farm dwellers, who may have been—long have been—inarticulate to tell the story of scenic loveliness of this land.

Even now, in a night when a fog settles on the river, it is told that one may hear the rhythmic dip of paddle, the guttural command from the phantom band of red warriors as they make their slow and steady way, only to vanish when dawn comes into the inevitable pages of history where finis has been written, and all the chanting requiems have been sung over the bones of disaster.

No sooner had Black Hawk's band of Indians been destroyed and the remnant placed on reservations than the land named after him became a populous region. In 2 years 300,000 people had entered southern Wisconsin. For a hundred years they have lived here and made it one of the most prolific agricultural sections of the world. When wheat failed, when the destroying bugs and flies made a crop unprofitable, these farmers of the South went into dairying. They began in a small way and gradually grew until their own State became first of all of the dairying States of the Union.

The Indian long ago has vanished. It is hard to find one in all this area. He belongs to history—to the storied past. He played his part and lost. His losing built a new empire—the empire which now is made up of the States of Illinois and Wisconsin.

Lending and Spending Legislation

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

LETTER FROM THE NATIONAL GRANGE

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the National Grange:

THE NATIONAL GRANGE,
Washington, D. C., July 28, 1939.

We desire to register an earnest protest against the enactment of the pending bill for the construction and financing of self-liquidating projects, H. R. 7120 and S. 2759. After a careful reading of

this measure we are thoroughly persuaded that it would be contrary to the best interests of the country to pass it.

It must simply be regarded as a camouflage to hide the mounting figures of the public debt, and it is intended to circumvent and violate the provisions of an act of Congress, passed at the time of the World War, fixing the limit of national indebtedness at $45,000,000,000. According to official estimates that limit will be reached before the end of the present fiscal year.

It cannot be successfully denied that the repeated efforts that have been made to "prime the pump" by Government lending and spending on an unprecedented scale have been a colossal failure. While each fresh shot in the arm was followed by temporary improvement, after the effects had worn off our basic condition was rendered more desperate than before.

The truth is that in pursuing this unsound and misguided policy the people of the United States are progessively being reduced to one of the most hopeless forms of slavery, the slavery that goes with debt. Even at the low-average rate of 2.57 percent the interest on the national debt amounts to the staggering sum of a billion dollars a year. Roughly, 20 cents out of every dollar collected by the Government in taxes goes in payment of interest.

The pending bill would make permanent the present lending and spending policy of the Government, and all the losses involved would automatically be taken out of the Federal Treasury.

There can be no doubt that the vast lump-sum appropriations that have been voted in recent years have done more to destroy the independence and self-respect of Congress than all other factors combined. This system of making appropriations has made a grab bag of the Federal Treasury and has had a demoralizing effect on the people. Surely the time has come when Congress should resume its constitutional prerogatives and put an end to this orgy of deficits, waste, and unbridled extravagance.

Mentioning just one of the self-liquidating projects contained in the bill now being considered, the Bureau of Public Roads, in a voluminous report published some months ago, clearly indicated that the dream of a system of superhighways supported by tolls was not feasible on the financial side, because the revenues to be derived from tolls would not pay for the cost of constructing and maintaining such roads. There are scarcely any toll roads left in the country, and there is a prejudice against toll bridges. It may therefore be taken for granted that if the proposed roads should be built, in a few short years the attempt to recover the cost of construction through the collection of tolls would be abandoned, saddling a heavy financial responsibility upon the Treasury.

Another item contained in the bill authorizes the sum of $500,000,000 for rural-electrification projects. The Grange has given its hearty support to the plan launched in this connection several years ago. We consider it one of the soundest steps ever taken by the Government to improve conditions in the farming sections. However, since the basic act for rural electrification, passed in 1936, authorizes the appropriation of $40,000,000 annually over a 10-year span for loans on such projects, there would seem to be no necessity for this provision in the measure now being debated in Congress. Several other items contained in the bill are open to many objections.

One of the fundamental reasons why this bill should not be enacted is that it would discourage private initiative and would take us farther along the road toward making America a collectivist state. If President Roosevelt should issue a clear, definite, and positive statement to the effect that it was our fixed purpose to continue our traditional American system of private enterprise, and if such legislation as this were thrown into the discard, it would do more than anything else could to bring about such an upturn in every branch of American industry and business as would give cause for universal rejoicing.

Yours very sincerely,

THE NATIONAL GRANGE,
FRED BRENCKMAN,
Washington Representative.

Judge Wilfred Bradshaw's Tribute to the Mother of Lincoln

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

SPEECH BY JUDGE WILFRED BRADSHAW, OF INDIANAPOLIS, IND.

Mr. LUDLOW. Mr. Speaker, on July 9, 1939, standing at the grave of Nancy Hanks Lincoln in Indiana, Judge Wilfred Bradshaw, a distinguished jurist and orator of Indianapolis, paid a beautiful tribute to the mother of Abraham Lincoln. It was an occasion of extraordinary interest, sponsored by the Boonville, Ind., Press Club. The subject of Judge Bradshaw's address was, "Nancy Hanks—Immortal Mother of Abraham Lincoln." He spoke as follows:

NANCY HANKS—IMMORTAL MOTHER OF ABRAHAM LINCOLN

Mr. President, ladies and gentlemen, members, and friends of the Booneville Press Club. February 12, 1809. In America, democracy was in control of Congress, and the popular idol, Thomas Jefferson, was President. His successor had been elected and James Madison was about to be inaugurated. For 5 years Alexander Hamilton had been in his grave. France and England were at war. From the bench of the Supreme Court of the United States, Chief Justice John Marshall was writing his great opinions that made constitutional history. Daniel Webster, then 27 years of age, had not yet entered Congress; Henry Clay was already in the Senate, and started on his unprecedented and unequaled career; John C. Calhoun, also 27, was still in the Legislature in South Carolina. Robert E. Lee was a child of 2 years, and General Grant had not yet been born.

While in America the foundations of the Union trembled and democracy was struggling for a foothold, and while war made brilliant with uniform and pomp every capital of Europe, far from the turmoil, across the mountains in a log cabin in the heart of Kentucky, Abraham Lincoln was born.

Other speakers on the platform today will pay tribute to the character and the life of Lincoln, the man. I wish to confine my remarks to the woman who gave him life, Nancy Hanks Lincoln, his mother.

It was the pioneer mother who suffered most in the conquest of the wilderness. Transient and inadequate homes, a man's place in the field, lack of medical care, and a constant fear robbed her of the comforts and security enjoyed by women today. The mother of President Lincoln was one of these self-sacrificing pioneer women who quietly made their contribution to civilization and passed on. Her short and obscure life may not have impressed the people of her day, but the offering she made to the Nation gave it a new birth. Today the whole world brings its tokens of appreciation to the cabin door of Nancy Hanks Lincoln.

The picture of Nancy Hanks is as uncertain and confused as that of Thomas Lincoln is fixed and clear. Dim as the dream of a shifting mirage, her face and figure waver through the mists of time and rumor. Those who knew her disagree even as to the color of her eyes, the shade of her hair, her physical build, and height. No signature of Nancy Hanks has yet been discovered. Whenever she had to sign a legal document she made her mark. At the very best, she was simply an attractive young pioneer woman, having the least and poorest opportunities for any kind of education such as the primitive schools of that time afforded.

But the qualities of her mind and character were impressed more distinctly than was her physical appearance. All remember that she was uncommonly intelligent, had remarkably keen perception, and extraordinary strength of mind. All testify that she was inordinately kind and affectionate. Between Abraham Lincoln as a boy and this backwoods mother there was a powerful bond of sympathy. They understood each other without words; perhaps she felt in him her own fierce hunger for learning, for a larger, richer world.

"Abe's mind and mine—what little I have—seems to run together," she is reported to have once said.

She has become one of the world's greatest mothers.

And that is why on this day descendants of neighbors of the Lincoln family, who lived in the crude log cabin here a century and a quarter ago, gather today on Lincoln City's highest hilltop to honor the memory of the mother who Abraham Lincoln as a boy of 9 helped to bury in Hoosier soil. The whole Nation honors his memory, but southern Indiana pays tribute at the grave of Nancy Hanks Lincoln, who died 2 years after coming with her husband and two children from Kentucky to make a new home in the wilderness. And so today from the countryside and neighboring towns come the faithful to place wreaths on her grave, just across the valley from the log cabin which was their home.

We stand on sacred soil today, where rest the precious remains of this great mother. It was here that Lincoln learned to read. It was here that in the crucible of hard and stern fate the character was formed that proved sufficient unto the task of striking the shackles from the slave ground by centuries of unrequited toil, making America forever a union of indestructible States. It was here that the heavens rained sorrow on him when he helped build his mother's rude coffin, and helped carry her up the hill to the little graveyard, and saw her laid away.

"Here in a quiet beauty spot,
Where Lincoln's mother sleeps,
The wild birds sing a vesper song,
The sky a long watch keeps.

"She was his guiding star through life,
The beacon light along his way,
That led him in his darkest hour,
When sorrow filled his day.

"And when his secret soul rebelled,
At fame so dearly bought,
In humbleness and faith he breathed
The prayers his mother taught."

It was in 1816 that the Lincolns decided to leave forever Kentucky's contentious soil, because they had become discouraged over the uncertainty of land titles. They made off to find another home beyond the Ohio River. If consulted at all, Nancy Lincoln

readily agreed to go. She appears to have accepted her lowly state in life as fixed and irrevocable. She was very humble, unprotesting, thankful for a friendly word or act. They drifted across and down the great river to a landing on the Indiana bank, like a piece of human flotsam thrown forward by the surging tide of immigration, the black and prodigious depths of the mighty woods before them. Albert J. Beveridge, in his Life of Lincoln, has described southern Indiana as the Lincolns saw it in these words:

"When, on the barren peak of some rocky hill you catch a distant view, it generally is nothing but an undulating surface of impenetrable forests. Vast, forbidding, tremendous, this mighty forest stretched northward from the Ohio, its trees like giant sentinels, guarding the wilderness."

There was hardly more than one adult white man to every 4 square miles. Into this abode of gloom and solitude the Lincolns made their slow and toilsome way in midautumn of that year.

Abraham Lincoln lived here until 21 years of age, when he moved to Illinois; but when he moved on he left with us his mother, in whose memory this great shrine has been built, and in whose honor we meet here today.

It is hard for us to accurately judge the influence of Nancy Hanks upon Abraham Lincoln. He was so young when he lost her. We do know that many years later, when he had achieved the ultimate in success, he said:

"All that I am or ever hope to be, I owe to my angel mother."

Someone has said:

"Give me a child until he is 7 years of age and the world can have him."

Abraham Lincoln was 9 years old when his mother died. He had her during the formative years of his life, when his childhood mind was plastic, like clay in the hands of the potter, which can be molded and made into a thing of beauty. She had given him everything in her power, a strong physique, a great mind, and a noble character. Hers was a great life; it needs no false dramatization or embellishment to enhance its inspiration.

"They say that man is mighty,
He governs land and sea,
He wields a mighty sceptre
O'er lesser powers that be;

But a mightier power and stronger
Man from his throne has hurled,
For the hand that rocks the cradle
Is the hand that rules the world."

As judge of the juvenile court of Marion County, in which is located the capital city of our State, my chief concern and interest today is in the welfare of young people, particularly the great problem of delinquency among children. If every boy in Indiana had a mother like Nancy Hanks Lincoln crime among young people would be materially reduced, and our boys and girls would grow into men and women with strength of character sufficient to enable them to meet the many temptations that come to men in a world seething with confusion and complexity. Poor and humble as the Lincoln home was, yet if every home in Indiana today had in it a Nancy Hanks Lincoln as the mother, fewer of our young men would be leading a life of crime. We all know that the greatest contributing cause of delinquency today is the lack of proper home influence. Yet this awful truth is not fully realized until it is known that 7 out of 10 young men in the Indiana reformatory come from homes broken by death, separation, or divorce.

During the darkest days of the Civil War, President Lincoln met with the Governors of the several States to honor the men who had fallen under the singeing fire at Gettysburg. There the great orators of the day gave eloquent accolades to the men who had sacrificed their lives in that great battle. Lincoln dedicated the cemetery in an address of 266 words, which will remain, as long as the English language endures, one of its greatest examples of purity of diction, of elcquence of expression, and elevation of thought.

"It is for us, the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us."

And so today let us catch the spirit of the Great Emancipator and here rededicate ourselves to the great task remaining before us—that of making more secure in the world today the great principles for which Lincoln stood. We are pioneers but not in the sense that the Lincolns were when they moved to Indiana. We have no more frontiers such as they had. If the early American did not like things as he found them, he could pull stakes and move on, and the majority of them did that. The majority of them never dug in for the lifelong, patient, creative effort to shape their environment to meet their needs. Now the frontier has closed, leaving us no choice but to try to solve our social and economic problems where we are. The virtue we need terribly today is endurance in the face of the absence of material hardships. Our modern lives are threatened by the subtle poison of safety, comfort, security, and hours of leisure, such as no generation before ever dreamed of. We were brought up to believe that the work of conquering a continent was the destiny of America. Now we find that continent conquered, and find ourselves in need of civilizing it, a process which cannot be carried on with spades and axes. What threatens the welfare of our country is within us. The real danger is the triviality of character and mind among our well-fed, well-dressed, educated citizens who do not seriously concern themselves about the great problems confronting our people.

And let us also today reconsecrate and rededicate ourselves to the keeping alive the memory of this great mother. Let us make this a shrine to motherhood. Where else in the world is there such an outstanding monument to the mothers of great men? We pay tribute to Nancy Hanks Lincoln, the pioneer mother, who was eminently successful in her life's mission. Here lies the mother of one of the greatest men America ever produced.

Mr. Roosevelt Admonishes America

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. MUNDT. Mr. Speaker, in spite of the fact that the New Deal's grandiose program of spending our grandchildren's money has collapsed completely as a method of either curing or curbing our 10-year-old depression—three times as long a period of panic and poverty as ever before experienced by this country—we are again faced with the same monotonous and badly disproved proposal to engage in another reckless spending spree.

So repeatedly has the Rooseveltian ruse of flirting with national bankruptcy by profligate political spending been exposed as a fiction and a fraud that this time even its sponsors are trying to camouflage its content by calling it a "lending" program. It is difficult to understand just who the New Deal dreamers intend to fool by disguising the new financial dance with death as a lending program, because for the past 7 years their entire program of careless squandermania has been based on the lending idea because they have borrowed so much money "lent to the Government" that our national deficit now is crowding $45,000,000,000. Such a prolonged Roman holiday with the taxpayers' money may be profitable for the politicians drawing rich dividends for their connections with this spend-yourselves-into-totalitarianism trickery, but to the millions of taxpayers who must pay these fiddlers from the fruits of their own toil it represents one of the most devastating eras in the history of any nation.

"Roosevelt economy"—remember he said he would cut Government expenses 25 percent—has increased taxes and boosted living costs to the point that despite the great pyramiding of unmet expenses resulting in our $45,000,000,000 debt, the money which is raised to meet the portion of this extravagance not permitted to accumulate as unpaid balances is so great that its back-breaking burden is already reducing living standards and denying happiness to a great portion of our populace. Witness the way in which New Deal expenditures are already reaching down into the pockets of the workingman and the farmer to take from him a generous portion of his already far too meager income—and remember, my colleagues and Mr. Speaker, that we have not yet even begun to pay any portion of the huge debt which previous lending programs have tied around our necks like an ugly and relentless millstone.

Figures computed by A. A. Ballantine, former Undersecretary of the Treasury, show just how the man who labors is not "the forgotten man" when the tax collector exacts his pound of flesh for the spending carnival which has brought so much opportunity and comfort to a privileged coterie of political favorites. In the following compilation the New Deal exacts the part of the price labeled "tax" in each of these items of everyday use:

Article	Normal price	Tax included in price
Cotton dress	$7.85	$2.85
Electric-light bill	3.00	.50
Telephone bill	2.50	.41
Cigarettes (2 packages)	.25	.12
5 gallons gasoline	.90	.30
Loaf of bread	.10	.01

When the American workingman and the American farmer finally realize the inevitable and eternal truth that only a little over two-fifths of the money received by Government through taxation comes from income taxes, and that the workers of the land are paying the balance through a wide variety of indirect and largely hidden taxes, he will know the full story of just how completely the New Deal and its spending-lending-borrowing-bankrupting policies are denying him and his children of the opportunities for success and happiness, which have been traditionally American for 150 years prior to the past 7 New Deal years.

Mr. Speaker, under leave granted me, I shall insert at this point an editorial taken from the Sioux Falls Argus Leader, published in Sioux Falls, S. Dak. The comments of Fred Christopherson, the capable editor of this splendid paper, are brief but highly pertinent. I urge you all to read the following editorial carefully before casting your votes on the huge spending programs to be confronting us next week. I am sure that not only the comments of Mr. Christopherson will be helpful to you, but that the statements of a fellow running for President by name of Franklin D. Roosevelt, and of America's premier historian and student of government, James Truslow Adams, will be illuminating. If what Mr. Roosevelt said in 1930, 1932, and 1933 was true and correct, then what President Roosevelt says in 1937, 1938, and 1939 is false and uneconomic. Each of you can decide in your own conscience whether the candidate or the officeholder was enunciating a sound governmental doctrine; none of you can seriously contend that the squire of Hyde Park is right in both instances. Upon your decision as to which preachment of the man who is now President you select to follow may depend the very existence of solvent government and democracy itself. It is my hope that a dispassionate and unprejudiced study of the following editorial will help us all to forget partisanship and to display patriotism in meeting the challenge soon confronting us as we approach the hour of decision in connection with what may well prove to be the "spending straw" to break the camel's back of Uncle Sam's national solvency.

[From the Sioux Falls (S. Dak.) Argus Leader of July 25, 1939]

ON THE BRINK

With the gigantic spend-lend bill now before Congress we give space today to the opinions of two distinguished commentators on the general subject of Government expenditures and credit.

One of these is Franklin D. Roosevelt. The following quotations are from speeches and public statements he issued in 1930, 1932, and 1933:

"We are not getting an adequate return for the money we are spending in Washington, or to put it another way, we are spending altogether too much money for Government services that are neither practical nor necessary. And then, in addition to that, we are attempting too many functions. We need to simplify what the Federal Government is giving to the people.

"I accuse the present (Hoover) administration of being the greatest spending administration in peacetimes in all our history. It is an administration that has piled bureau on bureau, commission on commission, and has failed to anticipate the dire needs and the reduced earning power of the people. Bureaus and bureaucrats, commissions and commissioners have been retained at the expense of the taxpayer. * * *

"If we do not halt this steady process of building commissions and regulatory bodies and special legislation like huge inverted pyramids over every one of the simple constitutional provisions, we shall soon be spending many billions of dollars more. * * *

"The credit of the family depends chiefly upon whether that family is living within its income. And that is equally true of the nation. If the nation is living within its income, its credit is good.

"If, in some crises, it lives beyond its income for a year or two, it can usually borrow temporarily at reasonable rates. But if, like a spendthrift, it throws discretion to the winds and is willing to make no sacrifice at all in spending, if it extends its taxing to the limit of the people's power to pay and continues to pile up deficits, then it is on the road to bankruptcy. * * *

"And on my part I ask you very simply to assign me to the task of reducing the annual operating expenses of your National Government. We must move with a direct and resolute purpose now. The Members of Congress and I are pledged to immediate economy. When a great danger threatens our basic security it is my duty to advise Congress of the way to preserve it. In so doing I must be fair not only to the few but to the many. It is in this spirit that I appeal to you. If the Congress chooses to vest me with this responsibility it will be exercised in a spirit of justice to all, of sympathy to those who are in need, and of maintaining inviolate the basic welfare of the United States. * * *

"Taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production. If those taxes are excessive, they are reflected in idle factories, in tax-sold farms, and in hordes of hungry people, tramping the streets and seeking jobs in vain. * * *

"I know something of taxes. For 3 long years I have been going up and down this country preaching that government—Federal and State and local—costs too much. I shall not stop that preaching. * * *

"And I propose to use this position of high responsibility to discuss * * * the duty of reducing taxes, of increasing the efficiency of government, of cutting out the underbrush around our governmental structure, of getting the most public service for every dollar paid in taxation. That I pledge you, and nothing I have said in the campaign transcends in importance this covenant with the taxpayers of the United States."

The other commentator is James Truslow Adams, author of the Epic of America and other famous books. In a statement issued to the press for publication today, he makes the following observations concerning public spending:

"The defeat of the spending-lending bill, the billions it would add to the public debt, are of vast importance to all Americans. In 6 years, besides reducing the gold value of the dollar by about 40 percent, we have attempted to prime the pump by adding about $25,000,000,000 to our debt without solving the unemployment problem or restoring prosperity.

"To continue longer on this spending-lending road is, I believe, to ruin the Government's credit beyond repair and to bring on us all the intolerable suffering of heavy inflation as happened in France, Germany, and elsewhere.

"I am not an economic royalist nor a politician but a hard-working private citizen of modest means, with only one house and some savings in securities, savings-bank accounts, and life insurance which I am struggling to preserve. From study and long experience, I am convinced that our savings will be almost totally lost if we do not stop this debauch of national spending; that small people like myself financially, men and women who have savings and insurance, will eventually be ruined.

"Members of Congress at this critical moment are under terrific pressure not only from the administration but from groups back home who, while they demand economy in general, also press for money for local projects.

"Congress should hear at once from all those who realize that George Washington was right when he said that for the payment of debt there must be revenue, and that to have revenue there must be taxes, and that while the cherishing of sound public credit is the duty of Congress, public opinion must cooperate in guiding Congress to a sound course.

"We are fast reaching, if we have not already reached, the brink beyond which lies the crash of our private security and hope. If we slide over this brink, we shall have ourselves to blame if public opinion is not sound and if, as Washington advised, we do not cooperate with Congress by letting them know what it is.

"If we do not want printing-press paper money, with all its intolerable consequences, I believe there is no time to lose in asking your Congressmen and Senators to halt spending. I suggest beside telegraphing your Congressmen and Senators you discuss this with your friends and neighbors, precinct committeemen, and county chairman of your own party."

The Argus-Leader can add little to the foregoing discussions except to suggest that they be read and reread and their contents carefully digested. Then clip them out and show them to your friends and neighbors. They present a philosophy that most surely deserves our exacting attention at this critical period in American history.

General Anthony Wayne Memorial Parkway

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

STATEMENT BY HON. CLIFF CLEVENGER, OF OHIO, BEFORE THE HOUSE COMMITTEE ON APPROPRIATIONS

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Committee on Appropriations:

History has said that General Greene was the strong right arm of Gen. George Washington. Granting the truth of this statement, surely then Gen. Anthony Wayne must have been his strong left arm.

Serving from the frozen reaches of the St. Lawrence in the Arnold campaign, with the Pennsylvania line at Germantown and Brandywine, what American has not thrilled at his capture of Stony Point? It was of him and the safety of West Point that Washington first

thought when came the betrayal of Arnold. He redeemed the Colony of Georgia, swept up through the Carolinas, and helped in the final consummation at Yorktown; was sent to the House of Representatives from the new State of Georgia, in which body his right to sit was questioned, he being a Pennsylvanian.

After the defeat of General Harmar in 1790 at the site of the present-day Fort Wayne, Ind., and the destruction of a second army at the hands of the British and Indians northwest of Greenville, Ohio, in 1792, and the consequent opening of the whole northwest country to ravages of Indian attack, President George Washington called him back from his retirement in private life and made Gen. Anthony Wayne Commander of the Army of the United States. He proceeded to Pittsburgh, thence to Cincinnati, where, under the greatest of handicaps, he drilled and disciplined his forces and then moved up the Miami River into the Indian country.

At the site of St. Clair's defeat he built Fort Recovery, buried 693 of the skeletons of that force, defeated a strong attack, moved up the Auglaize to its junction with the Maumee, where he built Fort Defiance and "defied all hell to take it." Proceeding down the Maumee to within a few miles of Toledo, he fought on August 20, 1794, the Battle of Fallen Timbers. Almost under the guns of the British fort he built a wooden post at the site of Toledo—Fort Industry—then, retracing his steps to Fort Defiance, he passed some 40 miles upward to the junction of the St. Marys and St. Joseph Rivers, where he built the post named after himself, now Fort Wayne, Ind.

Meeting the Indian tribes in council, he, after months of negotiation, made and signed on August 7, 1795, the famous treaty of Greenville. This great soldier of Pennsylvania saved what a great soldier of Virginia, George Rogers Clark, had won—six States of the American Northwest.

From the human material this brilliant military achievement made secure, these States have molded no less than 10 Presidents of the United States, together with uncounted other men and women of note. We want to make along the Miami-Auglaize-Maumee Rivers a lasting out-of-door memorial to a great American—one of its greatest soldiers whose fate it was in 1796 while on his way home from Detroit, to die from illness and exposure in his country's cause.

"As oft has happened in America's story
The path of duty is the road to glory."

We want to make this great waterway an American memorial parkway, to give along its way refuge to wildlife; places of recreation and enjoyment. To mark the resting places of men—white and red—who made history here. Let the memory of the savage Indian chiefs who made covenants and kept them, even to the loss of their most highly prized lands, in this day of covenant breakers, be remembered as men of probity and honor. My State and its people pray for this Anthony Wayne Memorial Parkway that all who pass this way may renew the wellsprings of their patriotism—to the glory of God and our native land.

The Spending-Lending Bill

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 29, 1939

ARTICLE BY H. I. PHILLIPS

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by H. I. Phillips:

THE ONCE OVER
(By H. I. Phillips)
FATHER AND SON DIALOGS

"Popper, what is a self-liquidating loan?"

"Sonnie, go out and play. The boy next door is whistling for you."

"Daddy, I've been reading about the plan to lend $4,000,000,000 to industry for self-liquidating projects, and I don't understand it."

"It's too deep to try to understand fully, my boy. Go ride your bicycle."

"But, popper, I wanna know about it."

"Well, I guess what it all means is that the Government still holds the notion that anybody pays back all money he borrows."

"But what is a self-liquidating loan, popper?"

"Let's see. Assume I am a manufacturer of doorknobs and the doorknob business is in a bad way all over America. All the doorknob factories are closed, and no doorknob worker can get a job."

"But why, popper, is the doorknob business in such a bad way?"

"Nobody is buying doorknobs. They have enough. Well, suppose I run a big doorknob factory. I haven't any money to spend for advertising, and I can't afford to put any money into new type doorknobs and a big selling campaign."

"So what, popper?"

"So I wake up some morning and read that the Government has a plan to revive my business. It will lend me a million dollars, maybe, to open full blast and turn out more doorknobs."

"Will that be a self-liquidating project, popper?"

"The Government says so. It says the people have always used doorknobs, that the old doorknobs are worn out and that if I go at it right I can turn out a bumper crop of doorknobs, create a big demand, sell 'em all and pay back the loan."

"What next, popper?"

"I take the loan, I put on a big selling campaign and I spend all the money I borrowed but nobody buys the doorknobs."

"What do you do then, popper?"

"You mean what does the Government do then? Well, it issues an appeal to the people to put an extra set of doorknobs on every door. Then it lends me another million to sell the country the idea that two sets of doorknobs on every door are necessary. I get up an advertising campaign with the slogan 'Wise Americans Do Not Depend on One Set of Doorknobs!' "

"Does it work, popper?"

"No."

"Is that loan self-liquidating?"

"No; so I get another self-liquidating loan to liquidate all the previous loans."

"Is it difficult, daddy?"

"It's compulsory. Then with the new loan Congress passes a law making it compulsory for every house in America to have three sets of doorknobs on every door."

"Does that clear up everything?"

"I'm afraid not. But I am not downhearted. I still have an ace in the hole so all the loans can be liquidated."

"What is it, popper?"

"I get together with all the doorknob makers and get Congress to pass a law requiring doorknobs on windows!"

Racketeering Patriots

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 29, 1939

RADIO ADDRESS OF MAJ. EUGENE I. VAN ANTWERP, AND AN EDITORIAL

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by Maj. Eugene I. Van Antwerp, commander in chief of the Veterans of Foreign Wars of the United States, over the red network of the National Broadcasting Co. from station WWJ in Detroit, July 19, 1939, and also an editorial from the Detroit News:

The year 1939 has marked the advent of a tremendous discovery! Certain superpatriots and opportunist demagogs have suddenly discovered Americanism!

Prompted by the success in Europe of individuals who climbed to fame in the role of dictators, scores of would-be dictators have suddenly appeared on the scene in the United States.

These self-appointed red, white, and blue Stalins, Hitlers, and Mussolinis are today spewing forth much of the evil propaganda with which the American public is being bombarded from all sides. Clothed in the garb of Americanism, they are preaching ideas and principles that are directly in conflict with the Bill of Rights and the Constitution of the United States. Conveniently they ignore the fact the Bill of Rights is the mother of Americanism and without the enforcement of the Bill of Rights in every respect Americanism ceases to exist.

Some of these imitation dictators would even have us believe that Americanism sanctions the organization of secret uniformed bodies, trained and prepared to take over the duties of our law-enforcing agencies at a moment's notice. Hiding behind the American flag, they would have us believe the spirit of Americanism approves the promotion of class and racial hatreds. In one voice they sing the Star-Spangled Banner. In the next they sing a hymn of hate to incite murder and riot.

Of course, there is a catch to all this, and their glorious promises of riches and prosperity for the American people, if we accept their guidance and counsel. These hatemongers, ego-maniacs as well as plain racketeers, have some very definite purpose in mind. You can be sure those purposes are all selfish ones. Regardless of the

glamorous titles with which they identify themselves and their societies—the man in the street knows them to be plain, ordinary, cheap, every-day chiselers who have visions of getting rich on the contributions they can wheedle from a gullible public. As specialists in the organization of hate societies, these self-crowned saviors belong to our newest class of racketeers.

The formula is simple. You pick out some special group to hate—by color, by race, by religion, or their politics. You create breath-taking, fabulous lies. Then with constant repetition, you eventually force your audience to suspect that where there is smoke there must be fire. Real success lies in the ability to fabricate the most amazing falsehoods. Falsehoods that produce fear are most effective—because when people are frightened they are more willing to pay for promised protection.

It all boils down to the fundamental purpose of collecting dues, donations, or subsidies, and the sale of uniforms and emblems. If they can't sell you a uniform they are prepared to dress you up in a shirt that is guaranteed to be both colorful and distinctive.

One or two of our most currently prominent made-in-America dictators have taken a tip from the Broadway producer who finds a so-called angel for his theatrical ventures. They have proved it is not impossible to find persons with more money than brains—persons who are willing to part with huge sums, either as an investment for greater riches or under the pathetic impression they are doing a patriotic service for their country.

The organizer who finds an "angel" is especially fortunate. He has money with which to immediately buy and distribute millions of pamphlets. He can put out millions of alleged copies of forged documents designed to prove his daring fabrications. He also has the money to hire agents in different sections of the country, to publish periodicals, and buy time on the radios. This type of racketeer, armed with an oily tongue, a magnetic voice, and a poisonous pen, goes after his profits with scientific, big-business methods.

The fact that some of these parasites are meeting with remarkable success has been publicly verified by the Federal Bureau of Investigation, by the investigations of the Dies Committee on un-American Activities, and articles that have been published from time to time in reputable magazines.

These developments indicate the rank and file of the American people are clear thinking and intelligent. They are smart enough to know that you don't have to pay dues to any organization or society, or subscribe to some terrifying pledge of hate for your neighbor, to be a loyal American citizen. They know you don't have to join any private armies, or vigilante groups, to prove your allegiance to the Government of the United States.

The rise of such men as Stalin, Hitler, and Mussolini proves to us it is wise to inquire into the motives and the sincerity of the demagogues in our own country who come before us disguised as apostles of Americanism.

After offering this bit of advice, I think you have the right to know why the members of the Veterans of Foreign Wars of the United States are peculiarly qualified to champion the cause of Americanism. First, I want it plainly understood that we are not asking you to join any secret societies. We are not trying to sell you any Sam Browne belts or funny-looking shirts. We are not soliciting donations or subsidies, nor do we want a mailing list of your friends. We have nothing to sell to the American public. We are asking you to do only one thing. We ask you to do your own thinking—to think for yourself. If we can encourage you to think for yourself, with an open mind, we know logic will prevail. And if logic prevails, we know that our Americanism will be safe and our efforts will be well rewarded.

I think you will agree with me that any man who has served in the Army, Navy, or Marine Corps of the United States in a zone of danger in time of war has every right to champion those ideals he was prepared to defend with his life if necessary. The overseas veteran, in my mind, needs no further proof of his sincerity than his record at Washington when he talks to you about love of country.

Amazing as it may seem to many of our superpatriots, the overseas veterans who compose the Veterans of Foreign Wars enjoyed the experience of discovering Americanism long before 1939. In fact, many of our comrades made that startling discovery long before 1898, and long before they sailed for the Philippines, the Chinese Boxer Rebellion, the islands of Cuba and Haiti, and the harbors of Santiago and Vera Cruz, in the War with Spain. It was the men who returned from these wars, campaigns, and expeditions in 1898–1900 who founded our organization and conceived our objectives.

To those who belong to the Veterans of Foreign Wars, Americanism has been a daily religion ever since our organization was formed back in 1899. Our ranks were greatly swelled by the World War, which gave America approximately 2,000,000 overseas veterans. These men came home from the American Expeditionary Forces ready to give what was left of their lives in the continued defense of Americanism. Since 1918 these veterans of the World War, and our previous campaigns, have been working side by side in the promotion of Americanism—banded together by a mutual respect for each other's sacrifices in the actual zone of warfare.

The men in whose behalf I bring you this message of Americanism proved they have a right to speak up in defense of Americanism when they learned what it means to fear death in the form of an enemy submarine, a burst of shrapnel, the deadly fire of a machine gun, or the sudden explosion of a hand grenade. They know what it means to seek shelter from a hail of lead in the mud and filth of a stinking trench. They know the utter weariness and the hunger and suffering of endless marches under the cover of darkness. They know, too, the scream of a dying comrade—crucified on a cross of barbed wire because he was willing to give his life to protect our Americanism.

To these men—members of the Veterans of Foreign Wars of the United States—Americanism is something worth living for in time of peace—as well as dying for in time of war.

Of course, I speak of a different type of Americanism than the brand our various hate societies are trying to sell to the American public. Our brand of Americanism keeps strict faith with every word in the Bill of Rights and in every line of the Constitution. We believe in the kind of Americanism that gives you and me a right to express our opinions, to approve or disapprove, to commend or criticize, as we see fit. Our brand of Americanism does not say you and I can give vocal support to our ideas, but our neighbor down the street—who has different views—must keep his lips sealed for fear of being brutally assaulted or jailed.

The philosophy of Americanism in which we believe gives us a legal right to meet under the same roof as coworkers in the ranks of labor, as farmers in our local granges, as businessmen in our chambers of commerce, as fraternal brothers in a Masonic order, or the Knights of Columbus, the Eagles, the Elks, Odd Fellows, or Moose. There is nothing in our brand of Americanism that says you must belong to my particular lodge—or else.

We recognize and cherish the Americanism spirit which leaves our newspapers free to print anything that does not conflict with the laws of libel or decency. As veterans, as business leaders, as laborers, or farmers, we appreciate the right that is ours to publish our own periodicals without the heavy hand of a censor to tell us what our members are allowed to read. In our desire to maintain a free press for ourselves, we know a free press must also be available to others under our flag. If it is denied to those with whom we happen to disagree today, it may be denied to us tomorrow.

As taxpayers and law-abiding citizens, the Americanism we advocate gives us the privilege of presenting our petitions to the highest court in the land if we feel we have been wronged. We insist nothing must interfere with that right which belongs to every other citizen as well as to ourselves.

If our public servants, our duly elected representatives in our town councils, our county and State legislatures, or in the Congress of the United States enact laws that are contrary to our ideas, we believe in the kind of Americanism which grants us the opportunity to petition our law-making bodies for corrective legislation. We want that opportunity as individuals. We want it also as ex-service men, as farmers, as laborers, as lawyers, doctors, or bankers, if we feel that our mutual welfare is being endangered.

Back in 1620 our Pilgrim Fathers migrated from England in search of individual liberty. One of their most important objectives was to establish homes in a new land where they could cling to the religious faith in which they believed.

The Americanism which veterans have made personal sacrifices to protect—the Americanism which has given us steadfast faith in the spirit of comradeship and the brotherhood of man—teaches us the blessing of religious freedom must be ours forever if America is destined to survive. There is no compromise with this fundamental truth. You and I would be throwing Americanism overboard if we should tell our neighbors there is room for only one church in this country.

Tolerance for the rights and privileges of others is the essence of Americanism, applied either to religious freedom, free speech, a free press, or other individual liberties. There must be freedom for all or we have freedom for none. Those who would have America half free and half slave are traitors to the spirit of Americanism.

When you hear any man preach a gospel of hate and vengeance for your neighbor; when you read a scurrilous pamphlet that uses the right of a free press to denounce freedom for others; when you hear a radio talk that subtly spreads ideas that are popular only with the dictators of Europe—be on your guard and think clearly. Be wary of those who use Americanism to cover up ideas that are plainly un-American. Be prepared to turn a deaf ear to the missionaries of communism, nazi-ism, or fascism, who would have you believe your security is at stake if you fail to swallow their prescriptions.

Keep this fact uppermost in your mind at all times. Americanism is not something you can sell for a price, nor is it something you can take off or put on when you own a certain kind of uniform. Americanism is a way of life—a way of living—and not something you acquire by paying membership dues in a secret society.

These are the basic principles of the Americanism program our organization has been supporting from the first day it was founded back in 1899. These ideals have been the inspiration for all our endeavors as a veteran organization. When we plead for loyalty to the United States of America and to the flag of our country we are pleading for the preservation of every principle in the Bill of Rights. In our veteran welfare work, in patriotic programs, in our youth activities, in the things we are trying to do to help the communities in which we live, we are constantly striving to demonstrate there is no substitute for Americanism.

[From the Detroit News]

BEWARE SUPERPATRIOTS

The creed of the American is defined in the Bill of Rights and other parts of the Constitution, and one who is born here and

stays here, or one who adopts this as his land, is assumed to subscribe to them as wholeheartedly as any other American. When an organization professes to be devoted, beyond the rest of us, to American principles, it is best, as Commander in Chief Van Antwerp, of the V. F. W., suggests, to look beyond its claims.

If it is suggested that he needs more than his status as a citizen to establish his patriotism, it is wise to examine the purposes of those with other memberships to offer. If they are collecting dues or donations or looking for subsidies or have paraphernalia to sell, it is safe to say they lack even the slight merit of meaning well. And there are many such. Others are so far from being devoted to the American way that they would, under guise of a superior patriotism, change its pattern to one of their own, somewhere in conflict with the principles of tolerance and equality and freedom of expression set up in the Constitution.

These principles have worn well, and will outlast the creeds, lately arisen, in which they are denied. To embody them in his everyday point of view is all the subscription any American need make, to them, and to membership in the American community.

The Importance of the Housing Bill—Slums and Diseases

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. VOORHIS of California. Mr. Speaker, I want to talk about slum clearance and low-rent housing—about the bill we will soon have before us, not in terms of dollars and cents, land values, or construction costs; I want to talk about it in terms of human beings—people like ourselves—subject to the same ills and the same dangers. I want to talk to you about the relation of slums to ill health.

Ill health and juvenile delinquency flourish in the shadow of the slums. Studies made over the last half century in city after city have shown that the areas of bad housing are almost invariably the areas with the highest disease, death, and juvenile-delinquency rates.

One of the most striking illustrations of the evil effects of bad housing is found in the studies of infant mortality. A survey made by the United States Children's Bureau in 8 cities indicates the effect of overcrowding—a prime characteristic of slums—upon a baby's chance of survival. In homes with less than 1 person per room, the infant mortality rate was 52 per 1,000 births. Where there were between 1 and 2 persons per room, the rate was 94 per 1,000 births. In homes with 2 or more persons per room, the rate was 135.7, or more than two and one-half times as high as in favorable surroundings.

In Cincinnati the Public Health Federation sought to answer another question: "If children live past babyhood in slums, how safe are they, then, from sickness and death?" A study of four groups of homes, ranging from slums to extremely pretentious neighborhoods, revealed that there were more deaths from measles and whooping cough in the worst housing district investigated than in all the other survey districts combined.

Medical authorities attribute the excess death rate from communicable children's diseases in overcrowded areas to the lower age incidence, since these diseases are more often fatal when contracted at very early ages. A study made in this country has shown that in diphtheria, scarlet fever, whooping cough, and infantile paralysis, as well as measles, cases "are more concentrated in the earlier years of life as aggregation of population increases." The excess contacts through which young slum children get such diseases arise from their congregation in congested tenement hallways and cramped play areas and in their overcrowded homes.

Children of the slums are also the easiest victims of rickets, which may cause them to go through life with twisted limbs and bodies. Lack of sunshine is chiefly responsible for this disease. In New York City a 5-year study revealed that three out of four babies in tenement districts had rickets, while the disease was almost unknown in better neighborhoods.

Only recently has the significance of ultraviolet light in preventing rickets been recognized. Since ultraviolet light does not pass through ordinary windowpanes and would not, at any rate, penetrate far into a room, the prevalence of rickets in the slums is due not only to lack of windows that admit sunlight but to lack of outdoor spaces in which infants and children can get sunshine. Satisfactory play space is also vital in promoting the actual physical development of children.

Other diseases menace the existence of slum dwellers. When a person with an advanced case of tuberculosis lives in a dark, congested household, the danger of infecting others is increased many times. The tubercle bacillus in sputum is destroyed in the outdoors by sunlight in about 15 minutes; in a completely dark room it may live for months. Consider the danger, then, from tuberculosis alone, of thousands upon thousands of inhabited windowless rooms in America, and of an even greater number of rooms with windows opening onto mere shafts or courts.

In Detroit it was found that pneumonia kills three and a half times as many people in certain slum areas as in the most desirable residential sections. Diphtheria was likewise a greater menace in areas of bad housing. And statistics show that Detroit does not differ greatly from other cities in this respect.

Decent occupancy standards, if not protection against contagion, would call for no more than one person per room in any home, to insure adequate privacy for all members of a household. Yet in the United States some 3,000,000 families live in homes with more than one person per room. Though running water for drinking and bathing, and sanitary sewage disposal are among the first essentials of sanitary living, more than a million and a half urban homes in this country have no private bathing facilities, and nearly a million and a quarter households lack private indoor water closets. It is common knowledge that many diseases, including common colds, sore throats, bronchitis, and influenza, spread because of close personal contacts. In congested slum dwellings and neighborhoods the chances of infection are greater. Overcrowding in sleeping accommodations is particularly dangerous.

Disease is not, of course, confined to slum areas; it takes its full toll by spreading. Communicable diseases may be transmitted by laundresses, domestic workers, and like contacts to other parts of the community as well.

Regulation of the Sale of Fireworks

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. KUNKEL. Mr. Speaker, I was so impressed by the information contained in the following resolution which I received this morning from my friends, Wilber Goodhart, of Shippensburg, and Lester Meily, of Mount Holly Springs, that I want to bring it to the attention of my colleagues. I hope that those of you who do not already have a law in your State regulating the use of fireworks on the Fourth of July will be sufficiently interested to promote or aid in the promotion of similar campaigns.

RESOLUTIONS PROPOSED BY OSCAR M. HYKES POST, NO. 223, SHIPPENSBURG, PA.

Whereas 5 years ago Oscar M. Hykes Post, No. 223, of Shippensburg, Pa., realized that continued deaths and injuries from Fourth of July fireworks should be ended; and

Whereas the said post inaugurated a vigorous campaign to secure the passage of legislation to accomplish this purpose and secured the aid and cooperation of the Cumberland County Council, the

Nineteenth District, and, finally, the Department of Pennsylvania; and

Whereas this campaign so inaugurated and so supported resulted in the passage of the act of assembly of 1939 forbidding the sale of fireworks in the Commonwealth except to civic organizations, to be handled and set off only by capable and experienced persons; and

Whereas, as a result of the enactment of the said act of assembly the number of persons injured by fireworks in 1939 was 2, compared to 1,242 injured in 1938, and while 6 persons were fatally injured in 1938 none were fatally injured in 1939: Therefore be it

Resolved, That at the instance and suggestions of Oscar M. Hykes Post, No. 223, of Shippensburg, Pa., the Department of Pennsylvania respectfully recommends to the national convention that in each State now permitting the unrestricted sale of fireworks, that State department institute and vigorously support a campaign to prohibit by law the sale of fireworks, except to civic organizations for the purpose of public display under the direction of competent and experienced persons.

Respectfully submitted.

OSCAR M. HYKES POST, AMERICAN LEGION,
Shippensburg, Pa.

Approved July 11, 1939.

CUMBERLAND COUNTY COUNCIL, AMERICAN LEGION.

The Oscar M. Hykes Post, No. 223, of Shippensburg, the original sponsor of this movement, may feel well repaid for their efforts and justly proud of their accomplishments, as may the Mount Holly Springs Post, No. 674, the Cumberland County Legionnaires, and the Legionnaires of the Nineteenth Congressional District of Pennsylvania, who actively cooperated in having the legislation enacted.

For the added safety of loved ones it is hoped that the Nation as a whole will adopt the policy outlined in the above resolution.

Is John Lewis the New "White House Spokesman"?

EXTENSION OF REMARKS
OF
HON. FRANK O. HORTON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 29, 1939

EDITORIAL FROM THE WASHINGTON STAR

Mr. HORTON. Mr. Speaker, inasmuch as John L. Lewis, hard-hitting leader of the C. I. O., has a $470,000 mortgage on the New Deal corner of the Democratic Party, he is of course somewhat entitled to speak for the party, to the party, or about the party leaders. But when he makes a bitter personal attack upon the Vice President of the United States, Mr. Lewis is definitely exceeding even the generous rights which are his as the largest individual contributor to the Democratic campaign funds.

I am going to insert at this point an editorial from the Washington Evening Star which throws something of a new light upon the backstage activities leading up to the attempt of John Lewis to "smear GARNER." It smacks somewhat of the same craftsmanship which initiated and projected the equally heartless and bitter "smear Hoover" campaign of 1932, and which to a greater or lesser degree has endeavored to "smear anybody" who has dared to oppose Franklin D. Roosevelt, whether that opposition come from within or without his own party.

This editorial tells its own story. Let those who read it decide for themselves in view of all the circumstances whether John Lewis was speaking as a new White House spokesman trying to smear the biggest present hurdle to Roosevelt's grim drive for the third-term nomination, whether it was another purge concoction of Tommy the Cork and his palace brigade of schoolboy strategists, or whether Mr. Lewis was simply once more demonstrating that the Democratic Party had better pay him back his $470,000 mortgage or resign itself to permitting him to continue to speak as its sugar-daddy and principle contributor.

The editorial following is from the Washington Star for July 28 and is entitled "Tut, Tut, Mr. Lewis."

TUT, TUT, MR. LEWIS

When John L. Lewis' eyebrows are as white as those of the Vice President of the United States he may understand that name-calling carries a powerful kick-back on the name-caller. Indeed, he may have this fact forced upon him almost immediately, as a result of his characterization of Mr. GARNER as a "labor-baiting, poker-playing, whisky-drinking, evil old man." That remark, unless Senators and Representatives commenting upon it are wrong, has lost to Mr. Lewis and his labor organization the Congress of Industrial Organizations, many votes in both Houses.

Mr. Lewis is a public figure. For any man to use the language he used in attacking the Vice President of the United States and the President of the Senate before a congressional committee indicates bad temper and worse judgment. Out in the country and among the rank and file of the people Mr. Lewis, as a result, will lose caste, just as he has in Congress.

If Mr. Lewis' unmeasured attack upon the Vice President was reprehensible, what of the attitude of the House Labor Committee, before which the attack was made? No member of that committee did more than sit and gape—except the chairman, Mrs. MARY NORTON, who thanked Mr. Lewis for his contribution when he had concluded his tirade. No member suggested that the Lewis remarks about Mr. GARNER be expunged from the record. The committee took it lying down, although there are certain rules of courtesy that are supposed to guide the proceedings in congressional committees as well as in the House and Senate themselves.

Mr. Lewis has a perfect right, of course, to be against Mr. GARNER, as he said, in 1939 and in 1940, "personally, concretely, and in the abstract." He does not wish Mr. GARNER to be nominated by the Democratic Party for President next year. Presumably his attack upon the Vice President was intended to lessen his chances for the nomination. The probable effect, however, will be to win friends for Mr. GARNER, even though they may not be enough to insure him victory in the Democratic National Convention.

Mr. Lewis is a bold operator. When President Roosevelt failed to support actively some of his ideas for labor Mr. Lewis openly said that the President had supped at labor's table, that labor had been responsible for his election to the Presidency, and that the President was expected to come across. It is true that he did not accuse Mr. Roosevelt of being an evil young man. But Mr. Lewis did imply that he was an ungrateful one. Mr. Lewis' labor organization had put up half a million dollars for the Roosevelt campaign—the largest single contributor. The President was annoyed, but he let the remark pass. Perhaps, with his present attack upon Mr. GARNER, Mr. Lewis hopes to win a more cordial feeling on the part of Mr. Roosevelt.

Mr. Lewis has not been a success in his recent political campaigns—except in 1936, when he supported President Roosevelt in a big way. Last year his candidates were knocked about by the voters. Particularly was this true in Pennsylvania, where, because of the United Mine Workers, of which he is president, Mr. Lewis was supposed to be influential. How much good he will do Mr. Roosevelt by his attack upon the Vice President—if that was his purpose—is decidedly problematical. Mr. Lewis enjoys a wide reputation as a clever politician and labor strategist. His outburst yesterday leaves one wondering where he got that reputation.

Some Arguments That Cannot Be Answered—W. P. A. Bill Must Be Changed

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 29, 1939

Mr. VOORHIS of California. Mr. Speaker, since the so-called Woodrum bill, Emergency Relief Appropriation Act of 1939, was passed every Member of Congress has been in receipt of letters and messages descriptive of the problems which hundreds of thousands of American citizens are now facing as a result of the action of Congress when it passed that bill.

In speeches at one time and another I believe I have said about all that I can say in opposition to what certain features of the bill have done to the unemployed people of the country.

I should now like to let the people speak for themselves. Congress has no right to adjourn until it has corrected the inequities of the so-called relief bill.

Here is some of the testimony regarding it: First, from a woman in her forties:

LOS ANGELES, CALIF., *July 25, 1939.*

HON. JERRY VOORHIS,
Member, House of Representatives, Washington, D. C.

DEAR SIR: I am a W. P. A. worker who will be seriously affected by the vacation clause in the Woodrum W. P. A. Act. I have not

been able to save one dime and am terribly worried about how I am going to pay my rent, eat, and be clothed during this enforced vacation without pay. I have no one who can help me. My application has been on file for months in all the large aviation companies in this part of the country. I am a divorced woman in my forties. Am a capable typist and secretary. As you know, it is indeed a difficult task for a woman in her forties to obtain employment nowadays.

Who can help but worry when faced with the immediate prospect of being forced to go on direct relief? I understand that I can obtain about $20 per month on relief, but the attendant shame and humiliation of having to take charity is awful punishment to people with pride, folks capable, healthy, able, and willing to work. I need $20 per week to live on.

Very sincerely,

Next concerning two veterans' cases:

John ———, now working as a senior statistical clerk on project N 9134. * * * Mr. ——— will be dismissed from this project July 31. * * * The man is positively unable to do heavy work. In fact, I doubt if he could even carry water on a W. P. A. project (the sun would get him). He is 57 years of age, has an F. H. A. loan on his home on which he must pay $31.70 a month. He was getting $85 per month. Was reduced to $65 2 months ago. Most of his life he has been with either large lumber companies and the Standard Oil Co. Was dismissed from the Standard Oil Co. 6 years ago, mostly because of age. Now, I just don't know what to tell a man like that. Any suggestions from you would be truly appreciated.

And the other:

——— ———, a veteran living here, whose physical condition is such that his wife has been made head of the family and is employed on the sewing project * * *, under this 18 months' ruling she will, in all probability, be given a "vacation." I sent Mrs. ——— to the W. P. A. employment office yesterday to see if it would be possible for her to claim his veteran exemption. The man in charge of the ——— office informed him that it could not be done.

Next from a group of mothers:

JULY 19, 1939.

HON. JERRY VOORHIS,
Congress of the United States, House of Representatives, Washington, D. C.

DEAR JERRY VOORHIS: We the undersigned, as mothers of children in the Federal Nursery School of Alhambra, Calif., strongly protest the Woodrum bill in general and the 30-day lay-off of persons on W. P. A. rolls over 18 months in particular.

We have it on good authority that the application of this clause will close down our nursery school. All of our W. P. A. workers, who have done such excellent work, have been on the rolls over 18 months, and we are told that there will be no new personnel trained to replace them.

This nursery school is of great material and educational benefit to low-income families. Its closing down will work a hardship on approximately 85 persons in our community (W. P. A. and N. Y. A. workers, children, and their parents).

We urge you, as our representative in Congress, to do everything in your power to have the Woodrum bill amended.

We want our nursery school and our present staff of W. P. A. and N. Y. A. workers.

Yours truly,

Celia Wilby, Alhambra, Calif.; Beverly Adams, Alhambra, Calif.; Marjorie Tatro, Alhambra, Calif.; Mary Harrison, San Gabriel, Calif.; Lucille Housey, Alhambra, Calif.; Ann Battaglin, Alhambra, Calif.; Eva S. Tenell, San Gabriel, Calif.; Mildred Arturi, San Gabriel, Calif.; Betty Wingerter, South Pasadena, Calif.; Lois Hahesy, Alhambra, Calif.; Ruth Novak, Alhambra, Calif.; Jeanne Ranscher, Alhambra, Calif.; Mrs. R. A. Burkhart, Monterey Park, Calif.; Mrs. Franco Morris, Alhambra, Calif.; Mrs. Doris B. Webster, Alhambra, Calif.; Mrs. Valda Johnson, Alhambra, Calif.; Louise Petersen, Alhambra, Calif.; Mrs. J. D. Paul, Alhambra, Calif.; Zephyr D. Stains, San Gabriel, Calif.; Mrs. E. O. Hoffman, San Gabriel, Calif.; Mrs. F. C. Burton, San Gabriel, Calif.

Now, from a city engineer regarding a most worth-while project which will be ruined:

JULY 21, 1939.

MR. JERRY VOORHIS,
House of Representatives, Washington, D. C.

DEAR JERRY: Knowing your interest in our center-line survey and mapping project here in ———, I am asking your advice and help in the present situation brought about by the new act, which threatens to disrupt the entire organization which I have built up during the past 3 years, and to ruin much of the $25,000 investment made by W. P. A. to date.

This project, operating now under O. P. ———, is known as the model job of its kind in the county, and has on it the only really capable men available in this part of the county. For instance, the county surveyor advises me that there are just four men on W. P. A. in the county that are competent to make the necessary cadastral computations in connection with the project (one in ———, one in ———, and two in the county offices). The project is operating in close cooperation with the county surveyor and the engineer of the title companies, and has their active backing, as shown by letters on file with W. P. A., as being a job of inestimable value to the entire area. The project is now in the midst of securing topographic data upon which to base location of property lines, etc., prior to the actual drawing of the map. The men I have been working are those who have been selected from a host of men supplied to the project in past years and are, as I have said, the only ones available from the relief lists for work of this kind, where the primary traverses are closed with an accuracy of 1 in 50,000.

It appears from news dispatches and from information given me in the Los Angeles office of W. P. A. that the 30-day layoff will eliminate the civil engineer Mr. ——— who is indispensable to the project, Mr. ——— and Mr. ———, engineering draftsmen who are the key men at the backbone of the project, having worked it out with me from the beginning. If as indicated, the layoff is permanent, I am afraid I will have to close the project and scrap what has been accomplished. This would be most unfortunate, and will subject us all to no end of criticism from those who know the worth of the job. Due to the flood, ——— has no funds with which to complete the work.

I hope that there is some way out. Some way to eliminate in this case the 30-day requirement, or if this is not possible, to get them back again at the close of the layoff. This job is so different from the usual works job, and of such particular worth to the future of the area that I feel sure that the last word has not been said. I have gone out and by public subscription financed the materials needed when the city was unable to help, and hate to say "quit" now.

Very sincerely,

HARLAN EDWARDS, *City Engineer.*

And finally from an administrative officer of W. P. A. who explains as dispassionately as possible in response to my inquiry just what is going to happen.

(1) Even though we were pretty well down to bottom on administrative expenditures, we are forced to cut this cost more than one-third, resulting in laying off more than 250 of our administrative employees immediately.

We are making these separations on the basis of those having the least number of dependents, and by setting up a fair qualifying board and letting those go whose record is least efficient for the work to be done.

We know of no other method to be free of charges of favoritism and unfairness to these people.

(2) The fact that the new bill gives prior preference to need rather than veterans is going to bring a great deal of criticism from the veterans' organizations.

(3) The requirement that local sponsors contribute 25 percent of the cost of projects will seriously affect many of our white-collar projects.

(4) The laying off of those who have been on our program for more than 18 months, coming along with greatly reduced quotas means that those people will never be assigned to our rolls again until our quotas are increased, and I know from contact with these people they are generally of the opinion that they will be off for only 30 days and immediately rehired.

(4) In southern California we have approximately 13,000 who will be laid off on the 18-month clause, but our quota during the next 2 months is to be decreased nearly 15,000, and we have an available file from the State relief administration rolls, of nearly 30,000 who have never been on W. P. A., or, if so, only a short length of time.

(5) The 130-hour month will undoubtedly be followed in the immediate future by a reduction in the schedule of monthly earnings in southern California when the Washington administration finally adjusts Nation-wide security wages to conform to the new law.

We have lengthened the hours of some of the W. P. A. workers by more than 100 percent; we have cut most of their wages; we have reduced total employment on the program by one-third; and we have ruined thousands of projects by the enforced lay-off provision applying to all who have been at work 18 months or more.

Keep a Keen Eye Cut Toward Infringement

EXTENSION OF REMARKS

OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. PATRICK. Mr. Speaker and fellow Members of Congress, what is this? It seems that the Federal Communications Commission has had an inspiration, or urge, or some-

thing. It has decided to go after the telephone business and would like to be vested with the power to regulate the whole telephone industry. I have been unable to find exactly how far that investigatory power, and so forth, is to extend, if granted; but most of the telephone business in this country is in the hands of the American Telephone & Telegraph Co., and I suppose a regulation of the business would practically be simply regulating that outfit.

Now, since I do not know what the F. C. C. may have seen, heard, found out, or caught onto, I shall not make any gesture at deciding whether or not the telephone business, or the American Telephone & Telegraph, should be investigated, regulated, or set right; but I do recall that only a short while back the F. C. C. made a threatening pass at radio, one that appeared to edge over toward sacred ground in this country.

You know Americanism is greatly a matter of free speech and action. Newspapers quite frequently get away with stuff we do not like, but we charge it all up to the freedom of speech and freedom of the press. We, in this country are like that—and we are very proud of the fact.

This is the pass the F. C. C. made at radio:

It took the position that when a short-wave broadcast is sent out from this country it must reflect nothing but refinement, culture, and good will.

We are to suppose whoever happens to be in the proper pivotal position to judge at the time of any given broadcast is to have the power of life and death over such broadcast. Do you, gentlemen, see any other way it could be worked out? I think not. Well, we are pretty jealous of our personal rights in this country and we believe the mind, heart, and general culture of this country is keen enough, safe enough, and strong enough to put any public agency in its place that begins to break out of due bounds.

Eternal vigilance is the price of many fine things in a democracy and while I am numbered among the staunchest new dealers there are morsels of freedom so sweet and rights of action so dear that I cannot for a moment consider their surrender to any agency or arm of the Government for supervision and control.

The radio as a speech-conveying agency has no counterpart and is one medium of intercommunication that we must always carefully attend and see to it that it does not get away from the American way for the American people. And please let me state that I think that wonderfully well have that great industry kept the faith and held to the ideals that make for the things we hold so dear. Violations of propriety and indiscreet broadcasts have been few and far between when we consider the volume of releases that fill the air every day.

Oh, if the American Telephone & Telegraph Co. is running its rates too high or is giving poor service or is in any way managing to gyp Mr. and Mrs. America we have no objection to that being cracked wide open, but let us keep a keen eye out toward anything that has a tendency to curtail our freedom of speech in this country.

I thank you.

The Lea Transportation Bill

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire herewith to include expressions typical of communications received by me from proponents and opponents of the transportation legislation known as the Lea bill, being S. 2009, as amended by the House.

Mr. Speaker, there was room for honest difference of opinion in the consideration of this legislation. All intelligent citizens are agreed that the railway industry is a sick enterprise and needs many "shots in the arm" of one form or another. Opinions differ as to the measures to be employed, calculated to accomplish this desirable objective. It has long been felt that it is not advisable or sensible to lift one industry while pushing down another—to strengthen one competitor while correspondingly weakening a rival. One of the curses of America is that we are embarked upon a form of restriction and implementation of an economy of scarcity, which runs absolutely counter to the experience and teaching of all schools of economics, to the effect that an economy of abundance must be supported and permitted to function.

When the railroads first came into existence they brought about the decay and decline of the stagecoach. The ascendancy of the automobile was coeval with the moribundity of the horse. The shingle industry has sustained serious setbacks because of the development of asphalt, rag, and slate substitutes. The coal industry is fighting desperately to keep from succumbing by reason of the substitution of oil and gasoline for coal as fuel in engines of propulsion and heating apparatus.

Today the railroads face increasing competition from the airplane, the truck, the autobus, the private automobile, and marine transportation. The railroad industry is sick from the germs brought about by the sins of its fathers. For years railroads owned and operated State legislatures, maintained their lobbyists in the Halls of Congress, were instrumental and influential in affecting the appointment of their attorneys as members of the highest judicial tribunals in America, accomplished the election and defeat of city councilmen, county commissioners, State legislators, and Members of Congress and the United States Senate. They were all-powerful and were riding high. The story of the corruption and boodle of the railroads embraces one of the blackest periods in American history. The early operation of the Goulds, the Harrimans, the Huntingtons, the Vanderbilts, and their ilk is a national disgrace.

But, Mr. Speaker, space does not permit me to recount in detail the counts of the indictment I place against the railroads. The fact remains that they are an indispensable and integral segment of our national economy. They must be preserved, protected, and fortified, but, I submit, not at the expense of their rivals but in cooperation with them.

I attach herewith expressions typical of those in support of the measure:

SEATTLE, *Wash., July 21, 1939.*

Hon. JOHN M. COFFEE,
House Office Building, Washington, D. C.:

As representative of express employees of Washington who are members Brotherhood of Railway Clerks, I earnestly solicit your support of the Lea transportation bill in the interest of a fair and equitable transportation policy.

T. E. HINTON, *General Chairman.*

CHICAGO, *June 20, 1939.*

Hon. JOHN M. COFFEE,
House of Representatives, Washington, D. C.

HONORABLE SIR: As an industry located in your district, we are asking your earnest consideration in promoting and effecting early passage of transportation legislation which is now pending in your body. We are suppliers of car wheels for railroads and sincerely believe that any help given the railroads will be of decided benefit to us and our employees, and will have a real stimulating influence upon all business.

We express the hope that you will actively interest yourself in the passage of measures now pending, which we are informed are known as H. R. 2531 and H. R. 4862.

Yours very truly,

GRIFFIN WHEEL CO.

BROTHERHOOD OF LOCOMOTIVE FIREMEN AND ENGINEMEN,
Cleveland, Ohio, July 18, 1939.

To all Representatives in the United States Congress, House Office Building, Washington, D. C.

MY DEAR CONGRESSMEN: I am assuming to communicate with you relative to the Transportation Act of 1939, and especially in behalf of the Lea bill (substitute for S. 2009), which it is understood has been favorably reported by the House Committee on Interstate and Foreign Commerce.

It will not be my purpose to undertake to analyze this important measure. However, its object is to regulate transportation by rail, highway, and water, with a view to placing all competitive forms of transportation on a basis of equality. This bill embodies certain of the recommendations made by the committee composed of three railroad presidents and three labor executives appointed some time

ago by the President to carefully study the general transportation situation. The bill will contribute greatly toward correcting the inequitable situation now existing.

I understand the indications are this matter will be placed before the House of Representatives for action during the course of the next few days. I am accordingly writing to request that you kindly give your support to the bill as reported by the House committee, to the end that it may receive favorable consideration by the House.

Yours sincerely,

D. B. ROBERTSON.

INTERNATIONAL ASSOCIATION OF MACHINISTS,
Washington, D. C., July 20, 1939.

Subject: Transportation legislation.

DEAR CONGRESSMAN: In behalf of 200,000 members of the International Association of Machinists, an organization whose members are employed in the mechanical departments of all forms of transportation service, we want to recommend to you S. 2009 as a legislative measure which establishes regulation that is fair to all branches of the transportation industry.

S. 2009, which has been favorably reported out by the House Committee on Interstate and Foreign Commerce, is an original House measure, as the House committee struck out all of the Senate bill except the enacting clause and wrote in a bill of its own. This bill is based on principles endorsed by the Committee of Six, representing employers and labor appointed by the President to recommend an equitable national transportation policy.

We respectfully request your vote in favor of S. 2009 and urge your support in securing its enactment by the House of Representatives.

Very truly yours,

H. W. BROWN,
Acting International President.

The following are fairly representative of statements and communications received by me in opposition to the measure. These opinions and observations are all self-explanatory:

INLAND EMPIRE WATERWAYS ASSOCIATION,
Walla Walla, Wash., February 27, 1939.

Hon. JOHN M. COFFEE,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN COFFEE: It is my understanding that hearings have been held before the Committee on Interstate and Foreign Commerce of the House of Representatives with reference to the so-called Lea bill, H. R. 2531, which would give the Interstate Commerce Commission the power to move in over the water carriers very much as it has over other forms of transportation.

It has long been the opinion of this association that instead of additional, cumbersome, ineffective, costly interference with the free movement of commerce by the enactment of additional legislation that the Congress should find some way of clarifying the situation by the repeal of much of the power of the Interstate Commerce Commission in the regulation of minimum rates.

As far as we can see, the bill represents the effort of the railroads and allied interests to force all rates and services into railroad patterns and to aid the railroads by handicapping competing forms of transportation.

The Commission has had control over joint rail and water rates for many years. In recent cases decided by the Commission they have arbitrarily set up divisions of from 85 to 95 percent of the all-rail rates. In other words, there has been no study of water-carrier costs, but this differential is an arbitrary one decided upon by the Commission for the reason that the rail rate is established at a certain level.

As an example, the all-rail rate from The Dalles to Portland, Oreg., on wheat was $2.10 per ton. The river boats moved in, started to take some of the traffic, and they immediately established a rate of $1.40, or an immediate cut of one-third. The rail rate immediately dropped to $1.60. However, the Commission, deciding joint rail and water rate schedules, disregarded this low cost of water-carrier service and in territory just outside of The Dalles established a joint water and rail rate and a differential of 1 cent per hundredweight, or 20 cents per ton.

We are unable to see any advantage to the producer, to the shipper, and to the consumer by additional, cumbersome legislation granting authority and making it mandatory upon the Interstate Commerce Commission to virtually eliminate the savings that will accrue to the farmers of this area through the competition of water-carrier service on the Columbia and Snake Rivers.

If the Commission is given the authority to control these rates, as is proposed in the bill, it is only reasonable to assume that they will be raised to the formula now in effect in joint rail and water rates. This means higher costs to the shipper, manufacturer, the farmer, and the merchant, and will also result in retarding development of natural resources which have laid dormant for years, due to exorbitant all-rail transportation charges.

There is no public demand for regulation of the water carrier and such regulation would not be in the public interest. The Columbia and Snake Rivers, when adequately improved and maintained, will afford the cheapest method of transportation in the interior Pacific Northwest. By this same token, when all of our inland waterways of the Nation are developed, it will likewise afford the cheapest known method of transportation.

Cheap transportation is necessary for the development of our now latent natural resources and the shipping of our agricultural products, not only to the domestic markets but to the markets of the world. If the low-cost inland water routes are permitted to develop and are left free as they are in Europe, the public will benefit from the savings they make possible.

In conclusion, the association firmly believes that the interests of shippers, producers, and consumers must be protected, and this interest cannot be if additional regulation by the Interstate Commerce Commission is enacted to law.

The association would be very glad to develop some statistical information regarding rates as it affects the interior Pacific Northwest if this information would be of value to you. We do earnestly urge that you make a complete study of the Lea bill before voting in favor of this type of legislation, for we are unutterably opposed to this bill, for we believe it to be against the best interests of the farmers and of the development of the natural resources of the area.

With best wishes, I am,

Sincerely,

H. G. WEST,
Executive Vice President.

INLAND EMPIRE WATERWAYS ASSOCIATION,
Walla Walla, Wash., July 3, 1939.

Hon. JOHN M. COFFEE,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN COFFEE: With further reference to S. 2009, to amend the Interstate Commerce Act, and especially providing for the regulation of water carriers:

Upon an exhaustive search on our part, it is rather significant to find that all of the important agencies of the Government charged with dealing with the transportation problem have not been consulted or given approval to this legislation.

After a study of the bill, our people are of the opinion that if section 30, the rate-making rule, is retained with the same language as passed the Senate that we will be afforded maximum protection. In other words, if the bill must pass, then we do request your full support in an effort to retain section 30 as passed by the Senate.

In further study of this bill, we do not find one single proposal that the railroads do anything whatever toward the amelioration or improvement of their own situation.

As an indication of what we might expect on the Columbia and Snake Rivers if our carriers are placed under the control of the Interstate Commerce Commission is the attitude of the Commission in prescribing joint rail and water rates in accordance with the Denison Act in conjunction with water service from Portland to The Dalles and thence by rail to immediate points within that area.

The Commission prescribed 10-, 12-, and 13-percent differentials as maximum. However, on port-to-port rates the same company operating from Portland to Umatilla made the following reductions: The rail rate from Portland to Umatilla on gasoline is 30 cents per hundredweight, or .019 cent per gallon, and the rate put into effect was 7½ cents per hundredweight, or .0049 cent per gallon.

In other words, we have had an indication that if the Interstate Commerce Commission is given the authority to prescribe minimum rates over water carriers that the rail level of rates will be their yardstick and water rates will be brought to that level rather than the level of rail rates brought down to the level of water rates.

We do hope that the House will be successful in defeating this legislation. However, as stated previously, if it must pass, then let's use every effort to retain section 30 in the form in which it passed the Senate.

With best wishes and kindest regards, I am,

Sincerely,

H. G. WEST,
Executive Vice President.

WEST COAST LUMBERMEN'S ASSOCIATION,
Seattle, Wash., July 24, 1939.

Hon. JOHN M. COFFEE,
House of Representatives, Washington, D. C.

Subject: Transfer of control over water rates to Interstate Commerce Commission.

MY DEAR CONGRESSMAN COFFEE: The trustees of the West Coast Lumbermen's Association have recently given this subject fresh consideration in connection with the Wheeler-Truman bill.

The west coast lumber industry, as of course you know, was built up upon water-borne commerce. Today the domestic cargo movement still takes 40 percent or more of our total production. Our two largest markets are reached by the coastwise water-borne movement to California and the intercoastal movement to the Atlantic seaboard.

Our industry has always been at a serious disadvantage in reaching the larger markets of the United States—because of distance. We, in common with other far western woods, have the longest hauls and highest transportation costs of any species of American lumber—in reaching the populous Central and Eastern States where 70 percent of the lumber is consumed. Our average cost for transportation today is about 60 percent of the average price realized by the sawmill; and for the third of our log which produces low-grade construction lumber, the average cost of transportation to market is over 150 percent of the price received at the mill. This is the primary reason why west coast logging operations appear so wasteful. Usually 15 percent of the standing timber just cannot be utilized, because we cannot get it to any market that will

pay back cost. The life of the west coast lumber industry could largely be summarized as a struggle against transportation costs that shut our mills off from essential markets.

In this struggle the competitive leverage of water transportation has been of incalculable value. Coastwise vessels move 75 percent of all the lumber we market in California and establish absolute competitive limits which railroad rates cannot exceed. Intercoastal steamships move 74 percent of all the lumber we sell in the States eastward from Chicago; and again have determined the rate levels by rail. Hence there has been impressed upon our industry for many years the vital economic function of free, competitive transportation by water and the necessity of keeping the competition of water-borne commerce free and open. The west coast lumber industry has always opposed efforts to place the regulation and control of coastwise or intercoastal carriers under the Interstate Commerce Commission from fear that this would—doubtless gradually and unconsciously—break down the free, competitive status of the water carriers.

With all the complexities in the transportation problem today and our desire to aid the rehabilitation of the railroads, our trustees believe that this fundamental necessity still remains—for protecting the competitive independence of the water carriers. Notwithstanding the safeguarding provisions of the Wheeler-Truman bill (rate-making rule stated in sec. 30), they believe it contrary to the interests of the Pacific coast, and of our industry particularly, to place water and rail carriers under the same Federal agency for regulation and control. I am requested to place this conclusion before you and to ask your serious consideration of it in connection with the pending legislation.

With warm personal regards,

Sincerely yours,

W. B. GREELEY,
Secretary-Manager.

AMERICAN TRUCKING ASSOCIATIONS, INC.,
Washington, D. C., April 24, 1939.

Hon. JOHN M. COFFEE,
House Office Building, Washington, D. C.

Re: S. 2009, transportation bill.

DEAR MR. COFFEE: Upon the convening of the legislative committee of the American Trucking Associations, Inc., on April 20, 1939, we were directed to say that the industry is opposed to S. 2009 in both principle and form.

Equality of regulation does not mean identical regulation, as stated by Commissioner Eastman before congressional committees. The Interstate Commerce Commission in its fifty-second annual report, states that the regulation of motor carriers, if anything, is more comprehensive than that of the railroads.

Amendments could never cure the confusion resulting from discarding the wealth of information which has been built up through 50 years of I. C. C. and court decisions, all of which are based on the present law by parts and sections.

The basic objection rests on the proposition that the proposed legislation fails to recognize the inherent differences in the various transportation agencies and proceeds to subject all of them to identical and inapplicable provisions. For example, long-and-short-haul clause and routing-by-shippers provisions, which were designed for railroads operating on a fixed route, are applied to motor carriers. This is so, even though the certificates may call for irregular routes only, and the operations are subject to different size and weight laws at every State line, and detours on account of weather conditions, etc., are general.

Similar impossible and impracticable provisions are to be found throughout the bill. Such results were to be expected when it is recalled that the bill, in its original form, was drafted by railroad management and railroad labor, and motor and water carriers were not consulted.

The universal experience of every administrator of transportation regulation has been that different treatment must be given to different conditions. No one has disputed this, and the only Federal agency competent to express an opinion, the Interstate Commerce Commission, has concurred in this view. They pointed out that the attempted codification in a few days of railroad and truck-carrier law, with water-carrier law superimposed on it, has resulted in endless errors of both omission and commission.

No one suggests that this codification of laws will benefit the railroads, except as they may escape regulation, by having applied to them some of the more simple procedures which were designed for the small-truck operator, such as consolidations without public hearings. That may be the answer to the desire of the railroads for codification.

The public notice and hearings were entirely too brief for full consideration of such comprehensive legislation.

Only 3 years ago Congress enacted a complete law governing motor carriers, and the administrative problems of bringing order out of chaos, arising from that legislation, are far from completed as to thousands of small trucking concerns.

We sincerely urge you not to codify the law at this time and to continue the established form of regulating each type of transportation by appropriate parts of the Interstate Commerce Act, such as part I for railroads, part II for motor carriers, etc., and to enact such additional legislation as may be deemed necessary by reference to the existing form and style of the Interstate Commerce Act, which recognizes the inherent characteristics of each transportation agency.

Respectfully,

AMERICAN TRUCKING ASSOCIATIONS, INC.,
TED V. RODGERS, *President.*

CONSOLIDATED FREIGHT LINES, INC.,
Spokane, Wash., May 2, 1939.

The Honorable JOHN M. COFFEE,
House Office Building, Washington, D. C.

DEAR SIR: We in the motor freight industry feel that Senate bill 2009 would be very injurious to the motor freight industry and to the millions of people directly and indirectly employed by this industry. For this reason, we are writing you to state our major objections to the bill, which are as follows:

1. Mr. Eastman has already indicated to the committee of Congress that equality of regulation does not mean identical regulation. As stated by the Interstate Commerce Commission in its fifty-second annual report, the Motor Carrier Act provides regulation for motor carriers which, if anything, is more comprehensive than that covering railroads.

2. The proposed legislation fails to recognize the inherent differences in the various transportation agencies and proceeds to subject all of them to identical and in many cases inapplicable provisions.

3. Amendments to S. 2009 could never cure the confusion resulting from discarding the wealth of information which has been built up through 50 years of I. C. C. and court decisions, all of which are based on the present law by parts and sections.

4. The bill would force reorganization of the Interstate Commerce Commission according to the nature of the work undertaken, rather than according to type of carrier, eliminating division 5. The present law permits flexible administration by the Commission itself.

5. The bill carries long-and-short-haul clause and routing by shippers provisions which were designed for railroads operating on a fixed route and would now be applied to motor carriers. Conflicting State laws, weather conditions, highway standards, construction detours, etc., frequently necessitate circuitous hauls, although the rates would be based on the direct route. The total charge via the circuitous route would generally be less than the aggregate of intermediate rates via the circuitous route.

6. The bill makes motor carriers subject to reparation proceedings, laying them open to possible trouble from "claim chasers."

7. The bill provides that if I. C. C. see fit valuation provisions of the Rail Act may be applied to motor carriers in rate making cases.

8. The bill provides for no regulation of forwarding companies or carloading companies.

9. The bill would remove all I. C. C. control from motor carrier operations of the Railway Express Agency as well as railroad pick-up and delivery service, insofar as present provisions of the Motor Carrier Act are concerned.

10. The bill provides that regulations covering hours of service for employees may be prescribed only for the purpose of promoting safety. This would make employees of common and contract carriers other than drivers and additional employees concerned with safety of operation subject to the hours provisions of the Fair Labor Standards Act, from which they are now exempt. This would be most unfair, as all railroad employees would be exempt from the hours provisions of the Fair Labor Standards Act.

We feel sure you will give our cause fair treatment and take into consideration the vital importance of this bill to the many thousands of people within your own State who are very gainfully employed by the motor freight industry and that the passage of this bill would be detrimental to the welfare of your State as a whole.

Very truly yours,

CONSOLIDATED FREIGHTWAYS, INC.,
J. H. HOWAY,
Division Superintendent.

GIG HARBOR, WASH., *May 5, 1939.*

Hon. JOHN M. COFFEE,
House of Representatives, Washington, D. C.

DEAR SIR: It is the opinion of the shipping men that the enactment of the Wheeler bill (S. 2009) will result in the strangulation of our waterways, by giving the railroads a practical monopoly; and will greatly injure shipping on inland rivers, canals, the Great Lakes, and coastal and coastwise waters; with resultant injury to our agricultural and manufacturing interests.

I ask that you oppose this bill.

Respectfully yours,

F. M. HUNT,
Member, National Rivers and Harbors Congress.

TACOMA, WASH., *May 13, 1939.*

Congressman JOHN M. COFFEE,
Washington, D. C.:

The Propeller Club port of Tacoma earnestly requests your efforts to defeat Wheeler Senate bill 2009 and Lea bill proposing to regulate water transportation by Interstate Commerce Commission as being eminently unfair water carriers and inimical to economical water transportation.

H. R. DAVIS,
President, Propeller Club, Port of Tacoma.

SUMNER-TACOMA STAGE CO.,
Sumner, Wash., May 3, 1939.

Hon. JOHN M. COFFEE,
Congressman, Washington, D. C.

DEAR SIR: There are several bills before the Senate committee, some of which may come before the Congress, pertaining to the

regulation of bus and motor transportation by the Interstate Commerce Commission.

We happen to come under the regulations of the Commission to some extent, as we have an I. C. C. permit, though we are not an actual interstate operator, but make connections with the actual operator of this service.

Under one section of Senate bill 2009 the Interstate Commerce Commission would have the right to fix and regulate the intrastate as well as the interstate rates. This we feel is unjust and uncalled for, since we are already regulated by the Washington Department of Public Service, and the natural demand of the service over our lines. The railroads, who we have reason to believe are behind this bill, would in all probabilities like to see the rates for the bus companies raised so that they could keep on losing business as the railroads have in the past.

Among other objectionable features of the bill is one authorizing and directing the Commission to proceed to investigate (a) concerning the economy and fitness of rail carriers, water carriers, and motor carriers for transportation service, or any particular classes or description thereof, with the view of determining the service for which each is especially fitted or fitted for and for which its use should accordingly be encouraged or discouraged in the interest or avoiding wasteful and destructive competition; and (b) concerning the extent to which right-of-way or other transportation facilities and special services have been or are provided from the public funds for the use, within the territorial limits of continental United States, of each of the three types of carriers without adequate compensation, etc.

We know we are paying adequately for any use we have of the highways, which fact has been investigated by the State highway department, and we believe that most of the States of the Union could give this information without any investigation. This would also avoid wasteful and destructive competition, so they say, for the three—water, rail, and bus—they have forgotten the air, which costs the public more per passenger hauled than any of the other three.

This is probably not to be taken into consideration, as the air probably comes under another department's regulation, but it is a fact, nevertheless.

We believe in adequate and ample compensation for any transportation service, or, for that matter, for any service, goods, or foods furnished to the public, if you can get it. Though we do not believe that legislation is the best way to make this possible. "He who is governed least is governed best."

You probably have considerable information of these bills; and we wish to ask that you use your influence against these two features at least. "The regulation of intrastate rates" and "the elimination of competition of rail, water, and bus."

Thanking you for anything you may do to eliminate these features, which we believe will be for the best interest of all concerned and, most of all, the public.

Yours very respectfully,

SUMNER TACOMA STAGE CO. (BLUE LINES),
P. O. CONLON, *Manager.*

PACIFIC HIGHWAY TRANSPORT,
Tacoma, Wash., July 19, 1939.

Hon. JOHN M. COFFEE,
House of Representatives Office Building, Washington, D. C.

DEAR JOHN: I have information that the Lea transportation bill is about to come to the House, in fact, it may have done so before you get this.

As I understand it, the most recent form of the bill exempts the Railway Express Agency from any kind of regulation. As you can well realize, this would be dynamite to all of the forms of transportation which compete with railroads, and if this is in the bill we think it would be much better to defeat the bill entirely than allow it to go through with this provision in it.

It would mean that regulated trucking in this State, and regulation is now, as you know, universally over both intrastate and interstate trucks, would have to compete with a regular truck line owned and operated by the railroads but not under regulation at all.

I was quite in favor of most of the provisions of the Lea bill, as we all were out here, until they stuck this absurd exemption into it.

This morning's paper indicates that you will soon be out of that very hot "vale of tears" and for your sake I certainly hope so.

Best regards.

Yours very truly,

C. S. REYNOLDS,
Secretary-Treasurer.

GRAND LODGE, BROTHERHOOD OF RAILROAD TRAINMEN,
Cleveland, Ohio, July 19, 1939.

DEAR CONGRESSMAN: You are soon to be confronted with the problem of enacting legislation calculated to aid the railroads of this country. This is a great responsibility, for the recovery of the American railroad system will, to a large extent, determine the course of recovery in all American industry.

You are, of course, aware of the fact that the Senate has already passed the so-called Wheeler-Truman bill (S. 2009) on railroads. It is my understanding that a substitute bill will be presented for your consideration by the House Committee on Interstate and Foreign Commerce. The Brotherhood of Railroad Trainmen vigorously opposed S. 2009, and we are just as strongly against the House substitute bill. For both measures contain provisions regarding railroad consolidation, the effect of which would be disastrous to our railroads and to our national economy.

What does railroad consolidation mean? It means the abandonment of many miles of track. It means impairment of service. It means the creation of ghost communities and the destruction of millions of dollars in property values. It means unemployment for 200,000 railroad workers and a consequent shrinkage in our national purchasing power. It means the continuation of the million-dollar-a-day waste in the industry—uncovered by the Wheeler committee—and the entrenchment of those railroad bankers who have found in this industry a very lucrative source of income.

For these reasons, I urgently request that you vote against the House substitute bill for S. 2009. In so doing, you will not only be acting for the best interests of the railroad industry, but you will also be preventing economic and social catastrophe by insuring that 200,000 men are not to be deprived of employment.

Respectfully yours,

A. F. WHITNEY, *President.*

PITTSBURGH, PA., *July 21, 1939.*

Hon. JOHN M. COFFEE,
House Office Building, Washington, D. C.:

In consideration of House transportation bill, your vote should not be much influenced by railroad demand, because waterway regulation will not solve railroad problem. Neither should you attach much importance to the favorable testimony of the Federal and Mississippi Valley barge lines (now regulated by the I. C. C.), because their combined efforts represent only about 10 percent of the total inland waterway tonnage. We, and others like us, originate and develop about 90 percent of this water-borne tonnage and our opposition should carry weight. Great Lakes exemption highly discriminatory. We suggested amendments but disapprove entire bill.

UNION BARGE LINE CORPORATION,
ALFRED S. OSBOURNE, *Vice President.*

SEATTLE, WASH., *July 22, 1939.*

Hon. JOHN M. COFFEE,
House of Representatives, Washington, D. C.:

We protest against adoption of House Interstate and Foreign Commerce Committee print No. 3 substitute for Senate 2009 and particularly that part of section 8 thereof called section 5, subsection 1, dealing with the subject of pooling or division of traffic or of service. Kindly advise by wire present position of measure and probable action this session of Congress.

HERB SHAW,
Manager, Motor Coach Association of Washington.

SEATTLE, WASH., *July 22, 1939.*

Hon. JOHN M. COFFEE,
Congress, Washington, D. C.:

Earnestly urge postponement any legislation affecting Motor Carrier Act, 1935, as contained in Senate bill 2009 or substitute committee print No. 3. Air-mail letter to you today.

R. T. WHITING,
Regional Director, National Association of Motor Bus Operators.

Why There Aren't More Jobs

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 29, 1939

Mr. BENDER. Mr. Speaker, before a single man ever goes to work, someone must be ready and willing to provide the funds with which to pay him his wages. Someone must be available who considers it economically desirable to risk his savings upon the venture which requires employment. In the system of capitalistic society by which our Nation has reached the tremendous development we have attained, the means through which our working men and women derive their assurance of continued earnings is the willingness of private investors to encourage enterprise.

Once the wellspring of private investment dries up the number of jobs must inevitably shrink. And the source from which the Nation's investors derive their sustenance is the confidence which they feel in the ability of their investments to earn them a fair profit. When this confidence fails the stream becomes sluggish; and unless it is quickly restored it ceases to flow altogether.

Many factors contribute to the destruction of this intangible confidence. Heavy taxes, constant harassment, uncertain future legislation, and the fear of long-continued labor battles make investment precarious and act as powerful deterrents to the establishment of new enterprises.

This is almost precisely the picture of what has happened in America during the last few years. The National Association of Manufacturers, the group representing the largest organization of factory owners in the Nation, has recently undertaken to discover, with some degree of exactness, just what investors in general regard as the difficulties confronting them under our present conditions.

One amazing conclusion reveals itself. Thousands of present investors in the United States who were asked two questions: (1) Do you have additional funds available for investment which you are not investing; and (2) if not, why not? Of those replying, 75.2 percent declared that they had money available which they did not choose to invest under present conditions.

The reasons for this refusal are even more illuminating. Analyzing their replies, it becomes apparent that—

(1) Thirty-eight and eight-tenths percent of our investing public declares that the primary reason for noninvestment today is the lack of adequate profit earnings.

(2) Seventy-seven percent of the replies declared that they seriously doubted the probability that adequate profits would be earned in the future because of already existing legislative restrictions upon industry.

(3) Seventy-five and four-tenths percent insisted that existing taxes upon business similarly rendered future profits extremely doubtful.

(4) Seventy-two and eight-tenths percent replied that the possibility of new taxes on industry made it advisable for them to restrict their investments.

(5) Sixty-two and seven-tenths percent observed that the likelihood of protracted labor troubles was acting to discourage them from using their available funds.

(6) Eighty-three and one-tenth percent were convinced that the Federal Government already takes so much in direct taxes from corporations that they do not care to risk their cash in corporate investments.

(7) Sixty-one and nine-tenths percent felt that taxes upon individual taxpayers were too high to encourage them to invest in the hope of earning profits, because those profits would simply be taxed into the Treasury.

It is interesting to observe the reaction of the investing public to those legislative enactments recently passed in theory for their protection.

(1) Fifty-nine and three-tenths percent believe that this new legislation places restrictions upon the sale of securities by individuals which are far too stringent.

(2) Fifty-two and seven-tenths percent believe that the purchase of securities by individuals is being too rigidly controlled.

(3) Forty-nine and eight-tenths percent declare their opinion that the regulations now surrounding the issuance of new securities by corporations are too rigorous.

No less informative are the suggestions of those polled as to steps which might be taken to correct these evils and start the stream of investment moving once more.

(1) Twenty and seven-tenths percent stated flatly that a change in the national administration would be of great value in solving the problem.

(2) Nineteen and two-tenths percent proposed a decrease in Government spending as a solution.

(3) Eighteen and six-tenths percent urged less governmental interference in private business by the Federal Government as a means to the desired end.

(4) Eighteen percent suggested a balancing of the Budget to do the trick.

(5) Fifteen and one-tenth percent felt that the lessening of governmental competition with private business would be effective.

(6) Fourteen and four-tenths percent observed that a reduction in existing taxes and the pledge to impose no additional ones would stimulate investment.

(7) Thirteen percent demanded changes in Federal labor legislation.

(8) Ten and five-tenths percent urged a change in the attitude of the administration and the radical alteration of its business policies.

(9) Ten and one-tenth percent believed that less Government legislation discriminating against industry would be signally helpful in overcoming their repugnance to investment of their available money.

Throughout all of these replies the one characteristic view is obvious. In virtually every instance the objection is directed at some Federal policy. The complaint of investors, echoed by businessmen throughout the Nation, is unmistakable. They are convinced that the policies of the New Deal are destroying the desire of men and women to invest their funds. Our banks are filled to overflowing with idle money. Our Nation is filled to overflowing with idle hands. Neither will be occupied so long as the people of our land lack confidence in the policies of those who determine our affairs.

There is but one answer—"Alter those policies." There is but one way to alter those policies. Change the administration of our Government. There is but one effective way to change the administration. Vote Republican in 1940.

Iowa

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. MARTIN of Iowa. Mr. Speaker, after having received many very splendid and welcome letters from several of my colleagues portraying the beauty of their home States, I am delighted to find that the National Geographic Magazine for August 1939, in a 40-page feature article, has described and pictured the glorious beauty and the superior productivity of Iowa far more eloquently than I can present it by word or by letter.

I therefore urge you to read the article, Iowa, Abiding Place of Plenty, in the August issue of the National Geographic Magazine, so that you may better know, understand, and appreciate the attractive qualities of the great State of Iowa.

Distribution of Public Power in the Pacific Northwest—The Grange Has Played an Important Part in Developing Public Power Sentiment—Distribution as Vitally Important as Generation in Electrical Development—Bring Cheap Power to the People Through Government Cooperation—The R. E. A. Has Demonstrated the Possibilities

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, July 28, 1939

Mr. COFFEE of Washington. Mr. Speaker the magnitude of the power development in the Northwest has come to be recognized rather generally by this time. The Members of this Congress are familiar with the fact that the capacity of the power plants to be installed in connection with the Bonneville and Grand Coulee Dams, exceeds by a considerable amount the capacity of all power plants to be operated by the T. V. A. combined.

So much emphasis has been placed upon the generation of energy at Bonneville and Grand Coulee, that we are sometimes inclined to overlook the problem of effecting the most

economical distribution of this power—of making the largest possible quantities of it available to the homes, the farms, and the factories of the Northwest. The Federal Government has a vital interest in this phase of the matter. From the rather narrow viewpoint of a creditor, it wants assurance that the appropriations made to build these dams will be returned through the sale of the energy produced by them. From a broader, social viewpoint, it is obvious that producing power is just one phase of the greater task of making it available to the user, where it will produce all the beneficial results which a plentiful supply of electricity at low rates works in a modern civilization.

If we were to depend only upon the normal increase in consumption of electricity which results under present rate structures maintained by public and private agencies, the investment of the Federal Government in these projects eventually would be repaid. Some idea of the extensive potential demand for electricity in the Northwest may be gained from a few illustrations. It has been the experience of the municipally owned electric plants in both Tacoma and Seattle that up until the beginning of the depression, in 1929, the power consumption on the average has doubled every 5 years. The Bureau of Reclamation has conducted studies in reference to the potential power market in the area within a radius of 300 miles of the Grand Coulee Dam. Permit me to quote from the bulletin entitled "Columbia Basin Project, Grand Coulee Dam," of recent publication, in which the following very significant observations are made in reference to this area:

> During the 10-year period ending with 1930 the requirements for power in the territory described as constituting the power-market area increased at an average rate of 9.5 percent per year, compounded annually. * * * The effect of the depression was to suspend for about 4 years the normal growth of the power market. * * * If we may judge the future by the past, there is every reason to believe that the rate of increase in power production for the 10-year period prior to 1930, amounting to 9.5 percent compounded annually, will continue. But if we assume that the rate of increase starts off at but 8 percent, compounded annually, and decreases uniformly to 4 percent during the next 30 years; and if we assume, further, that Grand Coulee will absorb only one-half of the increase after its completion, leaving the other half to Bonneville and other new developments, all of the Grand Coulee commercial power will be absorbed by the market in 15 years. And if the commercial power can be sold at 2¼ mills at Grand Coulee, equivalent to 3 mills on the coast, the cost of the Grand Coulee Dam and power plant, with interest at 4 percent, can be liquidated in 50 years, with a surplus of $144,500,000 available for the partial liquidation of the irrigation investment or other purposes; and after the fiftieth year the annual surplus would amount to $15,000,000.

I share with others, however, the concern that a market for the power output of these projects, particularly of the Bonneville project, be developed at once. It is desirable that these projects commence as soon as practicable to repay to the Federal Government the moneys appropriated for their development. It is far more significant that the development of the entire region will be retarded unless the kilowatts are taken from the dams and put to work. The great problem which we now face is what steps might be taken to bring this about.

Up to a definite point, at least, all concerned can agree upon certain facts to be taken into account in solving this problem. First, it is generally agreed that a solution is not to be found by the Federal Government's causing existing power plants to be retired, assuming that these are reasonably efficient. Rather the problem is to bring about an increased consumption of electricity, so that the power from the dams may be devoted to supplying new markets.

Second, it is generally agreed that the key to an increase in power consumption is lower electric rates for the consumer. The recent experience of the cities acquiring electric systems in the Tennessee Valley is fresh in your minds. You remember that substantial reductions in rates were put into effect by several of the municipalities immediately upon their acquiring electrical properties, and that the amount of energy consumed increased very sharply as a result. This has been the experience in the Northwest. About January 1 of this year my home city of Tacoma felt dissatisfied with its record of having the lowest electric rates of any city of the United States and made a still further rate cut. Scarcely 3 months went by when the revenues of the system had so increased that the net earnings were back up to the level which existed before the reduction was made. Over a period of years it has been the experience of all the municipally owned plants of the State of Washington that a reduction in electric rates has resulted in a corresponding increase in demand. This results because lower rates render it possible for electricity to be put to new uses. It is reasonable to infer that the continuing reduction in rates will result in still further increase in use. Electric heating and air conditioning in homes are just two of the many uses which remain for the future to develop.

It is still further agreed, Mr. Speaker, that if the consumption of electricity is to be increased by the decrease in rates charged to the consumer for it, by far the greatest savings can be made in the distribution, as distinguished from the generation of the current. It was a habit of the late Mr. J. D. Ross to point out in his talks on public power that the distribution of electricity requires from 4 to 8 times the cost of generating it; that several times the possible savings in the generating costs may be saved in the field of distribution. Savings in the cost of generation, he pointed out, are to be computed in mills per kilowatt; the savings to be effected in distribution are calculated in terms of cents per kilowatt; and when there are millions of kilowatts sold, the cents soon mount up into many, many thousands of dollars.

The conclusion, therefore, is inescapable, and it is accepted by everyone informed upon the subject, that the problem of distributing the power generated at Bonneville and Grand Coulee is to be solved by such a plan as is calculated to result in the most efficient distribution of electricity to the consumer.

In the State of Washington the people in 25 out of 39 counties have organized county-wide public utility districts, and it is proposed to utilize these to bring about a more efficient distribution of electricity. The Washington State Grange has taken the lead in causing these districts to be formed. This organization comprises between 35,000 and 40,000 dues-paying farmers and persons interested in Agriculture. Many of these people are leaders in their communities, and the reputation of this organization for integrity, courage, and devotion to the public good is such that its influence has extended far beyond its membership. People in the cities, as well as those in the country, have recognized and trusted its leadership.

It is to people in this organization to whom credit largely is due for the public power development in Washington; persons like Ervin E. King, its present master, and Fred J. Chamberlain, popularly known as the Grange war horse, who at 82 years of age is still ready at the drop of the hat to debate any opponent of public ownership and, like a veteran, joust him off his horse. The brilliant young attorney, Jack Cluck, of Seattle, has performed signal services in perfecting legal procedure in this connection, as has also the well-known expert on municipal corporation law, Hon. E. K. Murray, eminent attorney of Tacoma.

The power districts have been organized primarily for the purpose of acquiring existing electric distribution facilities, and to serve as public agencies for the distribution of power from the Bonneville and Grand Coulee Dams. The power districts are admirably adapted to that purpose. They are organized under the Grange power law, which was passed by the initiative vote of the people of this State in 1931. Under this law, a power district is created pursuant to an election held in the respective county, in accordance with the procedure set forth in the law. The districts are governed by three nonpartisan commissioners. These commissioners are authorized to acquire and operate facilities for the generation, transmission, and distribution of electricity, and facilities for the furnishing of water for domestic use and irrigation. The commissioners to date have focused their attention upon electric, rather than irrigation or water facilities, although it is foreseen that later the correlation of electric with irrigation or domestic water

facilities might be made very advantageously. The commissioners may acquire existing utility properties by purchase or condemnation. With the exception of facilities constructed in areas not presently served with existing facilities, it has been recognized that it is preferable to acquire existing facilities rather than to construct duplicating ones, since duplication results in additional and unnecessary costs to the consumer, obliging him to maintain two electric systems where one would be sufficient.

The power districts are authorized to issue revenue bonds as a means of financing the acquisition of any utility properties. Such bonds are a lien only upon the revenues of the utility properties; they do not involve any obligation to levy any tax. Anyone interested in checking the matter will discover that there is no instance on record of any default on any electric utility revenue bond in the history of the State of Washington. It has been the settled policy of practically all of the power-district commissioners to defray the purchase price of any facilities acquired by the issuance of these bonds rather than through recourse to levy of taxes or the issuance of general obligation or tax bonds.

The power districts are founded upon the record of successful experience of cooperative and municipal electric utilities in effecting the most economical distribution of electricity. In the State of Washington there are 17 cities, small and large, which own and operate their own electric utilities. Not a single one of them has ever defaulted on any of its utility obligations. Every one of them has been able to pay for its properties from the revenues of the utility rather than by levy of taxes. Every one of these cities has built up sizable surplus earnings. Some of them have applied their surplus earnings to the payment of the costs of government, the construction of public buildings, and the like.

The publicly owned plant at Ellensburg, for example, applies about 30 percent of its gross revenues for such purposes, while maintaining rates as low as those charged in the surrounding area by the private company serving it. City Light of Seattle has led in every rate reduction which has been made except the one made just a few weeks ago. And even in the case of this reduction, while the city did not lead in point of time, it led in the amount of savings passed on to the consumers. Thus the company effected a reduction in those rate classifications for which City Light has many more consumers than the private company. As a result, the savings to consumers of Seattle City Light will amount to about $210,000 annually, as against about $184,000 annually saved by consumers of the company.

The cities which have lowered rates have not done so by taking from Peter, the taxpayer, and paying to Paul, the consumer of electricity. Each of the cities contributes its share to the costs of government. Tacoma City Light, for example, pays, roughly, 13 percent of its gross revenues to the city and State in the form of taxes, and by way of street lighting and other service furnished without charge.

The success of public ownership has not been confined to the cities. Rural cooperative or nonprofit associations have been quite uniformly successful. Several of such cooperatives operate in rural areas adjacent to the city of Tacoma, for example, and charge rates no higher than those prevailing within the city itself.

The power districts of the State of Washington have embarked upon a coordinated program for the acquisition of distribution and other facilities now operated by private electric companies. The districts have organized a Statewide association composed of the commissioners of the various districts to correlate their action. They have adopted the policy of offering any private company a fair price for the properties to be acquired, or, if such price is refused, to institute condemnation proceedings. The laws on eminent domain in the State of Washington provide for the determination of the fair price to be paid for the properties to be acquired through judicial proceedings, and the law requires that the amount awarded by the court or jury as the fair value of the properties must be paid in full to the owners before any of the properties are taken. The majority of the districts of the State are either negotiating for the purchase of utility properties, or are pressing such condemnation proceedings. Contracts for the acquisition of electric utilities by power districts located in the vicinity of the Bonneville project already have been executed with certain private electric companies.

Now we come to the task which is left to the Federal Government to perform if it desires to facilitate the most economical distribution of electricity from Bonneville and Grand Coulee. That task is to formulate a proper program of financing so that moneys might be made available to the power districts at reasonably low interest rates to finance the acquisition of utility properties which the districts propose to acquire. We have devoted considerable attention to the matter of making loans available to private business, for a number of purposes. Here is a development vitally related to the success of our own Federal projects, and we have given scant attention to it. Is it not time that a sound program be formulated to meet the financial needs of these public bodies?

Even persons who may be committed to the philosophy of private, as distinguished from public, operation of electric utilities should join in the formulation of such a finance program. It is for the people in a given locality, not Members of Congress, to decide whether or not to effect the distribution of power over privately owned or publicly owned distribution facilities. As Members of Congress we have nothing to do with that decision, except as we may see fit to express our personal views to our constituents. When, finally, a local public agency has decided to acquire publicly owned distribution facilities, however, the Congress is confronted with a certain measure of responsibility. That responsibility is to cooperate fully with such local agencies to the end that the electric facilities proposed to be acquired may be placed into efficient, economical operation.

Unless that is accomplished, higher electric rates will be charged and consequently lower consumption of power from the Federal projects would result.

Moreover, it is to be noted especially that the policy adopted by the power district commissioners calls for the payment of the fair value of the utility properties to the owners before the properties are acquired. If duplicating facilities were being constructed, the objection might be raised that the values of existing utility properties to their owners would be sharply cut without compensation to them, and that, therefore, Federal funds should not be loaned in aid of such an enterprise. The policy of the power district commissioners is not to build competing facilities, however. Their policy is to acquire existing utility properties. And the laws of the State of Washington require that the fair value thereof be paid to the owners before any of them may be taken.

In proposing that a financing program be formulated for the power districts of the Northwest, let me make it clear that I am not suggesting that anything be given away to these districts by the Federal Government. I do not propose that any moneys, or materials, or services be granted to them. The power districts are self-liquidating projects and expect to pay for what they receive.

What I do emphasize most strongly is that the Federal Government should take such steps as may be necessary to make funds available as loans to these districts at proper interest rates. I hold that it is almost as important that the Government provide a yardstick for interest rates on money to finance the acquisition of utility properties by such public bodies as it is to provide a yardstick for power itself. The heavier the debt incurred in acquiring such properties, the higher must be the electric rates charged to pay it. And the higher the interest rate, the higher is the debt. We seldom stop to realize that if a power district pays 4½-percent interest on a bond payable over a 30-year period, as many of the Washington power-district bonds will be payable, that a sum representing 65 percent to 70 percent of the amount of the bond issue made to acquire the properties must be paid in interest before the bonds are retired. In other words, the purchase price of the properties in effect must be increased

by almost 70 percent to defray interest charges. This represents an additional burden for the consumers of electricity. This burden presents an obstacle to rate reduction and consequently to the increase in power consumption and resulting increase in demand for energy from the Federal projects.

The Federal Government has found that it is sound policy to make moneys available through the Rural Electrification Administration at interest rates ranging somewhat under 3 percent per annum. Why should not moneys be made available to finance the acquisition of electric properties by these power districts on equally advantageous terms? The revenue bonds of these districts in many ways constitute a better security than that which the R. E. A., under the circumstances, has been able to demand. The R. E. A., by the terms of the law under which it operates, has been confined rather rigidly to the financing of the construction of new facilities in areas not presently served with central-station electric service. The areas served by such construction are those which the private companies have refused to serve—the "skimmed milk" of the market. The projects so constructed for the most part have been comparatively small, without access to power generated at publicly owned facilities, so that they have been compelled to pay the rather high wholesale rates for energy which the private companies have charged. None of these handicaps are presented in the financing of properties acquired by power districts. The properties acquired have been operated by the private company over a period of time, and the record of earnings, expenses, and other factors is available to the investor, to enable him to predict the results of future operations. Connection with an established retail market for the energy is made coincident with the acquisition. The power districts in practically all instances will have access to low-cost energy furnished by transmission lines from the Bonneville and Grand Coulee Dams. The R. E. A. has operated very successfully charging the low interest rate which I have mentioned. Is it not reasonable to assume, therefore, that other Federal agencies should be able to make loans upon more favorable security to power districts at rates of interest at least as low as the R. E. A. has charged?

The formulation of such a financing program should be accomplished by the coordinated effort of, or at least in consultation with, persons who have been identified with the formulation of the power policies of this country, and such Federal agencies as the R. F. C. and the R. E. A. As I read the amendment to the R. F. C. Act which was passed in April 1938, the R. F. C. would be authorized to enter into this financing under existing law. I understand that the R. F. C. already has expressed its willingness to do so, but feels that it is limited by the terms of the act to loan moneys only to projects in which a substantial amount of new construction is involved. This limitation, in effect, would prevent the extension of loans to any more than a very few power districts, and then only in connection with small projects which these districts might undertake. This is so for the reason that when existing electrical properties are acquired, particularly those now operated by the larger electric companies, no substantial amount of construction is required. I myself fail to see that there is any limitation in the law such as that referred to. It seems to me that the R. F. C. is now empowered to make loans to power districts irrespective of the amount of construction involved in a given project. If counsel for the Government feels that such a limitation exists, however, it should be removed at once.

Mr. Speaker, in conclusion, without challenge it can be said the opportunity for power development in the Pacific Northwest is unlimited. Here is a golden field for expansion and demonstration of the beneficent aid which a government may give to its own citizens. Nature has been prodigal in her bounty in that favored region. I urge that our Federal Government provide every possible cooperation and assistance in connection with making available to the plain citizens of our land the multiform blessings which can come from a widespread use of electricity.

Echoes of the Neutrality Fight

EXTENSION OF REMARKS

OF

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

RADIO ADDRESS BY HON. ROBERT J. CORBETT, OF PENNSYLVANIA

Mr. CORBETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

Tuesday night at a dramatic White House conference the current fight to revise our neutrality laws ended. This was an indecisive battle, however, and we are just to enjoy an armed peace until the next special or regular session of Congress. Hence, before the reverberating echoes die away it is well that we tune our ears to those echoes so we may hear something of what it was all about.

I will in this discourse make many positive and perhaps startling statements which cannot be enlarged in the time available; so I urge you to be critical and if you doubt, check those statements against the record.

At the outset I contend that the objectives of the President were defeated first by the fear of what might follow their adoption, and, second, by either the stupid or insincere manner in which the effort was made.

Let us be both realistic and blunt. The administration was never seeking a neutrality law in any sense of the word "neutral." By reason of law and precedent the President of the United States is the dictator of our foreign policy. If it is actual neutrality that we want, the vital essential is then a neutral President. In the recent series of European crises, Franklin Delano Roosevelt has not been neutral, and he does not propose to be neutral in the event of actual conflict. Every word that he or his mouthpieces have uttered since his famous quarantine speech in Chicago indicates that he has already taken sides. His actions have spoken even louder than his words. So far as he can pledge it, the strength of the United States has been volunteered to the London-Paris-Moscow axis for "the duration of the war."

This choice of sides may suit the American people and it may suit the Congress, but if we take Roosevelt at his word, this is not his point. He contends that by throwing our weight into the European balance that we can thus frighten Hitler into waiting for a better opportunity to press his claims. Thus war in Europe may be indefinitely postponed and thus our peace will automatically be preserved.

That is an act of alliance, entente, or power politics. Call it what you will, it is not being neutral.

To make our position evident he has already done most everything possible, except secure the repeal of the arms embargo. When it came to that the Congress had a word to say and they said it. Do not be deceived by clever pronouncements, and inspired editorials. The issue was never which side we will be on in the event of war. The issue was, and it will remain, whether or not we want to be on any side, whether or not we want to intervene in the affairs of Europe, whether or not we want to gamble American treasure if not American blood in the game of power politics, whether we in the event of a general war want to be neutral or want to participate, whether, in short, we want peace or war for ourselves.

The issue was arrived at not so much by the language of the Bloom-Hull bill, as by the fact that the bill was considered to be just one more link chaining our foreign policy to that of England and France. Few responsible persons think that Mr. Roosevelt would deliberately get us into war, but a majority of Congress seemed to think that his policy of doing anything short of war is a very short step into war. And here is an interesting fact. If the notion that by joining the stop-Hitler bloc we can preserve our own peace is sincerely entertained, then the administration forces were guilty of an absolutely astounding blunder.

Here is the record. At the close of the last day of general debate on the Bloom bill, I predicted over this network that such a tide of sentiment had arisen on both sides of the aisle for the repeal of all neutrality laws including the arms embargo, that unless something unforeseen happened that the House would vote the next day to go back to international law and ordinary constitutional procedure. But something did happen. By the time Representative ALLEN of Pennsylvania introduced his substitute bill for the Bloom bill the administration forces were ready and they defeated the proposal by an overwhelming majority—195 to 68. Why did they do it? Why when they were offered all that they advertised that they wanted—the complete elimination of the embargo and all other restrictions of the President's power, did they turn it down? Was it just a stupid blunder or was it insincerity?

I do not know, but I suggest that you write to them to explain before they indulge in any more talk about how necessary it is to repeal the arms embargo if we are to preserve our peace and the peace of the world.

I repeat that from all indications a sufficiently large nonpartisan bloc was ready to eliminate the arms embargo in favor of international law. Had they been joined or even had they not been vigorously opposed by the administration forces the Allen bill would have been sent to the Senate by a trumpeting majority.

Again, but only in committee, the administration forces turned down with scant consideration a proposal to create a nonpartisan neutrality commission composed of Members of Congress with whom the President should advise and consult before taking any decisive action. Had a provision to create such a commission been accepted the arms embargo would have been repealed. The votes were available. But again by a straight administration line-up, the idea was defeated by three votes. Why, I ask, and why now all the moaning and crying? In all fairness, if the present situation is bad, whose is the blame? The President could have had all he asked for from two different angles, but he or his leaders turned it down.

From the beginning, suspicion regarding the President's motives and responsibility had grown. These two happenings only made it worse. And here you have the real reason why the key proposal of Hull's six-point proposal was defeated. A majority of the Members simply were fearful of what might happen. They were not taking sides with Germany, Italy, or anyone, but their own country. They were opposed to lifting the few existing restrictions on the President's powers and here they saw a bill that would not only lift existing restrictions, but one which would grant new and broad discretionary powers to him. Not knowing what might follow passage of the Bloom-Hull bill, they decided to sit tight, and I here make so bold as to predict that if the situation in Europe continues tense, that the arms embargo will not be repealed until we get a new President or until Mr. Roosevelt restores the confidence of the American people and the Congress in the safety of his leadership. America does not want war, and the people are suspicious of anything that looks like an attempt to involve them.

However, you may with wisdom say that suspicion of the President's motives is not a sufficient reason to retain the arms embargo. There are numerous other good reasons, but I will be content to refute the oft-repeated argument for repeal that the threat of our strength added to the stop-Hitler bloc would make the Berlin-Rome axis more fearful of war. That is a correct statement, but Germany and Italy are plenty fearful now. The stop-Hitler bloc has three times the potential man-power, and three times the potential resources of the axis. They have access to all the supplies of the world except our arms, ammunition, and implements of war. They have far greater purchasing power, and did not Deladier declare on July 14 that the French Army was invincible? What can Hitler and Mussolini hope to win in a general war that would be worth the cost, even if victorious?

Competent witnesses have left us believing that the only thing that would make Hitler risk a general war is to save his position. If that is correct, and it is logical, war will come to Europe only if Hitler is desperate, and if he is desperate, the odds won't matter very much.

The President is only asking that we carry coals to Newcastle. But if we follow his leadership we are apt to get burned, worse than we did the last time. Some of us feel that we should be a bit cautious, and that perhaps there is some other way than the exact way he has prescribed to reach the desired end. Isn't it after all getting on your nerves to be told so often that we must do exactly as Franklin D. Roosevelt says or expect disaster to follow? What, pray tell, will we do after 1940?

There is another way to peace in Europe and for ourselves. An eminent Englishman conversed at length with me in my office during the hearings on neutrality. He confirmed my opinion as gathered from English and French newspapers, and as reported by competent foreign correspondents, that a general war could be averted. He said that the English and French people were once satisfied with the appeasement policy; that they would have gone farther with it had President Roosevelt not given hope and vigor to the antiappeasement minorities. Prior to our meddling and prior to bellicose talk by our officials it seems that a discussion and settlement of the grievances growing out of the Versailles treaty was about to happen. Colonies might have been returned to Germany. Economic agreements might have been entered into. A right-of-way through the Polish corridor might have been established.

This hope for a peaceful settlement was temporarily ended, primarily by our joining the antiappeasement forces, and secondly by Hitler overstepping himself in Czechoslovakia. These two things combined to make the antiappeasement forces so strong in England and France that the governments of Chamberlain and Daladier had to yield or fall. Perhaps now that the President has been rebuffed by his Congress, negotiations looking to a peaceful settlement in Europe will be resumed. Perhaps, on the other hand, the damage has been done and France and England will have to make good their bluff if Hitler makes his good. Perhaps our President and his Secretary of State feel some hint of their responsibility and perhaps that is why they are so anxious to be in a position to throw our strength into the conflict. It should be noted here that the President's message to Hitler was not in effect a peace message nor a call to a conference. It was a definite and mighty clever way of putting Mr. Hitler in a bad diplomatic hole plus a fine political gesture to the American people. It did put Hitler in a hole and it did help Roosevelt at home, but it delayed the conference which it was supposed to result in.

Now let us emphasize one other fact that has been generally misunderstood. Article after article, speech after speech praises the cash-and-carry feature of the Bloom-Hull bill. Regardless of the merits of such a feature the truth is that the Bloom bill did not provide for cash payments but for "ordinary commercial credits" until amended on the floor to make such credit available for only 90 days at a time, and the Republican amendment secured by accident in committee to prevent the carrying of arms, ammunition, and implements of war to belligerents was stricken from the bill by the Democratic majority on the floor. Read the RECORD and you will see that my best efforts and the best efforts of several of my colleagues to retain this section were defeated because of the wholehearted opposition of the sponsors of the bill.

Had the Bloom bill passed the Senate, American vessels would have been free to carry anything but our own lethal weapons from anywhere in the world to any belligerent. The elimination of section 9 providing as it also did against the arming of our merchantmen when we were at peace was, to my mind, sufficient reason to vote against the whole bill. Cash was to be paid and title transferred, but our vessels carrying contraband of war were to be allowed to proceed into danger zones where they might be mined, torpedoed, shelled, or bombed. If our boats were thus engaged in supplying the war needs of one side or the other, and if those boats were sunk with the resulting loss of American lives and property, how long do you suppose we would remain neutral?

There is far too much to cover, but I cannot refrain from raising one other question before concluding. Why have we not taken some action regarding the Orient, where a war is actually going on, instead of figuring what to do regarding a war in Europe which may not happen? Is not Japan as much an aggressor today as Germany may be tomorrow? I grant Mr. Roosevelt the wisdom of not now finding a state of war in Asia, but wouldn't it have been better to treat openly with an actual conflict than to have been so concerned about a possible conflict in Europe? Finally, has not China been just as good a friend as, for example, France? Do we not have vital interests in Asia also, and is not pain and suffering just as pitiful on one continent as on another? Aware of your plan for prevention in Europe, I simply urge the logic of considering our problems in order of their imminence.

By way of conclusion, I wish to report that there is as a result of conversations held this week by members of the House Foreign Affairs Committee a live movement under way to combine the plan of going back to international law with the plan of creating a neutrality commission.

My own first love is for a commission to represent the Congress, because it would put a check on rash Presidential decisions on the one hand, and on the other would make for unison of thought and effort on the part of the people, the legislative, and the Executive on sound policies. I tend to favor international law as opposed to binding legislation because it leaves us free to take such action as circumstances demand for the protection of our own welfare. It is impossible to write fixed rules to apply to unpredictable future situations in which flexibility of action is demanded. Toward this end, a group is now committed to work unless something better is suggested. It is at least our hope that we can, on the hard anvil of study and discussion, pound out a safe and sane method of steering our course in a troubled world.

Until then let us urge on you what may after all be the best way to preserve our peace, namely, to keep calm in the face of international disturbances, resist propaganda, recognize that we should not go to war where our vital interests are not seriously involved, remember our past mistakes, and trust in a just God to safeguard a peace-loving people. After all, there will be no war for the United States unless the people demand it, and they will not demand it if they resolve here and now before any general war occurs, that they will not be committed in advance to take part in it, and they will not, except as a part of the defense of their own country, endure all the evils of that war. I repeat that, God willing and the people resolute, this generation of Americans may yet escape a bloody purge of its best sons.

Keeping the Record Straight About Farm Imports

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. COCHRAN. Mr. Speaker, in recent weeks there has been inserted in the CONGRESSIONAL RECORD by members of that faction of the Republican Party who believe it to be to their advantage to attack the commercial policies of the

Government, an increasing amount of statistics which is intended to support the contention that reciprocal-trade agreements are harmful to agriculture. Some of our colleagues have evidently been imposed upon by the authors of these statistical tables and the accompanying comments. They are, in many cases, nothing less than an insult to the intelligence of this House. For example, the increase in the imports of apples are shown. Apparently the authors of such tables do not know that in 1938 we exported $14,700,000 worth of apples, whereas we imported only $44,000 worth, the latter largely border trade with Canada. They would not be worthy of notice if it were not for the fact that some people, glancing at such figures without stopping to analyze them, might assume that they were reliable and told the complete story.

There is such a welter of this statistical misinformation inserted in the CONGRESSIONAL RECORD that it is not practicable to try to show all the errors in detail. In order, however, that readers of the CONGRESSIONAL RECORD may know what to expect in these absurd attacks on trade agreements, I want to point out certain flagrant misstatements that appeared in the Appendix of the CONGRESSIONAL RECORD (pp. 3544–3545).

In the first place, nearly half of the items shown have nothing to do with reduced duties in trade agreements. In other words, the sacred rates of the destructive Hawley-Smoot Tariff Act are in effect. In the second place, on those items on which limited concessions have been made the import figures given misrepresent the facts in the case. For example, less than half of the total cattle imported during the first 6 months of 1939 were subject to lower rates of duty. So that the effects of trade agreements is padded by more than 100 percent.

Following a table showing that imports of selected agricultural commodities were greater in 1937 than in 1933, it is stated that "one has only to read it to see the reason why the American farmers have had such low income during the New Deal administration."

Mr. Speaker, who would believe that anyone would compare 1933 when total farm income had been driven down by Republican policies to $5,117,000,000, with 1937, when Democratic policies had restored farm income to $8,521,000,000, and speak of the low income during the New Deal? Of course, no mention is made of the fact that imports in 1933 were small because Republican policies had so bankrupted the country that few Americans had money to buy much except bare necessities and were abnormally large in 1937 because of the droughts of 1934 and 1936, which were of unprecedented severity.

The following table indicates the relative prices for 1933 and 1937 of the products which appeared in the RECORD of July 26:

Average prices received by farmers

		1933	1937
Cattle	100 pounds	$3.75	$7.01.
Hogs	do	$3.53	$9.48.
Pork products	pound [1]	8 cents	18.2 cents.
Meat products	do.[2]	9.5 cents	21.1 cents.
Butter	do	20.2 cents	29.7 cents.
Cheese (cheddar)	do	13.1 cents	18.3 cents.
Corn	bushel	52.2 cents	55.1 cents.
Wheat	do	74.4 cents	99.4 cents.
Barley	do	43.5 cents	55.6 cents.
Barley malt	do.[3]	47.9 cents	80.9 cents.
Flaxseed	do	88.1 cents	$1.88.
Soybeans	do	98 cents	92 cents.
Cottonseed	ton	$12.85	$19.50.
Wool	pound	20.6 cents	32 cents.
Molasses	gallon	40.3 cents	45.5 cents.
Eggs	dozen	13.8 cents	21.3 cents.
Hides	pound	6.28 cents	15.45 cents.

[1] Market prices on hams, bellies, picnics, and loins.
[2] Market prices on fresh carcass beef.
[3] Market prices for malting barley.
Source: Department of Agriculture.

In that same table there was included a column entitled "United States Acres Displaced in 1937." The gentleman from Pennsylvania [Mr. RUTHERFORD] evidently is not aware that in a very careful analysis which was inserted in the Appendix of the CONGRESSIONAL RECORD (pp. 3109–3112), the Honorable THOMAS F. FORD of California clearly demonstrates that such acre-displacement figures do not approach even within calling distance of the facts.

Let no one be deceived—every argument that is advanced against reciprocal-trade agreements can be answered and refuted.

Some day the Republican Party will undoubtedly disown its child—the Hawley-Smoot Tariff Act.

Prohibition of Gambling Ships

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 29, 1939

LETTER FROM THE JOINT MARITIME LEGISLATIVE COMMITTEE OF THE MARITIME UNIONS AFFILIATED WITH THE C. I. O.

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include a letter from the joint maritime legislative committee of the maritime unions affiliated with the C. I. O.

I am placing this letter in the RECORD in order that the attitude of these unions will be understood concerning the pending bills against offshore gambling ships.

JOINT MARITIME LEGISLATIVE COMMITTEE OF THE MARITIME UNIONS AFFILIATED WITH THE C. I. O.,
Washington, D. C., July 26, 1939.

Hon. LEE E. GEYER,
United States House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN GEYER: In view of the hearing before the subcommittee of the Judiciary Committee this morning we respectfully urge you to sponsor an investigation of the entire gambling situation in and about the county of Los Angeles, Calif.

Unfortunately the testimony of the maritime unions against the bills introduced by Congressman CELLER, of New York (H. R. 7235) and Congressman KRAMER, of California (H. R. 7162) to prohibit gambling ships off the coast of California was construed by some as an attempt to condone gambling so long as it provided jobs for maritime workers.

We merely pointed out that the only people these bills would benefit are the operators of the numerous shore gambling dens in Los Angeles who are very anxious to get rid of the competition of the gambling ships operated offshore. We also pointed out the fact that these ships employ over a thousand workers with a pay roll of over $150,000 per month.

If the sponsors of this legislation are sincerely interested in the abolition of gambling institutions, they can certainly have no objection to an investigation of the entire situation and the drafting of legislation which will abolish gambling and not merely shift the traffic and create gambling monopolies as these bills would do.

We believe an investigation would be a wise step, in view of the inadequacies of the present bills, their effects on all ocean traffic, the precedent of Federal "blue law" legislation, and the variance of the presentation of the factual situation by opponents and proponents of the bill.

We believe that such an investigation will bring out the facts of the situation and prove the incorrectness of statements made this morning by Congressman KRAMER to the effect that the ships are unsafe and that they are used for smuggling aliens into the United States.

The maritime unions will gladly support a thorough investigation of this situation and lend their support to any honest proposal to improve the morals and living conditions of the American people.

Sincerely yours,

STEPHEN W. HARVEY,
Legislative Representative,
National Maritime Union.
W. D. FISHER,
Legislative Representative,
Maritime Federation of the Pacific.
DANIEL DRIESEN,
Legislative Representative,
American Communications Association.

Protection of Private Enterprise

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Saturday, July 29 (legislative day of Tuesday, July 25), 1939

STATEMENT BY HON. JOSEPH C. O'MAHONEY, OF WYOMING

Mr. BURKE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement made by the senior Senator from Wyoming [Mr. O'MAHONEY] on yesterday morning before a subcommittee of the Committee on the Judiciary considering Senate bill 2719. The statement deals at length, and in a very able and eloquent manner, with the subject which was under discussion today under what is known as the O'Mahoney amendment; and I think it will be of great interest to the Members of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PROTECTION OF FREE, PRIVATE ENTERPRISE

Incomparably the most important issue of our times is whether or not the system of private property is to be maintained. By the term "private property" I conceive to be meant the inalienable right of the individual men to work, to save, and to acquire property which they may call their own and which they may dispose of or transmit as they please, a right which they are entitled to maintain against all other men, against all aggregations of men, and even against Government itself.

It was because the founders of our Government believed in this principle as one of the necessary pillars of a free society that they wrote into the fifth amendment to the Federal Constitution the clear provision that no person should "be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation."

PRIVATE PROPERTY RIGHTS ESSENTIAL TO DEMOCRACY

Without the right to private property there can be no such thing as a democratic government. Any force or power which threatens this right threatens political liberty itself. If we look around the world we see political liberty and democracy vanishing before the advance of other systems of government which not only deny the essential liberty of the individual and his right to private property but which are founded upon the principle that the individual has no right whatsoever which the state is bound to respect.

That the people of America are unalterably opposed to all invasions of the right of private property no one can doubt. This opposition has been manifested throughout the life of the Republic by constant and continuous opposition on the part of the masses of the people to the expansion of the powers of government. Though complete and plenary authority over all interstate and foreign commerce was granted to the Congress of the United States by the Constitution, Congress has always been slow to extend that power, and it has never used it to the utmost. Although it has recognized from the very beginning that in the interests of all, in the interests of maintaining order, in the interests of preserving the right of private property, it has been and is necessary for Congress to establish the rules of commerce by which all must abide.

REASON FOR GROWTH OF BUREAUCRACY

Although this is unquestionably the fundamental belief of our citizens, the anomalous fact is that for almost 50 years we have been building in Washington a constantly expanding bureaucracy exercising more and more discretionary power over the economic lives of the people. This has been done though the overwhelming sentiment of the people is opposed to big government. It becomes important, therefore, to understand why boards and commissions exercising discretionary power over the commercial activities of the people have been multiplied in a land which is passionately devoted to the principle of economic freedom.

To me the reason is plain. It is because the commercial boundaries of our time have expanded far beyond all local and geographical frontiers. The village, the town, the county, the State, and not even the Nation, confines the commercial activity of the modern world. A man may now, by the railroad, the automobile, the airplane, the telephone, and the radio, extend his influence far beyond the radius by which our grandfathers and even our fathers were bound. But, more than that, because the instruments of travel and communication made available to humanity by science cannot be developed by individuals acting alone, we have found our commercial enterprises carried on not by individual men with their own capital, but by aggregations of men with the capital, the energy, and the abilities of thousands.

PEOPLE TURN TO WASHINGTON TO GUARD ECONOMIC WELFARE

When men could no longer protect their own economic welfare against what they deemed to be the unfair and improper activities of other men not subject to the jurisdiction of their local laws, they turned to Washington for a remedy. When the railroads, because they were spanning the whole continent, could no longer be regulated in the public interest by the States, the people turned to Washington and set up the first of the regulatory commissions, the Interstate Commerce Commission. From that day down to this, as the sphere of commercial activity broadened it became more complex. More and more commissions were established. Men have complained about the alleged interference of government in their activity, and political campaigns have been waged upon the slogan that there should be less government in business, but it is a notable fact that once established these commissions and bureaus are never disestablished. Quite the contrary, their powers are expanding. In this session of Congress, for example, there is pending a bill to expand the powers of the Interstate Commerce Commission so as to include shipping, and it is only a few years since trucking was brought under its jurisdiction. The significant thing is that there never is any effective opposition to this expansion of Federal regulatory power.

Most of these bills pass without a record vote. We set up a Communications Commission because the inventive genius of man has given us the radio. We set up a Civil Aeronautics Authority because the inventive genius of man has given us aviation. We complain about the details of the administration of these laws, but there is no effective resistance to the principle of regulation upon which they are based because it is universally recognized that there must be law and order, and that there is no agency which may properly establish law and order except the government of all the people.

WOULD FREE BUSINESS FROM GOVERNMENT DISCRETIONARY CONTROL

I have indulged in this preliminary outline of fundamental and elementary principle before undertaking a discussion of the basis of the bill (S. 2719) to provide additional civil remedies against violations of the antitrust laws, because I am very well aware of the fact that this bill has been criticized as another attempt to expand the powers of government in the discretionary control of business.

I deny it. And I want to make it perfectly plain that the primary reason for the introduction of this bill is because I believe that business should be as free as possible from discretionary Government control. I want to liberate business; I want to make it unnecessary to maintain in Washington great armies of Federal agents to watch and superintend the activities of the people, but I know, and I think every sane, intelligent person who devotes a clear mind to this problem, a mind free from emotional reactions, must also know that if business is to be kept free from Government interference it must, first, be kept free from the arbitrary interference of private individuals and organizations of private individuals who by violating the plain provisions of fundamental ethics and of law seek to acquire undue control for themselves over the commercial activities of the people.

BILL WILL BENEFIT GREAT MAJORITY OF BUSINESSMEN

I say that this bill, if enacted into law, will be beneficial to the great majority of businessmen in America, first, because it will protect them against illegal attacks by other businessmen; and, second, because, by preventing monopolistic practices before they take place, it will make unnecessary the continued building up of Government bureaucracies.

It is perhaps natural that men who have not read the bill should jump to the conclusion that it is in fact just another attempt to build up big government. Let me say, therefore, to the committee not only that I know this opinion to be mistaken but that I would not object to any amendment which will clarify the purposes I am now enunciating. Let no honest businessman believe that it is necessary for his protection to preserve the opportunity of the dishonest businessman to exploit the people.

Those who do desire to transgress the antitrust laws have always made it a practice to try to convince the law abiding that it was their legitimate right instead of the unjustifiable license of the exploiter which was endangered. When the exploiter raises the cry that there is too much government in business and that government should leave business alone, he is not serving the best interests of the average businessman; he is only preserving his own license to crush the honest and independent businessman by the use of monopolistic practices.

ANTITRUST LAWS DESIGNED TO PROTECT BUSINESS, NOT EXPAND GOVERNMENT

The antitrust laws were passed for the protection of business and not for the expansion of government. It was no part of the program of John Sherman, Senator from Ohio, when he sponsored the famous Sherman Act in 1890 to erect a vast Government establishment which should supervise the details of American business. His purpose was to reassert and make effective a principle of fair commercial dealing as old as the common law. He wanted to shield business from the attacks of those who by sharp practice and illegal device were willing to close the door of opportunity to others in order that they might make undue profit for themselves. As every member of this committee knows, a contract in restraint of trade was illegal at common law, not in the sense that it was a criminal offense but in the sense that it could not be enforced in a court of law by the parties to it. As was very clearly stated by former

Senator Cummins, of Iowa, in a notable report which he filed with the Senate on February 26, 1913 (Rept. 1326, 62d Cong., 3d sess.):

"The common law was that both contracts and acts in restraint of trade were injurious to the public welfare and therefore opposed to public policy. The Congress of 1890 very wisely borrowed the language of the common law, and with it came the learning of the judges who had from time to time declared and expounded it. It is not the purpose of the committee to recite the development of the English doctrine. It was not always stated with exact accuracy, and there is some inharmony of expression, but it may be said with confidence that a restraint of trade consisted of such unreasonable restriction of competition as impaired substantially and to the public injury the freedom of trade or the freedom to trade."

SHERMAN ACT SOUGHT FREEDOM OF TRADE

The drafters of the Sherman Act went a step farther than the common law, which merely made such contracts illegal, and they provided that every person who made such a contract should be deemed guilty of a misdemeanor, to be punished by a fine not exceeding $5,000 or imprisonment not exceeding 1 year, or both. The law also provided "that every person who shall monopolize or attempt to monopolize or combine or conspire with any other person or persons to monopolize any part of the trade or commerce among the several States or with foreign nations should be deemed guilty of a misdemeanor" and on conviction similarly punished.

It is first important to note that the purpose of this was to keep business free, not from government, because government was not threatening it, but from those businessmen whose purpose was to suppress competition, to restrain trade, to create monopoly, or, in other words, to deprive individual men of their free right to work and to acquire property.

The next important fact to understand is that the Sherman Act was not completely effective. It did not prevent combinations and mergers. It did not prevent contracts in restraint of trade and conspiracies and attempts to monopolize trade, because it depended for its enforcement, first, upon the common-law remedy in the refusal of the courts to enforce such a contract, and, secondly, upon criminal prosecution by the Government after the commission of the offense. The law also made it the duty of the several district attorneys of the United States in their respective districts to institute proceedings in equity in the courts to restrict violations.

WHY REMEDIES WERE INEFFECTIVE

These were all ineffective remedies. Individuals who were injured in their right to carry on free, private enterprise by some powerful aggregation of competitors were unable adequately to defend themselves in the courts because in most cases the perpetrators of the commercial offense resided in distant areas far removed from that in which the injury was suffered and were equipped with financial resources that the injured person did not have. The criminal penalty was also frequently ineffective. A $5,000 fine is no deterrent to a large corporation because a corporation cannot be imprisoned and because there is no effective way to invoke the penalty against the individuals responsible for the offense. The injunctive process was likewise ineffective because it is impossible for the Government to foresee violations or to maintain an army of agents to discover the contemplated acts of those who would evade or transgress the law.

More important even than these, the chief weakness of the antitrust law is the fact that it depends for its enforcement upon variable quantities. It is no stronger than the energy, ability, and disposition of the individual who, for the time being, is clothed with the responsibility of directing the Department of Justice. But even though the Attorney General should be determined to enforce the law against every violator, his activity is circumscribed by the appropriation which Congress is willing to give him. There never has been a time down to this fiscal year in which Congress has been willing to appropriate to the Department of Justice a sum sufficient to enable the Antitrust Division to enforce even the complaints which are filed with it.

COMPLAINTS ORIGINATE WITH CITIZEN

To those who are under the impression that government is constantly seeking for excuses to interfere with business, I recommend a review of the reports of the Attorney General. During the fiscal year which ended on June 30, 1938, the Department of Justice received 923 complaints alleging violations of the antitrust laws. Of these only 59 ripened into investigations conducted by the Federal Bureau of Investigation. Now, let us bear in mind that these were complaints which originated with citizens of the United States and not with the Department of Justice. Individual businessmen came to the Department and made the allegation that their right to free, private enterprise was being invaded by other businessmen. They came to the Federal Government seeking protection, seeking that protection to which every citizen is entitled, namely, the right to operate freely in the economy, the right to the impartial enforcement of the law. Who will say that the businessmen of America are not entitled to this protection? Who will say that the individual private citizen who finds his business being taken away from him by devices and practices which he knows to be condemned by the law is not entitled to have the protection of his Government? And who will dare to say that it is an unwarranted interference with business when the Government official charged with the responsibility of enforcing the law undertakes to do it?

ENFORCEMENT PROVES IMPOSSIBLE UNDER PRESENT LAW

The real source of complaint is not that government interferes with business, but that it is a physical impossibility for government effectively to prevent monopolistic practices under the present law. Year by year vastly more petitions for relief are filed with the Department of Justice than it is possible for the Department to consider. The same is true with the Federal Trade Commission under the Clayton Act. The business of the United States is so complex, so far-reaching, covers so vast an area that it is quite beyond the effective powers of government to carry out an enforcement program which depends upon punishment after the act. That is precisely the reason why I am urging this bill which will depend for its effectiveness not upon the appropriations of Congress, not upon the industry, philosophy, disposition or ability of the Attorney General and his staff, but upon the unwillingness of men who want to violate the antitrust law or who want to go as close to those laws as they can without violating them, to take any chances because of the knowledge that if they should violate the law and close the door of opportunity to other businessmen, they would be charged with personal responsibility in money damages out of their own personal pockets. Men who themselves plan restrictive policies for the corporations they direct would know they were personally responsible for the acts of their corporations and could not rely for escape from responsibility on the inability of their victims to take the case to court, on the inability or failure of the Department of Justice to prosecute, or upon the possibility that, since an economic offense is not ordinarily regarded as involving moral turpitude, the courts would not convict.

BOTH POLITICAL PARTIES FOR MONOPOLY CURE

An examination of the history of the Sherman Act will reveal that probably the most diligent efforts to enforce it were made during the administration of President William Howard Taft, but combinations and mergers proceeded, restraints of trade and the suppression of competition went on practically unimpeded. A great cry went up from all parts of the country for better enforcement of the antitrust laws in order to maintain private competition and keep private enterprise free. Each political party and every candidate for office declared his allegiance to the antitrust laws and his purpose rigidly to enforce them. This has been so invariable that even in 1936 the Republican National Convention at Cleveland, Ohio, adopted a slight modification of a declaration against monopolies which was written for the Democratic Convention of 1908 by William Jennings Bryan.

Said the Republican platform of 1936:

"A private monopoly is indefensible and intolerable. It menaces and, if continued, will utterly destroy constitutional government and the liberty of the citizen.

"We favor the vigorous enforcement of the criminal laws, as well as the civil laws, against monopolies and trusts and their officials, and we demand the enactment of such additional legislation as is necessary to make it impossible for private monopoly to exist in the United States."

Said the Democratic Convention in 1908:

"A private monopoly is indefensible and intolerable. We therefore favor the vigorous enforcement of the criminal law against guilty trust magnates and officials, and demand the enactment of such additional legislation as may be necessary to make it impossible for a private monopoly to exist in the United States."

It cannot be argued that political conventions do not know the sentiment of the people. In times of campaign, party conventions lose no opportunity to give assurance of their desire and intention to keep business free by enforcing the law, by extending to the individual citizen the protection of the Government, but when the election is over, the cry is raised that government should not interfere with business, a cry that results not in the protection of business but in the protection of those who are responsible for the monopolistic practices which are the initial cause of the decline of business.

DEFICIT SPENDING RESULT NOT CAUSE OF ECONOMIC DISTRESS

There are 10,000,000 people now unemployed. There are thousands of little-business men knocking at the doors of Congress for aid, for loans, for protection in order that they may engage in free, private enterprise and the huge aggregations of economic power and wealth that actually dominate the commerce and trade of America are sufficient unto themselves, enjoying great prosperity while millions of our fellow citizens are wholly and completely unable to support themselves and are dependent upon government to keep them from actual suffering.

Let no one say that Government spending is the cause, bad though Government spending may be, and is. Government spending is a result, not a cause. When the last Works Progress relief appropriation bill was before the Senate and the roll was called, not a single vote was cast against it, and when the roll was called upon the same measure in the House of Representatives the vote was 373 for and 21 against. There were no party lines, there were no economic lines in that division. It was the overwhelming confession of the Congress of the United States that it has been unable to solve the economic problem. But more than that, it was a confession that free, private enterprise has been completely undermined in America and that our fundamental principle of economic freedom has been seriously impaired. I say to you that political liberty cannot long endure if economic freedom is lost.

ANTITRUST LAWS CAPABLE OF ENFORCEMENT

"Ah," but it is said, "you cannot threaten business with a drastic statute to provide civil remedies for the enforcement of the antitrust laws as provided in this bill. The antitrust laws are vague and uncertain."

I say to you that the antitrust laws are not vague and uncertain. They have been in the past, because men have been unable to adjust themselves to the changing era in which we live and have governed themselves by habits of thought instead of realities. The antitrust law was originally ineffective because of a blunder committed in the very first attempt to enforce it. It was during the administration of Grover Cleveland when his Attorney General, Richard Olney, brought suit in what is known as the Knight case, to dissolve a merger of sugar refiners in Pennsylvania. It failed because the court said that the combination alleged was a combination of manufacturers and was, therefore, a combination outside of the field of interstate commerce. Because the case was thrown out of court, all practical efforts to enforce the law were abandoned until the Roosevelt-Taft-Wilson era, but President Taft, after his retirement from office, while he was lecturing in law at Yale University, declared his belief that this case failed because of defects in the pleadings. It was his opinion that, if a proper allegation had been made, the case could have been sustained. Be that as it may, in the opinion handed down by Chief Justice Hughes only a few years ago in the Jones-Laughlin case there was enunciated a principle which I feel confident would have sustained the old Knight case.

I am not interested, however, in the matter of pleadings and decisions. The important fact is that the combinations and mergers and restraints of trade which were forbidden by the antitrust laws in 1890, which are forbidden by the common opinion of the people of America, which are not only forbidden by the law but are recognized in the political platforms of both parties as against public policy, have been permitted to continue year after year, because we have not had an effective enforcing statute and because, whenever the proposal is made to enact an effective statute, the cry is raised that it would interfere with business.

WILLIAM HOWARD TAFT CITES CONSEQUENCES OF MONOPOLY

Let us examine the types of violations which are alleged by the businessmen of America when they come to the Government for relief. Let us see whether or not the law can be defined in understandable language. As long ago as 1910, when President William Howard Taft, in a special message to Congress on Interstate Commerce and Antitrust Laws, recommended voluntary Federal incorporation as a remedial step, he undertook to outline the problem, and a quotation from his message is so apt that, in my opinion, it ought to be on the desk of every businessman and every business executive in America. I quote the message of President Taft, because it cannot be said of him that he was a radical who sought to promote Government interference in business. Listen to his moderate and temperate language:

"Monopoly destroys competition utterly, and the restraint of full and free operation of competition has a tendency to restrain commerce and trade."

Observe those words—"the restraint of full and free operation of competition has a tendency to restrain commerce and trade."

Is not that the very heart of the modern economic problem? Are we not suffering from the effects of the restraint of commerce and trade imposed on small-business men? But to continue with Mr. Taft's language:

"It is possible for the owners of a business of manufacturing and selling useful articles of merchandise so to conduct their business as not to violate the inhibitions of the antitrust law and yet to secure to themselves the benefit of the economies of management and of production due to the concentration under one control of large capital and many plants. If they use no other inducement than the constant low price of their product and its good quality to attract custom, and their business is a profitable one, they violate no law. If their actual competitors are small in comparison with the total capital invested, the prospect of new investments of capital by others in such a profitable business is sufficiently near the potential to restrain them in the prices at which they sell their product. But if they attempt by a use of their preponderating capital and by a sale of their goods temporarily at unduly low prices to drive out of business their competitors, or if they attempt, by exclusive contracts with their patrons and threats of nondealing except upon such contracts, or by other methods of a similar character, to use the largeness of their resources and the extent of their output compared with the total output as a means of compelling custom and frightening off competition, then they disclose a purpose to restrain trade and to establish a monopoly and violate the act."

Let's make no mistake about it. These acts, so clearly defined by the former President and Chief Justice, lie at the root of our economic troubles. There has not been a major statesman in our history, from Grover Cleveland to this hour, who has not recognized the inevitable consequences upon business of monopolistic practices. The history of the last 50 years has been filled with prophecies of the exact disasters that now confront us if competition were not maintained.

GOVERNMENT MUST MAINTAIN COMPETITION OR FIX PRICES

In 1913, in the report of the Interstate Commerce Commission, submitted by Senator Cummins, to which I have already referred, we find this illuminating paragraph:

"The committee will not at this time enter upon an extended argument respecting the policy of maintaining competition or competitive conditions in the business of the country. It is well understood that there are many distinguished students and highly trained thinkers who believe that the age of competition is past, and that for the struggle which competition involves there should be substituted combination and cooperation, under such regulation and supervision as will protect the people from the oppression of monopolistic power, and added to the students and thinkers who have reached this conclusion through mere observation and investigation, there are many men engaged in commerce, and who therefore speak from a practical standpoint, who have also concluded that some form of regulated monopoly or concentration should be adopted. All these men, whether theorists or otherwise, admit that if we abandon the effort to maintain competition the Government must undertake, directly or indirectly, to fix prices for the combinations or monopolies. The committee feels that the time has not yet come for so radical a departure from the long-established policy of the country and it hopes that the time may never come when it will be necessary for the Government to assume the task of establishing price for general commodities. It believes that the progress of the world depends in a large measure upon that fair, reasonable rivalry among men which has hitherto characterized the advance of civilization."

Observe the words, "All these men, whether theorists or otherwise, admit that if we abandon the effort to maintain competition the Government must undertake, directly or indirectly, to fix prices for the combinations or monopolies." It is this exact dilemma we have been facing for the last 10 years. Before the beginning of the present administration, the United States Chamber of Commerce, in session in San Francisco, made a formal recommendation that laws should be enacted to provide for what has come to be euphemistically called "self-government of industry." We tried this program in the N. R. A. and we found that it led to the suppression of competition, the closing of the door of opportunity to free, private enterprise, because, for all practical purposes, no man could engage in business without the consent of his competitors. It was during that period that representatives of the Government were running around the country talking about "cracking down" on business and private enterprise and the persons who engaged in it contrary to the wishes of those who were administering the codes frequently had to prove themselves innocent of the charges brought against them by the managers of the codes.

CIVIL DAMAGES WOULD DISCOURAGE VIOLATIONS

When it is thus clear that the antitrust laws have never been effectively enforced to preserve competition because of the inherent defects in the sanctions provided, and when it is clear by trial and experiment that self-government in industry likewise has been a failure, are we not driven to the inevitable conclusion that the time has come actually to try competition, and by effective statutory provisions, prevent, instead of punish, violations of the law?

That is the purpose of the bill before this committee—to prescribe such clear, personal penalties upon the officers and directors who are responsible for commercial policy that they will not be willing to undertake the chance of personal loss in civil damages if they advise and carry through a trade policy which they know to be inherently wrong and plainly condemned by the law.

If President Taft can chart a course for them, they can chart a course for themselves. But, if his definition is not sufficiently clear, it is only necessary to review some of the specific practices which the experience of the Federal Trade Commission discloses.

FEDERAL TRADE COMMISSION SHOWS EXTENT OF MONOPOLISTIC PRACTICES

I hope that the members of this committee will read the testimony which was presented to the Temporary National Economic Committee on behalf of the Federal Trade Commission. Outstanding instances of the last 7 years were described, illustrating the devices and the methods used by some businessmen to crush other businessmen, devices, the plain purpose of which was to suppress competition sometimes by fraud, sometimes by coercion, sometimes by sharp business practices, all of which led to the building up of concentrated control of American business. Instances were marshaled to describe 45 different monopolistic practices, each of them well known to be unfair and unethical as well as illegal.

On March 1, 1939, Mr. P. B. Morehouse, one of the staff of the Trade Commission, presented the summary of 15 different cases, selected from a larger compilation of 59 cases. Every one of these 59 cases was the result of the complaint filed with the Commission by some businessman. In none of these cases did the Federal Trade Commission act on its own initiative. In none of these cases did the Federal Trade Commission exhibit a desire to interfere with business. The cases, in every single instance, were initiated by citizens of the United States who came to the Federal Trade Commission for protection against practices and devices which they believed to be in violation of their rights and in violation of the law.

Here, for example, was the case of certain tin-plate manufacturers who engaged in a combination to cease the production of a certain kind of "stock plate," and to require the buyers of their product to accept what the trade knows as "seconds" up to 25 percent of the full order.

Here was the case of 750 dealers in building materials who entered into a combination to control and confine retail distribution in building materials and supplies, and to prevent direct sales by manufacturers to nonrecognized dealers, consumers, contractors, or even to governments. In other words, this combination undertook to prescribe from whom the business consumer and the individual consumer could obtain their materials.

Another case told the story of a combination of eight separate corporations manufacturing liquid chlorine for industrial and commercial purposes. These corporations manufactured a commodity for the use of business and entered into a combination to

eliminate competition among themselves and to affix the price which other business was compelled to pay, thus completely eliminating competition.

It would be possible to go on for hours listing the various kinds of monopolistic practices which have been used to restrain trade and commerce, and which have contributed to the unfortunate economic condition in which we find ourselves today, a situation which is marked by the unemployment of 10,000,000 of our fellow citizens.

I shall place in the record here the full list of 15 selected practices presented to the Temporary National Economic Committee by the Federal Trade Commission, and I shall also file for the record the 45 different types of unfair competition and monopolistic practices cited to the T. N. E. C. by the Trade Commission.

DEVICES IN RESTRAINT OF TRADE EASILY IDENTIFIED

The point I am emphasizing here is that the essential devices and practices in restraint of trade are easily identified, and no businessman need be in doubt for 5 minutes. No businessman who resorts to conspiracy, coercion, to agreements designed to drive a particular competitor out of business, agreements to divide territory, to pool earnings, to apportion business and the like, can be under any doubt that he is engaging in a practice which is contrary to public policy and which has the inevitable result of depriving other businessmen of their inalienable right freely to engage in business.

ANY VAGUENESS OF ANTITRUST LAWS SHOULD BE CLARIFIED

If it be true that the antitrust laws are vague and uncertain in some particulars, no one will deny that they should be clarified. Indeed, that is one of the subjects now under examination by the Temporary National Economic Committee. But for the purposes of the bill now under consideration, in whatever degree the laws are not clear, it would be quite impossible to secure a verdict in damages from any court or jury under this bill.

The measure is drafted to enforce the Sherman Antitrust Law, the antitrust provisions of the Tariff Act of 1913, and sections 3 and 7 of the Clayton Act. The Sherman Act has already been discussed. Let me here insert the three other enactments. It will be unnecessary to read them at length. But a reference to section 3 of the Clayton Act emphasizes the point I have been making—that no businessman who undertakes to enter into economic warfare against another businessman need have any doubt of the meaning of section 3 of the Clayton Act, which simply makes it unlawful for any person to impose upon any lessee or purchaser of his commodities a condition not to use or deal in the commodities of a competitor. It takes no lawyer or economist to understand that prohibition, and yet it is one of the devices whereby the business of America, which we are all seeking to build up, has been restrained and prevented from reaching its full fruition during the past generation.

PROVISIONS SUMMARIZED

The provisions of this measure may be briefly summarized as follows:

(1) A violation of any provision of the antitrust laws by a corporation is made a violation by every officer or director who has participated in causing the action to be done.

(2) Officers or directors so participating in causing a corporation to violate the antitrust laws are themselves guilty of the misdemeanor defined by the present law.

(3) Such an officer or director is made liable to forfeit to the United States in a civil action brought by the United States a sum equal to twice his compensation from the corporation, in whatever form that compensation may be paid, for every month during which the violation occurred.

(4) Such officer or director may be enjoined from rendering any service, direct or indirect, to such corporation, permanently or for a period not less than 90 days in the discretion of the court, or from receiving any compensation or from engaging in competition with the company he is enjoined from serving.

(5) Any corporation which violates the antitrust laws is made liable to forfeit to the United States in a civil action brought by the United States a sum equal to twice its total net income during every month in which the violation occurred.

(6) Provisions for the consolidation of cases and for preserving the right of trial by jury are contained in the bill.

This is the first draft of the bill. I do not pretend to assert that it is perfect or that its provisions should not be changed. I am not prepared to insist upon the measure of damages contained in the bill. I am not prepared to insist, for example, that any corporation which consists of numerous subsidiaries or numerous business enterprises should be penalized in all its operation for a violation committed by a particular subsidiary or division. It might easily be that this measure could be made narrower without losing any of its effectiveness. For, after all, I am not particularly concerned with punishing offenses against the economic law—I am concerned only in preventing them, because I know, and it seems to me that the experience of the last generation amply proves, that the big government of which we are all so fearful has been the direct result of the monopolistic practices condemned by the antitrust laws, and that if business in America is be kept private, it must first be kept free.

MAINTENANCE OF COMPETITION CHALLENGE TO STATESMANSHIP

If the history of the last 10 years teaches anything, surely it teaches that there is opportunity enough in the world for all, and that it is not necessary for any man to resort to unfair methods and practices in order to make a living. Nature has provided an abundance but we have apparently been operating under fear that there is not enough to go around, and in our fear we have brought upon ourselves the very result that we have sought to avoid. With the resources of America practically untapped, with the farms producing more food than we have the purchasing ability to consume, with industrial plants capable of meeting almost every demand, with men ready and willing to work and other men ready and willing to invest their capital, it is a reflection upon our intelligence that we hesitate, first to make an effective rule against those sharp practices in business which restrict opportunity, and, second, to hold out every possible reward to energy, courage, and ability in private business.

There has been much discussion of late of Government spending, and the reasons why investment of private resources seems to lag. It has been suggested by some that the opportunities for private investment are passing, that because the population is not growing as rapidly as it used to grow, and the geographical frontier has vanished, that because many industries have all the plant capacity they need and investment abroad has become a risky business, it is now necessary to turn to investment in consumer goods rather than to investment in capital goods. Others suggest that public enterprise must be expanded and that the Government must find a way of gathering up private savings and directing them to the construction of great enterprises to be used by all the public.

It has seemed to me that both of these suggestions are the result of a defeatist philosophy. I cannot bring myself to believe that the progress of humanity has ceased or that opportunities for private initiative no longer exist. Every bit of the progress we have achieved to date has been the result of individual initiative. The invention of the steam engine, the invention of the gas engine, the telephone, the telegraph, the airplane, and, within the last few years, radio and television—all of these things are the product not of consumer enterprise or of public enterprise but of the genius of individual men. These and all the other inventions which have blessed mankind have been the results of the competitive urge, and like the authors of the Interstate Commerce Committe Report of 1913, from which I have already quoted, I believe "that the progress of the world depends in large measure upon that fair, reasonable rivalry among men which has hereto characterized the advances of civilization." It is the function and the duty of government to promote and protect that rivalry. It is a challenge to statesmanship to make certain that this objective is attained and that competition in America's commercial life shall not be eliminated.

To accomplish that purpose let us first make certain that competition is preserved by preventing the restraints which have throttled it in the past; and second, let us break open new channels for the investment of private savings in free, private enterprise.

It is not for me here to discuss the means whereby the latter may be accomplished. The bill before you embodies only the first objective—the maintenance and protection of the competitive system. Let us make no mistake about it. The perpetuation of American institutions, the perpetuation of religious and political freedom, the perpetuation of individual freedom, all alike depend upon the preservation of economic freedom. There can be no economic freedom unless we have free, private enterprise which is protected from all attacks from any source, whether private or public.

Cotton Warehouseman Admits Storage Charge 40 Percent too High; Cheaper Rates Possible

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. CRAWFORD. Mr. Speaker, in spite of all the claims made by House Members who represent cotton districts where loan cotton is stored to the effect that cotton warehousemen need the exorbitant storage rates now being paid by Commodity Credit Corporation, under permit to extend my remarks, I submit the following information showing that a cotton warehouseman admits the storage charges are too high and that cheaper rates are possible.

It is interesting to note that Mr. Bateman, president of the Southeastern Compress & Warehouse Co., takes the position the Commodity Credit Corporation "has been hamstrung by various Congressmen and Senators" every time the Corporation has attempted to effect savings in storage rates. Furthermore, in accordance with the figures submitted by Mr. Bateman as to the amount required for storage as payment to the warehouses on a competitive basis it is clear ample space can be obtained at 40 percent less than the rates which will be paid by the Commodity Credit Corporation for the year ending July 31, 1939.

The following is Mr. Bateman's letter to me on this subject, and following the letter is the article appearing in the Atlanta Constitution under date of July 27, 1939, covering this subject:

SOUTHEASTERN COMPRESS & WAREHOUSE CO.,
Atlanta, Ga., July 27, 1939.

Hon. FRED L. CRAWFORD,
House Office Building, Washington, D. C.

DEAR MR. CRAWFORD: Enclosed herewith is clipping from this morning's issue of the Atlanta Constitution, relative to your statement yesterday about the "cotton warehouse racket."

The Constitution called me for a statement, inasmuch as we were third on the list of those warehouses receiving large amounts of storage, and you will note that I have issued statement agreeing with what you have said.

Our warehouses are three-fourths empty, and there are millions of bales of empty space at the ports. These plants would be glad to offer the Government extremely attractive storage rates if storage could be placed on a competitive basis.

The Commodity Credit Corporation has tried to handle the matter in a businesslike manner; but you, of course, know the story as well as I do of how they have been hamstrung by various Congressmen and Senators every time they try to effect savings in storage rates.

Yours very truly,

DUPUY BATEMAN, JR., *President.*

The newspaper article referred to is as follows:

LEGISLATOR CHARGES "COTTON WAREHOUSE RACKET"—MICHIGAN SOLON DECLARES STORAGE PRICE MAKING GROUP RICH AT EXPENSE OF TAXPAYERS, FARMERS

Representative FRED L. CRAWFORD, Republican, of Michigan, charged in Washington yesterday that an "entrenched group of warehousemen, who are getting rich at the expense of the taxpayers and the farmers," are attempting to deny the Government the right to say what it shall do with its own cotton.

He made public a list of 98 warehouse firms that he said were engaged in a "cotton warehouse racket," from which they were receiving from $25,000 to over $5,000,000 for storage of Government cotton during the year just ending.

In the Crawford list were the following warehouse companies in Georgia: Southeastern Compress & Warehouse Co., Atlanta; Georgia-Carolina Warehouse, Augusta; W. C. Bradley Co., Columbus; Savannah River Warehouse Co., Augusta; and the Central Real Estate Warehouse Co., Augusta.

AGREES WITH CHARGES

Dupuy Bateman, Jr., president of the Southeastern Compress & Warehouse Co., yesterday agreed with Representative CRAWFORD'S charges.

"I would like to see Congress strip the mask from the whole thing," he stated, explaining the Government could get the same service from warehousemen at approximately half the cost if the system was placed on a competitive basis.

As it is, the cotton is "frozen" in the warehouse where the loan is made. There are approximately 2,000 such warehouses in the cotton-growing States, he pointed out, most of them at interior points.

Storage and insurance prices, set by agreement between the Government and warehousemen, now run around $3 a bale for the first year and $2.16 for the years thereafter, Bateman commented. He has estimated that warehousemen, if the system was competitive, could perform the same service at $1.80 per bale the first year and $1.44 for the following years.

WOULD REDUCE RATES

"As it is," he said, "our present rates are at least 10 percent under other interior warehouses, and we have told the Government that any time they would place loan cotton storage on a competitive basis, we would substantially reduce our present rates."

The company, he said, had received $940,000 for loan cotton storage at its interior warehouses since 1935.

Storage figures for other large companies for the same period were given as follows: Federal Compress & Warehouse Co., $8,518,000; Union Compress & Warehouse Co., $1,296,000; Traders' Compress Co., $933,000; Texas Compress & Warehouse Co., $910,000; and the Western Compress Co., $445,000.

WHERE THEY OPERATE

Federal and Union companies operate in the Mississippi Valley, Traders' in Oklahoma and Texas, Texas in west Texas, and Western in California and Arizona.

CRAWFORD'S attack climaxed the refusal of the House Committee on Banking and Currency, of which he is a member, to hold hearings on a bill aimed to facilitate the execution of arrangements for the exchange of surplus commodities produced in the United States for reserve stocks of strategic and critical materials produced abroad. The measure was designed primarily to speed the barter deal between the United States and England, in which it is proposed to exchange American cotton for British tin and rubber.

SAYS C. C. C. HANDS TIED

"The amazing part of this whole program," Representative CRAWFORD said, "comes to the surface when the Government, acting through its agency, the Commodity Credit Corporation, desires to deliver cotton under the provisions of the 'barter deal' recently made with England. The Commodity Credit Corporation finds its hands tied. To meet quality, staple, and fiber requirements of England, the Commodity Credit Corporation must procure title to the cotton on which it has heretofore made loans to cotton growers. The Senate approved a bill which carried provisions that would enable the Commodity Credit Corporation to procure, convey, transport, handle, store, maintain, or rotate the cotton on such a basis as would cost the Government and the taxpayers much less for storage and insurance charges than has heretofore been paid. The Banking and Currency Committee of the House has absolutely refused to allow the present law, which was written in a manner to protect the warehousemen at the cost of the taxpayer and the farmer, to be amended by the Senate bill so that the Commodity Credit Corporation could effect savings and prevent exploitation by the warehousemen.

Wage-Hour Amendments

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 31, 1939

RADIO ADDRESS OF HON. MARY T. NORTON, OF NEW JERSEY

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio yesterday:

May I say at the outset that I am very happy to have this opportunity to inform the people of the country of the present attempt to emasculate one of the finest pieces of labor legislation that has been enacted in the history of this country, the Fair Labor Standards Act of 1938, commonly known as the wage and hour law.

To go back just a little into the history of this legislation, I would like you to go with me back about 2 years when the wage and hour bill was introduced in the House of Representatives.

After months of hearings, this bill was reported to the House by the Committee on Labor and a rule was sought to bring the bill before the House for its consideration. The Rules Committee refused to grant a rule. The result was a petition, signed by 218 Members of the House—the necessary number to override the Rules Committee and requiring consideration of the bill by the House. Due to strenuous opposition on the part of those opposed to all wage and hour legislation, the bill was recommitted to the committee. Then ensued a long period of further consideration and finally another bill emerged from the House Labor Committee and again the Rules Committee refused to grant a rule that would bring the bill to the floor of the House for consideration.

For the second time a petition was resorted to and history was made, for within 2 hours and 21 minutes, 218 names were attached to it by the membership, many Members flying from long distances to get to the House in time to do so. Therefore, it is evident that the majority of the membership of the House demanded consideration and action on this legislation.

The bill was passed by a large majority, although considerable opposition was offered even at that time.

I present this brief history to show the long and hard struggle of the proponents of this legislation against a small, but well-organized opposition whose aim was and is to defeat all labor legislation. Those of us who had worked for so many years—and there were many—were happy indeed when the wage and hour bill became law. Although it was a long hard battle, at times seeming to be a losing fight, those of us who had persevered for the cause of the workers of the country, were victorious against that minority which led the fight to keep the workers of the country in peonage. For the first time in the history of America, those workers who had been paid starvation wages and were worked fantastically long hours by chiseling employers, were, by law, given a small part of what they justly deserved in the form of minimum wages and maximum hours to be worked. Let me state here that when I speak of chiseling employers, I do not mean to speak of all employers for I am well aware that there are numerous employers in this country who do not fall into this category and who do treat their employees fairly with regard to wages paid and hours worked and, of course, the wage-hour law has no application to them. The law was aimed only at those employers who are responsible for that large number of ill-housed, ill-clothed, ill-fed workers of this country, to whom our President has so often referred. It should be noted that this group of the lowest paid workers has never had representatives to bring their pitiful condition to the court of public opinion. Here and there, there was always that small group of individuals who have tried to help these underprivileged, but not until the enactment of the Fair Labor Standards Act of 1938 had the problem of these unfortunates been acted upon by Federal legislation.

When Congress assembled this year Mr. Andrews, the Administrator of the Wage and Hour Division, brought to the attention of the Committee on Labor some inequalities in the law and certain

difficulties that had been encountered in the administration of the law. After due consideration by the committee the bill carrying the number H. R. 5435 was reported favorably to the House by a committee vote of 16 in favor and 2 against. It should be understood that this bill contained only those amendments necessary for the proper administration of the act and alleviating unnecessary hardships imposed by the original law. It should not be understood that these amendments could in any way be construed as emasculating the original law, but were necessary and desirable amendments. At the time the committee reported H. R. 5435 to the House it did so with a certain amount of trepidation, for it had reason to believe that those who have opposed this law from its inception and who staged unceasing opposition to wage and hour legislation from the time the original bill was introduced would make every effort to so amend it that the main purposes of the law would be destroyed. As chairman of the committee, I, therefore, consulted with the leaders of the House and it was agreed that the proper action in order to preserve the law was to bring up H. R. 5435 under suspension of the rules of the House—that parliamentary procedure which permits of no amendments to a bill reported by a committee to the House. Such action was taken, but the motion to suspend the rules was voted down by the House. I feel safe in saying that this action was the result of the unjustified attack on H. R. 5435 by certain pressure groups whose desire and aim was to defeat the bill with the hope that in due time a bill whose purpose would be to exempt a large number of employees now protected by the law would be presented to the House. I am sorry to say that their hope was realized, for such a bill was but recently introduced by Mr. BARDEN, of North Carolina.

It should be stated that Mr. BARDEN was one of the 16 to vote in favor of reporting the committee bill (H. R. 5435). Apparently since that time he has changed his mind.

Time does not permit me to go into the provisions of this bill thoroughly; however, may I point out that the Barden bill would exempt from the provisions of the Fair Labor Standards Act more than 1,000,000 workers from both the wage and the hour benefits of the act, and, in addition, another half million workers would not receive the benefit of the maximum-hour provisions of the act. Hundreds of thousands of employees long exploited would lose the gains that have been theirs since October 24 last, the day the Fair Labor Standards Act went into effect. In addition, the hours standards of from 250,000 to 400,000 higher paid clerical and skilled wage earners would be endangered if the bill were enacted. The exemptions provided for in the Barden bill have no economic or social justification. Special treatment is given to various industries and employers and new discriminatory competitive situations are created. Exemptions included in this bill would apply to the whole series of industrial operations performed on agricultural products from the time they have left the farm and entered commercial channels until they have reached the ultimate retail distributor. For example, such operations as the transportation and storage of all agricultural commodities in urban centers like New York and Chicago would receive hours exemptions. As the Secretary of Agriculture, Mr. Wallace, pointed out in a report to the Senate Committee on Education and Labor, I quote: "The processing of farm products and preparing them for market, when performed off the farm, should unquestionably be regarded as a nonagricultural operation and should be brought under the provisions of the Fair Labor Standards Act of 1938." Of workers in these industries he said further; I quote: "There can be no question but that they are entitled to the same protection under existing legislation as their fellow workers in factory, mill and mine."

It is alleged by the proponents of the Barden bill that the existing wage and hour law is detrimental to the farmers of the country and as a result of this law they are suffering gross injustices. How can this be true, when under the provisions of the act, every farm employee in the entire country is exempt from the act? I want it understood that I am in complete sympathy with the farmers and my record in Congress will prove this to be true. But I resent the farmer being continually used to exploit industrial workers, many of whom have never seen a farm.

With regard to the processing of farm products which is an industrial operation, there is no evidence to indicate that those engaged in taking the products of the farm and the forests and who transform those products into goods for the consuming public, cannot pay the employees who perform this work 30 cents for each hour of work. To the contrary, in many parts of the country where the operations of the processing of farm products are carried on, the minimum wages now prevailing for these operations are more than 30 cents an hour. Where wages are less than this figure, the cost of the increase to 30 cents will not result in an undue burden to the processor, the consumer, or the farmer.

It is alleged that any increase in cost to the processor must necessarily be followed by a reduction in the price paid to farmers for their products. Such studies as are available do not indicate that this is the case. It should also be noted that labor costs in food-processing industries are extremely low in proportion to the value of products. With one exception, wages of the food-products industries constitute a smaller proportion of the total value of manufactured products than for any other major group of industries in the United States. It is therefore evident that wage increases resulting from the application of the standards required by the act would increase only to a negligible extent the retail prices of such commodities.

Time does not permit me to go into the provisions of this bill thoroughly. However, may I point out that the American Federation of Labor, the Congress of Industrial Organizations, the Department of Agriculture, the Department of Labor, and all other groups whose interest is that of protecting the workers of this country have expressed strong opposition to the Barden bill for the reason that it would emasculate the law. I, for one, do not intend to stand idly by while the opponents of this legislation attempt to destroy it.

The Barden bill has never been considered by the Committee on Labor, and yet the Rules Committee, by unprecedented action, now takes upon itself the consideration of granting a rule which would bring to the floor of the House the Barden bill. How the Rules Committee can justify this action in view of the tremendous opposition that has been presented to this legislation since its inception by a vicious minority, a minority that seeks, in my opinion, not only the repeal of this legislation but all other necessary and proper legislation enacted for the benefit of the laboring classes of this country.

I should like my audience to keep in mind that the fight the Labor Committee is engaged in is concerned with people, real, honest, hard-working, God-fearing men and women of these United States. Men and women who have children to feed and clothe and who love these children exactly as we love ours.

The Labor Committee of the House functions in behalf of labor, and I mean not labor organizations alone but the laboring people who have no one to represent them. I believe in labor organizations. I believe in the right of every workingman and woman to bargain collectively and gain for himself every advantage to which he is entitled. I subscribe to that philosophy, but more than that, I believe the Labor Committee of the House has a mandate from the people of this country to give to the underprivileged and unorganized as well as the organized workers, every assistance through legislation that can justly be given.

This, ladies and gentlemen of the radio audience, is what the Committee on Labor has tried to do. This is why the Committee on Labor has been deprived of its rights and privileges by the Rules Committee.

Probably during the coming week, due to the unprecedented action of the Rules Committee, the Committee on Labor, and all other members of the House who desire to protect the wage and hour law, will fight a battle against those who desire to emasculate it. It will merely be a continuation of the battle that started 2 years ago when the original wage and hour bill was introduced. Our purpose will be to prevent the emasculating features of the Barden bill from being enacted. If you believe in fair play, if you believe that every worker in this country, no matter how humble, is entitled to at least 25 cents an hour for a 44-hour week—in short, if you believe in the wage and hour law—tell your Representatives in Congress to stand by the Labor Committee and to demand the right of every worker to a living wage, regardless of whether he comes from the North or the South or from any other part of the country.

Monopoly and the Petroleum Industry

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

Mr. COFFEE of Washington. Mr. Speaker, during consideration by the House of House Joint Resolution 329, which provides for ratification of the interstate oil compact, I had hoped for sufficient time not only to discuss a little more in detail the provisions of the compact and some of the reasons presented for its discontinuance following 4 years of objectionable operation, but also to answer some of the remarks of my distinguished colleague from Maryland [Mr. COLE], found in the extension of his statement at the time the "Connally Act" bill passed the House after considerable opposition.

Due to the lateness of the hour and the crowded condition of the docket at this time, I refrained from entering into any lengthy discussion along these lines on Wednesday, July 12, when the interstate compact resolution was up for consideration, but I do desire to present before this session of Congress adjourns something in answer to the statements made by Representative COLE of Maryland in the RECORD of July 14 last.

President Roosevelt, Secretary of the Interior Ickes, and the Governors of practically all of the oil-producing States, and a large majority of the Members of the Congress have for the past few years endorsed the so-called Connally Act and interstate oil-compact legislation. But so have the major oil

companies, most of the producers selling oil to these companies, and the refineries manufacturing products for them. It is my sincere belief that the President, the Secretary of the Interior, the Governors of practically all of the oil-producing States, and many others, have been ill-advised and misled as to the real effects of this legislation. I feel certain that if the monopoly aspects of this legislation had been as forcibly presented to these gentlemen as the so-called conservation aspects have been presented to them, that they would not favor such legislation.

Personally I have always felt that these laws were essentially trade restraining, price fixing, and monopolistic rather than helpful to the real preservation of our petroleum resources, and that both laws have been unnecessary and inadvisable legislation.

It is unfortunate, I think, that those expressing favor of these measures of doubtful worth do so in the use of generalities and present little argument of a concrete nature. Such generalities contain statements that both the Connally Act and the interstate compact resolution do not foster monopoly. Naturally, those statements draw to the support of the authors thereof many who are not familiar with the operations of the laws but who do not want their position in support thereof misunderstood.

Following the discussion on the floor of the House on June 20, 1939, at the time we were considering the Connally Act, many of the arguments advanced by the proponents were answered by the opposition who participated in the heated debate. Later, however, there was inserted in the RECORD by me, with permission of the House, an extension of remarks which time did not permit me to include in the debate.

Rather than assume the burden of answering my remarks referred to, the gentleman from Maryland [Mr. COLE] took the liberty of calling them to the attention of the Honorable Harold L. Ickes, Secretary of the Interior, under whose direction the Connally Act is administered, with the request that he address a letter to me in answer thereto. The Secretary replied to Mr. COLE on July 5, 1939, and on July 14, the gentleman from Maryland had this letter inserted in the RECORD.

In my opinion, the Honorable Secretary was not responsible for the origination of this letter; the gentleman from Maryland [Mr. COLE] should have replied to my remarks himself; and, therefore, I address my reply to this letter to the gentleman from Maryland rather than to the Honorable Secretary, for whom I have the greatest admiration and profoundest respect.

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 31, 1939.

Hon. WILLIAM P. COLE, Jr.,
House of Representatives.

MY DEAR MR. COLE: I appreciate your having directed to the attention of the Members of the Congress and to the public through the medium of the RECORD the letter to you from Secretary of the Interior Ickes, which letter you requested from him rather than assume the burden of answering my remarks in opposition to the so-called Connally Act. I assume that the Secretary's letter is your reply to my remarks and, therefore, am addressing this letter to you.

In your opinion, I take it, the Connally law does not prevent effective competition in the purchase of crude oil and sale of refined products by restraining trade in crude petroleum and products; the act is not anything more than a trade barrier against the oil-consuming States; that it does not apply only to the east Texas area, where it is enforced rigidly against independent producers, but not against the major oil companies; that the State laws which receive the support of the Connally law are true conservation laws and are administered purely on the basis of maintaining crude oil at a price neither above nor below its economic level; and that the Connally law is not a full-fledged dam that has been built around the production of crude oil, holding the supply at or below demand, thus fixing price.

To my mind, such opinions are erroneous and are not supported by the facts. The experience of the east Texas field amply illustrates the inefficacy of joint Federal and State action to prevent "waste" in oil and gas production. No one has proved nor can he prove by the very physical nature of things the extent, if any, to which the ultimate recovery of oil and gas has been increased or the time of use extended by enforcement of the provisions of the Connally law. It is idle and misleading to talk continually about this "conservation" in abstract, moot, and vague terms. What is overproduction? What is stabilization? What is waste? What is conservation? You must define these terms if you do not wish to misguide.

The importance of the East Texas field is recognized generally. All agree that it is one of the world's largest oil fields. It was discovered by an independent wildcatter, was largely developed by independent producers, and was originally looked upon as the salvation for independent refiners in competition with the major oil companies. But the major oil companies did not want this competition and took steps to have the oil "conserved" as they call it. Thus this legislation instigated and sponsored by them was passed as a conservation measure, but by whatever name, trade was restrained, independent competition practically eliminated, and prices stabilized against the consumer. By this means, competitive oil has been conserved, not for the public welfare, but for the major oil companies themselves, to be produced at a time when independent ownership has vanished, competition no longer threatens, and when monopoly prices can be charged.

The Connally law does not establish the allowable production of oil in the East Texas field. Neither does it do so for any other oil field. But the law does make effective State production-control recommended by the United States Bureau of Mines and changed into law by the oil-producing States. The allowable oil production in the East Texas field is determined monthly, pursuant to Texas law, by the Railroad Commission of Texas. In so doing, the commission attempts to limit the daily production in such a manner that the reservoir pressure is maintained at points where the physical waste of oil and gas is believed to be avoided. Engineering testimony before the commission on numerous occasions has established the maximum allowable of approximately 20 barrels of oil per well daily.

Obviously, under such restrictions, a major oil company with thousands of wells in many fields in diverse parts of the country, with huge volumes of stocks, and very often access to unlimited imports, is not in the least harmed. But with the small refiner having only a dozen or so wells which ordinarily would yield several thousand barrels of oil a day, when this only supply is forcibly cut down to a scant 200 barrels per day, as it is by the workings of this law, he must either sell out to the major at a discount or go bankrupt. Small refiners by the score have, as a result of this handicap, gone to the wall in the East Texas field.

As for the "engineering testimony" relative to the "maximum allowable" for this field I dare say that most of such testimony has originated in the offices of the major oil companies themselves who employ most of the petroleum engineers of the country. Testimony in innumerable lawsuits involving geological and engineering problems of the production of oil, water, and gas shows conclusively that it is just as easy to employ an "expert" to testify one way as another. The very mootness of the questions accounts for this inevitable indefinite circumstance; the ethical character of the geologists and engineers is not necessarily at fault. Nevertheless, I have not heard of a case where an engineer has testified against his employer.

But regardless of the maximum allowable and the degree of conservation claimed, there still remains the fact that production control is trade restraining, price-fixing, and monopolistic. Therefore, the conservation argument is beside the point unless monopoly is the price we wish the public to pay for the conservation we think we achieve. Personally, I believe that that price—monopoly—is too much to ask of the independent businessman, the consumer, and the public in general.

The east Texas field, in the spring of 1933, had an allowable of 1,000,000 barrels a day instead of the less than 500,000 barrels it now has. Attention has been called to the fact that the drop in reservoir pressure of 65 pounds which occurred at a time when 12,000,000 barrels of oil was produced in 15 days. It is contended that if that rate of decline had continued, most of the wells in east Texas would have been reduced to pumping by the close of 1933. Sooner or later all wells cease to flow and must be pumped. The flowing life of a well is not an index to ultimate recovery from it or its economic life. Some wells cease producing altogether when natural flow ceases. Other wells never flow, but are pumped for tens of years. The real predicament with the east Texas field was that production from this field displaced production from more costly fields elsewhere. But that situation was the result of the functioning of the law of supply and demand. Had production from the east Texas field not been restricted, the flush would have soon been off whence cost in that field would have risen and production reestablished elsewhere. It cannot be denied by any logical analysis that by restricting the output of the east Texas field, consumers were denied the benefit of the lower cost oil, regardless of the conservation argument.

Since the Connally law was enacted in February 1935 the total demand for oil in the United States has increased nearly 35 percent, or from 2,742,000 barrels daily in February 1935 to 3,600,000 barrels daily in February 1939. During the same 4-year period crude-oil production has increased but 28 percent, or from 2,600,000 barrels daily in February 1935 to 3,338,000 barrels daily in February 1939. From March 1935 to April 1939, inclusive, the total demand for oil in the United States was 5,283,043,000 barrels. Domestic crude-oil production during the same period totaled only 4,845,418,000 barrels. There appears to be considerable restraint of trade in such a situation.

The above data are from statistics published by the United States Bureau of Mines. They indicate that during the 4-year period of the Connally law domestic producers were prevented from supplying 437,625,000 barrels of the total demand. When domestic

production is prohibited from meeting the total demand obviously the deficiency in current domestic output must be made up from other sources of supply.

What are these other sources of supply? They are imports, withdrawals from stocks, natural gasoline and benzol, all practically entirely in the hands of the comparatively few major oil companies most actively sponsoring this legislation. And why should not these companies sponsor such legislation? This margin set aside exclusively for them and for which the domestic producer cannot compete [by virtue of this legislation] has meant more than $500,000,000 worth of business to them.

Even more concretely: In 1934, before this law was passed, the largest 20 oil companies showed aggregate net profits of $152,000,000; in 1935 they showed $254,000,000; in 1936 they showed $410,000,000; and in 1937 they showed $566,000,000. Meanwhile, thousands of independent operators were forced out of business.

In February 1935 the posted price of 40° A. P. I. gravity and above, Oklahoma-Kansas crude oil was $1.08 per barrel, and at present it is $1.10. East Texas crude oil was $1 per barrel, and now it is $1.10. Comparable grade Gulf coast crude was $1.14 per barrel as compared with the present posted price of $1.28. From discovery of the Drake well near Titusville, Pa., to the year 1935, 16,598,444,000 barrels of oil were produced in the United States with an aggregate value of about $20,415,809,000, or an average of $1.23 per barrel. The average crude-oil price since the beginning of 1935 has been about $1.08 per barrel, or 15 cents per barrel less than the 76-year average.

On the surface, it would appear that "conservation" does not "maintain crude oil prices above economic levels." But the facts are that where production has been restricted the price of crude oil has increased and has been considerably higher than it would have been under the influence of unrestrained trade. To compare the average price of crude oil since enactment of the Connally law with the average price over a 76-year period, or any other long period prior thereto is illogical and misleading. The average cost of producing crude oil since 1935 in all probability has been more than 15 cents per barrel less than the cost of producing it during the 76-year period. And, if so, what place has this fallacious argument against higher prices for so-called conservation?

But, above all, the consumer is paying the price for this so-called conservation. During the year 1934, prior to this law, the average price (exclusive of taxes) of gasoline in 50 representative cities was 13.60 cents per gallon. During 1935 it was 13.55 cents, during 1936 it was 14.11 cents, during 1937 it was 14.40 cents, and during 1938 it was 13.91 cents.

More significant is the fact that whereas the price index of the United States Bureau of Labor Statistics for all commodities (even including petroleum products) from 1935 to 1938, inclusive, decreased nearly 2 percent, the index for petroleum products during the same period increased nearly 9 percent.

But probably the most vicious price circumstance of this production control is the fact that the price of crude oil, especially in the east Texas field, has been increased out of all reasonable relationship to the quoted prices for gasoline manufactured from such crude. In 1933 the ratio of the posted price of crude oil to the quoted price of gasoline at the refinery in the field was 19.6. For the same grades of oil at the same time the ratio in representative west Texas fields was 13.6. But by the beginning of 1938 this ratio for east Texas was 32.1 against only 23 for west Texas.

This rigging of the posted price for crude oil out of all reasonable proportion to the price of gasoline is commonly called the "refinery price squeeze," and is a direct result of the price-fixing attending these so-called conservation laws. At one time, March 1938, it was possible to buy a barrel of gasoline in the east Texas field nearly as cheaply as it was to buy a barrel of crude oil. No independent refiner, with his own supply hampered and forced to pay the abnormal price for crude, can hope to operate at a profit, and for that reason scores of them were forced out of business.

Labor has not benefited by this kind of conservation. Actually the index of employment in crude petroleum producing activities has decreased from 74.2 in February 1935 to 65.9 in April 1939. Despite the fact that practically as much oil will necessarily be refined under production control as without it, in petroleum refining the employment index has decreased from 116.2 in February 1935 to 116.1 in April 1939.

By your own admission you state that prior to enactment of the Connally law there were more employees at refineries than when the law was enacted. Most certainly employment as a whole is less in the great east Texas field since enactment of the Connally law than before it, and 30,000 unemployed in this field alone as a direct result of these laws is a conservative estimate which you have not, and, I believe, cannot, refute with facts.

When the Connally law was enacted there were 81 refining plants in the east Texas field, 70 of which were skimming plants and were equipped with cracking facilities. It is well known that skimming plants do not produce as much gasoline per barrel of crude oil refined as do plants equipped with cracking units. But it is also well known that skimming plants produce gasoline at a much lower cost per barrel of crude oil refined than do plants equipped with cracking units, especially when crude oil is plentiful, cheap, and of high gasoline content, as it is and still would be in the east Texas field were it not for the trade-restraining effect of the Connally law. Thus it is that skimming plants find it difficult to compete with the cracking units and not because the cracking plants are more efficient. It was not on the basis of comparative efficiencies that of the 81 plants existing in east Texas when the Connally law was enacted only 42 were operating; it was because of the enforcement of the predecessor to the Connally Act, section 9 (c) of the National Industrial Recovery Act, which, like the Connally Act, prevented these skimming plants from securing crude oil at competitive prices. Today, I am informed, there are less than half a dozen of these original 81 independent refiners operating in east Texas.

It is significant to note that with one exception all of the refineries in the east Texas field were independently owned. True competition from these refineries was something with which the less efficient or higher-cost major oil companies could not compete. The companies could not conspire to restrict production, restrain trade, eliminate competition, and fix prices without violation of the antitrust laws, so they devised and supported this legislation as part of a scheme to place the Government in the position of doing for them that which they could not do legally themselves.

The enlarged use of cracking equipment at east Texas refineries has resulted in an increase in the number of gallons of gasoline produced per barrel of crude oil refined in that field. But this fact alone does not necessarily indicate a "saving" of "4,710,000 barrels of crude oil." Such argument is as fantastic as it is presumptuous. How do you, Mr. COLE, know that if all the crude oil of east Texas were "skimmed," that the resulting residuum would not be used elsewhere as cracking stock for the manufacture of more gasoline? Such cracking stock would no doubt be cheap in relation to the cost of crude oil which it would supplant and thus really conserve crude oil in the ground.

Theoretically, the regulations which have been issued under the Connally law apply with equal force to all operators, whether they be majors or independents, and, theoretically, the Connally law applies to all States which have enacted legislation to control the production of oil. But practically, and as a matter of fact, the law has not been enforced effectively and for the most part not at all in any but one field—east Texas—and it is interesting to note that it is from this field, and this field alone, that there is any real threat of independent competition to the major companies.

Investigations are reported to have been made from time to time with the idea of enforcing the law elsewhere, but nothing has come of them. For several years the law is commonly reported to have been openly violated in the State of Louisiana, but not until the recent political scandals in that State were opened did agents of this law authority go into that State to "investigate." If the law were a good one, the discriminations in its enforcement have made it a bad one.

The law cannot possibly apply with equal force to all operators, whether they be majors or independents, also from the very physical nature of things. The major companies, through their extensive and intricate pipe lines, gather oil from thousands of wells, run it through a maze of pipes great distances to their refineries at seaboard. The police force of the regulatory body set up under this law is not adequate enough to check on the production and movements of crude oil and products of the major oil companies. With the smaller independent the case is different. He usually obtains his oil from a few wells and manufactures relatively small quantities of products. It is an easy matter to check the movements of his oil and he has been hounded to death while the majors go along in comparative ease with a minimum of molestation.

These things were all brought out clearly at the hearings on the bill to extend this law, which was originally an emergency measure. You are merely repeating the testimony of the proponents of the measure. You have apparently neglected the very forceful and able testimony of the opponents.

I have nothing but the highest respect for you, personally, and have equal regard for your beliefs and intentions. But we are all likely to be misinformed at one time or another. The petroleum industry is highly specialized, and our problems with it are complex. Special interests have always tried to influence the Government in supporting, passing, and enforcing laws in their behalf rather than in the public interest. The petroleum industry affords the classical example of monopoly in American industry. These interests have always had their agents close to, if not actually hidden in the Government, usually in the form of departmental underlings who for some reason are sometimes "industrially minded" instead of public-spirited. My position is one of trying to aid and not combat you in a true understanding of a difficult problem. Despite your high-minded intentions, in light of the facts, I cannot feel but that you have been misinformed and ill-advised. But whatever the reasons for our differences of opinion, I leave with you the thought that, regardless of the conservation argument for this legislation, there is definitely concomitant to that argument a monopoly aspect to which we cannot be blind.

I appreciate greatly the interest which you have shown in the conservation of the Nation's oil and gas resources. If there is any further information which may be helpful to the understanding of the many problems associated with the monopoly problem in the petroleum industry, I shall be glad to attempt to furnish it.

Sincerely yours,

JOHN M. COFFEE,
Representative from Washington.

I hope the Members interested in the important subject of legislation as it shall apply to petroleum resources will read the extension of remarks made by the gentleman from Maryland [Mr. COLE] in the RECORD of July 14, 1939,

and the reply thereto given above. If there is additional information and facts on the subject which they desire and will communicate with me for that purpose, I will be glad to try to supply it.

Pernicious Political Activity Hatched in the Hatchery of Iniquity

EXTENSION OF REMARKS

OF

HON. GUY L. MOSER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

Mr. MOSER. Mr. Speaker, on the subject matter of the bill S. 1871, I say that no bill of this sweeping effect has, in my judgment, ever any right to be passed by any body on its consent calendar. An examination of the CONGRESSIONAL RECORD for April 13, 1939, will show, on page 4191, this to be exactly the manner in which it passed another body.

We are told that the disclosures of the Sheppard committee in its investigation of politics in relief last year made this bill necessary. But did it? Having personally examined the report of that committee, I find no evidence of such necessity. On the contrary, in a certain State there were revelations and grand-jury inquests resulting in indictments disclosing nepotism. Coincidently somebody rather simultaneously, according to all diagnoses, contracted the recurring malady of "Senate itch" in this body. Opprobrious as must have been the disclosures of nepotism in that State, and effective as the patronage thereunder was indicated to have appeared from the distance, lending no enchantment in such case made and provided, it is singularly coincident that the bill to correct the disclosures made in the Sheppard report, simultaneously bore evidence of purification offered from the State where the nepotists were indicted, as evidenced in the amendment inserted into the deficiency relief bill last January 1939, in another body, for the same stated and publicized reasons. But was it? Quite the contrary, it had the effect to transfer from nominal political sponsorship patronage selections in administering relief to the Workers' Alliance. The well-known activities of that organization, past and present, in the proposed and pending strikes against the laws of the United States, enacted by the Congress and approved by the President, who has publicly announced his executive responsibility and determination to enforce them. The contrast is obvious to any discerning mind.

The membership of another body, having seized upon all opportunity to grasp every vestige of patronage and transform it to its own uses, and disdainfully thereby attempting to make a "rubber stamp" group of this body, prompts a feeling of revulsion, and righteously so, at the presence of this bill in this body for determination. When the nepotists in a certain State had their hands soiled by the indictments, then and not before, did there appear any manifestation of a desire to wash their dirty linen in the Congress of the United States. Having determined upon such course, the amendment to the deficiency relief bill was sufficiently palpable, but not satisfied and desirous for more purification and to perfect the ablutions, this bill was passed through another body by unanimous consent and sent to this body of calculated and intended "rubber stamps" to perform the laundering processes and the political ablutions of the chaste and unsullied.

Mr. Speaker, as a Member of this body who has never had his hands steeped in the alleged iniquities of patronage, I resent as well as revolt at the task assigned us here today. I did not know of the existence of this bill and had never heard of its being passed by another body, until I was approached by Fred Perkins, of the Pittsburgh Press, about 6 weeks ago and asked how I intended to vote upon it. He had to acquaint me with its origin and purpose, and asking if he might publish my viewpoint, I readily acquiesced and informed him that notwithstanding its allegedly and averredly wholesome objective, its origin smelled and nauseated me and I would vote against it regardless of its presentation. My course was definitely determined upon that evening. I reminded Perkins of the Pittsburgh ripper bill before the General Assembly of Pennsylvania several years ago, when the linen of dissatisfaction and disagreement with their bargain was being laundered in the assembly, and assured him my views as to local responsibilities for its situations had no business in the general assemblies any more than they have in the Congress of the United States.

With the malady of the "Senate itch" developed to the point until you heard this bill and its objectives and purposes vaunted on the radio broadcasts almost nightly for several weeks, the bill is here for us to do the laundering, and with my mind made up to neither vote for nor against any amendment offered but to vote to defeat the bill and let the purifiers do their laundering at home, my predetermined course was easy to follow today. Little did I anticipate, Mr. Speaker, that I would behold the spectacle presented here.

The Republican minority rolled up their sleeves, bent over the washtubs, each giving evidence of sincere satisfaction that he was lathering a Democrat in the steaming suds, and went to work with vim, vigor, and all their vitality. With the gentleman from New York [Mr. HANCOCK] for the most part of the time turning the wringer with evidence of grim satisfaction but readily seconded and relieved by the willing leadership from his side of the aisle, they presented a solid phalanx; and while not yet advocating an amendment to prohibit anyone except a Cabinet officer from voting the Democratic ticket, their front readily indicated, as presented, they would have voted with alacrity and solidly for such amendment had one of the water bearers offered it. Thus performing their political responsibility to the accustomed dirty elephant, receiving the 1940 "hope pep" treatment since January 3 until now on July 20 the sick pachyderm was able to consume all the peanuts the boys from across the aisle fed him while their buddies carried water for the free ticket see the minority leader and the majority leader with his remnant of devoted and faithful followers voting together on two record votes to the confusion, consternation, and disdain of the steadfast Democrats. While the eloquence of the Republican side poured forth in mellifluous tones of encouragement to their new-found followers, the great pachyderm, now fully pepped up on the 1940 tonic, "hope pep," blasted forth in stentorian tones, abounding with less harmony but trumpeting his effort that resembled the jingle of Three Blind Mice. Mr. Speaker, as long as I live, without having merited a "free ticket," I shall never forget the spectacle, and regardless of the length of time I remain a Member of this body. Thus was the laundering process completed as of the legislative day of July 20, 1939, at 12:05 a. m., July 21, 1939.

Pay Roll Credit Act

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

Mr. VOORHIS of California. Mr. Speaker, testimony and evidence are too abundant to deny the fact that the small-business man of America is today in desperate need of credit and cannot under present circumstances obtain it.

Much support was given to the Mead bill providing for guaranties by the R. F. C. of bank loans to business up to 90 percent of such loans. But the shake of one or two very influential heads seems to have blocked action on this bill for the time being.

Unless we are to let monopoly control take further and further advantage of foreclosure and bankruptcy as they visit the small producers, something must be done to enable those small producers to obtain short- and long-term financing.

Evidently the banks either cannot or will not meet this need. Some governmental action is necessary.

Furthermore our economic problem generally can be stated thus: The value of goods produced is not matched by equivalent buying power in the hands of willing consumers. Until this condition is corrected it will indeed be difficult for "safe" loans to be made by banks or safe ventures to be taken by businessmen.

For these reasons I have introduced the Pay Roll Credit Act, which provides, under certain conditions, for guarantee by the F. D. I. C. of loans made by banks for the financing of production. The guarantee is limited to a total amount of 20 percent of the average monthly loans of any given bank made under the terms of the bill.

Furthermore the loans can be made for one purpose only—namely, for the meeting of pay rolls incurred by producers in the course of production. Nor can any salary or part of a salary in excess of $3,000 be paid out of the proceeds of any such loan.

This means that as these loans are made and the money spent all of it will go into the stream of active consumer demand for goods. To insure that it will stay in that stream and not become a part of our already swollen idle pools of "potential money," the bill also provides in title II for a "recapture tax" equal to 100 percent of all profits made from dealings with "pay roll credit" funds over and above salary income to entrepreneurs of $10,000 a year. To make possible the collection of this tax it is necessary to include in the bill the following section:

SEC. 6. Every check, due bill, ledger page, promissory note, written pledge, Federal Reserve note, and other document by which such pay-roll credit is issued, transferred, recorded, evidenced, or dealt in shall have distinctly printed on the face thereof in outline letters not less than one-half inch in height the words "Pay roll credit." In addition thereto, the Federal Deposit Insurance Corporation may prescribe a distinctive color or colors of paper and ink in which the same shall be printed.

I did not draw this bill. Its real authors are Thorwald Siegfried and Fred A. Blethen, of Los Angeles and East Los Angeles, Calif., respectively. I introduced the bill "by request" as these gentlemen's Representative in Congress. There is no doubt in my mind, however, of the economic soundness of the provisions of the bill, whatever moderate concern I may have regarding possible difficulty of administration. Mr. Siegfried and Mr. Blethem have also contributed largely to the preparation of this speech.

And undoubtedly the time has come when we must cease to be discouraged by mere "difficulties" and must of necessity proceed to grapple with our basic problems in a spirit of determination. It is only at times of stress that men and nations learn that, when necessary, they can be both great and forthright.

FAILURE OF THIS CONGRESS

It seems to me that this Congress has neglected to do a necessary task. It should have established a sound basis for a Nation-wide reemployment of its unemployed workers. To go on year after year treating the unemployment problem as a temporary and emergency condition and simply initiating palliative measures instead of corrective measures is as futile as it is unstatesmanlike.

The basic problem is to make it possible for every willing worker to be employed at a task which will help to create more real wealth. This cannot be done by the dole method and it is now evident that something is wrong with the "made work" program. I am not condemning the W. P. A. program. On the contrary, I sincerely believe that until we find the right way to employ every person who wants work we must continue to supply the meager relief that the W. P. A. furnishes.

BENEFICIAL EFFECTS OF W. P. A. AND CONSEQUENCES OF CURTAILMENT

There is now no reasonable doubt that the W. P. A. program does stimulate business. Every man directly employed on projects furnishes secondary work for two or three others in private enterprise. We have seen the disastrous results caused by a curtailment of this program and I venture to say that we will again see these results from the curtailment that we have made to the next year's program.

WHERE THE MONEY GOES

There is one thing that stands out sharply in connection with our W. P. A. experience. After the money has been spent and the work is completed we find that three things have happened. First, the national debt has increased; second, the W. P. A. money has disappeared from the markets into "big name" savings accounts and "excessive reserves," and third, private industry has still failed to find the way to place every willing worker on a productive job.

There is a definite connection between these three results and the monetary policy of this country. If we continue to appropriate endless billions of dollars for a program and then find that these dollars have been siphoned out of the stream of commerce almost as soon as they are issued, it is almost like pouring water down a gopher hole, except that we have furnished a little temporary relief during the process.

Most of us agree that the relief program must be continued until private industry can re-employ a good share of the unemployed, and we all want to see private industry expand on a sound basis to the point where every person can have a job who wants one.

Is it not possible that the thing that holds back private industry is the same thing that causes W. P. A. funds to disappear so quickly? After all, business must be an endless cycle and if a portion, even a small portion, of every turnover is withdrawn from the business stream, and lodged in some idle savings or reserve account, business very soon dries up. Such hoarding is destructive not only to the worker and consumer of the Nation but to the hoarder as well. In fact, these hoarders pray the loudest for tax relief and freedom from Government restriction.

BUSINESS DEPENDS ON ACTIVE CIRCULATION OF SUFFICIENT MONEY

There cannot be any prosperity under our type of economy unless there is a sufficient quantity of the medium of exchange and unless this exchange is allowed to circulate freely. As soon as any restriction is placed upon the necessary quantity or the free circulation, business begins to dry up and the drying-up process is cumulative. If this Nation is to ever produce and distribute goods in line with its ability to do so, we will need a much larger quantity of "effective" money and a vastly better circulation.

DILEMMA OF SMALL BUSINESS

Although representatives of many large industries have repeatedly stated that they experience no lack of funds for the expansion of their business when such expansion seems justified, there seems to be considerable evidence that the smaller industries and businessmen find it not only impossible to finance expansion but difficult to obtain funds to support their present business. After all, it is the tens of thousands of small employers in the Nation that furnish the bulk of employment. The average employer employs considerably less than 50 persons, and for each of these to add 2 or 3 employees to their pay roll means more than for the large employers to add a hundred or even a thousand men. Increase employment and pay rolls in "little" business and the business of the large industries will take care of itself.

F. H. A.

We have seen the tremendous increase in housing construction brought about by the Federal housing program. Is it not significant that this program works through thousands of small contractors and banks throughout the country? No institution or group of men or industries has any monopoly on this business. Not only are we adding to the real wealth of the Nation by this program but we are doing it through the medium of private industry, with a minimum of Government control, and with no cost to the Federal Government. With the recent reduction in the rate of

interest on F. H. A. loans, we will see further activity along this line.

Why is it not possible to carry some features of this housing program into the industrial field? Why cannot we provide the means for insuring loans for the production of other goods and go a step further by earmarking these loans in such a way that these funds must circulate in the market and furnish the vital purchasing power necessary to buy the goods so produced? Perhaps such a program would be an experiment, but so was the F. H. A., and we now have the success of that experiment to guide us in this other and greater task.

It is significant to me that when the Federal Reserve System was first inaugurated, over 90 percent of all bank loans were of the "commercial" nature, while today less than 10 percent come under this classification. Tens of thousands of little businesses dealing with thousands of little banks throughout the Nation, borrowing funds to help to float their goods to market, caused this country to grow great. Now, these little businesses have been divorced from their banks and their production has been curtailed almost to the point of extinction. We can reverse this trend and rejuvenate the spirit of private enterprise if we will but use the tools and knowledge at hand in a constructive manner.

THE PAY-ROLL CREDIT ACT

I want to propose specifically that we enact legislation that will do two important things: First, to provide a basis for the making of insured loans by private banks at a moderate rate of interest to individuals and firms, such loans to cover the actual pay-roll costs of new production; and second, to provide the means of earmarking such credit so that these credits shall continue to circulate in the market until such new production shall have been consumed.

This proposed act is called the Pay Roll Credit Act, and I ask unanimous consent that it be printed in full at this point as a part of my remarks.

The text of the bill is as follows:

Be it enacted, etc., That the Federal Deposit Insurance Corporation is hereby authorized to issue to banks approved by it certificates of eligibility to make loans to private persons solely for the payment of wages not exceeding the rate of $3,000 a year for any one employee under the guarantee of the United States provided for in this act. Such eligibility shall be established under rules and regulations to be made and published by the Federal Deposit Insurance Corporation, to the end that employment, production, and consumption of goods may increase, and may be revoked by said Federal Deposit Insurance Corporation when in its judgment such ends may be served thereby.

SEC. 2. Any bank so certified as to eligibility may make loans to any person engaged in farming, mining, manufacturing, processing, merchandising, or other commercial enterprise for the production or distribution of tangible goods at an interest charge not to exceed 3 percent per annum in amounts not in excess of the total payments for wages made by such borrower during the period of such loan excluding that part of such payments at a rate more than $3,000 a year for any employee. Such loans shall be secured by such commercial paper or collateral security as, in the judgment of the bank advancing such credit, will best serve the purposes of this act and will insure the self-liquidation of such loan according to its terms.

SEC. 3. Any eligible bank as herein defined may ask, demand, and receive from the United States reimbursement for any loan or part of a loan made under the provisions of this act which, in its judgment, is uncollectible at any annual accounting period: *Provided*, That in any one year the total amount of such reimbursement shall not exceed one-fifth of the monthly average principal sum of credit so advanced by such bank during the year ending with said accounting period. The United States shall be subrogated to the rights of such bank in such uncollectible loan to the extent of such reimbursement and for interest thereon.

SEC. 4. Such reimbursement shall be made by check or warrant of the Secretary of the Treasury, upon demand of the Federal Deposit Insurance Corporation, such check or warrant being payable out of the "Pay roll underwriting fund" which is hereby established in the Treasury.

SEC. 5. Congress shall from time to time appropriate to said fund all sums of pay-roll credit recaptured as provided in this act, and such further sums as may be necessary for the purposes of this act.

SEC. 6. Every check, due bill, ledger page, promissory note, written pledge, Federal Reserve note, and other document by which such pay-roll credit is issued, transferred, recorded, evidenced, or dealt in, shall have distinctly printed on the face thereof in outline letters not less than one-half inch in height the words "Pay-roll credit." In addition thereto the Federal Deposit Insurance Corporation may prescribe a distinctive color or colors of paper and ink in which the same shall be printed.

SEC. 7. All pay-roll credit issued pursuant to this act, when deposited in banks shall be and remain the property of the depositor of which such depositary shall be the trustee. Deposits of pay-roll credit in banks shall be accounted separately and shall not be mingled with moneys of other derivation. Advances of pay-roll credit may be repaid with pay-roll credit and with moneys of other derivation.

SEC. 8. Every person and corporation receiving such pay-roll credit, for the sale or use of property, for goods, wares, merchandise, or for personal services, shall keep a record of the total amount of such pay-roll credit received and also of the total amount of other moneys received.

SEC. 9. The Federal Deposit Insurance Corporation shall fix the charges to be made and paid for services to be rendered to the payees of such pay-roll credit, on a unit basis, for each deposit and check and for other necessary services; and no other charges therefor shall be collected from such payees by any person.

SEC. 10. The Federal Deposit Insurance Corporation shall establish and maintain offices or agencies wherever, in its judgment, a need for pay-roll credit as herein provided for exists and is unsatisfied. Whenever the absence of an eligible bank to create and advance pay-roll credit, or the refusal of eligible banks to do so, prevents a borrower from obtaining the benefits of this act, the Federal Deposit Insurance Corporation may, in its discretion, advance pay-roll credit and take security therefor and receive repayment thereof. Such advance shall be made by the check or warrant of the Secretary of the Treasury, payable out of said pay-roll underwriting fund, issued upon the demand of the Federal Deposit Insurance Corporation. To the extent of such actual or anticipated demands by the Federal Deposit Insurance Corporation, the Secretary of the Treasury is hereby authorized to issue the written promises of the United States, in convenient denominations, without interest, and to deposit them in banks to the credit of the United States, and to disburse such amounts by checks drawn against such deposits, in compliance with such demands.

TITLE II

SECTION 1. In addition to other taxes, there shall be levied, collected, and paid upon the income of every individual received by him after January 1, 1940, for and in payment of personal services rendered by him, a recapture tax equal to the full amount of pay-roll credit received by him in excess of the rate of $10,000 a year. The pay-roll credit recaptured by such tax shall be exempt from all other taxes. Such tax may be paid in pay-roll credit or in other funds.

SEC. 2. To the end that pay-roll credit shall remain in circulation and shall be used to pay for goods, wares, merchandise, and for personal services valued at not more than $10,000 a year for one person, and when not so used shall be recaptured for the Treasury. In addition to other taxes, there shall be levied, collected, and paid for each taxable year upon the net income of each person and corporation a recapture tax, payable in pay-roll credit or in other funds, equal to the full amount of the net profits of business done for and in consideration of pay-roll credit by such taxpayer; such profits to be calculated by deducting from total gross sales made for pay-roll credit a like proportionate part of the deductible costs and expenses of such taxpayer. Such proportionate part of costs and expenses shall not include payment for personal services at a greater rate than $10,000 a year for one person, but wages to the taxpayer for his own personal services up to that sum may be included in such deductible costs.

SEC. 3. The taxes herein imposed shall be computed, returned, and paid at the time when such taxpayer shall be required to make a computation, return, and payment of income tax under the revenue laws.

SEC. 4. The definitions and administrative provisions of the revenue laws shall apply to this act insofar as they are appropriate, including the penalties therein provided. The Secretary of the Treasury shall make and publish all needful rules and regulations for the enforcement of the tax provisions of this act.

SEC. 5. This act may be cited as the "Pay-roll Credit Act of 1939."

You will note that this act provides that the Federal Deposit Insurance Corporation shall establish the regulation governing loans to be made under the provisions of the act and that such loans will carry a maximum interest rate of 3 percent per annum. These loans can only be made for pay-roll purposes and no individual employee can be paid in excess of $3,000 per year from the proceeds of such a loan.

These loans are to be secured by commercial paper representing the goods actually to be produced or by other collateral and should the Federal Government be called upon to cover any part of a loss sustained through such a loan, as provided, such collateral shall be subrogated to the Government, to the extent of such loss paid.

In order that this pay-roll credit may remain in circulation and not be siphoned off it will be earmarked by having printed across the face of every check or other evidence that such funds have been transferred the word "pay-roll credit." Recipients of income so marked will simply make

a record of the total such income apart from the total of other income. When income returns are made at the end of each year for income tax purposes, each individual will be allowed to have a net income in the amount of $10,000 from such "pay-roll credit" transactions, but any sum over this amount shall be recaptured by the Federal Treasury.

This act is designed to help the small-business man of the Nation and to enable him to employ more workers. It will furnish the base for a vast increase in the production of real wealth and will not interfere with any existing business or banking practices. It will simply be an additional method of making loans for the production of industrial goods in the same manner that F. H. A. has been an additional, and very satisfactory, method of making loans for the construction of houses.

Finally, the act provides that where there is no available or qualified bank to make these pay-roll credit loans, the Federal Deposit Insurance may, at its discretion, make such loans direct, using the credit of the United States for such purpose.

A Turkey for an Eagle and a Song for a Parody

EXTENSION OF REMARKS

OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

Mr. PATRICK. Mr. Speaker and fellow congressmen, my reasons for arising this afternoon to make a speech are a bit out of the ordinary and one voice is not commanding among this 435, but if we can ever get a great enough number like me together here we are more than likely to take some lively action.

Now, I will tell you what is on my mind. This is truly a great Nation, but we fall short on any platform of patriotic originality.

To begin with, we got off to a bad start. That fellow, Americus Vespucius, for whom this whole western stretch of country was named, had no more right to that magnificent and monumental memorial than "One Eyed" Connally has the right that every stadium in this country should bear his name. In a few certain important respects we fail to hold to our own.

There is our song, My Country 'Tis of Thee, and it is about the best we can offer thus far. The tune, thought, and several of the words of that song were plucked right out of Great Britain's song book, as every school child knows, or should know. To be sure we believe some day some voice is going to break out in a truly great and singable song for this Nation, one whose words shall be original, full of bright inspiration, and whose melody will sweetly fit and easily find the voice. This has not yet come about.

Now, for our flag we may truly give thanks. It has everything the patriot could call for—originality, beauty, appeal, and that unnamable something that holds the eye, enraptures the heart, and stirs the spirit. All glory to Old Glory.

But we had to drop back across the Atlantic Ocean and select the much-used eagle for an emblem bird. Pity, pity. No originality shows itself in that gesture; and right here we have as grand, as fine and as noble bird as ever parted the leaves of a forest in a truly native bird—the turkey. He is a bird peculiar to this native land of ours. What could be more appropriate than to have the turkey as our emblem bird? You do not like the name? What is the matter with the word "turkey"? Oh, well, that might be easily managed by using the name of some Indian tribe used. There are several excellent ones.

And there is one other item—then I will take my seat. When Joilet and Marquette paddled down the Mississippi River they saw looking at them through the tall river grass with a magnificent mane falling over his face as stately and impressive animal as has ever trod the good earth—the American bison. Again somebody had to grow old-worldish and name him "buffalo." This is a gross and scandalous libel in particular and an insult in general. No buffalo ever lived who was worthy to escort a bison to a drinking pool and home again. And what have we done for this genuinely American creature? We have placed his image on our pin money—our nickel—our 5-cent piece. Anyway, that is a small beginning.

But on the whole, do you not think we have some patriotic cement work to look after in this country? And right here on the floor in this body is the place to start to work.

Oh, I know, just as I dig, dig, dig away for Jefferson County, Ala., you are always plugging away for your district, but we can occasionally raise our eyes and look at the things that apply alike to all of us.

We can present a cotton gin, a flying machine, or an improved potato; we can come forward with an Edison, a Lindbergh, or a Ford; so why cannot we present our own natural insignia to our children in school, to our adult population, and to the world, so as to represent ourselves by our own tokens?

Let us see to it that the turkey finds his perch in his native land, that the bison's proud and emblematic head is raised where all men may see; and when she stands to sing I want to hear America singing America's song.

I thank you.

The Hatch Bill

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

EDITORIAL FROM THE PORTLAND OREGONIAN OF JULY 27, 1939

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the Portland Oregonian of July 27:

[From the Portland Oregonian of July 27, 1939]

LONG BEFORE HATCH

Thirty-one years ago the people of Oregon voted into the statutes provisions identical in State effect with those embodied in the Hatch bill that has now passed both Houses of Congress and is directed at national affairs.

Promises of appointment to any position of honor, trust, or emolument, public or private, were prohibted when made to promote nomination or election to public office.

Holders of nonelective positions were forbidden to contribute to promote the nomination or election of any other person to public office, and solicitation of such aid from them was also forbidden.

It was made unlawful for the holder of a nonelective public position to be a delegate to a political convention in his election district or to be a member of a political committee for such district.

These sections of a 31-year-old Oregon law contain the essence of the Hatch bill. The latter forbids the same political activities, exempts from its inhibitions holders of Federal elective positions plus Cabinet members.

The Oregon Corrupt Practices Act was, in the particulars cited, aimed at State and local political activity of what used to be given such terms of derogation as "the State machine," "the courthouse gang," and so on. The congressional act is designed to prevent control of nomination and election to national office by the "Federal brigade," and the coercion in national politics of the great number of voters who are dependent upon government for livelihood.

Oregon's pre-Hatch law has never been questioned regarding its constitutionality in the 30 years of its existence. Its propriety has popular acceptance. A year ago, solicitation of political contributions from persons in appointive public positions was begun but was promptly abandoned when the law was cited.

But the President's signature is withheld from the Hatch bill pending study by Government departments, and Mr. Roosevelt remarks "offhand" that there might be some principles of government, constitutionality, and free speech involved in the measure.

The President's political concern over the measure is understandable. Political conventions have traditionally been assemblies of holders of public position, endeavoring to choose as candidate one whose election will keep them in their jobs. The new dealers, in their belief that Mr. Roosevelt can be drafted or, at least, control the Democratic nomination, have been relying on a convention constituted in the traditional way. The Hatch bill will prevent that.

But Mr. Roosevelt's regard for the Constitution is less understandable. Without here lending the least approval to the idea, it is recalled that when the first Guffy coal-control bill was before Congress he advised that it be passed notwithstanding doubt as to its constitutionality. If there is reasonable doubt as to the constitutionality of the Hatch bill, it ought to be abandoned. The Constitution is not a thing to be invoked only against the other fellows' ideas and not against your own.

But, as said, an Oregon law, identical in import and purpose, has survived without constitutional question for 31 years. It has broken down machine politics, and there have been no political scandals over relief.

Americanism and International Law

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

RADIO ADDRESS BY DR. C. D. JUDD, JUNE 11, 1939

Mr. GOSSETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Dr. C. D. Judd, head of the department of government, Texas State College for Women, Denton, Tex., delivered at Fort Worth, Tex., June 11, 1939:

The Declaration of Independence bound the United States to respect "the opinions of mankind" and to accept the law of nations as it then existed. From the time of the adoption of the Constitution our Supreme Court has recognized international law as a part of the law of the land and also a part of the municipal law of the States. Justice Gray laid down the rule as follows: "International law is a part of our law, and must be ascertained and administered by the courts of justice of appropriate jurisdiction * * *." In other words, true Americanism is grounded in international law. The Constitution confers upon Congress the power to define and punish offenses against the law of nations, and to regulate commerce with foreign nations. The Government may make treaties, appoint ambassadors, ministers, and consuls, and may do all things necessary to promote international understanding. The Constitution makes treaties a part of the supreme law of the land. As a principle of Americanism, law and justice have been scrupulously observed in our intercourse with other nations during every crisis at home or abroad. Moreover, it is the spirit of America to contend for a fair deal through a system of justice under law. Americanism has irretrievably committed us to a leadership in maintaining a system of fairness and justice toward all men and all nations. Enemies and critics of America will search in vain for any serious breach of international justice on the part of the American Government.

In the light of rapidly moving events since the war, we are brought to inquire whether there exists such a thing as international law and whether or not Americans shall abandon the cherished principle of international justice and spurn the opportunity for leadership among the nations of the world.

Gigantic programs of rearmament, hostile political philosophies, and bitter abuses of nation against nation seem at first glance to have undermined the foundations of international law. But in all the darkness, chaos, and confusion there may be seen a glimmering light of hope in the international conscience, the sense of international justice, and the principles of international law which have evolved through the struggles of many centuries. Americanism bears this torch of light, and Americans keenly resent wrong and injustice wherever found. The spirit of democracy in every land joins hands with Americans and looks to America for inspiration, guidance, and leadership.

Everywhere enlightened human beings are casting about to find whatever they may in the form of established law to serve as an anchor in these troublous times. A present thesis of Americanism is that there does exist in the world a tangible, positive, well-established law between nations based upon ethics, practice, precedent, history, rules, and contractual agreement. This thesis is stated by Secretary Hull when he says: "The law of nations is in part the outgrowth of custom and in part the product of contractual undertakings which have ripened into and become a part of the body of international law. That law can function only on the basis of its widespread acceptance by nations."

The twentieth century has brought many new functions of governments. With these new functions has come a tremendous increases in the power of individual nations. America has abundantly shared in this increase of power. Such power imposes a greater responsibility upon nations than ever before, both internally and externally. America must assume her full share of this responsibility. Neither America nor any other nation can deny its responsibility for illegal actions, nor can any nation, because of its independence, claim to be superior to international law. To ignore responsibility is to undermine and destroy all law and social order in the world. During the past century, many new offenses have been added under international law, branded as violations of social conscience, of world public opinion, and of decent rules of intercourse between nations. As in no other country, the conscience of America has been quickened against international outrages.

It has been pleaded that the people of a nation, as the Germans or Italians, is not responsible when the ruling authority is too strong to be brought to account. Sound Americanism, jurists, scholars, and established custom reject such doctrine on the ground that it would be an abject surrender to tyranny and dictatorship. Moreover, international law and order would disappear if peoples could no longer be held responsible for the acts of their rulers. If a system of government, such as exists in certain countries today, flouts international law, violates its pledged word, and defies the rules of justice and equity, certainly it is up to the people to change such government. There is no longer any valid excuse for a civilized, enlightened people to surrender its sovereignty to a group of bandits, whose sole ambition is one of international plunder, and who pose as the saviors of their country.

International standards must be enforced because nations are dependent upon each other. Illegal conduct on the part of nations must not be tolerated or condoned if civilization is to be saved. Whatever the excuse, no nation should, with impunity, be allowed to spurn international law and justice. How, then, may we proceed, in order to avert another world conflict?

In the first place, international obligations under law must be clearly stated by a concert of law-abiding nations. Then there must be established a legally constituted authority to interpret and enforce the law, such as the World Court. Then will all nations know and understand their responsibility.

In the second place, the nations must agree as to what penalties may be applied against offending nations. Under the present practice, when diplomacy, arbitration, conferences, the World Court, and the League of Nations fail, aggressor nations eagerly seize such failure as an excuse to use force against the weaker nations. Therefore, the time seems near when a concert of respectable, law-abiding nations must stand squarely behind the World Court or some such tribunal. There must also be established an executive system, bristling with power to enforce the principles of justice and order.

Americanism holds firmly to the following: That the present weaknesses of the world system are no excuse for deliberate breach of international law; that science, art, invention, trade, exchange, every known element of civilization, demand international order; that no nation, however strong, should be permitted to evade or deny liabilities for injuries to other nations; that the moral achievements of history must not be destroyed by lawless nations; that in behalf of and in the name of a community of nations, international responsibility must be enforced at all hazards; that, in the interest of civilization, the sanctions of international law must be applied, even at the expense of armed intervention, should it come to that; and that measures short of war may be used to guarantee the peace of the world. What may be done to determine and enforce international responsibility? The challenge is before us. How shall it be met?

WHAT MIGHT BE THE PLAN?

This is the most pressing and bewildering problem mankind has ever faced. Can we longer rely upon nations voluntarily to conform to a system of world order and international justice? Or must there be set up a super-state, a strong international organization, clothed with power and authority over individual nations? Recent trends and events predict that the security of the world can but little longer be entrusted to the voluntary will of nations to abide by the rules of international law. It seems apparent that certain nations cannot be trusted to cooperate in maintaining world order under law. Who would be foolish enough to say that the laws of a country, with penalties for their violation, could be enforced by the voluntary action of individuals? Under such a system, social anarchy would ensue, and the law of tooth and claw would prevail.

Just as the rights of society have in a large measure superseded the rights of the individual, so has the interest of the world risen above the interest of any one nation. However, we in America believe that in both municipal and international law the individual remains the basic element. We believe that a world public opinion must be invoked in behalf of peace, a world conscience that is sensitive, educated, informed, and active. Perhaps such a world opinion now exists, but remains more or less passive and inarticulate. Such an opinion is alive in America, and upon this opinion and not upon war, do Americans rely for peace and order in the world.

Obviously, the present crisis demands an aroused community interest on the part of law-abiding nations sufficient to demand and enforce an efficient system of international control. Only

through such a system can international banditry and hijacking be suppressed. The plan must take the form of a league or a Federal system fashioned after the American plan, with legislative, administrative, and judicial powers. The foundations have already been laid for such a system. The League to Enforce Peace, the League of Nations, and the World Court have paved the way, and all these, it should be remembered, are American ideals.

Whatever the system of collective security, it must be backed up by adequate power to enforce the sanctions of international law. An attitude of supineness, of wishing, and praying on the part of Americans can never secure international order and peace. It may here be recalled that in 1910 Theodore Roosevelt advocated a league to keep and maintain the peace of the world by force if necessary. In 1914 he again declared for a world tribunal whose decisions should be backed by force. Then, in 1916, the League to Enforce Peace was organized according to the Roosevelt plan. The principles of this league were supported by many distinguished leaders, including William Howard Taft and Henry Cabot Lodge. The movement was the forerunner of the League of Nations. The fact should here be stressed that the Roosevelt plan would invoke the use of force to establish and maintain world order, just as we do to maintain national order.

The problem of world order is necessarily one of world government, of superior authority, of force when necessary. May we not here think in terms of constitution and government, in terms of Americanism? A constitution similar to ours and a federal government supreme in the realm of international peace, order, and law? Our Constitution, the League of Nations, and the World Court afford patterns for a world state, with legislative, executive, and judicial power.

Every plan for collective security has failed because it lacked the cooperative power of enforcement. Such has been the fate of the League of Nations. Any effective system of world order must possess the power to command obedience from those nations who would disturb the normal peace of the world. Merely dreams and ideals will not complete our task. There exists in the world a sufficient number of law-abiding nations to establish a world system of government based upon the principles of a world constitution similar to the Covenant of the League. But it is worse than folly to proclaim a system of government unsupported by both moral and physical force. Social order within every country is assured not only by the support of public opinion but by the implements of death in the hands of enforcing officers. So must world order be assured. International law, supported by public opinion, must ultimately be enforced by armies and navies commanded by authority of a world federation. If peace and order are to come out of the present crisis, self-respecting nations must bring themselves under the reign of law and must create a government for the world. This government must be enforced by the joint action of the law-abiding nations of the world, finally by all nations. "Every nation must assume greater and greater responsibility under international law. The great problem now is to create the most efficient machinery for interpreting, administering, and enforcing that responsibility." Whether Americans like it or not, Americanism dictates that we cannot, we will not, evade our responsibility in this great task.

Pay Roll of Works Progress Administration

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, July 29 (legislative day of Tuesday, July 25), 1939

Mr. HOLT. Mr. President, I ask unanimous consent to have inserted in the RECORD a statement on the pay roll of the Works Progress Administration in West Virginia.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

At last my fight to open the W. P. A. pay roll to public inspection has been successful. The people have a right to know how and where their money is spent. When anyone attempts to hide public business in secrecy you will gain by watching that individual very closely.

The W. P. A. has taken the position that how they spend money is no one's business. They want us to take only that information they desire to give. The Administrator said that he would not make public the W. P. A. project pay roll because it would "cause neighbors to gossip."

The publication of the W. P. A. bosses' pay roll might cause people to gossip, but more likely to gasp. It is the most revealing waste of public money one can find. On W. P. A. pay rolls one can find persons listed receiving many times their salaries in private employment. As long as the list is kept private no one can find out. W. P. A. workers can look at these pay rolls and see why they have been fired.

I have always said that many of the W. P. A. bosses are excellent men and women. They are deserving and capable. My criticism is not against these individuals but against those who are on the pay roll who are not capable and were placed there for political reasons.

For a time the bosses were able to convince the workers on W. P. A. that their friends were their enemies. Who is the real friend of the W. P. A. worker? The man who works to see that the money actually goes to the relief worker or the man who talks about helping the relief worker and then gives to the bosses the money that belongs to the men and women on the projects? Why are many of these bosses given wages far in excess of their worth? For political reasons. Lists were prepared and circulated throughout the State to county political leaders for them to pass on the persons to be given jobs and the ones to be left idle.

The pay roll of the W. P. A. project bosses in West Virginia for May of this year is astonishing. Thousands of workers had been fired for lack of funds, yet the salaries of the officials had been increased. Many statistical studies of these increases have been made by me and are available. They have been printed in the CONGRESSIONAL RECORD from time to time.

There have been changes in personnel since May. Some on the May list may not be employed now. Some now employed may not be on the May pay roll. The people of the county will know the details and the names and they can check accordingly. I have checked this pay roll with other pay rolls and I find in some instances counties with more employees and others with decreases. I made a survey some time ago, county by county, and submitted it to the people of West Virginia. It was not based on this particular pay roll.

The W. P. A. states that they had 524 administrative employees charged to administration on May 1 in West Virginia. This list will show approximately three tmes that many who receive salaries in excess of $900 a year who are not charged to administration but charged to projects. Of course, there are many, many more who receive more than the security wage but who do not receive at the rate of $900.

The chart shows the name, salary, and county of the W. P. A. project bosses as shown on the official pay roll. The list includes those charged to projects. These employees are not listed by the W. P. A. as administrative employees. When they say their administrative cost is 3 or 4 percent, they do not include those charged to projects. In West Virginia, the project-boss salary cost is almost three times as much as the administrative salary cost. It is here where the political favorites of W. P. A. are hidden in secrecy from the public who pay the bill. They know their statement that the administrative cost is 3 or 4 percent is just bookkeeping trickery. The May project-boss pay roll for West Virginia follows:

BARBOUR COUNTY

$75–$100:	
Mabel E. Lake	$75.00
Paul Blaine Kelly	85.00
Rose M. Phillips	85.00
Mona Phillips	90.00
$100–$150:	
William H. Price	100.00
Russell D. Queen	130.00
Charley J. Bolyard	100.00
Guy G. Stalnaker	145.00
William T. Curry	100.00
Warren Radcliffe	145.00
Roy Phillips	120.00
James D. Nestor	125.00
Kenneth A. Booth	110.00
James Studdard	110.00
Kara R. Manley	100.00
L. Aubert Gainer	100.00
William J. Coontz	120.00
Conwell Griffith	100.00
Roy O. Hillyard	115.00
Birdie E. Andrick	100.00
$150–$200:	
Aubrey Phillips	150.00
Anna E. Murphy	150.00
I. Walker Dadisman	150.00
John C. Messenger	150.00
Martin McCloud	150.00
$200 and over: John H. Marsh	215.00

BERKELEY COUNTY

$75–$100:	
Daniel H. Mauck	90.00
Lester G. Landerkin	90.00
Anna Light	80.00
John R. Seckman	90.00
$100–$150:	
Harry W. Null	125.00
Oscar Caniford	100.00
Allen T. Tyson	100.00
Harry J. Ring	100.00
Edward L. Janney	130.00
Roy M. Newkirk	100.00
William R. Downey	125.00
John C. Ellis, Jr	125.00
Richard F. Whiting	140.00
Charles W. Pennwell	100.00
H. Wilson Ashton	125.00
Amelia Davis	110.00

$100–$150:
Mary L. Gardner $115.00
William H. Gaither 100.00
Richard H. McCormack 100.00
Howard Braithwaite 100.00
Ward Heck 100.00
Edward J. Comer 100.00
Thomas W. Flynn 100.00
$150–$200:
E. Gustave Stickel 175.00
George Hunter 165.00
Cornelius H. Rhodes 150.00
Paul Ridings 150.00
$200 and over: Raymond Tabler 225.00

BOONE COUNTY

$75–$100:
Reta Allman 90.00
Martha L. Izzard 75.00
$100–$150:
Jesse H. Perdew 110.00
Archie T. Sutphin 110.00
Alfred C. Miller 110.00
Clarence Chapman 100.00
Hanse Stowers 110.00
Curtis Miller 120.00
Marion F. Vickers 135.00
Helen V. Hylbert 105.00
Jed D. Hollenbeck 110.00
Ray Belcher 110.00
$150–$200: G. F. Hendricks 150.00
$200 and over:
John T. Collins 225.00
William B. Childress 220.00
Richard R. Copeland 200.00

BRAXTON COUNTY

$75–$100:
Ellis L. Posey 80.00
Cecil Johnston 90.00
$100–$150:
Fred D. Given 125.00
Arden Lewis 100.00
Charles C. Gillespie 125.00
John A. Bragg 125.00
Walter S. Bush 125.00
Louis Lombard 125.00
Chester M. Lamb 140.00
Thomas B. Cutlip 140.00
Harry L. Crutchfield 140.00
Granville J. Haymond 135.00
Walter G. Skidmore 125.00
Harold L. Hall 100.00
Gertrude B. Rader 130.00
$150–200:
Wayland F. Keener 150.00
William R. Singleton 150.00
William B. Golden 175.00
Mildren G. Small 160.00
Ernest L. Hammack 150.00
$200 and over: George E. Barrett 250.00

BROOKE COUNTY

$75–$100:
John W. Worstell 85.00
Joseph Bowen 85.00
Aileen McCorney 85.00
Kathryn Zilliken 90.00
George B. Cornelius 75.00
$100–$150:
Ben O. Jones 125.00
Joseph P. Mendel 100.00
Earl Owens 100.00
Cora L. Carman 100.00
John W. Mayhew 100.00
Robert C. Nowery, Sr 125.00
$150–$200: Cecil R. Wells 190.00

CABELL COUNTY

$75–$100:
James A. Stevens 90.00
Edna Matheney 90.00
Ella Haynes 90.00
Mary Louise Jaynes 90.00
Minnie Meek 85.00
Rosa B. McCallister 90.00
Lenora Yarbrough 90.00
John A. Ross 90.00
Elizabeth F. Earls 85.00
Boyce Petrie 90.00
Alberta Davis 95.00
Julia Smith 95.00
Hazel Biddle 95.00
Lillian Newcomb 90.00
$100–$150:
Ernest W. Fry 125.00
Marie Meadows 125.00
James Martin 100.00
Clarence Schaub 125.00
$100–$150:
Frank A. Reynolds $125.00
Woodrow W. Perry 100.00
Worth Ferguson 125.00
Laban T. Workman 125.00
Lillian Pfau 100.00

The United States and World Peace

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

ADDRESS BY HON. PAUL V. McNUTT, JULY 30, 1939

Mr. MINTON. Mr. President, I ask to have printed in the Appendix of the RECORD an address by Hon. Paul V. McNutt delivered on International Peace Day, World's Poultry Congress, Cleveland, Ohio, July 30, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have just come from the other side of what was once known, with some justification, as "the good earth," but what has earned in recent years the title "the tragic earth." The reason for this change may be found in the failure to answer a question, which one of the wise men of this generation put several years ago—"Why is it that we human beings succeed so much better in conquering nature than in conquering human nature, in dealing with things than in dealing with ourselves and with one another?" The first step in answering such a question is to find the actual ways men contract the disease called war and the actual methods by which they achieve the health called peace.

In this tormented, confused, deluded, bewildered, and bedeviled world today the prayer of every sane man is for peace, peace at home and with all peoples. Shortly after what we thought was the last world war, one of the seers of this century said that what he feared was that America would refuse to take the position of leadership for which she was so eminently fitted both as to resources and ideals. A leader leads by precept, and what is far more important, by example. We have said that all nations should, through voluntary self-restraint, abstain from use of force in pursuit of policy; that all nations should seek to adjust problems arising in their relations by processes of peaceful negotiation and agreement; that all nations should uphold the principle of the sanctity of treaties and of faithful observance of agreements and that each nation should respect the rights of others and perform scrupulously its own obligations. If these professions are to be practiced by nations, which are after all organizations of individuals, they should be practiced by the individuals as well. If we are to lead the way to peace we must practice peace at home. We do not find peace in the abstract. We find it by living and acting it.

This gathering has, it seems to me, adopted a fitting symbol of peace and international cooperation. It is constructing a garden made up of earth from all of the various constituent countries. Men may and do differ about policies. But the earth is always one.

It is also fitting that this gathering should take a definite and distinct interest in world peace. In discussing that topic, I claim to have a particularly vivid interest. I speak as a member of the American Legion, and there are here gathered many of my comrades. To us the making and the keeping of peace are more than words, and I feel justified in talking with some bluntness.

The first duty of the United States, as indeed of any nation, is to itself. Rightly and properly, our Government has made as its first objective the preservation of our national security, our freedom, and our peace. Patriotism requires this, common sense exacts it.

But having said so much, it must be obvious that helping ourselves necessarily includes helping to create a situation in which peace can be maintained. Unless the foundations for peace are well and solidly laid we are continuously in danger. We are preeminently a peaceful people, with a peaceful history. Our foreign wars have been infrequent and, saving for the Revolution which gave us birth, of short duration. We have not used the intervals of peace to organize ourselves for war. We do not have fortified frontiers, huge standing armies, or compulsory military service in times of peace. Our schools are not filled with war propaganda, nor is war and conquest the ideal of national thinking or the goal of national policy. The result has been to release American energy for the greatest peace development known in the modern world. We like this way of life and we propose to continue it.

In the Lincoln manner we can say that today the world is engulfed in a controversy testing whether any nation dedicated to peaceful ways of life can long endure. The contest is really a war in all respects except the progress of actual military operations. There is no point in not stating the facts.

There are under arms in Europe and in Asia about as many men as there were in 1917. The armies are fully concentrated and in the field. Trench lines are manned in western Europe, mobile armies are concentrated in eastern Europe and in Asia. Fleets stand over against each other in the Mediterranean and the North Sea. Preparations for air warfare on a scale undreamed of during the World War have been fully made. Every resource of propaganda and diplomatic intrigue is being used. Never in history has such a mobilization resulted in anything except in battle.

In this armed camp certain nations openly, even brutally, state that their aim is war unless peace is bought by surrender. Certain other nations, like ourselves, only desire to keep the peace. To them or any nation even a victorious war can only be a catastrophe; the best they can hope from it is to maintain themselves.

American policy in this dangerous and difficult situation is now squarely before the public. The debate came up on the issue of the Neutrality Act. The arms embargo, as such, is, of course, relatively insignificant; modern wars are fought mainly with machines, oil, chemicals, and every other known kind of materials. But it has served to present the issue whether we can withdraw from the entire current of world affairs, even though the rest of the world sinks into the disintegrating chaos of a general war. The opposite course must of necessity assume a policy which patiently and cautiously endeavors to contribute to the fabric of world peace, the reestablishment of decent world economics, the increase of respect for treaties and pledged faith; and an ultimate world of order under international law. Both sides are presented; and I may perhaps legitimately express my own view.

The United States is not responsible for international settlements outside the New World, and even less for the methods by which any nation chooses to govern itself. We do have an interest, however, first, that other countries shall not attempt to force their political doctrines on us; second, that in solving their difficulties they do not precipitate the world into a war, which necessarily will affect the United States economically, if indeed we can avoid being embroiled in actual military conflict. For that reason, those countries which take the same view of peace that we do—those countries whose interest likewise is to avoid a world conflict—happen to have for the moment an interest which helps us. In asking any country to defend the peace, or in assisting it to do so by exerting a steady influence in favor of nonwarlike powers, we are not assisting that other country as much as we are assisting ourselves.

The extreme isolationists suggest there is another way of maintaining our peace. They tell us that we could and should draw a line around the New World, including Hawaii, and reorganize that New World on a basis of self-sufficiency. We could, theoretically, make a self-sufficient hemisphere; and we could then let the rest of the world descend to any kind of cataclysm into which it cared to drift. This plan is possible, on paper at least, and many honest Americans think that it should be tried.

But our isolationist friends do not tell the other side of the story. The resources of this hemisphere, and particularly of South America, are an integral part of the economic life of the Old World. For a solid century designs and intrigues to absorb a part of the New World into European or Asiatic political systems have been attempted; they have been prevented principally by our Monroe Doctrine. If we wish hemispheric isolation, we must recognize what it really means.

Isolation means at least trebling our present Navy, for we should have the coast lines of two huge continents to defend. It means maintaining a military establishment capable of putting a protective expeditionary force into any part of the New World at any time. It means abandoning many markets for our agricultural products. It means putting two-thirds of the cotton-producing South out of action. It means the end of much of our wheat- and cattle-producing West. It means the reshifting of a great part of our population and stagnation in many, if not all, of our manufacturing centers in the industrial East. Foreign trade is less than 10 percent of our total trade; but that trade is the key to a great deal of what

we do. For instance, substantially all of our rubber comes from the Far East. Cut off that trade and ask yourself what happens to the automobile industry in the United States. The attempt to build a wall around the New World means an upheaval in the United States almost as great as a war itself; only wars do end, whereas this process would wreck a generation. I have altogether left out of account a great far eastern people, the Philippine Commonwealth, to which we have obligations of honor and good faith, and to which I am personally bound by many ties of sincere interest and affection.

I do not wish to play the role of Jeremiah, but I must point out that we may, of course, be driven to the form of life just outlined: To a lower standard of living, a militarist country, and the crushing burden of defending the New World. But it is the last thing that we should do. It is to accept defeat; to surrender outright to the militarist ideal. The word "surrender" has not yet been learned by America. It must never be.

Let me also, as a member of the American Legion, add another consideration. If the United States in particular and the New World in general is to endeavor to defend itself and live by itself, we have to consider where the line of defense really is. In the days of sailing ships, we might draw a line 3 miles out to sea. With the advent of the modern navy, the line moved farther out. Now that aircraft have been developed, a naval carrier 400 miles out can release planes capable of bombing our coasts and returning to their starting points. Within a few years air squadrons may leave European islands like the Azores, bomb Washington or New York, and return to their base. Yet air development is still in its infancy.

I know, of course, that the Western Hemisphere cannot be conquered by the air. What can be conquered, however, is the thing we prize most: Our peaceful way of life. For, if the world is dedicated to war as a means of carrying on its affairs, we shall have to go into the whole dreary business of military organization which has cursed the continent of Europe for a thousand years. We shall have to ring our coast cities with aircraft guns; train our children to keep gas masks by their beds; build bomb-proof shelters and evacuation areas near every substantial town. That is how all Europe lives at this minute. Our real stake in the current controversy is whether we spend the next two or three generations in a militarized America or whether we can preserve America in the classic pattern of a great democratic republic of peace.

We do not have the simple question of minding our own business. I wish we did. We have the question of whether we will keep quiet while other people mind and mould our own business for us. And that, as I think everyone will agree, is a radically different question.

What, then, must be done if the United States is to make an active contribution to peace?

In this tempestuous world the United States has steered a serene and purposeful course. That course has been clearly and capably outlined by Secretary Hull on many occasions, and particularly at Nashville a year ago in a paragraph which should be repeated:

"At this crucial juncture of history it is our Nation's duty to itself to make its appropriate contribution toward preservation and advancement of the principles of international law and of the orderly and cooperative processes of international relations, which have evolved with, and have in turn promoted, the development of civilization. Toward that end we should maintain and strengthen our own adherence to the principles and processes of international law. We should exert all moral force of which we are capable toward influencing other nations to work for the same end and to accept and employ the civilized practices of pacific settlement in connection with such controversies as may arise among them. We should be prepared to aid in every practicable way resort to such peaceful means of settlement. Within the limitations of our traditional policies and without entangling alliances or involvements we should cooperate sincerely and resolutely with like-minded nations working toward the same goal toward which we ourselves are striving."

President Roosevelt summarized the attitude last April in his Pan American Day speech in a concise statement:

"We have the right to say that there shall not be an organization of world affairs which permits us no choice but to turn our countries into barracks, unless we are to be vassals of some conquering empire."

I am convinced that the bulk of the American people, surveying the international scene, stand squarely behind this policy; that they have no faith in endeavoring to be like Ishmael, with their hand against every man's and every man's hand against them; that they realize that their peace can never be safe so long as any nation or group of nations is at liberty to stage a raid upon any part of the earth not surrounded by a wall of steel.

Under the American system of peace, conquest is not only immoral but ridiculous, for the economic necessities of any country can be fully satisfied in friendship and by reasonable agreement; while the sovereignty of all is respected.

In the modern world—the world of aircraft, of chemicals, of machines, of economic pressures, of propaganda, of long-range influences—any major country which dedicates itself to conquest threatens not merely the United States as such, but the kind of world which makes the American way of life possible. Any nation which seriously seeks to seize and monopolize any considerable share of natural resources, or of the lives and trade of human beings, upsets the peaceful fabric in which alone the American ideal can flourish. American life in a world at war, even though we stay out of that war, is not the same as life in a world at peace. This is why those of us who are engaged in public affairs, and all of us who are here gathered, must pledge ourselves to an active search for an enduring peace: Not peace by surrender and flight, but peace by cooperation. The world knows that we can defend; let it also know that we claim our sovereign right, with all other peace-loving nations, to insist that none has a right to impose on us, or any of us, the anarchy of savage times.

This is one reason I welcome the gathering today, representing, as it does, the cooperative processes of nature and fertility, symbols of a tranquil world, a world of peaceful order and repose. God grant that such a world may emerge from the tragedy of this age. Hear, O Lord, our prayer: Thy kingdom come, Thy will be done on earth as it is in heaven.

America and World Peace

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

ARTICLE BY STUART CHASE

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the United States and World Peace, entitled "Civilization in Our Keeping?" by Stuart Chase, published in Common Sense for August 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Common Sense for August 1939]

CIVILIZATION IN OUR KEEPING?—BEING THE ONLY POWER THAT HAS NO CAUSE TO FIGHT, AMERICA HOLDS THE FUTURE IN HER HANDS

(By Stuart Chase)

The United States is unique and alone. We are the only great Nation on earth which can afford the luxury of free decision between war and peace. We do not have to act as less fortunate nations are forced to act. Our statesmen do not have to imitate the policies of other countries in respect to war, alliances, foreign trade, loans abroad, life lines to colonial empires, outlets for surplus populations.

Take a map of the world and look at England, Japan, Germany, France, Italy. What do you see? You see that the first two are islands, and not especially large islands. You see that the last three are fragments of the continent of Europe, with boundaries which have no particular economic justification. You could put any one of them comfortably in the State of Texas. You could put all the 24 sovereign nations of non-Russian Europe in the United States, and they would take up only two-thirds of the area.

We are not a nation in the European sense at all. We are an integrated continental area, protected by 3,000 miles of salt water on one side and 5,000 miles on the other, beyond the reach of the best of bombing planes for years to come. Iowa cannot go to war with Nebraska. New York cannot raise a tariff wall against Connecticut. No State has a suppressed national minority demanding self-determination. We cannot take much credit for this condition. It is our good luck.

Suppose the United States were like Europe. Then we should have some 20 or 30 independent nations on our territory, each trying desperately to make its own economic position more secure at the expense of the rest. Half of them would be ruled by dictators. The free city of New Orleans, for instance, and the Mississippi corridor back of it would be a powder mine, ready to drench the continent in blood. There would be Maginot lines along the Ohio, the Missouri, the Colorado. Nations in the interior would be plotting for access to the sea. New England would be arming against New York to regain control over Long Island, a territory which had changed hands six times in the last century. We should owe an annual armament bill of $15,000,000,000. Every man, woman, and child on the continent would be fitted with a gas masks. None of us would sleep well at night, listening for sirens and bombers.

We can admire the people of Europe, and still be sorry for them. They have not got together since the fall of Rome. They have been marching, fighting, recarving their boundaries for 1,500 years. Their present political structure is unsuitable to the power age. No one nation has adequate natural resources inside its own boundaries, and few are on good enough terms with other countries to be sure of importing what they need. When they fight it is for economic motives far more acute than any conflict of ideologies. Modern Europe presents a terrible problem in political and economic anarchy. The only answer lies in some form of economic unification.

The people of Europe may have to fight before they can think. We have time to think. We can wait. We can choose a course.

We have achieved economic unity in North America. As a result we are the strongest Nation on earth today, the most productive, the most democratic, and the luckiest.

Compare this country with England. England's food supply might suddenly be cut at sea, and in 6 weeks the British people would begin to starve to death. The British economy depends on swapping manufactured products for food and other raw materials. We have no such dependence. We are not only a greater industrial country than England, but we have so much food that our farmers cannot get rid of it. Ours is a problem of abundance; theirs is a problem of threatened scarcity. In respect to major resources the United States is in an entirely different class from any other country—with the possible exception of Russia.

Assuming that the United States is prepared to defend the Western Hemisphere and keep its trade routes here open, the only serious shortage is natural rubber, now imported largely from the East Indies. Rubber is elastic in all senses, including the time factor. We can store it or wait for it much longer than we could store or wait for some necessary foods. If worse came to worst, it could be manufactured synthetically by the Du Pont process. The cost would be somewhat higher, but less than a few days of war would cost. Again, Brazilian rubber can be developed to serve the needs of the Western Hemisphere. Again, if we have our wits about us, we can swap some of our surplus wheat and cotton for stock piles of rubber as a reserve against war, a sensible procedure already inaugurated by the administration.

There are no imports from Europe which are absolutely vital to our well-being. No significant industries are as dependent upon European imports as they were at the outbreak of the World War. If these imports were shut off, the chief sufferers would be traders whose interest is vested in the import business, and consumers of such luxuries as French lace and English leather goods. If the import of shoes from what used to be Czechoslovakia were shut off, thousands of shoe workers in Brockton, Haverhill, and Lynn would go off relief and onto factory pay rolls.

One of our chief imports from Asia is Japanese silk. Already two great factories are nearing completion in this country which will manufacture a fiber stronger than silk, equally lustrous and made from air, water, and coal. The Japanese silk trade is doomed, war or no war. Our export business is now running at the rate of 4 or 5 percent of the national income. The domestic market absorbs 95 percent of all our output. Would we go to war for this beggarly 5 percent? I do not want to see my boy sailing away to die in Europe or Asia for a trade which I know, and can prove, is not vital to the American continental economy.

Going to war to protect our investments in the Old World need not be argued. The sad facts since 1914 make such argument ludicrous. During the war, we loaned $10,000,000,000 to our allies. They have not paid and do not intend to. Since the war we have loaned some $14,000,000,000 more to governments and private parties abroad. It is estimated that when the books are balanced, $10,000,000,000 of this "investment" will be in default. That makes $20,000,000,000, more or less, of American products shipped abroad for which nothing has been received in return. In effect we gave away our soils, minerals, oil reserves, manufactured goods.

Our present investment in China is only $132,000,000. Harry Hopkins used to spend that amount in a month when he put his mind to it.

Our foreign trade and our foreign investments are no reason for war. But there are two grave economic temptations that might lead this Nation to fight. Both seem to me contemptible, and I shall state them without gloves on.

1. Shall we kill a million boys to give a temporary boom to business? Businessmen themselves are questioning the value of this shot in the arm. 2. Shall we kill a million boys to give our excess savings an outlet in war investment because we are too stupid to find adequate channels in peace investment? Shall we send them to die because it is easier to finance death and destruction than to finance life and construction—easier to forget the metaphysics of balanced budgets in wartime than in peacetime? These bloody and cowardly paths out of business depression are not good enough for me, and I profoundly doubt if they are good enough for the majority of the citizens of America.

There is then no compelling economic motive that would force us to war. Are we immune to the ideological struggles of Europe?

It is widely alleged that if hostilities break out in Europe it will be the democracies against the dictatorships. The United States is a democracy, and accordingly it should join with brother nations to crush the menace to liberty and freedom which the totalitarian idea presents. This is an appealing argument, but, being almost entirely verbal and abstract, it collapses at the touch of realistic consideration.

The line between democracies and dictatorships today is blurred. It changes with every morning's headlines. Our allies in any new war for democracy are likely to include some astonishing democrats. Mr. Stalin, that great defender of the Bill of Rights, may be with us, together with the dictators of Poland, Rumania, Greece, and Turkey; nor is it altogether impossible that we might wake up some fine morning to find Mr. Mussolini, the founder of fascism himself, in bed with us. Many observers expect Italy to double-cross the German axis as it did in 1915. England and France are democracies of sorts, but their empires were seized by military aggression, and the peoples they conquered do not all enjoy the blessings of democratic rule. Is it our ideological mission to help Britain sit on India?

Again I cannot follow the people who, like Lewis Mumford, see "fascism" in the form of the Devil incarnate, as real as that Satan whom Luther observed crawling through his window. To them it is a thing, walking, worse than war, which has hit the world like the Black Death; a monstrous evil spawning suddenly in the minds of evil men. I don't believe in the spontaneous generation of either the bubonic plague or the practices labeled "fascism." I see loathsome practices in Germany and Italy. I see practices only a little less loathsome in other countries. I see other nations, for instance, the Poles, persecuting minorities, especially Jews.

For any nation to engage in war now for ideological reasons is a kind of ceremonial suicide. It is like the Chinese who hang themselves in protest against some public action. They have no assurance that the action will be changed, but they have every assurance that they themselves will be quite dead. Into this cockpit we need not go, and there is no mercy which we can extend if we do go. We simply join, with the wooziest of motives, the suicide club.

The effects of the next war will include some we can hardly imagine, because the weapons of that war are almost beyond our imagining. The civil war in Spain was not even a dress rehearsal. The treaty which will end that war—if anybody is left with a hand steady enough to write a treaty—is still further beyond prediction. The idea that after that war Hitler will move on to world conquest strikes me as the wildest kind of hysterical guessing. A better guess is that Hitler will be dead or in exile, and all Europe too prostrated to think about further conquests for a generation.

We have no territorial ambitions; no surplus population to be exported; no driving need for a place in the sun. We have no yearnings for military achievement; no traditional enemies; no revanche to appease. We do not need to go totalitarian. We do not need flags, swastikas, Klieg lights, goose-steppers at the salute, military mobilization to show the world how strong we are. The world knows how strong we are. We are fortunate above all others and unified above all others. Therefore, in a sense we have civilization in our keeping. The responsibility is passing from the Old World to the New. We may not be worthy of it, but we are getting it by default.

If we are only going to play power politics with the rest of the world, we do not deserve this trust. And if we fight, we shall throw away not only our chance to lead the world but the best of the civilization we now possess.

The Secretaries of State

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

EDITORIAL FROM THE NASHVILLE (TENN.) BANNER OF JULY 29, 1939

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent editorial published in the Nashville (Tenn.) Banner of July 29 entitled "Our Cabinet Premiers," dealing with the history of our various Secretaries of State, and particularly with the fine record made by our present splendid Secretary of State, Cordell Hull.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Nashville (Tenn.) Banner of July 29, 1939]

OUR CABINET PREMIERS

The one hundred and fiftieth anniversary of the founding of the State Department was an occasion of note from a historical viewpoint, but it was observed without ceremony at Washington yesterday.

The expansion of the proportions of this branch of the Government has been a reflection of the growth of its importance. When Mr. Jefferson assumed the first portfolio of State, his office requirements did not exceed the capacity of two rooms in New York. Today there are 1,000 employees in Washington alone and several thousand scattered in headquarters throughout the world. Relations are now maintained with 59 nations.

It is doubtful if as many delicate problems affecting the foreign relations, commerce, interests, and rights of this country were ever confronted at one time by the Department of State as those which now challenge the attention of the white-haired, poised Tennessean.

The Secretary of State has always been recognized as the premier of the Cabinet, and the high distinction that has attached to it accounts for the presence of so many illustrious names upon its roll.

Forty-seven men have held this high office since its establishment in 1789. The Department of Foreign Affairs had been

created by Congress July 27, 1789. John Jay, who had held the position of Secretary for Foreign Affairs since his appointment by the Ninth Continental Congress in 1784, left it in September 1789, when the Supreme Court was established, with him as Chief Justice. On September 15, 1789, Congress changed the name to the Department of State, and Thomas Jefferson, then Minister to France, was appointed the first Secretary by Washington, September 26 and took office March 21, 1790.

Six Secretaries—Jefferson, Madison, Monroe, John Quincy Adams, Van Buren, and James Buchanan—became President. It was the life dream of four Secretaries to reach the White House, and they repeatedly battled, over a period of three-quarters of a century to reach the Nation's highest office, but Fortune baffled their ambition. Webster, Clay, Blaine, and Bryan composed this great quartet, one of them thrice the nominee of his party.

Some of the greatest diplomats, statesmen, jurists, and orators whom the Nation has known held this portfolio. Among the more distinguished names on the list, besides those noted, were Edmund Randolph, John Marshall, Edward Livingston, William L. Marcy, William M. Evarts, John Sherman, Lewis Cass, Edward Everett, and Elihu Root.

Virginia, with six sons, led all the States in the number who headed the State Department, but none has come from the Old Dominion since 1843.

Eleven Secretaries were from New York, nine of them appointed since the war between the States.

More than a century passed before a single Secretary was chosen from Ohio, the first being John Sherman, in 1897; but the next two in succession were also from that State. Though Presidents have been taken from that populous and important commonwealth, the only three Cabinet premiers in the history of the Government who were citizens of Ohio when chosen were Sherman, William R. Day, and John Hay, whose combined period of service, it so happened, did not exceed 4 years.

Virginia, Kentucky, Louisiana, Georgia, South Carolina, Maryland, and Tennessee are the only Southern States to have furnished this member of the Cabinet, and by somewhat curious freak of political history all the 47 Secretaries since the foundation of the Government have come from 20 States, there being 28 States which have never been thus honored.

Mr. Hull is not only the only Tennesseean who ever became a Cabinet premier but he is the first one to come from the South in nearly a century, the last from this section being John C. Calhoun, whom Tyler appointed in 1844.

The present head of the Department of State of the world's foremost Nation unquestionably preserves and honors the highest traditions of the great office. His character and ability command a world-wide respect and confidence. It has been conceded for years that he was the preeminent figure in the Roosevelt Cabinet; and is extensively discussed in connection with the Presidency.

Diamond Jubilee of Cigar Makers International Union

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK, JULY 28, 1939

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD remarks made by me over the radio at the Raleigh Hotel, Washington, D. C., on July 28, in connection with the seventy-fifth anniversary of the Cigar Makers International Union of America.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In accepting the honor of appearing on the program of the notable occasion—the Diamond Jubilee of the Cigar Makers' International Union of America—there are so many things that might be alluded to in the history of this remarkable union, in the careers of the outstanding leaders which it has contributed to the organized labor movement of our country and the part taken by it and by these leaders in the great struggle of labor.

It can be said that this union has suffered from and taken part in the mechanical revolution in American industry to a degree not exceeded by any other skilled craft. When this revolution acquired momentum the cigar maker was one of the most highly trained and individualized workers in America. Now, machine production has largely invaded that field, but with the indomitable spirit of their founders and their successors, the cigar makers have met this challenge, have rescued and maintained the working conditions of the still large portion of handworkers in the industry.

Along with this, and marching with such other splendid unions as the typographical trades, they have made a tremendous contribution to their members and, more particularly, to the public generally. The union has put an end to sweatshops and insanitary conditions of employment to such a degree that the cigar maker of today has actually doubled his working life—from 20 years in the old days to 40 years now

Another contribution—and this of historic significance—is the part taken in the struggles of the seventies and eighties for shorter hours of labor. As might be assumed, with such great figures in their ranks as Sam Gompers and George W. Perkins, the cigar makers were the shock troops of the 8-hour movement. In this period, when we are struggling to stretch dwindling work opportunities to cover mounting thousands of workers, the tremendous significance of that contribution looms with increasing force.

No one can approach a discussion of the cigar-makers' union without a word concerning the man who, more than any other, typifies the American organized-labor movement.

An immigrant, coming to this country from England in his youth, entering what was at that time one of the most cruelly exploited and underpaid crafts in industry, fighting against every handicap for the bare necessities of life, while at the same time carrying the banner of a vision which he lived to consummate—a labor movement built upon the sound foundation of enduring principles and upon equally high and enduring ideals.

Sam Gompers, symbol of American labor's hopes and aspirations, the cigar maker, for many years a member of this union, was, so far as it lies in the power of any individual to claim that honor in an institution founded upon the ideals of democracy and enduring by the devotion of its individual members, the founder of the American Federation of Labor.

I might pause to mention others; George W. Perkins, a president of the cigar makers and close counselor and associate for many years on the executive council of the American Federation of Labor.

I must not neglect to speak of one who yet carries on, also a former president of this union, I. M. Ornburn, secretary of the powerful and rapidly expanding label-trades department of the A. F. of L.

We should not fail also to speak of the fine contribution to this union and to the labor movement which is being made now by the present officers of the union, worthy successors of their illustrious predecessors: R. E. Van Horn, president; Manuel Gonzalez, Maurice Simons, William M. Brandt, Charles E. Rholer, A. P. Bower, and John R. Ograin, vice presidents. All of them, as might be expected, are present here this evening.

A diamond jubilee typifies in these hurrying and evolutionary times one of the most dramatic and significant periods in human history. The diamond jubilee of one of the outstanding factors in the greatest development of this period, the material advancement and the spiritual, legal, and social establishment of the common people, the wage earners of our Nation, is, by that token, an event in which I, a son of a wage earner, a wage earner myself, and a lifelong member of organized labor, am proud to participate.

Conscription in Case of War

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

ARTICLE BY CABELL PHILLIPS AND J. D. RATCLIFF

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "M-Day and After," by Cabell Phillips and J. D. Ratcliff, condensed from the American Legion magazine. The article relates to conscription in the event of war.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

M-DAY AND AFTER

(Condensed from The American Legion Magazine)

(By Cabell Phillips and T. D. Ratcliff)

There is a group of men in Washington today who spend all their time thinking in terms of M-Day, the day of mobilization. If the United States were to go to war tomorrow they would be ready. In their files is an already written law with which they could conscript 10,000,000 men. They have placed sample registration cards for the draft in every State capitol—ready to go to the printer on a moment's notice. Millions of Americans are totally unaware of this vast machinery which has been set up by the Joint Army and Navy Selective Service Committee—and of how quickly and profoundly their lives might be changed by it.

When Henry Putty, Oklahoma City garage mechanic, for instance, reads the electrifying headlines in his evening paper on the fateful day, he may tell himself that he had seen it coming

But until that moment war had probably seemed to him only a distant threat, and his own involvement even more remote. He reads the President's speech before the joint session of Congress. But the significance of another news item escapes him. Immediately after voting to go to war, Congress unanimously passed the Selective Service Act.

It would be annoying to Henry if he knew how completely that act has planned his life for him. But, of course, he doesn't. He has never had access to that 32-page mimeographed document, the Selective Service Law; nor to the thousand and one other details of the plan that affect him. Let's accept Henry as 25, unmarried, living with self-supporting parents—the representative of 10,000,000 American men—and see what happens to him.

The morning after declaration of war Henry reads that the President will speak over the largest radio hookup ever put together, instructing everybody between the ages of 21 and 30 to report to his regular voting place to register for military service. The registration date is set for the next week.

During this intervening period there is an enormous blast of publicity. Posters go up: "Patriots Will Register—Others Must." Henry, knowing little about the mechanics of lithography, won't pause to wonder how these posters were produced with such magic speed. Nor will he notice the pattern that runs through all the newspaper feature stories. They are written in a highly patriotic vein, but each carries a threatening undertone, suggesting that serious things will happen to anyone who refuses to register. Henry dutifully reports on registration day.

Ahead of him in line is an uncombed individual with fierce black eyes, who begins to harangue those in charge about constitutional rights and the evils of war. He is stopped almost before he has started. The man behind the table starts reading from the regulations:

"If the prospective registrant is sullen or inclined to falsify, his attention should be called to the penal provision of the law. * * * If he is still refractory, the case is reported to the necessary police authority. * * * The registration must not be obstructed."

There are several policemen standing by. The registration proceeds.

Henry signs his card and is given a second card—for purposes of identification. He must be able to produce it at any time he is called on to do so. It carries the number 800, which means that he was the eight-hundredth man to register in his district. From the moment he puts his signature on that card he is subject to military law—all this, understand, by the time the war is 8 days old.

On this same day 12,000,000 other men have filled out cream-colored cards precisely like the ones Henry signed. The all-inclusive ritual extends even to jails and insane asylums. Four days later the lottery is announced. The newspapers say that the President will draw the first number capsule determining the order in which men will go into the Army, and they urge everyone to listen to the broadcast. If the President draws number 346, that means every man with this number on his registration card should prepare to leave at once. At his radio, Henry hears various numbers announced. And finally 800 is called, moving him a few more feet toward the front.

Five days later, Henry receives a long questionnaire which he is directed to fill out. The questions puzzle him. Does he have a wife? Is she self-supporting? What crops does he raise? Did he file an income tax last year, and does he own his own home? Henry fails to wonder how these questionnaires were ready so quickly. He has had no way of knowing that months were spent on devising questions which would extract a maximum amount of information and that master copies of the resulting questionnaire were kept in every State capitol ready to go to the printer when M-Day arrived.

Two days after mailing his questionnaire back to the local selective service board, which has miraculously sprung up, Henry is informed that he is in class I and should report to a designated doctor for physical examination immediately. Class I indicates that there is no reason why he should not be inducted into the military service. Class II would signify that he was engaged in some necessary work—like making shells or running a wheat combine. Class III would mean that he had a family dependent on him, and class IV that he had a glass eye or a cork leg.

Henry passes his medical examination and 9 days later is ordered to report to camp—along with some 300,000 other young Americans. A scant 30 days after the declaration of war, Henry Putty, garage mechanic, has become Pvt. Henry Putty. He can never get it quite straight how these things happened to him so rapidly. The answer, of course, lies in the fact that all preparations had been made in advance.

The Army learned a lesson in the World War when a feverish appeal to patriotism netted only 86,000 men in the first month. An Army of 3,500,000 was needed.

The 1917 Conscription Act was the inspiration of a tough young cavalry captain who sold the idea to his chiefs in that hectic spring and turned it out in 4 days. His name was Hugh S. Johnson.

Two months elapsed between the declaration of war and the first registration. More months passed before green recruits could be taught the fine points of trench warfare.

Such valuable weeks will not be wasted another time. The Joint Army and Navy Selective Service Committee has taken care of that. Once America decides to go to war it will go in a hurry.

From the central authority of the six-man board, composed of officers representing all branches of the military, organization extends downward to every county and hamlet in the country. Adjutant generals, normally responsible to the Governors of each State, bridge the gap between the War Department and the States themselves.

The adjutant generals have under them from 4 to 16 highly trained key men, drawn from the National Guard and the Army Reserve. They have prepared pin maps of all voting places, lists of election officials, and lists of men to sit on selective service boards, which will classify the registrants. One of these boards will be required for each 30,000 population—approximately 6,400 for the whole United States. Plans are complete even to the number of square feet of floor space required by the various agencies. M-day charts in each adjutant general's office indicate the exact steps to be taken by him after the declaration of war.

The men chosen to run the machinery of the draft attend regional conferences each year where for 2 weeks they discuss the details of getting civilians quickly into uniform. These regional conferences are supplemented by correspondence courses. A National Guard officer can substitute home work for drill. Monthly bulletins keep this skeleton organization constantly in touch with new problems as they arise.

The Adjutant General and his staff have astonishingly detailed information about even the most remote backwoods counties: the reading habits of the people and the publicity channels which will reach them. They know the number of men required for capacity production of the West Virginia coal mines, and who should therefore be "deferred"; and the men necessary to keep Detroit machine shops rolling at top speed.

The more than 300 men in the permanent and ever-enlarging selective service organization are not blind to the fact that there is a more widespread and articulate antiwar philosophy abroad today than there was in 1917. They are aware that many people have taken oaths against bearing arms. They know, too, that thousands and thousands of others just don't want to wear uncomfortable uniforms or be shot at. So every facet of the expansive art of ballyhoo will be turned full force upon each of these reluctant patriots. Three-minute speakers, chosen from lists already compiled, will break in on every radio and movie program. The likelihood is that by the time their numbers come up many objectors will have changed their ideas.

On local and State committees are advertising and publicity men, publishers, radio and motion-picture executives, and well-known free lances in the art of manipulating public opinion. With the arrival of M-Day they will set up the Public Relations Board, the third unit in the great wartime triumvirate. This unit's assignment is to "sell the country" on the other two, the War Resources Board, and the Selective Service Administration. It is needless to catalog the multiple devices by which a reluctant citizen can be "educated" to the point of making him acquiescent to the demands of military service. The science of propaganda today is nearly irresistible.

The purpose of all this is not only to get men in a humor to go to war, but also, as one officer bluntly expressed it, "to make men think they have the responsibility to push other men into recruiting offices."

Not even pacifists will escape this dragnet. But if a man is an honest-to-goodness conscientious objector (which up to now does not include takers of pacifist pledges or members of radical political parties) he will not be forced to bear arms. He will be placed in noncombat service behind the lines.

What to expect in the way of manpower from all this effort is indicated by "yield" figures, which reveal that of the 12,000,000 men between the ages of 21 and 30 approximately 3,000,000 will be available for immediate service. Although there are only 3,000,000 boys between the ages of 18 and 21, 2,000,000 of them can go. They are healthy, have fewer responsibilities, and are less valuable to industry than older, better-trained men. The group between 31 and 45 contains 13,000,000 men, of which only 2,000,000 will make soldiers.

In the aggregate, the machinery already set up is geared to produce 330,000 men every 30 days; or 4,000,000 every 12 months.

All the plans so far drawn are necessarily liquid; ready to meet conditions as they change. Every few months new flourishes are added to the Selective Service Law and changes are made in regulations.

Henry Putty may contemplate with whatever reactions are peculiar to him the military career which has been planned for him. The least he can say is that the plans are pretty complete.

The United States and the World War

EXTENSION OF REMARKS

OF

HON. WILLIAM E. BORAH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

ARTICLE BY HON. GEORGE WHARTON PEPPER

Mr. BORAH. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Never Again,"

published in the American Legion and written by Hon. George Wharton Pepper, a former distinguished member of this body.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the American Legion Magazine for August 1939]

NEVER AGAIN

(By George Wharton Pepper)

Doubt. Determination. Disillusionment. These three words tell the story of the relation of the United States to the "First World War." The fourth and final word cannot yet be written with certainty. It will, however, be either wisdom or folly.

Earlier modern wars in Europe and elsewhere had usually been duels. Two nations fought while the rest of the world looked on. Our War of 1812 with Great Britain and later our war with Mexico, our own Civil War, the Franco-Prussian, the Russo-Turkish, the Boer War, our War with Spain, and the Russo-Japanese conflict are typical illustrations. There was always talk about third-party intervention but it seldom came to pass. When our relations with Spain were strained to the breaking point the diplomatic representatives of six powers called at the White House in a vain effort to avert the war that was pending. They were politely but firmly advised to mind their own business. When recently the United States volunteered similar advice to Germany and Italy the response was just as firm but not as polite.

Most of these wars were of short duration. They ended either in a draw or in a decisive victory. Peace treaties were signed, some territory changed hands, new boundary lines were drawn, costs were taxed against the losers, and the wars passed into history.

When 1914 dawned a large section of the people of the United States had undergone a marked psychological change. As one result of the Spanish War and of the effective service rendered to Cuba, many of us had domesticated the idea that it was part of our business to right the wrongs of other nations even if they were geographically remote. As a consequence of the acquisition of the Philippines and other island possessions, we had gone "imperialistic." Easy intercommunication throughout the world had made it plausible to assert that all national families had now moved into one big apartment house, and that the day of staying at home was over. This assertion was widely accepted as a matter of course. Few stopped to reflect that the closer the international contacts the greater the importance of restraint in criticizing the conduct of others. When, therefore, in 1914 the several European powers plunged into war, the psychology of millions of Americans was such our voluntary participation seemed, even at the outset, to be by no means impossible.

As soon as the several European nations had exchanged warlike declarations, the United States promptly took a position of official neutrality. When, however, Germany invaded Belgium there were many Americans who at once proclaimed it to be our duty to resent the outrage and to go to war to punish the invader. Millions of Americans, especially in the West and Northeast, were slow to assent to this doctrine and there ensued a period of national doubt respecting the proper course for our Government to pursue. That this national uncertainty was popular with the majority was indicated by the reelection of President Wilson on the strength of the slogan, "He kept us out of war."

During this period Great Britain, upon the high seas, so often violated our rights as a neutral that, but for Germany's graver violations of international law, the cloud of an ugly Anglo-American rupture might have darkened the sky. Fortunately the British violations affected property rights only, whereas Germany inflicted irreparable loss by taking American lives. As time passed, public attention was focused upon the conduct of Germany. Finally the sinking of the *Lusitania* marked the end of the period of national doubt and made our declaration of war with Germany only a matter of time.

The question of why we went to war has been furiously debated. It cannot be answered satisfactorily without recognizing that motives were strangely mixed. Those who from the outset had advocated the participation of the United States welcomed the long-delayed opportunity to help friends and to chastise the Kaiser. In addition to this group there were millions to whom theretofore the war in Europe had seemed strangely remote.

When, however, American lives began to be taken the anger of these millions flared and they accepted war as a normal mode of expressing it. There was another group, relatively small at first, to whom the problem presented itself as a somewhat academic question of political science—the confrontation of Democracy by autocracy. To this group President Wilson belonged. To him should be given the credit, if it be a credit, of rationalizing national anger by interpreting our participation in the war as a noble attempt to make the world safe for democracy.

There was also in many minds the element of fear, in that the Kaiser's military program was popularly believed to include the ultimate subjugation of South America as well as the rest of the world. In February of 1917 the German Minister to Mexico was instructed from Berlin to propose an alliance between Germany and Mexico with the hope that Mexico would secure the active cooperation of Japan. The publication of these instructions aroused bitter American resentment and stimulated the House of Representatives to an overwhelming vote in favor of arming American ships. Nothing but a minority filibuster prevented similar action by the Senate.

Though legislative action was thus blocked, such a German policy, officially declared, had an immense popular effect. Whether it was all a bluff or whether the program was seriously contemplated is still under debate. Were it not that multitudes of sensible people today attribute similar programs to Herr Hitler and Signor Mussolini this apprehension might be regarded in retrospect as a form of hysteria. In October of 1917 the New York World published in map form a synthetic tabulation of various territorial claims advanced from time to time by German writers. "Obviously," wrote Newton D. Baker, "no such comprehensive plan of world conquest was ever adopted by responsible German statesmen." (Why We Went to War, p. 18.)

Nevertheless, such grandiose claims were taken seriously by so many Americans that the instinct of national self-defense must be included in the list of reasons why we went to war. Futile attempts have been made to hold munition makers and bankers responsible for our decision to fight. The most effective demonstration that this theory is baseless will be found in Secretary Baker's book just referred to (pp. 119 et seq.).

When the decision to take up arms was reached by Congress in April of 1917 national doubt was at once replaced by national determination. The well-nigh universal acclaim with which the President's war message had been greeted naturally made opposition to war intensely unpopular. The 6 Senators and 50 Representatives who voted against the declaration must be recognized in retrospect as brave men. At the time, however, they were accused of cowardice, as is apt to be the case when a minority attempts to stem the tide of popular determination.

Not every man now alive who wore the uniform of the United States in the World War can give a comprehensive account of all our war activities. His own experiences in his training camp and through the 584 days that intervened between April 6, 1917, and November 11, 1918, are of course engraved in his memory. For the rest, frantic preparations at home and actual operations abroad were on so vast a scale that perhaps even the historians have not yet been able to tell the whole story. Suffice it here to record the unquestioned fact that American determination which was enthusiastic at the outset became more and more grim as reality replaced imagination. The present writer has no certain way of appraising the sentiments of the men of the American Legion. His conjecture is that nobody values our American heritage more highly than they; that if this heritage was really endangered by the World War they are glad that they responded to their country's call; but that they never again can be persuaded that it is America's duty to police the world or to intervene in the quarrels of other nations.

After doubt, determination had come; but after determination came disillusionment.

The present well-nigh universal recognition of the folly of Versailles makes it hard to realize how near we came to national participation in it. The story of the conflict over ratification in the Senate of the United States is one of the most interesting in the annals of diplomacy. In an outcome which the writer regards as providential we declined to accept the fatal doctrine of "collective security" and refused to join in a guaranty of the artificial status quo which the Versailles Treaty so unhappily set up. The theory that the consequences of war can by collective action be made so terrible that no nation will dare to risk them is as unworkable a theory as has ever been boldly asserted and plausibly maintained. When the crisis comes collective international action becomes impossible both because opinions differ as to who is wrongdoer and because the several parties to the compact are found to have diverse interests.

Recent events in Europe are nevertheless relied on by some as a compelling reason for American intervention, even if this means war. It is said, as it was in 1914, that Germany's policy is hostile to the United States. Every weighty consideration leads to a wholly different conclusion. It is further said to be our duty to hasten to the support of Great Britain and France. There can be no such duty until we know precisely what the issue is and where the vital interests of the United States really lie. Certainly we cannot wisely issue even to the most friendly nations a blanket policy of reinsurance.

We must first know about and approve the risks they propose to assume and be made to recognize that reinsurance is, for us, a measure of enlightened self-interest. It is, for example, far from clear that Britain and France acted wisely in giving commitments to Poland in connection with the Polish Corridor and Danzig problems. The reshuffling of the cards has been going on for centuries in Central Europe. This is not to say that this ancient game has always been "on the level" or to deny that grave injustice has often been done. The point is that these successive new deals are not necessarily a justification for intervention by outside powers.

It is not the fashion of today to read ancient history for light on modern problems. Nevertheless an American citizen in 1939 might find it interesting to review the record of the relations between Rome and Carthage. After Rome had won the first round in what was in its day a veritable world war, oppressive terms were as usual imposed by the victors on the vanquished. When the latter had regained a measure of strength they decided to endorse the project of their great military leader, Hannibal, who planned to renew the war and carry it over the Alps into Italy. This he did.

Livy's account of what followed 2,000 years ago reads as if written today. "The hatred with which they fought," says the Roman historian (Livy, book XXI, ch. I) "was almost greater than their powers of attack; the Romans burning with indignation that

the conquered should dare to take up arms against their conquerors; and the Carthaginians likewise enraged because they believed that the conquered had been treated with supercilious arrogance and greed." Scipio, perhaps the best balanced of all history's military heroes (see A Greater Than Napoleon, by Capt. B. H. Liddell Hart), first turned the tide of battle by vanquishing Hannibal at Zama and then vainly sought to commit his countrymen to a policy of generous liberality toward the conquered.

How, opposing him, the vindictive Cato insistently clamored for the utter destruction of Carthage will be recalled by many schoolboys. Echoes of Cato's popular slogan "Delenda est Carthago"—Carthage must be blotted out—must have run through the council chamber at Versailles. Certainly its echoes are ringing still. As this article is being written (Memorial Day 1939. The incident referred to was the ejection of an important Roman Catholic prelate from his official residence) the newspapers are chronicling still another incident in Germany's international policy which will put patience to a further test. It is just another temptation to raise the cry "Delenda est Germania." It is to be hoped, however, that this incident will not bring a repetition on the part of high United States officials of intemperate and abusive utterances about German policy.

No matter how deeply we regret on the part of other nations acts of injustice and oppression, denunciation by our Government officials is out of order unless we seriously mean again to take up arms to redress the wrong. This we do not intend. Disillusionment has opened our eyes to the futility of an international policy of knight-errantry. It may safely be predicted that as long as the American Legion is a stabilizing force in American life the United States will make the most of our fortunate geographical position.

It has become with some the habit to apply the word "isolationist" as a term of reproach to those who insist upon capitalizing our position of natural advantage. It is recorded of James IV of Scotland that on the eve of the Battle of Flodden he forsook his advantageous position on high and rocky ground because he thought it unfair to subject the English cavalry to the consequences of an unequal fight. In the ensuing combat he perished and almost his entire army with him. It is to be hoped that in his last moments he had the consolation of realizing that at any rate he was not a selfish isolationist.

The truth is that the word "isolation" clamors for definition. Those who use it should explain clearly just what they mean.

If the term is applied to one whose offense is that he does not agree with his critic on some matter of policy, the critic's argument is not helped by a mere repetition of the word. The true question is, What is the policy under discussion, and is it right or wrong? If, on the other hand, the term denotes the decent reserve of a well-bred family in an apartment house, who neither intervene in their neighbor's quarrels nor shout denunciations through the keyhole, then the term is descriptive of one of the most desirable traits of civilized man. To talk with owl-like solemnity about the futility of "isolation" is neither creditable to the talker nor convincing to his hearers.

If, as a result of the disillusionment which followed the World War, we first determine that our proper policy is to make America strong and to shun war unless we are attacked, we are likely to make in this way the greatest possible contribution to the cause of civilization. It is something more than a coincidence that the Franklin penny (see resolution of Congress under the Articles of Confederation, July 6, 1787), the first coin minted under the authority of the United States, carried upon its face this homely and sagacious injunction: "Mind your business." It would be reassuring if the Congress were today to authorize the minting of a new coin bearing the slogan "Never again."

Hon. James A. Farley

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

EDITORIALS REFERRING TO PUBLIC SERVICES OF HON. JAMES A. FARLEY

Mr. GILLETTE. Mr. President, I ask to have printed in the Appendix of the RECORD a number of editorials referring to the public services of Hon. James A. Farley.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Scranton (Pa.) Times of July 20, 1939]

BUSINESSMAN FARLEY

Big Jim Farley is not only an A No. 1 political general but, it would seem, a business executive who can produce results. There is hardly any need to talk about Jim's ability as a rigger of political conventions and his ability to put his man across. President Roosevelt's nomination in 1932 and Jim's forecast of the outcome of the election in 1936 are the best testimonials of his ability as a political leader.

Not only is Jim chairman of the Democratic National Committee but Postmaster General as well. In the operation of the Postal System he has made a record which we doubt can be excelled in any period of the country's history. For the fiscal year ending June 30 the Postal Department shows a net operating surplus of $10,000,000. This is the fifth surplus reported by Mr. Farley during the 6 years of his administration of the Department. Without reducing the efficiency of the Department, Jim has quietly been cutting corners on expenses and is now able to show a record surplus.

Gains in revenue by the Department, he says, came from all over the country. Taking postal receipts as a barometer of business, Mr. Farley sees in them an indication of an upward turn in business. From the manner in which Mr. Farley has operated the postoffice, apparently we are looking at him too intently as a politician and overlooking his business qualifications.

[From the Burlington Suburban List, Essex Junction, Vt., July 6, 1939]

AIR MAIL TO TOWNS

Postmaster General James A. Farley, while in Vermont last week, made the statement that most of the small post offices would get air-mail service within the next 5 to 10 years. This is a pretty broad statement, yet Postmaster General "Jim" has an intimate knowledge of the Postal Service, and his statement would indicate that he has an advanced vision of the delivery of mail in the future.

It does not seem reasonable that the air-mail service will develop to the point where the small towns will be served. If it is done, there will have to be some sort of pick-up-and-delivery service such as the railroads did some years ago by "catching the mail on the fly." When that comes about, it will be another stab in the revenues of the railroads, and the trucks will also suffer, too.

The railroads today get millions of dollars for carrying the mail. If deprived of this revenue, there will necessarily be many less passenger trains and possibly the abandonment of many local railroad lines. Probably Postmaster General Farley has a keener insight into what mail service is going to be in the future than is generally understood.

[From the Crawford (Colo.) Chronicle of June 1, 1939]

THIS TRIBUTE TO HON. JAMES A. FARLEY

This little intimate story will, we feel sure, serve to reveal the kindly disposition of a great American citizen; one who although a member of President Roosevelt's Cabinet and also the Postmaster General of the United States, finds time to render little favors which prove that the heart of this outstanding public official beats in tune with the hearts of his fellowmen regardless of their position, wealth, religion, social standing, or political belief.

About 2 weeks ago Leslie J. Savage received a letter from one of his life-long friends telling him of an unjust report that had been circulated against one of Mr. Savages' boyhood friends who was employed in the United States Postal Department in a small town. Fears were felt that an effort would be made to get the Post Office Department to discharge this party. Knowing that Mr. Savage was a good friend of James A. Farley, these good people asked him to write to Mr. Farley and explain the situation to him and request that he see to it that no charges made against this party be allowed to stand unless they were backed by unimpeachable evidence. At the time this letter was received by Mr. Savage the newspapers reported that Mr. Farley was on his way from Washington to San Francisco to visit the World's Fair and attend the postal employees' convention to be held there. He immediately wrote Mr. Farley, addressing the letter to him at San Francisco. The letter, which was sent by air mail, did not reach San Francisco until after Mr. Farley had left there and it was forwarded to him at Cheyenne, Wyo., where it was delivered to him the night he made a speech there, which was May 23, 1939.

The next morning at about the hour of 7:30 a long-distance telephone call was made from Cheyenne, Wyo., to the cross-road town of Crawford, Colo. The Postmaster General of the United States was calling for the little town of Crawford, Colo., for the purpose of telling Leslie Savage that he had received his letter in regard to his friend and that his request would receive his personal attention and that immediately upon his return to his office in Washington he would personally see to it that no unjust reports made to the Post Office Department relative to this party would be allowed consideration. Mr. Farley requested Mr. Savage to notify his friend that he need have no fear of losing his job because of any unjust criticisms that might be filed against him.

Everyone who has given any thought to the vast amount of work done by Mr. Farley as Postmaster General and as a Cabinet member, knows that he is one of the busiest men in the United States. Many people who are intimately acquainted with Mr. Farley say that he is one of the hardest-working men in public life today; they say he works over 16 hours every day except Sunday. The reason he is able to stand up under such terriffic pressure is because of his perfect health and well-developed body. He does not drink, smoke, or dissipate in any way; is a

devout Christian and a home-loving man who places great value on doing the things that will be of service to his fellow man. That fact that this very busy man was willing to take time out of his overcrowded working schedule to give personal attention to the letter written him by Mr. Savage concerning a proposition that might mean the loss of a job to a man who lives in a small town many, many hundreds of miles away from Washington, proves beyond a doubt that James A. Farley has within his breast a big heart that responds to those things that are based upon justice and fair dealing between men everywhere. It is a gracious act on the part of this high Government official—one that is not only appreciated by the interested parties but likewise by all lovers of justice and fair dealing in this Nation and all other nations composed of God-fearing people.

We are glad to pay this well-deserved tribute to Hon. James A. Farley and other public officials—regardless of their political or religious convictions—who stand for the things Mr. Farley stands for with reference to serving his fellow man. May their tribe increase.

[From the Salt Lake City Tribune, May 23, 1939]

UTAH'S EMINENT GUEST WILL HAVE TRIPLE RECEPTION

There will be a triple reception today in Salt Lake City in honor of a distinguished visitor who is to reach the city this evening. As chairman of the national Democratic organization, James A. Farley will be greeted by both faithful and doubtful members of the party. As Postmaster General and head of the largest Government-controlled business institution in the world, James A. Farley will be entertained by Postmaster Smoot, president of the National Association of Postmasters, and by other appointees of the Postal Department from all convenient post offices in the State. As a prospective candidate for the Presidency next year, James A. Farley will attend and address a sympathetic gathering of several hundred leading citizens at a banquet scheduled for this evening in the Newhouse Hotel.

Generally recognized as one of the most active and astute politicians this prolific government of, by, and for the people ever produced, the genial gentleman who is an official guest until tomorrow's early train will carry him to Cheyenne, is always welcome, always enjoyable, always worth while. He sees everybody within the range of his vision, salutes everybody under the sound of his voice, and knows everybody he has previously met.

Although not officially or admittedly in the race for the next Presidential nomination and ostensibly still loyal to Roosevelt personally, if not to some of his pet policies, Farley is a force to be reckoned with by both major organizations, as he demonstrated 3 years ago.

With all his popularity the President will be helpless in any convention or campaign without the support or cooperation of "Sunny Jim." Roosevelt may have the rank and file behind him, but Farley has the organization and that is what counts in this machine age.

Salt Lake City will extend a cordial welcome to Postmaster General Farley, National Chairman Farley, and Candidate Farley while the quintuplets of Canada are being received by British royalty.

[From the Burlington Suburban List, Essex Junction, Vt., July 6, 1939]

CAPTURED VERMONT

Postmaster General James A. Farley came into Vermont one day last week and just about captured the State. He is no novice in appearing in public. Dignified and with commanding appearance he has a keen understanding of human nature and makes an indelible impression wherever he appears. The Democrats have taken strongly to the Postmaster General and he also made quite a favorable impression with the Republicans. It is doubtful if any other man in public life, even the President himself, would have been more cordially received. And "Jim" Farley has been traveling all over the country, meeting people just about the same as he did in Vermont, and is building up such a wealth of popularity that he will surely have to be reckoned with at the next Democratic National Convention. Should he get the nomination for President and campaign in Vermont to any extent, he might turn this State upside down. He is a man of tremendous energy, very likeable, yet under his skin he gave the impression of sincere sympathy in humanity.

[From the Erie (Pa.) Dispatch Herald of June 16, 1939]

WELCOME, MR. FARLEY

Erie is honored today by a visit from James A. Farley, the Postmaster General. Mr. Farley comes here as a guest of the Pennsylvania Postmasters' Association, meeting here in annual convention.

Although Mr. Farley is a member of President Roosevelt's Cabinet, as well as being chairman of the Democratic National Committee, there is no political implication to be found in his visit here. He comes here to talk to postmasters from every section of Pennsylvania, who, because of their position, are serving the communities in which their post offices are situated. Further, while here he will pay tribute to the memory of Eben Brewer, a Republican, whose monument in East Perry Square was erected by the postal employees of the country.

As Postmaster General Mr. Farley has done a good job. He has maintained the efficiency of his Department which reaches into every city, village, and hamlet in the country, and through the rural service to the farms and to every out-of-the-way place from coast to coast.

To Mr. Farley Erie should extend a hearty welcome. Actually he comes here as the guest of the State's postmasters; nevertheless, he is the guest of the city. The city should honor him as such and do everything possible to make his brief stay pleasant.

[From the Port Huron (Mich.) Times-Herald of June 6, 1939]

THIS OFTEN HAPPENS HERE

Probably nowhere else in the world than in America could there occur such an incident as that in Conway, Ark., last Sunday, when Postmaster General James A. Farley, a Catholic layman, received from Hendrix College, a Methodist institution, an honorary degree of doctor of laws.

We know well enough that the United States, unfortunately, is not free from religious and racial and sectional intolerance and prejudices, but this thing which Hendrix College did on Sunday shows that education and intelligence are the opposites of prejudice and intolerance and do not work well together.

For what Hendrix College has done is not remarkable because unusual. Honors of this kind have been conferred upon Catholics by Protestant colleges, and upon Protestants by Catholic universities.

It is one of the evidences of which there is frequent recurrence on this continent—both in the United States and Canada—that democratic peoples have no difficulty in living and working together in peace and amity, no matter how much they may differ in their racial origins, politics and religion, or social theories.

[From the Sapulpa (Okla.) Herald of May 16, 1939]

WELCOME JIM FARLEY

Farley's visit to Oklahoma this week gives Oklahomans a buzz—because it is the forerunner of activity that will from this point hence until 1940 gather political campaign momentum.

"Good Old Jim" Farley is the very epitome of the Rooseveltian era's strong man. Jim Farley has been front man so long and so ably that one wonders whether he gets his ideas from the President or vice versa.

At any rate, Oklahoma Democrat dignitaries are rallying around one of the most notable Postmaster Generals of the century. Farley has managed to survive political storms and administrational shake-ups of varied degrees. He knows how to sit steady in the boat, and there he has sat.

Oklahomans are pleased with the opportunity of seeing and greeting Farley—Democrats to be sure, and some Republicans. In this day of paradoxical party fusion there are Republicans who lean to the demos and demos who espouse the Republican ticket.

Jim Farley, however, is strictly a dyed-in-the-wool Democrat. He exudes the principles of Roosevelt democracy—and he has made an excellent executive in the post he has been selected to fill for the Roosevelt regime.

His tour at the moment is timely and wisely chosen by party strategists. Whatever may ostensibly bring him through the Middle West and Southwest, Jim Farley will mend fences if he can, build political new ones where they have been washed away, and feel out the prospects of the Democratic bid in the upswinging Presidential election.

And Farley is well fitted for this task in view of his extensive job as patronage aide-de-camp for the present administration.

Oklahomans all are happy to extend a sincere welcome to this major cog of the national administration, James Farley, Postmaster General.

[From the Nowata (Okla.) Star of May 21, 1939]

JIM FARLEY—SUPERSALESMAN

Postmaster General James A. Farley came to Oklahoma this week, made three speeches, clasped the hands of thousands, retained that captivating smile, sold his wares, and departed with Oklahoma still safely in the Roosevelt column.

Jim Farley has the happy faculty of making friends—none can resist that winning personality, infectious smile, hearty handshake, and cordial greeting as he calls his greeter by his first name and says, "Yes, sir; glad to see you again; glad to be back in Oklahoma." Having the knack of remembering faces and names, Farley makes the best of this, a politican's greatest asset. How his memory retains the first names of thousands and how he stands up to the gruelling task of shaking the hands of many thousands daily while on these trips is a mystery to everyone. But Farley seems to enjoy it—at least if he doesn't, no one but Farley knows it.

"Good old Jim" is the very epitome of the Rooseveltian era's strong man. He has been front man so long and has performed the job so ably he has many wondering how he has managed to survive political storms and administrational shake-ups of varied degrees.

In his defense of the Roosevelt administration one is quick to perceive that Farley fairly idolizes his friend of long standing, and no matter what others may think of the Chief Executive, it is easy to see that Franklin D. Roosevelt is still the idol of the greatest Postmaster General and the most astute politician this country has ever seen.

And this unswerving loyalty to his chief plus his winning personality tends to make "genial Jim" today one of the best-liked men in American public life.

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

RADIO ADDRESS BY HON. ROBERT M. LA FOLLETTE, JR., OF WISCONSIN, JUNE 29, 1939

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by me, broadcast by transcription over station WHA, Madison, Wis., on June 29, 1939, on the subject Surplus Purchases of Dairy Products.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Several weeks ago I had an opportunity to talk over this station about the desperate situation facing the dairy industry. It was a time of emergency. Surplus supplies of butter and other dairy products were piling up in unprecedented amounts, and dairy prices, as a result, were falling to disastrously low levels.

Butter was selling at 22.1 cents a pound, the lowest monthly average for 92-score butter since 1933. The price of cheese was lower than it had been at any time since 1934. Milk was 38 cents per 100 pounds below the price it had brought a year ago. These few, brief figures represented market conditions that were costing Wisconsin dairy farmers thousands of dollars every single day.

At that time I told you that I was joining with Senators from other agricultural States and with our Progressive Congressmen from Wisconsin in a combined effort to meet the emergency and stop the decline in commodity prices. We set out to secure an appropriation of additional funds to the Federal Surplus Commodity Corporation so that it could buy up the surplus farm commodities which are bearing down so heavily on commodity prices and distribute these surpluses to the unemployed people on public relief who can use them.

Tonight I am happy to report that we were successful in getting most of what we went after. Our original amendment called for an appropriation of $150,000,000 for these purchases of surplus commodities, and the Senate approved the amendment providing $113,000,000 of this amount. Finally, late last week the House of Representatives also accepted the amendment.

This appropriation will be added to the money already provided for such purchases under existing law. Since 1933 the Surplus Commodities Corporation has been receiving 30 percent of the Federal customs receipts to finance the purchase of surplus commodities for relief purposes. It is estimated that this source will provide approximately $92,000,000 in the coming year. This, together with the additional appropriation just made, will mean a total of $205,000,000 will be on hand to remove farm surpluses from the market and bolster up the prices of farm commodities.

The additional appropriation was necessary for two reasons. In the first place we have been steadily accumulating larger surpluses of farm products in the past year. Dairy production in particular has increased a great deal since 1937. The number of milk cows has increased in all areas, and the amount of milk produced has increased still more, due to good pasture and feed supplies. The production of manufactured dairy products such as butter, cheese, and evaporated milk during the 1938–39 season increased about 10 percent above the average production for the previous five seasons. On April 1 of this year there were 78,000,000 pounds of butter in storage, compared with only 14,000,000 pounds in storage on April 1 of last year.

Yet in spite of the fact that the surpluses to be faced were larger, the money available to the Surplus Commodities Corporation under the existing appropriation from customs receipts appears to be about $52,000,000 less next year than was available this year from that source. The reason for this is a decline in American imports.

This type of emergency action has proved its worth to the farmers of the country in preventing the collapse of commodity prices, and I am confident that on this occasion it will offer substantial help to our farmers in Wisconsin.

I hope no one will misunderstand me. This is not going to work any miracles. The problem of market surpluses and depressed farm prices will require more fundamental treatment than we are able to give it in a more or less temporary program of emergency purchases. The economic crisis which the farmers are facing today is still a continuation of the same agricultural depression which started in the years immediately following the World War when big business and high finance set out to deflate the country and liquidate wartime values.

However, I am convinced that a properly conducted program of Government purchases will relieve the acute crisis which has arisen as a result of the increasing production of the past year. It is one way of maintaining the market demand and thus supporting the price level for the farmer.

Look at what happened this spring after the Government discontinued its purchases of surplus butter in the open market. For 9 months the purchases financed through the Government had kept the price of butter above 25 cents. In March these purchases were discontinued, and the price promptly fell to 22 cents.

So that you may get a clear idea of just how this program works, let me explain it briefly. The Surplus Commodities Corporation was set up in 1933 to buy foodstuffs and other farm commodities which were clogging the commodity markets and which would also be useful to the people on public-relief rolls. In this way the supplies bought were actually removed from the market and consumed. They were not allowed to lie around in storage where they could be tossed back on the market again at a later date, as was the case when the Farm Board tried to stabilize the wheat market during the Hoover administration.

Last year, when the surpluses of dairy products became a serious threat to the market price of milk, the Federal Surplus Commodities Corporation concentrated its efforts on the job of keeping up the price of butter, which represents about three-fourths of the milk that goes into manufactured dairy products.

To supplement the direct purchases of butter for relief purposes, there was organized a Dairy Products Marketing Association. This association was able to borrow additional money under another section of the Agricultural Adjustment Act with which it was able to purchase butter for storage. Under the terms of the loans this butter could not be resold in the open market at less than the purchase price plus the charges for storage and handling. Since the Dairy Products Marketing Association bought all its butter supplies at a price in excess of 25 cents per pound, it could not be sold on the market under any circumstances for less than approximately 26 cents.

By this means it was possible to absorb much larger amounts from the market than would have been feasible if direct purchases for relief had been relied upon entirely. Then as relief channels could absorb the supply, the Federal Surplus Commodities Corporation bought it from the Dairy Products Marketing Association as well as from the open market.

Butter has been distributed to the needy on relief during the past year at the rate of 12,000,000 pounds per month. The Dairy Products Marketing Association purchased 114,000,000 pounds of butter during the summer and fall of last year. Of this amount 91,000,000 pounds has now been purchased by the Federal Surplus Commodities Corporation for relief distribution, leaving only 23,000,000 pounds of this supply in the hands of the association. The storage supplies of the Surplus Commodities Corporation are definitely out of the market and can be distributed only to people on relief.

In addition to these purchases of surplus butter, the Corporation has also bought considerable amounts of other dairy products within the last year, including 3,262,000 pounds of evaporated milk, 9,000,000 pounds of dry-milk powder, and 132,000,000 pounds of fluid milk.

Altogether the actual purchases of dairy products for relief use for the fiscal year ending tomorrow represent an expenditure of approximately $36,000,000.

Just this month new efforts have been made to divert additional supplies of cheese and evaporated milk from the market for relief purposes. Seventy-five cars of evaporated milk were purchased just a few days ago, and offers are being considered for the sale of substantial orders of cheese.

With the new appropriation available for the coming year, beginning July 1, the dairy farmers of Wisconsin ought to find the Federal Government a valuable and helpful customer. Under the law 25 percent of the total appropriation is the maximum that can be devoted to a single type of farm commodity. So $50,000,000 is the very most that could be used for the purchase of dairy products, but even that amount should be of assistance to the dairy farmer in the present emergency.

I do not think that anyone will quarrel with the use to which these products are put after they are purchased. They are not wasted. They are not plowed under or destroyed. They are used by people who need them badly. The foodstuffs go to supply these people with a more adequate diet, and I am sure no one is going to begrudge the unfortunate victims of unemployment and misfortune an opportunity to eat more healthful and wholesome food.

In conclusion I want to assure the farmers of Wisconsin that the battle still goes on toward an ultimate solution of the critical problems which have plagued agriculture since the war. This victory I have told you about tonight is only a temporary stopgap. The real solution must be worked out over the long pull. The problems are the outgrowth of fundamental changes in our economic environment which go deeper than any specific measure or administration, either State or National, at the present time. The answers will probably have to come the slow, hard way. But by constantly working away day after day to reduce farm indebtedness, to maintain farm commodity prices and push them back upward to the point where they will cover the farmer's cost of production, to build stronger marketing cooperatives which will be effective in reducing the spread between the price the farmer receives and the price the consumer is obliged to pay, and by striving to improve the quality of the product as well as the efficiency of production—I am confident that it will be possible to achieve the balance between farm production and industrial production that is absolutely necessary if we are to have a sound, healthy economic system.

Vice President Garner

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

EDITORIAL FROM THE NASHVILLE TENNESSEAN OF JULY 28, 1939

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very splendid editorial published in the Nashville Tennessean of July 28, 1939, on the subject of the Honorable JOHN NANCE GARNER, Vice President of the United States. I will say in that connection that this editorial is accompanied by one of the most illuminating and effective cartoons I have ever seen printed in my life, and my only regret is that the rules of the Senate preclude me from asking unanimous consent that the cartoon be included in the RECORD as well as the editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Nashville Tennessean of July 28, 1939]

FOR THE ENEMIES HE HAS MADE

JOHN NANCE GARNER, of Texas, if we know the man, is entirely undisturbed by the violent personal attack that has been launched by the angry and unrestrained generalissimo of C. I. O., John L. Lewis.

If there are any regrets, they will be attributed to the labor leader who chooses to take as an affront the fact that the Vice President of the United States and presiding officer of the Senate reserves the right of freedom of decision on all important issues.

For 40 years the record of Vice President Garner has been unstained and his has been character beyond reproach. From the time of his rise to prominence on the southwestern plains until he assumed his duties as the second ranking official in the National Government, he has had the esteem and confidence of his fellow citizens. During two national campaigns even the discriminating John L. Lewis found this typical American worthy of political support.

There has come to light, however, a fundamental difference of opinion between the Texan and the man who so belatedly denounces him as "evil." It dates back to those dark days when the sit-down strike was at its height.

In the face of this direct challenge to government it is generally known that Mr. Garner put all politics aside and advised the administration that an uncompromising stand in behalf of law and order and Americanism was required. This was the American viewpoint, as events turned out, and it is responsible for the decline of illegal occupation and destruction of property. It has been upheld by a sweeping decision of the Supreme Court.

While one voice was being raised on behalf of constitutional rights and liberties, there was no helpful action on the part of the C. I. O.'s high command. Silence reigned in the tent of John L. Lewis. The courage which has permitted an inexcusable attack on a good citizen was not enough to warrant a protest against methods which threatened to undermine the foundations of government.

From that time on it has been generally known that Mr. Lewis was not to be listed among the friends and supporters of John Garner. If the Vice President became an active candidate for the Presidency, it was assumed that the would-be labor dictator would oppose him.

Political differences, however, fail to justify the tactics now employed by the embittered labor leader, nor do they furnish sufficient grounds on which to base a charge that Mr. Garner is not, or has not been, a friend of labor.

Over the years the record of Mr. Garner has been one of support for liberal legislation. He has played an important part in the New Deal, which has opened new opportunities for labor, and has enjoyed the vote of labor which had full knowledge of the facts.

And if, to Mr. Lewis' eyes, the stand against the sit-down was an affront to the workers, he would do well to consult the rank and file of labor in these United States. As a matter of fact, the man who denounced an indefensible practice is one to whom labor should owe an everlasting debt of gratitude.

The voice of John L. Lewis is in no sense the voice of the American worker, and if he is not yet aware of that fact, he will be enlightened in due time.

John Garner has become one of America's great institutions.

He typifies the independence and courage which is the national heritage.

He has numberless friends and he has never shrunk from duty because some individuals or groups might be displeased.

No words of calumny from John L. Lewis or any other can lessen the stature of the Vice President of the United States, who is loved, among other things, for the enemies he has made.

Mr. Lewis' crude outburst of anger and malice at one who for 40 years has stood before the American people as a man of character and high morality will have no effect upon this veteran war horse of democracy.

JOHN GARNER was fighting Cannonism, Republican reaction, the political influence of the Mellons, the Mills, and the Morgans while John Lewis was a Republican ward worker.

The only man in the history of his country to have successively been Democratic minority leader, Democratic majority leader, Speaker of the House of Representatives, and the Vice President of the United States, the Vice President, of course, will be all the more endeared to the American people.

If JOHN GARNER today is "a labor-baiting, poker-playing, whisky-drinking evil man," he was the same in 1932 when he gave the word that nominated Franklin Delano Roosevelt for President at Chicago.

If after the 6 years in which he has distinguished the Vice Presidency with his dignity and wisdom, he is what Mr. Lewis said, he was the same 3 years ago at the Philadelphia convention when President Roosevelt paid his great tribute to him and asked him again to accept the Vice Presidential nomination.

Creation of Additional Federal Judgeships

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

EDITORIAL FROM THE NEWARK (N. J.) EVENING NEWS OF JULY 27, 1939

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix an article dealing with creation of additional Federal judgeships, entitled "No Fifth Judgeship!" published in the Newark Evening News of July 27, 1939.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Newark Evening News, of July 27, 1939]

NO FIFTH JUDGESHIP

The Senate confirmed the nomination of District Judge William Clark to be a judge of the third circuit court of appeals on June 16, 1938, since which time there have been three United States district judges functioning in New Jersey instead of the statutory four. The vacancy has existed for more than 13 months. Now, on top of this, the Senate passes an act creating a fifth judgeship for this district, and the bill goes to the House of Representatives for action. The House, in the light of all the circumstances, should reject this legislation.

The fourth judgeship remained vacant during the last 6 months of Attorney General Cumming's tenure, and it has remained vacant for almost 7 months since Frank Murphy became Attorney General. The criminal docket in this district is reported to be in a serious state of congestion. Yet Mr. Murphy announced months ago, and has restated it since, that he was going to purge the Federal courts of politics, to disregard politics in appointments to the Federal bench, to reform inefficient and laggard methods of handling court business, and to clear up congested dockets.

One might say in this connection: Mr. Attorney General, there has been a vacant judgeship in this State during almost 7 months of your term of office, during which the Congress has been in session; the Senate prepared to consider and confirm a suitable nomination. What is the reason no appointment has been made? Could it be politics? Could it be, as Senator REED, of Kansas, charged in the Senate, that Mr. Hague and Senator SMATHERS can't get together on a candidate? Can it be that the creation of a fifth judgeship is designed to liquidate this dilemma?

With one judgeship vacant for 13 months, does not the proposed creation of another place have an aroma of politics? Are you aware that when the proposal for a fifth judge was first made to the Congress, in the report of Mr. Cummings, it was stated that all four district judges had expressed themselves as opposed to Mr. Cummings' recommendation when one of his assistants, Mr. Keenan, first broached the subject to them?

Suppose we fill the fourth judgeship and see what happens. Suppose Mr. Murphy then speeds up the presentation of cases here and integrates the work of the courts, as he has promised to do everywhere in a general statement on the needs of the

Federal bench. Suppose, in case of need, a retired Associate Justice of the Supreme Court of the United States is sent here to sit as a district judge, as was done in New York, or that one of the retired judges of the third circuit is designated to help out as a district judge in certain cases. Let's see what happens then.

If, in spite of all this, it can be demonstrated that congestion of dockets in this district is still serious, still prejudicial to that promptness which Chief Justice Taft once described as "the essence of justice," then it will be time for the Congress to consider the creation of a fifth judgeship, without the reproach of politics being present to hurt the prestige of the Federal bench, which all of us more than ever desire to guard and preserve.

America's Responsibility

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

EDITORIALS FROM THE MONTREAL DAILY STAR

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD two excellent editorials of recent date appearing in the Montreal Daily Star dealing with international relations in Europe and in the Orient. The editorials are particularly interesting because of the fact that the Montreal Daily Star is recognized more than any other newspaper in Canada as reflecting the policies of the Canadian Government.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Montreal Daily Star of June 22, 1939]

SHOULD BRITAIN FIGHT JAPAN ALONE?

It is a great comfort to note that the Chamberlain government has no intention whatever of allowing Great Britain's enemies to fix either the time or the place for the presumably pending "show-down" about which everybody is always talking. When a battlefield is finally chosen, we will have at least a voice in its selection. This flare-up in Tientsin, underlined by the dramatic occupation of long-doomed Swatow, looks altogether too much like a "put-up job" to deceive such experienced foreign-policy directors as the officials of the Foreign Office. They are not to be irritated or stampeded into ill-advised action by tactics which resemble nothing so much as the methods of the interfering "stooges" who prepare the victim of the pickpocket.

What are needed more than anything else are cool heads. And that is precisely what the present British Government and their official advisers have nothing else but. Excitable people find them too cool. But the ordinarily peaceful citizen who deeply dreads an unnecessary war will be greatly reassured by the spectacle of the British Prime Minister and his foreign secretary daily parrying poisonously insinuating questions in both Houses of Parliament, and refusing to be pushed into precipitate action that would nicely play the game of the dictator powers.

Nothing would suit Germany and Italy half so well as to see the British Empire deeply and unescapably involved in a first-class war in the China Sea. So much of the British and French Navies would have to be sent to Singapore even to cover relief operations for the Chinese armies that these two democracies would be exposed to grave danger in the Mediterranean and even the North Atlantic, should they try to redeem their pledges to help Poland in case that country were subjected to wanton attack. It is precisely this overwhelmingly naval strength of ours in the west that, more than anything else today, keeps the axis twins quiet. Diminish this strength to a perilously precarious margin, and we would almost certainly see the Germans in the Polish corridor and the Italians in Tunisia.

Admittedly, if the United States became involved, the situation would be completely changed. A British-French-American alliance to protect their mutual interests in China, and more especially to keep the Pacific from being dominated by Japan, would almost certainly bring Russia into the combination, and we would then have irresistible military and naval strength on our side. Under such circumstances, it would be most unlikely that the axis would turn at all. It would feel that this was an exceptionally poor time for it to try conclusions with the democracies. We should have peace with honor and a fine sense of security, and Japan would be sent back to her legitimate sphere of influence.

Such a combination of powers—if it could win the right to negotiate a new peace treaty without first embittering every participant by a long and murderous war—would be strong enough to lay the foundations of that peace on the firm principles of even-handed justice and fair play for all. It would not be a Brest-Litovsk peace, with its logical spawn, Versailles, St. Germain, and the others. It would be a peace recognizing the claims of the "have nots" to a fairer distribution of the world's choice possessions. It would be a peace in which it would be possible to grant some of Hitler's requests and make some of Mussolini's dreams come true without apparently yielding to threats of force.

But there is at present little or no prospect of any such combination. There are still too many Americans who distrust British intentions and dislike British policies in Asia. We British come to them burdened with the heritage of the ages. We cannot start now with a clean slate. Consequently some of our actions are shining targets for the criticism of an idealistic people whose foreign history began only when Dewey entered Manila Bay. Still, such as we are, we stand in this year of our Lord on guard along the China coasts of not only the interests and the ideals of the American people but of their future security as a people living along the shores of the Pacific Ocean.

But as things stand, and in view of the menacing condition of Europe—not excluding Russian reluctance to join our "peace front"—Great Britain has no interests in eastern Asia whose protection would justify a single-handed war with Japan. This is the hobble that limits the stride of the British Government. Just what national cause is served by having Mr. Chamberlain grilled every day in public by political gadflies, with little knowledge but much partisan or personal spleen, it is hard to see. Still, this is our system of government. This is one of the handicaps of democracy for which some of us at least are most unwilling to bleed and die.

It is becoming clearer with every day that the British Cabinet is doing what it can—and that is not too much. It is playing a hard game with low cards. But it is playing it with traditional British determination and with the help of the splendid courage of every British subject now facing discomfort and danger under Japanese arrogance. British history records many sorts of British heroism. It is not always the victorious charge of the Guards at Waterloo. It is sometimes the hopeless charge of the Light Brigade at Balaclava. And again it is sometimes the sacrificial death of a "Chinese" Gordon.

[From the Montreal Daily Star of June 27, 1939]

WHY NOT REDEEM WOODROW WILSON'S PLEDGES?

Just 20 years ago tomorrow the Treaty of Versailles was signed. None of the first-rank German leaders would make the humiliating pilgrimage to Paris to affix their names to this dishonoring document. An ersatz delegation appeared. It did not get a friendly or encouraging reception. All that could be said was that it got away alive. Yet the Kaiser and his crew were long since exiles in Holland. The great German Reich was a Republic. If the Wilsonian "mush" to the effect that we were making war on the German rulers and not on the German people had been even measurably true, we should obviously have welcomed the formation of a democratic German Republic and tried to help it keep the confidence of the liberated German people.

But we did nothing of the sort. We imposed astronomical damages on the prostrate and helpless Germans, knowing full well that they could never pay them. We disarmed the Republic, forgetting that time, if left alone, would surely render existing armaments obsolete and that all we had to fear from Germany was a revival of the old war spirit. Then we went watchfully to work to snub the Republic, to rebuff its every effort to get a little release for the German people from the impossible terms of Versailles, to discredit it daily in the eyes of its own suffering citizens. In short, we did everything we could to arouse the old war spirit of the Teutons and to convince them that they had nothing to expect from a retention of Republican institutions save generations of quasi-slavery. If they wanted to stand upright again, they must prepare to fight for the privilege.

Well, that is precisely what they did. They turned to nazi-ism and the intoxicating rhetoric of an ex-corporal called Adolf Hitler. Absurd as were his fantastic dreams, ludicrous as were his first efforts to arouse his people, smothered with laughter as was his beer-hall putsch, we had so thoroughly cultivated and manured the soil of German sentiment for just such a rank and poisonous growth as his dragons' teeth have since produced that his dreams have come true, his absurdities have hardened into good German gospel, and the derisive laughter of the Munich beer hall has become the bitter laughter of the Munich surrender. In less than two decades it was a white-faced and humiliated allied delegation that signed on the dotted line.

A cable statistician, writing from Versailles, calculates that of the 453 pages of the Versailles Treaty a total of 300 have been torn into scraps of paper. Of its 440 clauses, 314 have been broken—most of them by the hammer strokes of this same figure of fun, Adolf Hitler. The clauses dealing with the independent status of the free city of Danzig are said to be next on the list for contemptuous flouting. And possibly the most discouraging feature of the whole fiasco is that the German people—about whom we once professed to be so concerned—are completely convinced today that they are right, that they were tricked by the 14 points into a premature surrender under false pretenses, and that the old pre-war policy of "encirclement" is once more in course of preparation.

Those who say that Hitler is crazy do not strike deep enough into the dangerous stratas of German thought. The whole German nation are not crazy. As a people, they are probably about the least likely in Europe to go insane, with the exception of the stolid

British. They could not be led into the wild adventures they have risked by a crazy man if they had not been previously persuaded that in no other way could they hope to regain "a place in the sun." But the worst of their apprehensions must by now be fairly well dispelled. They have got back their Rhineland and the Saar. They have brought crippled Austria into the German fold. They have rescued the Sudetens and then taken over the rest of Czechoslovakia. They have picked up Memel. They have been recognized as equals at Munich.

It is time that they sloughed their inferiority complex and were prepared to sit down with the rest of us in a warless peace conference. Such a conference would not depend upon whether or not we could trust the word of Hitler. We would not have to. Once Germany is given what her people will regard as a fair offer, the malignant power of the Hitler magic to summon them to a suicidal war against a united civilization will have vanished. If he really is crazy, the methodical Germans will then find it out.

It was something like this that Mr. Chamberlain had in mind when he preached and practiced "appeasement." We cannot ignore 80,000,000 people in the middle of Europe. They must have a sense of decency and intelligent self-interest and a desire to advance civilization to which we can appeal. They cannot want war for war's sake. Remove from Hitler's vocabulary the inflammatory pictures he paints them of simple justice in the division of the world's riches, and his amazing hypnotic spell will be broken.

With Germany off our backs, we could deal with Japan. Japan is destroying, piece by piece, our splendid and fabulously rich empire in Asia. Even a victorious Germany would not inflict half so many deadly injuries upon us, unless it drove a lethal thrust through the heart of the Empire. We certainly should not allow ourselves to stumble or drift into the fatal abyss of a world war against three mighty military powers—with only one sure ally—if we can escape it by redeeming the Woodrow Wilson pledge to treat the German people, as distinct from their rulers, as friends and neighbors.

Let Us Stick to Real Neutrality

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

SPEECH OF HON. PAUL W. SHAFER OF MICHIGAN, AT SUNBURY, PA., July 29, 1939

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include a speech delivered Saturday, July 29, at the twenty-seventh annual Herrold reunion at Rolling Green Park, near Sunbury, Pa.:

If an inhabitant of another planet should visit the earth today, he would find the peoples of Europe arming madly for their own destruction. He would see men killed daily in the frantic race to build up air forces. He would see cities preparing desperately to defend themselves against destruction from the air. He would watch children too young to lisp their first prayers being fitted with gas masks. He would witness the movements of troops and engines of death and destruction by day and by night. Everywhere he would find the people girding themselves physically and mentally for the greatest conflict the world has ever known.

He might then cross the seas to a land separated from this terrifying scene by 3,000 miles of ocean—a land vast in size, rich in resources, her people the freest in the world, enjoying the highest standard of living man has ever known, and with vastly more space for expansion than the crowded people of Europe have ever known.

"Here are a people blessed among the nations of the earth," this celestial visitor would say to himself. "No need for them to become involved in the conflicts of another continent. Theirs are the resources to make them virtually independent of the rest of the world. Their geographical position is such that they need not become involved in the wars of others."

He would expect to hear these people exclaiming fervently, "Thank God I live in America." Instead, he would hear them asking each other, "Must we fight another war?"

He would be shocked to discover that daily these people are told, by men in high public office, through the press, and over the air, that they cannot hope to escape the next war, and that the price of their peace is that they prevent the outbreak of war in any corner of the globe. He would find tragic—and well-nigh incredible—the propaganda which teaches that we must resign ourselves to policing the world in an attempt to enforce peace inevitably or be dragged down into the bloody conflict. Yet such is the situation in which we find ourselves.

The American people, alarmed by the tide of world events; horrified at the thought of war, are bewildered as to how to remain at peace.

Few official voices are raised today against the preaching of this doctrine of despair and defeatism. Yet, midst this tumult and shouting, out of the past, come two voices that would guide us if we would but heed them.

The first is that of Washington himself, in his Farewell Address to the people whom he loved and had served so well:

"Observe good faith and justice toward all nations," it says. "Cultivate peace and harmony with all. Religion and morality enjoin in this conduct; and can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and, at no distant period, a great nation, to give mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. Who can doubt that in the course of time * * * the fruits of such a plan would richly repay any temporary advantages which might be lost by a steady adherence to it * * *?"

For over a century, these words were to guide the American people, to form the basis of their foreign policy, and to aid them in the building of a great and prosperous Nation. They found it wise counsel, because it was timeless. It was not merely advice to a new and struggling Nation weakened by revolution and not yet strong enough to wage a foreign war. It was advice to the Nation even after it had become, as Washington prophesied, powerful and prosperous. Because they followed this advice, the American people were able to hold up to the world the shining example of the blessings of peace and liberty under self-government. They knew that there was one way to preserve all that they had built; it was by remaining at peace. They knew that there was but one way to avoid entanglement in the embroilments of Europe; it was to preserve strict neutrality. They knew that there was but one way to maintain neutrality; it was to refrain from taking sides in the quarrels of other nations.

Another voice speaks across the years: It is the voice of thousands who lie buried in Flanders Field and in many another field of Europe, speaking as one:

"We crossed the ocean inspired by the ideal of making the world safe for democracy," it says. "We gave our lives in a war that was to end all wars. Is the world to be dragged into another struggle under these false hopes? Are men to fight and to die again in vain? Have they learned nothing from the supreme sacrifice we made?"

This war, the most horrible the world has ever known, was followed, like all other wars, by a boom and then a depression—the deepest in history. In the despair of that depression, we lost our sense of values. We momentarily abandoned the traditional way of solving our problems, and turned to panaceas and experiments in defiance of the lessons of the past.

The traditional American character, the sturdy qualities of industry and initiative and energy and thrift have been mocked to scorn. Far from being regarded as useful, they became something of which to be ashamed, as the people were taught that henceforth they could not hope to solve their own problems, but must look to the Government as the root of all power, the dispenser of all good. The damage which this has done to the courage and the morale of the American people is greater than any man can say.

We were persuaded that a rigid economy of planned scarcity, rather than a free economy of abundance, was the way of prosperity and progress. We were told that while profligate spending beyond income spells debt for an individual and is wrong, profligate spending beyond income for the Government is not debt at all, but an investment and the only way to prosperity. As a result we are still wallowing in the mire of depression after 10 years, and we are no nearer to recovery than we were when the New Deal administration took office.

Today an administration which has demonstrated that it has no solution to our problems save more debts, more spending, and more taxes, is determined to try to solve the problems of the rest of the world. Indeed, the New Dealers would persuade us that we cannot hope for the solution of our own problems or for a return to even an approach to prosperity until we have set the rest of the world straight. To the list of foolish fallacies which it has attempted to put into practice it has added the theory that we can preserve peace only by force, and that war can be averted only by the threat of arms. We are asked to pull the mote out of our brother's eye before we have removed the beam from our own eye.

Those who urge such a program argue that the best way to prevent a war is to prevent its breaking out. But the deceptiveness of this logic hides its ugly implications. It would be all very well if it could be done. It might succeed if America's armed might were such that we could police the world. It might succeed if America could control the motives and moves of all leaders of all nations. But unless America is prepared to undertake such a task, it remains the most dangerous path we could choose.

We were drawn into the last World War although we had no intentions of taking sides at its outbreak. Are we not much more likely to be dragged into the next general conflict if we have already pledged our support to one group of combatants before war has even begun?

Those who advocate this policy cannot guarantee that such a policy will prevent the outbreak of war. They cannot guarantee that, having taken sides and supplied aid, the foreign propaganda which is now at work enlisting our sympathies will not become more forceful and formidable, ultimately succeeding in dragging us actively into the struggle.

They cannot guarantee that, if factories are booming with the false prosperity against which President Roosevelt himself warned us but a few years ago, munitions makers and others will not join the foreign propagandists and mistaken idealists in the clamor that we enter the war.

They cannot guarantee that they can stem the tide of emotionalism of a people whose sympathies and active aid they have already directed to one side of the conflict.

They cannot guarantee that they can control the tide of events, of "incidents," and acts of retaliation from nations against whom we discriminate, events which would inevitably lead to our entry into the conflict.

Those who propose this course know what the horrors of the next war will be. They know that since the war that was to end all wars men have so developed the science of self-destruction that another general conflict will threaten civilization itself. They know that this conflict will not be confined to the battlefields, but will extend as far as bombing planes can fly on their missions of death and destruction. They know that no man, woman, or child within the range of these planes will be safe. They know that the human mind can scarce conceive the suffering, the desolation, and the chaos which such a conflict will bring.

They know, moreover, that if the United States becomes embroiled in such a suicidal struggle life and progress as we have known it in America will be gone for generations—perhaps centuries. They know that the industrial mobilization plans prepared by the Navy and War Departments provide that property shall be commandeered, wealth conscripted, labor conscripted, as the Government assumes absolute control of all industry and all resources of the Nation. They know that in such a dictatorship—for such it will be—freedom of speech, freedom of the press, the right of assembly, must all disappear. They are counting upon the wave of emotionalism that will sweep the country upon a declaration of war to rush the needed legislation through Congress. Then all that will be needed will be the stroke of a pen by the President upon proclamations already prepared to transform this Nation into a military dictatorship.

They are gambling, those who would have us pursue this international and interventionist policy; and it would be the greatest gamble in history. The stake is America herself. They hope to be able to prevent a war; but if they lose, American lives, American wealth, American institutions, the glory of the American heritage, and all that it has meant, not only to millions of Americans of every generation, but as the hope and the light of all the world—will disappear.

They ask us to risk all this upon their hope that they can prevent a war from breaking out. They ask us to embark upon another attempt to make the world safe for democracy, despite the tragic lessons of the last war. They ask us to take the course which is most certain to involve us in war once it has begun.

Nor is this all. They demand that the power to decide the vital issues of such a course be placed in the hands of one man. They would give the President the power to decide the right and wrong of world events, to say that one nation is the aggressor and must be punished, and that another nation is in the right and must be aided. It gives him the power to say when a state of war exists.

We know how the President stands on these questions. We have a clear idea of how he would use these vast and arbitrary powers. We know that he declared a war to exist and enforced embargoes against Italy in her Ethiopian campaign, but that he refused to take similar steps in the case of the war which Japan has been waging in China.

And—irony of ironies—the proposals that these men put forth are labeled "neutrality" laws and "peace" plans. To call such a program "neutrality" is an unconscionable fraud upon the American people. It is to raise their hopes that those who administer the affairs of Government will keep the United States free from entanglements and commitments which would drag her into the fury of the combat while, in reality, they propose to do the very opposite. Nothing could be more unneutral than to plan deliberately to aid one contestant and punish the other. Nothing could more dangerously menace our peace once the struggle has begun. And yet, high-sounding platitudes are invoked to make the people believe that such a course is the only way of honor and righteousness, of peace, self-preservation, and prosperity.

We are told that this is the cause of humanity. Pity is aroused for the oppressed, indignation and hatred against the aggressors. Yet little is said of humanity toward the peoples whom they would punish, toward the helpless, blameless women and children whom they would condemn to death by starvation because the leaders of those nations had incurred their wrath.

We are told that this is the cause of the democracies against the dictators of the world. France has set herself up as a virtual dictatorship in an attempt to cope with the world situation. Poland is a dictatorship. Soviet Russia, whom England and France are now wooing, is the bloodiest, the most ruthless dictatorship of them all. The conflict for which Europe is preparing is not based upon ideology.

The interventionist policy which we are asked to pursue is justified neither by humanity, by ideology, by peace, nor by self-preservation. It is, however, an extension of the international program which the New Deal has followed ever since it took office.

In the name of a "good-neighbor" policy, the administration entered into reciprocal-trade agreements which have meant the loss of millions of dollars and thousands of jobs to American farmers and workers, not only through the loss of American markets abroad but through the inflow of cheap foreign goods which have meant the loss of domestic markets as well.

In the name of helping our export trade, it has loaned millions of dollars to foreign countries—loans which stand slight chance of ever being repaid, and which have benefited the trade of other nations far more than our own.

Stripped of the lofty ideals with which it is clothed, the bare facts of the program we are now asked to adopt are that we provide the President with further opportunity to favor whatever nations he sees fit—this time with instruments of death.

"Keep America out of war!" is the fervent plea of thousands of letters pouring in to the Members of Congress. These messages reveal an instinctive feeling on the part of the American people that to become the munitions factory of one side in a European conflict would be the first step toward dragging us into the war. They express the fear that the loaning of money will be the second step, and that finally American youth will march away to the blare of martial music, to mingle their blood with the sod of Europe.

The American people do not believe that it lies within their power to prevent the outbreak of war anywhere on the globe. They do believe that they can avoid entanglement in a European war—if they remain strictly neutral now. They remember that the Scandinavian countries, although far more closely connected with the events of Europe than we, have remained at peace while the fury of a world war raged about them. They are determined, by remaining aloof and giving aid to neither side, to escape the catastrophic conflict of another general war.

The great contribution that America has made to the world was, as Washington foresaw, the glorious example of a free and happy people, at peace with themselves and the world, progressing under the blessings of self-government. This has been the beacon which has beckoned millions from the war-weary nations of their birth to this new land of hope and opportunity for all.

It is significant that before the United States permitted herself to be drawn into the World War the other nations of the world sent commissions to this country to study the American methods and the American way of life. Since that time it is we who have sent commissions abroad to study foreign methods and foreign solutions of current problems.

I have faith in the American people to solve their problems with the same courage, the same industry and initiative by which their ancestors solved the problems of another day. I have faith that they will once more go forward in the path of peace and progress. Only thus can they fulfill the American destiny of carrying aloft the torch of liberty to light the way of men.

Let Us Induce Travel and More Travel, Where It Is Most Worth While

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, the passage of several bills in the House today in which I had a local interest gives me considerable pleasure but none more than Chairman LEA's bill, so ably supported by Congressman JOHN MARTIN, to facilitate travel in this country by pointing out that which is worth while for the travelers to see. I made it known a little while ago in my interruption of Congressman MARTIN that I was in full accord with this legislation. I wish now to indicate further what this bill, enacted into law, means for our country, especially the western portion of the country.

For many years our rich citizens have been traveling abroad and singing the praises of Mediterranean lands or the glory of the Alps or some other portion of Europe greatly blessed by nature. For an equal number of years it has been difficult to make this class of our citizens understand that there are more glorious, healthful, and pleasant areas within our own country. A few years ago the wife and I took Dean Carl Seashore, of the University of Iowa, and his wife over the Apache Trail in Arizona from Phoenix to Globe by way of the Roosevelt Dam. As we took the hairpin curves on this great scenic highway at a safe and leisurely automobile speed, with new vistas opening before us at every turn, the scholarly old gentleman said to his wife, "We saw nothing in Switzerland that surpasses or even equals this." Then turning to me he explained that it was their custom to take an extra honeymoon trip every few years and that this

particular trip was the "steenth" in their long married life but that they had taken their first honeymoon trip in the Alps years ago riding part of the time on a tandem bicycle. I am sure that even with my driving and an inexpensive car, they saw greater sights and traveled more comfortably than they had done years ago abroad.

My own State of Arizona is fast becoming not only the Nation's playground but the world's playground as well. Not only do distinguished Members of this body, such as my colleague from New York, BRUCE BARTON, and my colleague from Ohio, Congressman CROSSER, but also eminent Members of the United States Senate, such as Senator BANKHEAD and Senator VANDENBERG, have come to value the attractions of that marvelous land called Arizona. Around the cloak rooms, and in the corridors, I talk with many of my colleagues, who tell me they propose to retire and spend their last days in Arizona at Tucson or some other equally well known spot. All of which indicates that the magic word "Arizona" has come to be as enticing to the gray-haired boys, or celebrities on the Hill, as that magic word has long meant to the young adventurous fellows who dream of romance and excitement in the land of the cowboy and the Gila monster.

The Grand Canyon of the Colorado is in Arizona, a fact which is fairly well known to the public because the Santa Fe Railroad has advertised it so widely. I wonder if there is a bridge or a trestle on the great Santa Fe system which does not have painted in large letters on it The Grand Canyon Route. It is superfluous for me to say that the Grand Canyon in Arizona, more than a mile deep and more than 14 miles in width at Bright Angel Trail, is the most stupendous feature on the face of the globe. I must say that there are half a dozen other equally marvelous features to be found in that same area.

Where on the face of the earth can be found such a forest whose petrified shapes have taken form through millions of years? What region can show painted deserts where the master painter has lavished such coloring over so many square miles of land? Who can name a pit formed by the impact of such a monstrous projectile hurled from the heavens as Meteor Crater, a little way off Highway 66, west of Winslow? Time will not permit the listing of marvelous natural bridges, bottomless pits, wells fed from beneath, ice caves, lava beds, and caverns, measureless to man. I could this moment without stopping to refer to notes name for you 50 great natural features or spectacles of which the Grand Canyon is but one, and any one of which would be worth crossing an ocean to see. Why, indeed, should any American go to any other continent to be awed by the grandeur of nature, or to study the handiwork of the Great Architect?

It is natural that we Americans should long to go to Europe whence came our ancestors from the seat and origin of our civilization. If we wish to travel to broaden our minds with the Old World culture, it is well to turn toward Europe, but since there is as much broadening culture in studying man's environment and the handiwork of Nature as there is in studying the institutions of man, Europe might well look to America as a proper place for travel. We may not be able to give Old World travelers what they can give us, but we can show Europeans what they cannot find on their side of the Atlantic. The fact that the great English writer, Priestley, has for several seasons spent his winter on a ranch near the dude ranch capital of Arizona, the unique town of Wickenburg on the Hassayampa, is both illustration and proof of the truth of what I have said. So, Mr. Chairman, let us pass this bill—and I hope the Senate will take similar action—and benefit the travelers of the world and enrich our own people by the encouragement of this tourist flow. Arizona and other playgrounds of the West long ago realized that the tourist crop is our best crop. This legislation put into operation will prove to America that our tourist crop, not only of our own traveling citizens, but also visiting foreigners, is the most profitable of all crops. The profit for those who travel will be greater than the profit of those who serve.

Britain and Japan

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

ARTICLE FROM THE WASHINGTON POST

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which was published in yesterday's Washington Post:

[From the Washington Post of July 30, 1939]

BRITAIN AND JAPAN

(By Commander Stephen King-Hall)

WILL ENGLAND FOLLOW AMERICA'S LEAD?

(The following article, by an authoritative British student of international relations, was written for the Post prior to the administration's denunciation of the Japanese-American commercial treaty. Commander King-Hall's analysis indicates that many in Great Britain will wish to support this action by parallel policy there.)

LONDON.

The conference between Japan and Great Britain has produced a formula but no settlement.

The British say that the purpose of the conference was to discuss a local issue at Tientsin, where the Japanese military are blockading the British concession and subjecting British subjects to degrading insults. The Japanese military and press declare that the conference had the simple purpose of arranging for the recognition by Great Britain of the "new order in Asia," which is an oriental euphemism for a state of affairs in which all Western interests in the Far East would be driven out and replaced by Japanese dominance.

The British Government has firmly declared that it does not intend to commit hari-kari in the Far East at the orders of Japan. Indeed, it must stand firm if Britain is not to suffer a loss of prestige which will shake the foundations of our position from Suez to Shanghai and incidentally lead to the disappearance from the Far East of all French and American interests.

In these circumstances, and as we must never forget that the European position is the decisive area in world politics, it is sound business to ask ourselves what friends we may have in the Far East.

The obvious answer is China.

Indeed, it is because the Japanese realize that after 2 years of bloody struggle they have only succeeded in consolidating Chinese resistance, that the Japanese general staff have decided to isolate China from the meager help which now reaches her from the West. If China can be isolated morally and physically from the democracies, her splendid resistance may crack.

Therefore, it is distressing to have to admit that during 1938—the latest period for which figures are available—the democracies supplied Japan with 86 percent of her essential war supplies. The United States of America was responsible for 56 percent of the supplies, followed by the British Empire, with 21 percent, and the Dutch, with 9 percent.

The principal commodities bought by Japan from those countries were as follows (the percentage shown after each article is the percentage of Japan's total requirements): Motor cars, 65 percent; aircraft, 77 percent; petroleum, 99 percent; ores, 99 percent; scrap iron, 99 percent; copper, 99.9 percent; lead, 99.9 percent. Japan received 100 percent of her nickel, mica, and asbestos from the three democratic groups mentioned above.

When one examines the details of these transactions there is some satisfaction for the English to be found in the discovery that of the 20 percent of her war supplies which Japan secured from the Empire, Great Britain was only responsible for 1 percent. Canadian readers of this paper may be interested to know that Japan secured nearly half her needs of aluminum, nearly all her nickel, and all her asbestos from that Dominion.

From British Malaya the Japanese procured 67.55 percent of the rubber and 92 percent of the tin she needed in order to pursue a policy of aggression in the Far East which will, if successful, lead to the day when she will get 100 percent of what she wants from Malaya—without paying for it. From British India the Japanese acquired 97 percent of her mica. I wonder what the nationalist leaders there think of that?

All of these essential imports are paid for by exports, and the democracies are obliging enough to take 82.3 percent of Japan's total exports, whereas Germany and Italy only buy 3.2 percent. The British Empire takes 40 percent (approximately) of Japan's exports. "Business as usual" is a great slogan and ought to be stamped on all the material the American aircraft industry has sold to Japan.

The exports of aircraft and parts sold to Japan for their murderous bombing of cities in China amounted in value to the tidy sum of $13,553,000 during 1938. It is only right to say that an indignant section of American public opinion (in which the President can be included) is trying to stop this export.

Why do the democratic lambs support and sustain the Japanese butcher, who will in due course take them to the abattoir if he can poleax the Chinese dragon?

The answer is a simple one. The democratic governments reflect the attitude of mind of their peoples. The public opinions in the United States of America, Great Britain, the Dominions, and Holland are accustomed to think of international relations as being either in a state of peace or of war. In the latter case relations are "broken off," in the former they are maintained and fostered in every possible way.

But the totalitarian states have taught us that there is a third type of international relationship which can be called bloodless war. Czechoslovakia is the leading case in this technique. Bloodless attack must be countered by bloodless defense and this includes counterpropaganda and the use of economic pressure where and when necessary.

At the moment I consider it would be tactically unsound to break off economic relations with Germany, since we may require this action at a later stage in the crisis. In the case of Japan the position is different. The Government departments concerned have investigated the position and action could be taken at any moment. The question of consultation with America would naturally be important, but in such a matter it would probably be best to set an example of action which public opinion in America would certainly wish to support.

In addition to such action it should be possible to allocate to China some of the $300,000,000 extra export credits authorized for "political" purposes by the House of Commons. I find it difficult to conceive of a more useful political purpose than that of supporting China in her fight against Japanese aggression.

Sermon at Funeral Services of the Late Representative Lord

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, July 31 (legislative day of Tuesday, July 25), 1939

SERMON BY REV. FRED J. NICHOLS

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix the sermon of the Reverend Fred J. Nichols, pastor, First Baptist Church, Afton, N. Y., at the funeral services of Hon. BERT LORD, Member of Congress from New York.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

"A human soul went forth into the night
Shutting behind it death's mysterious door,
And shaking off, with strange resistless might,
The dust that once it wore.

"So swift its flight, so suddenly it sped—
As when by skillful hands the bow is bent
The arrow flies—those watching 'round the bed
Marked not the way it went.

"Heavy with grief, their aching tear-dimmed eyes
Saw but the shadow fall, and knew not when
Or in what fair and unfamiliar guise
It left the world of men.

"Time could not hold it back with fettering bars;
Death lost its power and ceased at last to be,
It swept beyond the boundary of the stars
And touched eternity.

"Out of the house of mourning, faintly lit
It passed upon its journey all alone,
So far not even thought could follow it
Into those realms unknown.

"Thru' the clear silence of the moonless dark,
Leaving no footprint of the road it trod,
Straight as an arrow cleaving to its mark,
The soul went home to God.

"'Alas!' some cried, 'He never saw the morn,
But fell asleep out wearied with the strife.'
Nay! Rather he arose and met the dawn
Of everlasting life."

This is an hour of precious faith, an hour when we need to draw heavily upon the bank of heaven. We come from our various positions in this walk of life to pay tribute to a husband, a loved one, a sincere friend, a servant of God, of the Nation, State, county, and community, and it is well. We come extending our heartfelt sympathy to you who mourn, because you weep and we weep with you. But what shall we say? Words are so futile, so expressionless, so empty at such a time as this. Death has its own eloquence and nothing that we can say can add or take away from the solemnity and sacredness of this hour. It speaks a language fitting to each individual heart. So may you who mourn—desiring no eulogy be given—so may you find solace in our presence and extended sincere sympathy by golden silence.

There is, however, One who may speak. He who hath gained the victory oved Death and the Grave. He who can transform this hour from one of sadness to gladness; from one of the darkness of sorrow and death into one of eternal light of heaven and life. He who is surest verity and in whom there is no shadow of turning, but remains the same yesterday, today, and forever in this changing world. And thanks be unto God, the Father, this One not only may speak but does speak as real and as sure now as when He walked the shores of Galilee.

He speaks, saying, "Come unto me all ye that labor and are heavy-hearted with sorrow and I will give you rest. Rest of body, rest of mind and heart, rest of soul. Cast all your cares upon me, for I care for you."

"Oh, wonderful story of deathless love;
Each child is dear to that Heart above.
He fights for me when I cannot fight;
He comforts me in the gloom of night;
He lifts the burden, for He is strong;
He stills the sigh and awakes the song.
The sorrow that bows me down He bears,
And loves and pardons because He cares.

"Let all who are sad take heart again;
We are not alone in this hour of pain.
Our Father stoops from His throne above
To stoop and quiet us with His love.
He leaves us not when the storm is high,
And we have safety, for He is nigh.
Can it be trouble that He doth share?
Oh, rest in peace, for the Lord doth care."

He speaks, saying, "Let not your heart be troubled. Ye believed on God—believe also in me. For I am the resurrection and the life and he that believeth in me tho dead shall he live." To believe in the Christ of God is to possess life eternal, whether here or there. Absent from the body—present with the Lord. Present with Him. "In my Father's house are many mansions. If it were not so I would have told you. I go before you to prepare a place for you and if I go and prepare a place for you, I will come again and receive you unto myself." Your beloved has been received into Christ's presence—into the very government of God, where a new position is held. Death is not the end of life for one who trusts the Son of God. Death is simply the portal through which such a one passes out into the liberty and freedom of the Eternal City, not made with hands, but is eternal in the heavens where the many mansions are.

Just now some occupy the mansions of Heaven, some trod this footstool of God as His representatives here, but, behold, I show you a mystery. We shall not all sleep. But we all shall be changed in a moment—in the twinkling of an eye at the last trump—for the trumpet shall sound and the dead in Christ shall rise first and we which are alive and remain shall be caught up to meet them in the clouds and so shall we ever be with the Lord. Thanks be unto God who giveth us the victory of a great family reunion through the Lord Jesus Christ. This was the assurance of the psalmist when by inspiration he wrote:

"The Lord is my shepherd; I shall not want.
He maketh me to lie down in green pastures;
He leadeth me beside the still waters.
He restoreth my soul:
He guideth me in the paths of righteousness for His name's sake.
Yea, though I walk through the valley of the shadow of death,
I will fear no evil: for Thou art with me.
Thy rod and Thy staff they comfort me,
Surely goodness and mercy shall follow me all the days of my life:
And I will dwell in the house of the Lord forever."

May God lead each of us to the assurance of these words that we may grasp them as did David of old, thus laying hold of an abiding springtime made possible for each of us in the words of the Lord Jesus when he said, "Lo, I am with you, always." He is here just now and He will be with thee through the days ahead. Only be thou strong and of good courage, for the Lord thy God is with thee whithersoever thou goest.

"Sometime when all life's lessons have been learned
And sun and stars forevermore have set,
The things which are weak judgments here have spurned,
The things o'er which we grieved with lashes wet
Will flash before us out of life's dark night
As stars shine most in deepest tints of blue;
And we shall see how all God's plants are right
And how what seemed reproof was love most true.

"And we shall see how, while we frown and sigh,
God's plans go on as best for you and me.
And if sometimes commingled with life's wine
We find the wormwood and rebel and shrink,
Be sure a wiser Hand than yours or mine
Pours out the potion for our lips to drink.

"And if some friend we love is lying low,
Where human kisses cannot reach his face,
Oh, do not blame the loving Father so
But wear your sorrow with obedient grace!

"And you shall shortly know that lengthened breath
Is not the sweetest Gift God sends His friends,
And that sometimes the sable pall of death
Conceals the fairest boon His love can send.
If we could push ajar the gates of life
And stand within and all God's workings see,
We could interpret all this doubt and strife
And for each mystery could find a key. But not today!

"Then be content, sad hearts, God's plans like lilies pure and white unfold,
We must not tear the closed shut leaves apart, time will reveal the calyxes of gold,
And if thru' patient toil we reach the land
Where tired feet with sandals loosed may rest
When we shall clearly know and understand
I think that we shall say, 'God knew the best.' "

Federal Spending

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 31, 1939

Mr. SPRINGER. Mr. Speaker, the press of the Nation is greatly exercised over the excessive demands made by the President and his administration for the appropriation of huge sums of money for spending. The housing bill, which will come before the House for action, is one of the unessential plans of this administration for spending a vast sum of money. The President's own "lending-spending bill," which is, in fact, merely another "spending bill," carries an enormous sum of money which, if passed, will be spent and squandered by the President and his many and varied agencies under the guise of promoting business and industry in this Nation.

Mr. Speaker, this plan has been tried by the President on numerous occasions since he assumed office, but each period of spending has had the same depressing effect upon our Nation. The effect of the spending was quite soon over, and the overburdened taxpayers, which embrace every class of our people, were left in worse condition than they found themselves before the spending program started.

The important question today is this: "How long can we continue this folly?" The people are asking this question because they know the future of our country is in peril, and they know this administration is placing a mortgage upon every boy and girl in this Nation; and they know those who are yet unborn, and who cannot defend themselves against this wild orgy of ruthless spending of money, will find their birthright encumbered by billions of dollars which their voices did not create but which debt they must assume and pay, if possible.

This plan, Mr. Speaker, of the man attempting to lift himself by his own bootstraps has been tried and it has been found wanting. The people of our Nation, now facing the staggering debt of approximately $45,000,000,000, are frightened; the future of our country is involved today. The greater the spending program of this hour, the greater the depressed condition of our Nation will become tomorrow. This has been the answer in each prior attempt to bolster business and industry by spending enormous sums of money. The same answer will be given if the pending measures for the spending of huge sums of money are passed by this Congress.

Mr. Speaker, I ask the unanimous consent of this body to include in my own remarks an editorial appearing in the Cincinnati Enquirer, of date July 27, 1939, which is very illuminating and instructive:

STILL VALID

Some of the most cogent arguments for a policy of economy which can be found are from the facile pen of President Roosevelt himself. All of them, however, bear dates preceding the summer of 1933. It is amazing to reread some of those pungent indictments of lavish Federal expenditure and to notice how perfectly they apply to the conditions of 1939.

"I accuse the present administration," Mr. Roosevelt said September 29, 1932, "of being the greatest spending administration in peacetimes in all our history. It is an administration that has piled bureau on bureau, commission on commission, and has failed to anticipate the dire needs and the reduced earning power of the people."

The President did not see why the Government should spend lavishly when individuals could not—during his 1932 campaign. At Pittsburgh on October 19 he asserted:

"The credit of the family depends chiefly upon whether that family is living within its income. And that is equally true of the Nation. If the Nation is living within its income, its credit is good."

There is no doubt of the authorship of these candid statements. They are in the record. Nor are they distorted by being removed from their context. Mr. Roosevelt waged his 1932 campaign very largely on an unequivocal, personal promise to reduce expenditures.

"And on my part I ask you very simply to assign to me the task of reducing the annual operating expenses of your National Government. We must move with a direct and resolute purpose now. The Members of Congress and I are pledged to immediate economy."

Those were brave words—in 1932 and 1933. They won for Mr. Roosevelt a tremendous majority of the vote. This, perhaps, is why so many of the vast number who condemn present policies feel justly aggrieved. They gave a mandate to economize and retrench. They have found a solemn promise repudiated, a popular mandate twisted beyond recognition. They still agree with Mr. Roosevelt's words—the words he spoke in 1932. And they are wondering how these words must look to the President today, if he recalls them faintly in occasional moments of introspection.

And, Mr. Speaker, while we are considering this very important question of spending, we must refer to the expressions which have been made in the past by the President. He made pledges to the taxpayers of this Nation, and these very utterances aided in his selection to that high office which he now occupies. The people have not forgotten those pledges and the people will not forget them when they face the staggering tax burdens imposed upon them, which have largely deterred and depressed business of every class in our country.

Another editorial appearing in the Cincinnati Enquirer, of Cincinnati, Ohio, of date July 27, 1939, is germane to this question, and I ask that the same may be inserted herein as a part of my remarks on this important subject:

A COVENANT FORGOTTEN

In an editorial yesterday we did not by any means exhaust the incisive comments of President Roosevelt on the need for tax reduction—a need which has mounted enormously since he uttered these forceful sentences.

One statement of September 29, 1932, which turns out to have been highly prophetic, merits notice:

"If we do not halt this steady process of building commissions and regulatory bodies and special legislation like huge inverted pyramids over every one of the simple constitutional provisions, we shall soon be spending many billions of dollars more."

Mr. Roosevelt had a remarkable insight into the future, even though he did not apprehend in 1932 that he would be the villain of his own melodrama.

Taxes, like expenditures, have soared in the intervening years. The President had a good deal to say about taxes in his first campaign. Two vivid sentences from a speech of October 19, 1932, are singularly pertinent just now:

"Taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production. If those taxes are excessive, they are reflected in idle factories, in tax-sold farms, and in hordes of hungry people, tramping the streets and seeking jobs in vain."

There are perhaps 11,000,000 of those jobless folk today, tramping the streets in search of employment—nearly as many as at the peak of unemployment in 1932.

Mr. Roosevelt's promise of lower taxes was not merely a criticism of his predecessor. It was a well-defined commitment for the future, as his own words at Sioux City, Iowa, in September of 1932, clearly show:

"And I propose to use this position of high responsibility to discuss up and down the country, in all seasons and at all times, the duty of reducing taxes, of increasing the efficiency of government, of cutting out the underbrush around our governmental structure, of getting the most service for every dollar paid in taxa-

tion. That, I pledge you, and nothing I have said in this campaign transcends in importance this covenant with the taxpayers of the United States."

It is perhaps unkind to recall the President's forgotten "covenant with the taxpayers." But it is essential to recall it, in order that Americans may compare promise with performance, and the hopes of 1932 with the reality of 1939.—Editorial.

Congress—Showmanship and Statesmanship

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of the junior Senator from Ohio [Hon. ROBERT A. TAFT]:

Citizens of the United States of America, Representative SMITH has proposed a toast to the Congress of the United States, and such a proposal is so unique that certainly any Member of Congress can only rejoice in the opportunity to join. Representative SMITH'S proposal was so dramatic that I looked around to see whether the well-known hospitality of the Columbia Broadcasting System was supplying the materials usually considered necessary for a toast, but I assure you that this little broadcasting studio doesn't offer even the acid refreshment of tomato juice. And so, perhaps without offense, I may differ with my colleague on both the showmanship and statesmanship of Congress.

I did not have anything to do with choosing the subject, and frankly I doubt whether Congress has very much of either. My picture of a statesman has always been a large, rather pompous gentleman, with his hand stuck into his coat, insisting on great principles which have little to do with everyday life. Undoubtedly there have been great statesmen, but most of them are dead. I don't mean to say that statesmanship is not a very desirable ideal for Congress, but it is difficult to attain.

As for showmanship, Congress as a body has very little of it. As far as publicity is concerned, a single thoughtful executive, like a Governor or President, can overwhelm any legislature or Congress, for the simple reason that publicity coming from a legislative body comes from hundreds of men, expressing every point of view without system or coordinated effort. I know a good many individual Congressmen who are good showmen on their own account and know how to handle publicity, but usually it is the kind of showmanship which does not do the whole Congress any great amount of good. Congress does give a platform from which individual Members and investigating committees may call to the attention of the Nation the evils which exist in the body politic. That is a most useful function. But, after all, this can hardly be as important as formulating and adopting the measures actually to deal with the evils so publicized. The qualities which Congress does have, and the qualities which seem to me more important in day-to-day life, are very different from showmanship. Those qualities are common sense and hard work.

After all, what is Congress? Everybody, including the newspapers, refers to it as if it were one man. It is a good Congress or a bad Congress, rubber-stamp or independent, definite or wavering. It is perhaps accused of voting one way one day and reversing itself the next. There is a tendency on the part of the press and the people to personify Congress as if it were a single person. As long as anyone looks at it in that way, he can't understand Congress. It is made up of 531 different people. As Representative SMITH has pointed out, they are of every size, shape, appearance, background, and mentality. On any important issue they are hopelessly divided, and of course they should be. If Congress reverses itself on a close issue, it means that one or two men have changed their minds. Congress is not wabbling; just a few men are wabbling.

The public contrasts Congress with the President and treats it as if it were an executive body running the Government. As long as people look at Congress from that point of view, they are going to be disappointed, for it is a very poor executive. How can any group of 531 men act like an individual? We frequently see in this country an attempt to delegate executive power to a board of three or five or seven, and it is generally agreed that even a board of five is a much poorer, more uncertain method of running anything than an individual. I think it was General Goethals who once said that boards were long, narrow, and wooden; and of course a board of 531 would be still longer, narrower, and more wooden if you looked to it for prompt, decisive action.

No; Congress is not an executive; it is a legislature. It represents the people. It is a method of finding out what a majority of the people want. It should move slowly, because it is a deliberative body. It should discuss the matters proposed to it until all points of view are before it, so that it may act more intelligently.

Congress is made up of a group of average men, intended to be representative of the people of the United States. In one respect they are especially qualified for their position. They have all run for office. They have had to campaign and meet all kinds of people in the districts or States from which they come. They cannot have gone through this experience without becoming a little better judges of public opinion than other men, more in touch with the real wishes of the people. Perhaps that experience has made them a little too intensely practical and not quite enough students of the theory of government. But they are men with just a little more experience than the average man. Many election victories can only have resulted from a little better planning and a little harder work than the defeated candidates could offer.

This experience which Members of Congress have gone through perhaps qualifies them better than the average man to perform what seems to me the principal function of Congress. For Congress, first of all, is a jury, passing on one proposal after another, prepared by other men or other groups in Congress or out of Congress. Under present conditions, few Congressmen could possibly be experts on the hundreds of important subjects which come before them. Some may be expert on one subject and some on others, but, considering Congress as a whole, it can do no more than apply to particular proposals the basic principles of American government, and the sound, practical sense which most Congressmen have. They aren't statesmen, they aren't showmen; they are just average Americans with a little better preparation than the average.

Of course, there is a second function which Senators and Congressmen ought to perform and frequently do. Individually they are workmen, specialists on particular subjects, willing to spend their time making thorough examinations of those subjects and drafting laws for the consideration of the jury.

In the very nature of Congress which I have described lies its essential weakness. Measure after measure is proposed and considered on its own merits, without much attention to the question whether it fits into a larger program. It is hard enough for 531 people to give proper thought to a particular problem, without trying to agree at one time on a whole program of legislation and Government policy. The press and some of the people yearn for the development of leaders and criticize Congress for lack of leadership, but to a certain extent the very nature of Congress resists leadership. Most men have been sent there by their constituents to express their own views and not blindly to follow party leaders. Particularly in the Senate, with its smaller numbers and the right to discuss every subject at length, aggressive leadership may defeat its own purposes.

The difficulties of Congress can perhaps be illustrated best by its attempt to deal with the financial problems of the Budget. The President is advocating a policy of spending approximately $9,000,000,000 in the year which begins on the 1st of July, although the already excessive taxes are only going to produce $5,600,000,000, a deficit of nearly three and one-half billion dollars added to the huge deficits of recent years. I feel quite convinced that Congress and a majority of the people of the United States are opposed to that policy. But what happens?

A Budget consisting of a thousand pages of fine print is prepared by the Director of the Budget. Many appropriation bills carrying out the President's recommendations are presented, one after another, in the House of Representatives, and after consideration these are sent to the Senate. The different departments are heard from and testify to the tremendous public good resulting from their activities. It is very difficult for Congress to effect reductions in particular departments for the simple reason that they cannot make the thorough investigation required for real knowledge. Possibly in one department 20 percent could be saved, while in another a reduction of 20 percent in the Budget might force the elimination of work which is absolutely essential. Reduction in the expenses of executive departments ought to be done by or with the cooperation of the Executive and his department heads. The problem of saving money against the wishes of the Executive cannot be done through the ordinary processes of congressional action.

For instance, look at the reduction of the supplemental appropriation for the W. P. A. Last year $1,425,000,000 was appropriated for 8 months. Largely because of a tremendous increase in W. P. A. expenditures in the months of September and October, just before the election, the money was used up in 7 months, and the President requested $875,000,000 more to last until the 1st of July. Congress felt that the W. P. A. might be more economically administered and that even with $725,000,000 the total appropriations for the year would amount to the huge sum of $2,150,000,000. They also thought that business conditions were improving and that the increase in agricultural work in the spring ought to relieve the W. P. A. rolls of hundreds of thousands of men. And so they provided that no reduction in excess of 5 percent should be made during the winter months of February and March, and suggested that the President ask for additional funds for later months if the reduction did not materialize. A cooperative President, feeling as the President does, would have said to Congress, "I don't think you are giving me enough, but since you have indicated your desire for economy, I will do the best I can to cut down expense and will be back later if I need the money." Instead of that, all the propaganda from all the pressure groups benefiting from relief was turned loose on Congress, and the President, with every indication of annoyance at the suggestion of

economy, demanded an immediate additional appropriation of $150,000,000.

Not only that, he announced his intention to use freely during the months of February and March the money which had been appropriated. This would create a condition to justify his demand for an additional sum in April, May, and June. Under these circumstances, there is little doubt in my mind that because of the lack of cooperation on the part of the President additional millions will have to be appropriated and spent. I hope not as much as $150,000,000.

So, also, Congress in its nature considers each of the new activities of Government on its own merits: relief, social security, public works, T. V. A., Army, Navy, and hundreds of other agencies. But no one has sat down to consider the whole program. The Nation is somewhat like an individual. A new automobile is a nice thing to have; a new house is better. Certainly any man would like to give his wife a fur coat and provide his children with the finest possible education, but he knows he can only spend his income or he will end in bankruptcy. The same thing is true of government. Most of the Government agencies can be justified, although certainly some are extravagantly administered; but someone must take the burden of saying that we can only afford a certain amount of government, and we must plan our expenditures within our income. What is the use of having a Budget at all if it does not balance?

Ordinarily, this responsibility of balancing the Budget and the responsibility of coordinating the whole program of Government activity have been assumed by the Executive. Every President, Democrat or Republican, has heretofore felt deeply the moral responsibility of holding Government expenses down to its income. But today apparently it is up to Congress to develop a collective responsibility, in spite of the difficulties that I have described. Perhaps it is a good thing, because I believe Congress, if forced to do so, can develop that quality of statesmanship, which is not very natural to it. It is hard to concentrate responsibility in a group of 531 men, but I feel confident it can be done.

Many of the leading Members of House and Senate are intensely interested in opposing a spendthrift policy. A small committee might be authorized to survey the whole field of income and appropriations at one time and recommended a plan of expenditure which will balance the Budget in the course of the next 2 or at most 3 years. Such a committee could say to group after group and to special interest after special interest that seeks Government money, "Your project is interesting; it may be sound; it may be justified, but we are so far in debt today and the burden of taxation on the producers and consumers of this country is already so great that we can't afford to spend more until we have caught up with ourselves."

Congress hasn't much showmanship and can't possibly compete with the President even with the assistance of the radio. It is a good sound jury. It is made up of hard workers. It hasn't much statesmanship, but I think it can develop statesmanship if statesmanship disappears from the other departments of government.

Antialien Bills

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

ADDRESS BY HON. LEE E. GEYER, OF CALIFORNIA, BEFORE DISTRICT OF COLUMBIA CHAPTER, DESCENDANTS OF THE AMERICAN REVOLUTION, JULY 14, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks I insert a speech I made before the District of Columbia chapter of the Descendants of the American Revolution:

Your ancestors fought and died to make this a free Nation. They believed that all men—not just some men, nor even most men, but all men—have an equal right to life, liberty, and the pursuit of happiness. There is nothing in the Declaration of Independence, or in our Constitution, to justify the taking away of that fundamental human right from any individual or from any group of individuals. Discriminatory legislation was not considered patriotic in 1776.

Today, apparently, it is. Simply by wrapping themselves in the American flag and mouthing a few catch phrases, dozens of my colleagues have been able to foist discriminatory bills upon us. I refer to the anti-alien bills that are breaking out all over Capitol Hill like a summer rash. To be sure, these bills discriminate against an unpopular group, and a group that has no power of reprisal. That fact does not make them any less intolerant, oppressive, and essentially un-American.

Such bills are dangerous. Not only because they discriminate against one group, but also because they can be interpreted in such a way as to discriminate against still other groups. And they make it easier for false patriots to dupe or bully us into accepting even more restrictive measures. They are designed specifically by illiberal men to take away our hard-won liberty. They are the entering wedge of fascism.

It is not the first time in the history of our Nation that such bills have been introduced—and passed. During the closing years of the eighteenth century, the so-called lower classes were getting restless. They were beginning to demand that suffrage be extended to those without property. At once the Tory Federalists raised the cry that aliens were trying to overthrow the Government. They passed the Alien and Sedition Acts of 1797, and many a good American was thrown into prison for having the audacity to exercise his right of free speech. When Jefferson became President he let those people out of jail, and the Federalist Party was unable to stand the shock—it passed out of the political picture forever.

In Jackson's time, too, an attempt was made to hold down the submerged third of our population. The "sons of the wild jackasses" were beginning to assert themselves in the West, to the great indignation of the hitherto specially privileged easterners. You know how Jackson handled that situation.

And you know what Lincoln did later in the nineteenth century to keep this Nation dedicated to the proposition that all men are created equal.

Most of us remember vividly those hysterical days after the World War, when Bolsheviks had long hair, and carried bombs in every pocket except their handkerchief pockets. In those pockets they carried, strange to say, handkerchiefs with the initials "I. W. W." on them. The criminal syndicalism laws of 1919 were not used against aliens and seditionists; they were used against labor.

The same thing is happening today. But today the battle is on a broader front. Our enemies' objective is the entire New Deal. They plan to destroy every measure and every agency created by President Roosevelt in his magnificent attempt to bring social justice to the underprivileged.

During Roosevelt's first term, they tried a direct attack. This failed pitifully. So they resorted to the time-honored trickery of their Tory predecessors. They deliberately began to inflame the public against an imaginary "red" menace. They set the Dies Committee to grubbing for red herrings in a slough of slander. They fished for communism in the W. P. A. And now they are going to "investigate," as they so euphemistically put it, the activities of the National Labor Relations Board.

While these so-called investigations are going on, various others of our public enemies are busy talking it up. No day goes by without some mention of the "red" menace or some attempt to trace a communistic tendency in this or that New Deal policy. Everything possible is being done to stir up an anti-red hysteria throughout the Nation.

Introducing anti-alien bills is, of course, just one more way of feeding the flame. More than 100 bills of this type have been introduced during this session of Congress, and every single one of them is just as unpatriotic as its advocates pretend it is patriotic.

The American public is being fooled again. It is time for people who are really qualified to speak about Americanism to speak up and give the lie to the patrioteers. It is time for people like you, whose ancestors made this a free Nation, to take action which will keep it free. I see that you agree with me wholeheartedly. You realize as well as I that America will not remain free if we abandon it to forces of ill will.

The Antialien Bill

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's edition of the New York Herald Tribune:

THE ANTIALIEN BILL

Swamping the opposition under a test vote of 273 to 48, the House on Saturday incontinently rushed the Smith antialien bill to passage and dumped it, viva voce, in the lap of the Senate. It was the remarkable climax of a remarkable movement that had been gathering strength in Congress since the first day of the session.

The Smith bill itself is a kind of final distillation of something more than a hundred different measures which have been pouring into the hopper—a few of the more drastic ones have already passed the House as separate bills—looking toward the debarring and deportation of aliens, the restraint of alien "isms," the suppression of sedition and espionage, and the severe discouragement of organized Communist and Fascist penetration. As assembled in the Smith bill, their provisions are many and frequently dubious. Some, if not actually imperiling civil liberties, seem at least to

trench violently on established ideas of the democratic process, while anything which could be described as an antialien bill is certainly a striking departure from an American tradition which has never been hostile to aliens, or any other group, as such. Yet the House has rolled them all up and passed them with a maximum of enthusiasm and a minimum of consideration.

There is little chance of the Senate's acting on the measure now, and perhaps it is just as well. But to say that the details of these proposals demand far more careful attention than they have received is not enough; it is time to look twice at the movement which they express. As to the primary authors of that movement there is no doubt whatever—they are the whole collection of Stalinites and Hitlerheilers, Communist borers-from-within and Nazi-Fascist propagandists and spies, who with their organized allegiance to foreign ideas and foreign political powers have reduced the mass of Americans to an irritated alarm and exasperation. They have at the same time proved by many of their activities that somewhat better means of legal and democratic control are necessary if this country is not to have its hospitality abused and its affairs disrupted by foreign agents.

They have created a powerful and well-warranted popular demand that something be done about them. But the House has proceeded to do it by the shotgun system. There is more prejudice and politics in a measure like the Smith bill than clear purpose. There is more appeal to emotionalism than consideration of methods.

There are sweeping expulsions and suppressions which can be easily evaded by the real offenders, which must, because of their loose wording, depend wholly on court interpretation and administration for their effect, and which are likely in practice to prove either so feeble as to be useless or so tyrannical and oppressive as to be unenforceable. And by channeling popular disturbance over Communist and Nazi-Fascist activities into a flag-waving campaign against the alien, a measure like the Smith bill simply reduces the whole movement to the base and stupid level of a Nazi campaign against the Jews. The House is turning what ought to be the serious study of some real problems into a dangerous and emotional hunt for an "alien" scapegoat—which will have small effect on Communist and Fascist subversion, in which the leaders sometimes are aliens but very often are not.

The matter is at once too important and too delicate for such treatment. The American system of government is never going to be overthrown from without, and we believe it is never going to be overthrown at all, so long as its citizens retain the courage of their liberal and humane convictions. But the activities of organized representatives of alien totalitarianisms have raised certain practical questions. These deserve to be met on strictly practical and well-considered grounds, not by the viva voce passage of emotional "antialien" bills.

Water-Pollution Control

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

ARTICLE FROM THE NEW YORK TIMES

Mr. SPENCE. Mr. Speaker, there is no subject that is of more vital importance to the people of the Ohio Valley and to many other large, thickly populated, industrial areas of our country than the subject of water-pollution control. I ask unanimous consent to have inserted in the RECORD an article by W. F. Wiley, chairman, State commission on stream pollution in Ohio River Valley, which appeared in the New York Times, on Thursday, July 27:

WATER-POLLUTION CONTROL

ACTION ON IT IN THE OHIO RIVER VALLEY IN LAST FEW YEARS OUTLINED

TO THE EDITOR OF THE NEW YORK TIMES:

We find it necessary to correct specific misrepresentation in the letter of Kenneth A. Reid, general manager of the Izaak Walton League, published in the Times on July 20, in which he states that the Ohio Valley Water Sanitation Compact "has been under negotiation for 14 years." Actually fewer than 2 years were consumed in negotiation, and the rapidity with which States of the Ohio Valley have approved the compact is a modern marvel in cooperative legislation.

Enabling legislation permitting the States to negotiate was introduced in Congress March 31, 1936. After approval by Congress the bill was signed by the President June 8, 1936. Governor Davey issued his call to the Governors of the Ohio Valley States to appoint commissioners to participate in conferences for the negotiation of the compact August 5, 1936. Commissioners and representatives assembled at the first conference November 20, 1936. The fifth and final conference completing the compact was held on October 11, 1938.

Since the final conference the legislatures of Indiana, West Virginia, New York, Ohio, and Illinois have approved the compact and there is every reason to believe that Kentucky, Virginia, and Pennsylvania will complete enactment of the compact at the next session of their legislatures in January.

SENATORIAL DIALOG

In Mr. Reid's rather loose reference to Senator TAFT it would be enlightening to quote the senatorial dialog at this point in the debate:

"Mr. CLARK of Missouri. Let me finish my answer to the argument made a moment ago by the Senator from Ohio, and then I shall yield. The Senator from Ohio said the city of Cincinnati cannot be expected to spend the money necessary to enable it to refrain from dumping the raw sewage into the Ohio River simply because it will benefit the municipalities of the States lower down. The municipalities of the States higher up will undoubtedly take the same position.

"Mr. TAFT. Mr. President, will the Senator yield?

"Mr. CLARK of Missouri. I yield.

"Mr. TAFT. I did not say that. I said the incentive not to do it is very strong, and I do not see how the doing of it can be forced. Therefore I am in favor of offering all cities—of which Cincinnati is only an example; Pittsburgh is larger and worse from the standpoint of pollution below the city—some assistance in the matter of sewage disposal, but not to proceed by an injunction process which cannot be enforced by any means of which I know."

THE COMMISSION'S POLICY

Drastic stream-pollution legislation has failed year after year because it was largely guided by ardent, idealistic sportsmen imbued with more sentiment than common sense. It is perfectly natural that industry, almost to a man, has opposed every bill that mentioned pollution abatement, as a matter of self-defense.

In our attempt to clean up the Ohio River here in the Ohio Valley we are faced with a very practical problem. The Cincinnati Chamber of Commerce recognized this at the start and prepared to lay plans for a middle-of-the-road program that would—

1. Enlist the Government in activity of pollution abatement.
2. Provide financial stimulation for municipalities and industries.
3. Provide for interstate cooperation by compact.
4. Avoid drastic Federal control by retaining enforcement in the hands of the States.
5. Attract the cooperation of industry rather than its opposition.

The Barkley bill, S. 685, carries out these features.

BARKLEY BILL SUPPORTED

Aside from the question as to the fairness of Federal enforcement versus State control, we are generally of the opinion that a Federal enforcement bill cannot be passed at the present time and it is the type of bill which may never be passed. Therefore, we want to make a start and that is why we are asking Congress to go ahead with the Barkley bill.

Typical of groups supporting the Barkley bill are the American Water Works Association, American Forestry Association, National Institute of Park Executives, American Society of Civil Engineers, American Medical Association, United States Chamber of Commerce, National Brewers Association, Camp Fire Club of America, Upper Mississippi Board of Engineers, Great Lakes Board of Engineers, New England Conference of Governors, and countless others. Are these organizations noted for careless or reckless thinking?

If the Izaak Walton League had not adopted its dog-in-the-manger attitude, the stream-pollution program would be much further advanced that it is today.

Even today, with the bill on the eve of consideration, we are not attacking the Mundt bill. We are concentrating our support on the Barkley bill, which we feel is sound and right. We do not believe a prohibitory bill can succeed. We remember prohibition.

W. F. WILEY,
Chairman, State Commission on Stream Pollution in Ohio River Valley.

CINCINNATI, July 24, 1939.

Neutrality Legislation

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 1, 1939

RADIO ADDRESS BY HON. ROBERT M. LA FOLLETTE, JR., OF WISCONSIN

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by

me, broadcast by transcription over station WHA, Madison, Wis., on July 13, 1939, on the subject Neutrality Legislation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Senate Foreign Relations Committee has voted to postpone consideration of all proposed amendments to the present neutrality law until the next session of Congress. The effect of this decision is to delay, for the present at least, the so-called Bloom bill.

Recent events in Europe have been seized upon as an excuse for amending our neutrality law so that this country might be in a position to supply Great Britain and France and their allies with arms and munitions in case of war. This proposal was advanced by the administration in the Bloom bill, which provided that arms, munitions, and implements of war could be sold to belligerent countries on a cash-and-carry basis. Under the present law the President is required to place an embargo upon all shipments of arms, munitions, and implements of war to belligerents as soon as he finds that a state of war exists.

Although the cash-and-carry proposal would apply theoretically to all belligerents, there is no serious argument over the fact that Great Britain and her allies would be the real beneficiaries of such an arrangement. No other European power has the cash and the facilities to carry which can match England's resources. If Britain secures complete control of the seas, as would probably be the case, in time of war, that would automatically exclude her enemies from buying American supplies.

As a member of the Foreign Relations Committee, I voted to postpone action on the Bloom bill until the next session of Congress because I am convinced that selling arms, munitions, and implements of war to one group of belligerent nations is the first fatal step that will lead to our being drawn into war.

We cannot help but sympathize with the unfortunate people in Europe who are caught in the jaws of Old World diplomacy, but in justice to our own people we must not allow this Nation to be drawn into the same cauldron of chaos. No matter how difficult it becomes, we must always keep in mind four fundamental facts about the present international situation.

First. There is no sufficient reason to assume that it is our responsibility to keep Europe and the rest of the world in order. The governments directly involved can do that job if they only will.

Second. Going to war to protect British and French imperial interests is not going to save the world for democracy today any more than it did 20 years ago.

Third. Experience has shown that economic aid to belligerent nations under modern economic conditions sets in motion domestic forces which ultimately will push us into war itself.

Fourth. We can stay out of any foreign war if we insist upon remaining strictly neutral and if we refuse to be lured into any belligerent's camp by the false and illusory benefits of wartime trade.

In the long series of incidents which have been used to arouse American sympathy for Great Britain and France in the current European situation, many conscientious American citizens have been given the impression that the international maneuvering abroad is the prelude to a life-and-death struggle between "defenseless" democracies on one side and Fascist "monsters" on the other.

The truth of the matter is that the nations of Europe directly concerned are far from defenseless. They have the power to stop Germany and Italy in their tracks if they want to use it. The eminent American scholar, Charles A. Beard, has recently pointed out that the countries threatened by Germany and Italy can put three or more soldiers on the field for every single soldier that Hitler and Mussolini can muster. They have far greater economic resources than have Germany and Italy. They have the vast domain of the British and Dutch Empires from which to draw their food and raw materials, and with the British Navy in control of the seas they can starve their enemies into submission by means of blockade.

It remains for the governments of these nations themselves, particularly Great Britain and France, to explain why they have not used this power to prevent aggression in Europe. Certainly the reason cannot be that they needed our help. On the contrary, their policy in sacrificing Czechoslovakian democracy indicates that they are more concerned with power politics and the position of the groups they represent in the social and economic life of their own countries than they are in preserving the democratic process.

Europe is today reaping the bitter harvest from the seeds of hate and reprisal sown during and after the last World War. That war, strangely enough, was fought "to make the world safe for democracy." Today all but two of the large nations of Europe are under the yoke of dictatorships. The Treaty of Versailles was not a treaty of peace. It was a treaty of revenge. Instead of solving the problems which brought on the war it made them insoluble. The victorious governments carved up the map of Europe to suit their own ambitions, and every possible effort was made to destroy Germany beyond repair. Then in the years which followed the uncompromising opposition of the allied powers to all efforts of the democratic government in Germany to alleviate the suffering of its people brought ultimate disgrace upon German democracy and paved the way for Hitler and fascism.

In modern times whenever there has been an international crisis involving acts of aggression and treaty violation, the United States has tried to cooperate with peaceful nations for the preservation of international law and order, but every time the results have been far different from what we had every right to expect. The series of failures which have followed such attempts is an indication that the policies of foreign governments with which we have tried to cooperate are guided by considerations other than the plain desire to prevent aggression and preserve peace.

In 1931, when Japan marched into Manchuria, the United States took a firm stand in refusing to recognize Japan's conquest, but Great Britain, fearful of damage to her commercial interests, backed down, and left our State Department holding the bag. As a result of Great Britain's attitude the members of the League of Nations did not dare to invoke the sanctions provided in the League Covenant.

In 1935, when stoppage of oil shipments to Italy might have halted Mussolini's invasion of Ethiopia, the British Government refused to apply the sanctions and, instead, negotiated a deal with France, which sold Ethiopia out to Italy just as Czechoslovakia was sold out to Germany at Munich last fall.

The governments which are now asking for support from America in the name of democracy are the same which destroyed democracy in Germany to begin with and which have continued to betray democracy in the international crises which have followed the rise of fascism.

It would be a tragic mistake for this country to assume that it must cast its lot with such governments in order to preserve our own cherished ideals of democratic society.

If Americans want a way to preserve democratic forms of society in the world, their greatest service would be to foster and preserve democracy in this hemisphere and demonstrate to the rest of the world that it can work in modern circumstances. If we can preserve a refuge of sanity in a war-mad world, we will be doing a far greater service to mankind than all the guns in the world can perform.

War will not save democracy. I think the American people are pretty well convinced of that fact. It will not only destroy it abroad, but if we allow ourselves to be drawn into hostilities, it will mean the destruction of all democratic liberties in this country as well. War means military dictatorship in any country that undertakes it in these times.

The present controversy over neutrality does not spring from any disagreement over the necessity of staying out of war. It comes instead from a disagreement over how far we can safely go in helping certain nations in the event of war without becoming involved in it ourselves.

There are some people in official circles who think that we can eat our cake and have it, too. They think we can give economic aid to Britain and France and their allies, if the occasion arises, without committing ourselves to furnishing military aid. That is the contention behind the Bloom bill and similar proposals to lift the embargo on arms and munitions to belligerent nations.

Such an argument, however, ignores our actual experience from 1914 to 1917. Men of influence in the Wilson administration had that idea then. The United States Government allowed the export of large supplies of war materials to the Allies on the assumption that "such sales do not in the least affect the neutrality of the United States."

As a result American exporters built up a staggering trade in war supplies financed by private credit through such banking firms as J. P. Morgan & Co. When the day of reckoning came, the Wilson administration discovered that either the Government had to step in and continue to support the purchases being made by the Allies or take the consequences of a sudden stoppage of that export trade because of the inability of the Allied Powers to secure additional credit to finance the purchases.

The American Ambassador to Great Britain cabled the Government in the winter of 1917 to say, "I think the pressure of the approaching crisis has gone beyond the ability of Morgan. Perhaps our going to war is the only way in which our present preeminent trade position can be maintained and a panic averted."

We went to war and we maintained our trade balance for a time, but you know the cost. We sacrificed 350,000 American men, killed and wounded. The war cost us billions upon billions of dollars, and we are still suffering from the economic dislocation which it left in its wake.

I fervently hope that this may never happen again, and to that end I shall do all within my power to maintain the strict neutrality of the United States.

Hogs and Lard

REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. ALLEN of Illinois. Mr. Speaker, for the last 6 weeks American hog lard, a product which has built the brain and brawn of modern civilization, has been selling in Chicago at the lowest price in the history of that market; so low,

in fact, has been the price decline that it is reliably reported that lard is now going into the kettles and being made into soap.

About 2 weeks ago the representatives of the National Grange, the American and the Illinois Farm Bureaus, and the Association, Southern Commissioners of Agriculture, made an appeal to various Members of this body asking their help in order to effectuate an increase in the price of hog lard. This appeal was addressed to the Members of both sides of the aisle. In response to the request of these farm groups a call was signed by the Members of both parties arranging for a meeting to be held in the caucus room.

The purpose of the meeting was to discuss as well as to work out a sensible, economically, and factually sound program to bring about an equitable price for that commodity.

The meeting was attended by Members of both Houses from practically every agricultural section of our country. The distinguished chairman of our House Agricultural Committee, Mr. MARVIN JONES, gave his wholehearted support to every purpose and objective of that meeting. For the first time in the years I have been in this House I saw "party lines" set aside and the representatives of the agricultural farm side join in a concerted action with but a single objective.

Mr. Speaker, I am happy to say that the next few hours will reveal in part the splendid work which has been accomplished by that group. Apropos of that work done in behalf of our farmers, I want to say that I have just read one of the most constructive, economically, and factually sound editorials that has ever been written on any subject. Devoid of every vestige of partisan spirit, it truly points the way down the road to the restoration of foreign markets for our agricultural surplus crops of corn and corn products, including pork and lard, which we have historically enjoyed.

This editorial is taken from the Chicago Tribune, one of the finest metropolitan dailies of our country. I commend the reading of that article to every Member of the House. It outlines a clear, lucid, common-sense, and realistic method of solving the problem, both as to the surplus as well as the price of our exportable surplus of corn and corn products, including pork and lard.

I know I speak the sentiments of the farmers of my district, as well as the sentiments of the farmers of my State, when I say that I am in accord with every statement made and conclusion reached in that splendid piece of constructive editorial work.

Mr. Speaker, in conclusion I am submitting the call, sent out by the Members of this House, for the meeting, as well as that short editorial from the Chicago Tribune:

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 12, 1939.

MY DEAR COLLEAGUES: The hog and lard producers of the country are faced with the greatest carry-over of hog lard in our history. This food product, which, since earliest times, has furnished the brain and brawn of our people, is now going into the soap kettles of the Nation.

While lard substitutes are selling at 21 cents per pound in the District of Columbia, the chain stores of the District are retailing "lard, 2 pounds, 15 cents," the lowest price received for that commodity in 72 years. Normal exports of upward of 900,000,000 pounds annually have shrunk to a fraction of that amount.

In the face of the tremendous stocks on hand and in spite of the decline in exports, there is at this moment coming into production, wrapped up in hides and on hoof in Corn Belt States, one of the greatest crops of hog lard ever produced.

In the matter of obtaining a fair price for lard the Corn Belt farmers are today faced with impending doom. The Congress has already provided means to meet this condition, and we can therefore avoid the crisis now at hand.

Will you not meet with us at 11 o'clock a. m., Saturday, July 15, in the caucus room of the Old House Office Building, in order to discuss and alleviate this situation?

Yours very truly,

H. K. KNUTSON, Minnesota; LEO E. ALLEN, Illinois; FRED L. CRAWFORD, Michigan; KARL STEFAN, Nebraska; A. H. ANDRESEN, Minnesota; DEWEY SHORT, Missouri; J. ROLAND KINZER, Tenth, Pennsylvania; FRANCIS H. CASE, Second, South Dakota; RICHARD M. SIMPSON, Pennsylvania; SAM HOBBS, Alabama; HARRY P. BEAM, Illinois; V. F. HARRINGTON, Iowa; JAMES MCANDREWS, Illinois; HAMILTON FISH, New York; JESSIE SUMNER, Illinois; CLARE E. HOFFMAN, Michigan; NAT PATTON, Texas.

[From the Chicago Daily Tribune]

GERMANY'S FATS AND AMERICA'S CORN

A two and one-half billion bushel crop of corn has been forecast by the Department of Agriculture. This large crop will be added in the fall to the record-breaking carry-over from 1938, much of last year's corn being sealed in the cribs against "loans" from the Government.

We shall then have more corn in the country than at any time since 1932, and perhaps a record for all time. There will be more opportunities than last year to convert the corn into pork, for the spring crop of pigs is back at the pre-A. A. A. level. Then what? What will be the price when all those pigs have eaten most of that corn and are sent to market?

During the coming winter the country is likely to see the lowest hog prices in years and on the gold basis the lowest since 1894. That will take place unless the Government sees to it that we get back some of the old customers whose purchases made it possible for farmers to get fair prices for hogs.

The old customer whose purchases from us shrank most is Germany. That country, despite a tremendous endeavor to produce at home all of the goods required by her people, is dependent upon foreign countries for half of the required supply of fats. Germans formerly purchased as much as 300,000,000 pounds of lard from the United States. Last year's purchases were only about one-half of 1 percent of that amount.

American products can only be bought with gold and free exchange. Germany has practically no gold, and is thus obliged to depend upon credits obtained from exports to pay for American goods. We make it very difficult for the Germans to acquire these credits. Because of things which the German Government has done of which we disapprove, we impose a tariff against German goods which is 25 percent higher than against any other country's products. As a result, Germany sold to the United States last year the smallest amount of goods since the war. The 1938 total was only half as much as that for 1931, only one-quarter as much as that of 1929. Exports to Germany this year are running a third behind those of last year.

The result of restricting the sale of German goods here has been that Germany has been obliged to reduce her purchases of American farm products severely. She was able to buy from us last year only one and one-half million pounds of lard, instead of the several hundred million pounds she formerly took.

Other countries with which Germany has had trade relations, especially Brazil, Denmark, and Holland, were unable to supply her anything like the total lard requirements. And boats sent out by Hitler to seek whales for their oil, which is a fat substitute, proved unsuccessful.

Germany and the United States have reciprocal needs. Germany badly needs American pork products, and America badly needs customers for pork products. It should be possible to exchange our pork products which are going to be in excess for German goods of which we have need. Among German products we might take in exchange for lard are chemicals, raw furs, glassware, milk separators, and magnesium. If we were to increase our purchases of these articles up to the 1931 level, Germany could readily buy from us as much lard as she did in the best predepression year.

To seize an opportunity to trade American products for German is not to approve fascism nor to condone military aggression. In attaining the high position which the United States formerly occupied in foreign trade we did not restrict our dealings to those who followed our ideas of government, economics, or morals. Being practical, France last year seized the opportunity to sell Germany as much lard as she could. French exports of lard to Germany in 1938 were twice as much as ours.

Long-time considerations also suggest the feasibility of attempting to get back the German lard business. Germany has been seeking substitutes and has been able to find them for a large number of products. If we make it impossible for Germany to obtain her supplies of fats from us, we are offering a bonus to her scientists to develop something to displace our lard. If we do not act to rewin the German market for lard now it may be lost forever.

The Constitution—Written and Unwritten

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of the junior Senator from Ohio, Hon. ROBERT A. TAFT:

Why have a Constitution? We have heard it denounced as a bar to progress. We have heard the men who wrote it, Washington,

Franklin, Madison, Hamilton, Randolph, and others, denounced by Irving Brant and Morris L. Ernst as interested only in protecting their own pocketbooks. President Roosevelt does not seem to like the Constitution unless it is construed just the way he wants it construed. The scoffer says, "What's the Constitution between friends?"

Well, the greatest value of the Constitution is to keep all our public officials from bossing us around. If it were not for the Constitution, the Government could tell us what we could eat for breakfast and how we should comb our hair; the Government could pass laws to take away our property, and even take away our lives. Many governments have just that kind of power when there is no effective constitution, and it is not a prospect that anyone can contemplate today with comfort or pleasure. If the Constitution were repealed or construed away to have no meaning, it would not be long before our Government became more and more arbitrary, and more and more like Germany, Italy, and Russia.

No one who reads history can seriously question the intense and disinterested patriotism which moved the men who drafted the Constitution in their effort to create a nation. For that purpose they made every compromise, and accepted provisions which often differed from their individual opinions and interests. The history of the United States is a testimony to the success of their efforts.

But these men and those who ratified the Constitution deliberately limited the powers of government because they were afraid of arbitrary government. They had had experience with it, and they didn't like it. They knew also that many republics in the past had slipped into despotism even while preserving the forms of a republic. They were students of government, and they knew how the democracies of Greece had developed into tyrannies. They knew that under all the forms of a republic, powers under the Roman state were gradually concentrated in one man until he became in fact the arbitrary emperor of the Roman Empire. They knew that the granting of unlimited power on every subject, even to a popular majority, would lead ultimately to unlimited power in an individual or a class. They knew that if all the powers of government were concentrated in one man or one group of men, it would not be long before the exercise of those powers became arbitrary and dictatorial. They tell a story about old Benjamin Franklin as he came out of the Constitutional Convention. He was asked, "Dr. Franklin, have you given us a monarchy or a republic?" His reply was, "A republic, if you can keep it so."

And so they imposed three great limitations on the power of the National Government. First, the National Government was made a government with power to deal with only certain national matters, and all powers not granted were reserved to independent States or to the people. We are told that State lines have become artificial and have no meaning; but, except for State independence, local matters, like schools, roads, cities, would soon be governed by the arbitrary will of Washington. The founders knew that preservation of local home rule was essential to real liberty. They had seen before the Revolution that government from a distant capital, like London, was bound to be tyrannical. It is impossible for any man or any board, no matter how well-intentioned, to make detailed regulations for all sections of the United States which will really fit more than a very few localities. To the rest of the Nation those regulations are tyranny, because the people have had no effective voice in their making and they are not the regulations they desire.

Of course, it is true that in the growing complexity of modern life more matters have come to acquire a national interest and have passed beyond the power of the States to control. It is true that more matters have come within the scope of the power to regulate interstate commerce conferred by the Constitution. But laws telling the farmer what he can plant and what he can't plant, and regulating even retail trade, the administration of local work relief by Federal officers, and the proposals to control all local health, welfare, and education through the use of Federal funds have seriously infringed on the rights of local self-government guaranteed by the Constitution. The real new dealers would like to abolish the State and give all power of government to Washington. They resent any opinion of the Court which recognizes a limit to the powers given by the interstate-commerce clause. Unless there is a limit somewhere, however, there is an end to local self-government, and soon to liberty itself.

In the second place, the founders of the Constitution carefully separated the powers of the National Government between the executive, legislative, and judiciary, so that no one branch should be able to exercise all of even the limited powers given to the Federal Government. They knew that if the legislature delegated all powers to the executive, and if the judiciary were made subservient to the executive, it would be but a short time before a dictatorship would put an end to any actual rule of the people.

In the Supreme Court bill of 1937 the President attempted to destroy the independence of the courts. The bill gave him power to appoint six additional judges, and his unquestioned purpose was to appoint men who would decide every case the way he wished to have it decided. The bill was constitutional, but if there is an unwritten part of our Constitution, it is that the fundamental principles embodied in the Constitution shall not be violated even by powers granted in the Constitution itself. The attempt to destroy the Government was so clear that the people rose up in violent protest. The bill was defeated by a Senate of which a vast majority were members of the President's party. The report of the majority of the Judiciary Committee, most of them Democrats, said of the bill:

"It would subjugate the courts to the will of Congress and the President, and thereby destroy the independence of the judiciary, the only certain shield of individual rights. It stands now before the country, acknowledged by its proponents as a plan to force judicial interpretation of the Constitution, a proposal that violates every sacred tradition of American democracy.

"Under the form of the Constitution, it seeks to do that which is unconstitutional.

"Its ultimate operation would be to make this Government one of men rather than one of law, and its practical operation would be to make the Constitution what the executive or legislative branches of the Government choose to say it is—an interpretation to be changed with each change of administration.

"It is a measure which should be so emphatically rejected that its parallel will never again be presented to the free representatives of the free people of America."

This attempt to destroy the division of powers was the measure which first shook the people's confidence in the President and led to the extraordinary reversals of public opinion in the elections of 1938.

In the third place, the people of the 13 States insisted, as a condition of the ratification of the Constitution, on the express limitations of the Bill of Rights contained in the first 10 amendments. No limitation on government is more typical of the American system than the Bill of Rights. It provides, in effect, that even the power of the majority of the people shall never be used to tyrannize over any minority, no matter how small that minority. On the coldly formal words of the first 10 amendments depend the right to worship according to a man's own religion; the freedom of speech and of the press; the right to assemble; the right to be secure against unreasonable searches and seizures; the right to trial by jury; the right to life, liberty, and property. If these rights were suspended to give arbitrary power to a majority of the people, it would not be long before the arbitrary power so conferred would be usurped by a small group or an individual. It is probably true that in their zeal to protect these rights the courts have given too much effect to the so-called due-process clause. In a complicated modern nation, individual rights must be more curtailed than in the simple American colonies of the eighteenth century. But a complete planned economy under which the Federal Government regulates prices, hours, wages, and every detail of business and agricultural life is impossible to administer without abandoning many of the protections given by the Bill of Rights. Whether we wish to abandon any of those rights may be debatable, but we can hardly criticize the courts for giving them effect.

Finally, the founders set out their checks and balances in a written Constitution and gave an independent judiciary the right to construe it. Some question the right of the courts to declare laws unconstitutional, but without that power the limitations imposed would have been meaningless, because Congress and the majority it represents are seldom restrained from doing what they wish to do to any minority by the mere words of the Constitution. As Madison and Hamilton said in volume II of The Federalist:

"The complete independence of the courts of justice is peculiarly essential in a limited constitution. * * * Limitations of this kind can be preserved in practice no other way than through the medium of courts of justice, whose duty it must be to declare all acts contrary to the manifest tenor of the Constitution void. Without this, all the reservations of particular rights or privileges would amount to nothing."

Those who wish to destroy the independence of the courts, those who wish to construe constitutional limitations away until they mean nothing, are in fact desirous of destroying the Constitution itself. Their course, whether intentional or otherwise, is directed toward an all-powerful state.

The Constitution is our bulwark today against both fascism and communism, and against the bitter conflict between them, which is destroying Spain and threatens to destroy Europe. No constitution can be perfect, and it may be highly desirable to make additional changes. As George Washington said in his Farewell Address, "The basis of our political systems is the right of the people to make and to alter their constitution of governments. But the Constitution which at any time exists, until changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all."

The Constitution did not create the American way of life; the character of that life has changed and extended since it was adopted; but it did impose certain restraints on the exercise of governmental power which have prevented democracy from destroying itself. The progress of America has been due to the retention of the spirit of liberty and individual initiative, kept alive by the freedom of the different localities and the freedom of the individual.

All over the world we have seen how easy it is for a temporary majority of the people to turn over all the powers of government to a dictator, and how difficult it is ever to recover those powers once they are delegated. Such a thing cannot happen in this country as long as we revere the Constitution, as long as we retain an independent judiciary with power to interpret it, as long as we refuse to listen to those sirens who would construe away the essential restraints which the founders so wisely imposed.

Enviable Record—H. O. L. C.

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. CELLER. Mr. Speaker, I think we can all be proud of the fine work the H. O. L. C. is doing. It has made a splendid record. I have always found its Board and local officials in New York City particularly sympathetic and responsive to genuine appeals for relief and help. Mr. John H. Fahey and his colleagues on the Board—T. D. Webb; Franklin W. Hancock, Jr., whom we shall always remember as a distinguished former Member of this House, and who is a warm personal friend of mine; Fred W. Catlett; and W. H. Husband have all rendered yeoman service in relieving owners of homes of various trials and tribulations growing out of mortgages held upon these homes by mortgagors about to foreclose.

THE RECORD OF THE HOME OWNERS' LOAN CORPORATION

The Home Owners' Loan Corporation, now in its sixth year of operations, is well on its way toward the goal set by Congress—the rehabilitation of hundreds of thousands of home owners who faced the loss of their properties during the depression. Today more than 701,000 borrowers, all threatened with foreclosure at the time the H. O. L. C. stepped into the picture, are in satisfactory standing. Nearly 588,000 are either entirely current or less than 3 months in arrears, and 113,500 others not only are meeting all regular monthly bills but, in addition, are making regular monthly payments on their arrearages. About 126,000 other borrowers are making adjusted payments which give hope that they, too, will be enabled to "come through"; and nearly 44,000 accounts, amounting to $101,000,000, have been fully liquidated and crossed off the books.

Borrowers have paid back more than $500,000,000 of their entire principal indebtedness; about 90 cents of every dollar due has been paid to date, with collections now aggregating about $1,000,000 in principal and interest every working day.

The accomplishments of the Corporation, however, are not confined to the relief it extended more than a million home owners in the form of loans, or in helping halt the demoralization of a real-estate market that already was recording 1,000 foreclosures a day and never could have withstood the shock of a million more. In taking mortgages totaling $932,400,000 from banks and trust companies, $767,900,000 from savings and loan associations, $192,000,000 from finance and mortgage companies, and $164,600,000 from insurance companies it made those institutions liquid and allowed them to grant leniency to other distressed home owners. The rest of the $3,093,000,000 the Corporation advanced before the close of its lending period, June 12, 1936, went directly to individual mortgage lenders, keeping them, too, from adding to an avalanche of foreclosures which had mounted to 1,000 a day.

The Corporation saved its borrowers $200,000,000 in concessions it was able to obtain for them from mortgage holders at the time of refinancing. It directed the spending of $78,000,000 for repairs which made their homes better investments and sounder security. And it paid $229,000,000 to wipe out delinquent taxes. It is estimated that H. O. L. C. borrowers to date have saved $175,000,000 in interest alone—the difference between the amount they have paid under their 5-percent rate and the higher rate on which they originally obtained their mortgages.

But perhaps the Home Owners' Loan Corporation's chief contribution was toward the reformation of the entire mortgage structure of the Nation. Its 15-year 5-percent amortized mortgage has revolutionized the home-mortgage field. It swept away the old and burdensome second mortgages of H. O. L. C. borrowers—and the second mortgage is virtually disappearing from the American home-financing picture. The old short-term loan—renewable only at high fees and which the average home owner rarely ever paid off—also rapidly is being discarded. The low-interest, long-term loan now is a recognized part of home financing in this country.

The H. O. L. C. at the present time owns 88,576 homes. It has sold 34,595. These homes—representing only about 12 percent of the number H. O. L. C. refinanced—were acquired only after every effort to save their owners failed. It is estimated that 18 percent of the homes acquired were abandoned or virtually so and that 6 percent came to the Corporation through deaths of borrowers and refusal of heirs to assume their obligations, or through legal complications. The largest single block of foreclosures, almost 40 percent, resulted either through a willful default of those able to keep their contracts, or utter refusal to cooperate to the best of their ability. Only a minority of foreclosed H. O. L. C. borrowers lost out through sheer inability to pay.

The personal service which the H. O. L. C. instituted was unprecedented. If borrowers were out of jobs, H. O. L. C. field men sought to get them employment; if they were eligible for relief, they were aided in obtaining a shelter allowance which could be applied on payments for their homes; if they were "overhoused"—attempting to carry homes beyond their incomes—they were helped to rental or sale. Every resource was exhausted before foreclosure action was taken, and even then 16,500 withdrawals of foreclosure actions prove that leniency was granted to the last.

It must be realized that the average H. O. L. C. borrower, when refinanced, was 2 years delinquent in both principal and interest and in arrears 2 to 3 years on taxes. The average foreclosed H. O. L. C. borrower at the time of foreclosure was again delinquent 20 months in both principal and interest to the Corporation, with unpaid taxes mounting. Since the process of foreclosure requires several months in the average State, the average borrower who has lost his home occupied it rent free for at least 4 and probably 5 years. If he was unable to make any progress toward rehabilitation in that period, little hope could be held out for the future.

Net H. O. L. C. foreclosure authorizations dropped in November to about 2,000 from a peak of 8,000 monthly in the late summer and fall of 1936. In several States, foreclosures virtually have ceased; in many others, withdrawals are about equaling foreclosures. H. O. L. C. has been able to dispose of its acquired properties almost at will, but only offers them for sale in quantities which will not adversely affect the stabilization of the real estate market. In 1938 the Corporation sold more than four times as many as it had sold in the course of its operations up to December 31, 1937.

As rapidly as the H. O. L. C. has acquired homes, they have been placed in condition to yield income. Its reconditioning forces are spending about $100,000 each working day for that purpose and to recapture values lost through depreciation; in all, $45,000,000 has been expended to improve such homes, making a definite contribution toward safeguarding neighborhood values. Of the homes the H. O. L. C. holds, available to yield income, 88 percent are rented; 98.8 percent of the renters either are current or less than a month in arrears.

Although the H. O. L. C. was created to meet an emergency, its officials have sought to make permanent contributions toward a more secure home ownership in the future. Forced to recondition half the homes it refinanced in order to make them good security, the Corporation exposed the full extent of shoddy construction in the small-home field. As a result, its technical forces conceived the Federal Home Building Service plan, which now has been placed in operation by the Federal Home Loan Bank Board, the parent of the H. O. L. C. It is a program which links home-financing agencies, architects, materials dealers, and manufacturers, contractors, and

all other elements of the building industry to give better design and supervision of construction to small-home seekers for the first time in the country's history.

These technical forces now are working on a neighborhood rehabilitation program, which seeks to halt the obsolescence of what should be sound residential areas, either through blight within their borders or from the menace of encroaching slums. They believe that a united front of home owners, real-estate interests, and home-financing agencies can halt the staggering loss in property values which all major communities now bear each year.

The H. O. L. C. has a selfish interest in such programs to better home construction and protect home investments, since it owns a vast number of homes and has mortgages on hundreds of thousands more, all of which are affected by any decline in property values. But, in a broader sense, it is seeking to protect not only itself and its borrowers, but all home owners of the future from the conditions which contributed to the necessity of establishing the H. O. L. C. during the most desperate period of the depression.

I herewith insert an interesting letter received from Chairman Fahey of the Federal Home Loan Board:

FEDERAL HOME LOAN BANK BOARD,
Washington, July 28, 1939.

The Honorable EMANUEL CELLER,
House of Representatives.

MY DEAR MR. CELLER: We recently have received inquiries from a number of Members of the Congress regarding the operations of the Home Owners' Loan Corporation, both nationally and in their own States. Believing that you will be interested, I therefore am attaching a brief, informal report as of December 31, 1938, which not only gives a picture of our current activities but outlines the permanent contributions the Corporation has made to a broader and more secure home ownership. To supplement this report, I am taking the liberty of presenting you with some interesting figures on your own State of New York.

The H. O. L. C. refinanced 80,117 New York home owners, to the extent of $424,032,983, since the beginning of its lending period, June 12, 1933. These New York borrowers, like all H. O. L. C. borrowers, were without private credit at the time; the average was 2 years delinquent in both principal and interest and between 2 and 3 years on taxes.

As of February 28, 1939, New York borrowers had repaid $35,276,568, or 8.3 percent, of their total principal indebtedness. Collections in March were 91.7 percent of billings. One thousand and forty-seven New York borrowers have paid in $3,685,000 to settle their accounts in full; 20,375 others today are current or less than 3 months in arrears, while 12,896 more are in a liquidating class, meaning that they not only are meeting all current bills but, in addition, are making regular monthly payments on their arrearages.

This means that we now have 33,271 accounts in New York in a satisfactory condition, representing borrowers who clearly are on their way to debt-free home ownership. There are 21,335 other borrowers who are making adjusted payments sufficient to keep their accounts active and who are being given every assistance in their effort to rehabilitate themselves.

The H. O. L. C. now owns 18,202 homes in New York. It has sold 1,367 others. Of the homes it owns, and which are available to yield income, 87.9 percent are rented. Rental collections in February were 98.8 percent of billings.

These figures tell a story that we believe is a credit to both home owners and the manner in which they were assisted by the Government. They show that more than 69 percent of these almost hopless home owners H. O. L. C. refinanced either have saved their homes, are almost certain to save them, or at least have a good chance—and only 26 percent are in the last category.

Included in the original loans made in New York were $4,574,000 for reconditioning and repair of homes to make them sound security, and about $31,062,117 for payment of delinquent taxes. The Corporation has advanced an additional $12,320,000 for taxes, maintenance, insurance, and similar purposes to aid and protect borrowers. Further, $9,426,000 more has been spent on properties which the Corporation has acquired. Every dollar spent on reconditioning, of course, stimulated the construction industry and enhanced neighborhood values; the taxes we advanced provided needed revenue to New York communities and to the State.

The story of how the H. O. L. C. tried to serve the purpose for which it was established by the Congress is told in the attached national statement. Its constructive social purposes have been carried out in the Sate of New York to the best of our ability.

Sincerely yours,

JOHN H. FAHEY, *Chairman.*

John Ericsson—Son of Sweden Whose Monitor Saved the Union

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 1, 1939

ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON, DELIVERED AT EXERCISES HELD AT JOHN ERICSSON STATUE, POTOMAC PARK, WASHINGTON, D. C., JULY 31, 1939

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert the address which I delivered at the memorial exercises held at the John Ericsson statue, Potomac Park, Washington, D. C., July 31, 1939, as follows:

Mr. Chairman, Secretary Edison, Admiral Bowen, distinguished guests, ladies, and gentlemen, we are assembled this evening in beautiful Potomac Park, on the banks of the historic Potomac River, south of the Lincoln Memorial, in our Nation's Capital. We are met before the impressive statue of that great and gifted son of Sweden and noble benefactor of America, John Ericsson, to whose memory we esteem it a privilege and an honor to again pay tribute. In the words of the poet:

> His was one of the few, the immortal names,
> That were not born to die.

John Ericsson was one of the greatest inventors of all time. He was born in Varmland, Sweden, on July 31, 1803, and died in New York City at No. 36 Beach Street on March 8, 1889. His career as an engineer commenced in connection with the construction of the Gota Canal from Stockholm to Göteborg in Sweden. He early became interested in steam locomotion by land and sea. He later went to England, as a young man of 26 designed and built a locomotive, the Novelty, which attained a speed of 28 miles per hour in successful competition with Stevenson's Rocket.

While in England he also designed the screw propeller, which was destined to ultimately change all travel and commerce, and proved its efficacy on two vessels named for Americans, the *Francis B. Ogden* and the *Robert F. Stockton*.

Ericsson came to America in 1839 and introduced his new propeller on the canals and inland waters of the United States, and within 4 years after his arrival 24 merchant vessels were thus equipped. In collaboration with Captain Stockton, of the United States Navy, he commenced construction of the first screw-driven ship of war, the *Princeton*, a frigate of 600 tons, in which for the first time the method and means of propulsion, the screw for the propeller and the engines, were concealed below the water line safe from shot and shell.

He also designed and perfected other important mechanical devices. Among these should be mentioned air compressors, a boiler with artificial draft; a steam fire engine; the caloric engine, which at that time some expected to displace the steam engine; and numerous other valuable devices for use in the pursuits of war and peace. With these alone to his credit he would justly be renowned as one of the outstanding engineers of that period.

However, it is as the designer and inventor of the *Monitor*, and its quick construction in one of the most crucial hours in American history, and hastening its completion just in time to protect and save the Union fleet from destruction by the ironclad *Merrimac* at Hampton Roads, Va., on March 9, 1862, that John Ericsson won undying fame and a high place among the immortals in the age-long struggle of mankind for liberty and freedom. Second only to the savior of the Union, Abraham Lincoln, whose majestic memorial and shrine is nearby, will live forever the name of John Ericsson.

Those of us who are able to trace our ancestry to the sturdy people of the powerful little Kingdom of Sweden are naturally proud of the important and valuable contribution which our forbears have made to the discovery, the growth, the development, and the progress of the United States of America. We take justifiable pride in the fact that it was that heroic champion of religious freedom and also one of the greatest military leaders of the ages, Gustavus Adolphus II, who was responsible for planting on American soil a Swedish colony. It was his great chancelor, Axel Oxenstjerna, who carried to fruition the King's idea when he died on the field of Lutzen in 1632, and thereby gave New Sweden to the New World, which later became known as Delaware. Through the period of the Revolutionary War and in every subsequent crisis and emergency in our country's history down to the present hour,

men and women of Swedish birth and ancestry have played a leading role in our national history. Altogether 2,000,000 people of Swedish birth and ancestry now live in the United States and are noted for their industry, their integrity, their culture, their patriotism, and their manifold qualities of good citizenship.

It is fitting and appropriate that this magnificent statue of John Ericsson is located not far from the wonderful memorial which expresses the everlasting gratitude and affection of the American people for Abraham Lincoln and that this modern destroyer of our Navy should be named after Ericsson who nearly 80 years ago said to Lincoln: "Attachment to the Union alone impels me to offer my services." Tradition records the fact that Lincoln gladly and gratefully accepted the proffer and after going over the plans of the Monitor with Ericsson, added a little gayety to an otherwise solemn occasion by remarking in his characteristically humorous vein, "Well, like the girl that put her foot in the stocking, it strikes me there's something in it." Events later proved that there was indeed something in the idea of the stolid scientist from the North and together Lincoln and Ericsson wrote one of the most interesting and glorious chapters in American history.

In a world of storm and strife, it is significant that after 150 years of unbroken friendship, the bonds of attachment and mutual regard, which have always existed between the United States and Sweden, are today stronger than ever and it is our fervent hope and prayer that they may always remain so.

Un-American Activities

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. THORKELSON. Mr. Speaker, as I review this session of Congress, I am happy to note that the oseus structure of many Members is undergoing calcification. This to me is a hopeful sign, for statesmen need to have a good strong spine to support themselves in an upright position. This manifests itself in independent action and in firmer support of the people instead of the President.

Like other freshmen in Congress, I had much advice and help from some of the veteran statesmen. I was told to listen to the veteran Members, which, of course, I did; and, believe it or not, listening is always enlightening, in more ways than one.

I soon began to suspect the wisdom expounded by these veteran statesmen, for at times their opinions did not seem to be based upon a sound premise. Many of these Members seemed to be depriving the people of rights instead of preserving and protecting such rights. They were, of course, very loyal to the President, but in attempting to please him, they appeared to be disloyal to the people. Not once did I hear anyone say, "Let us set our course from the Constitution," or "Let us use this document for guidance." All I heard was, "The President wants this," and "We must make democracy work."

In cogitating upon this peculiar statesmanship, it occurred to me that "democracy" had worked, very successfully, for the past 26 years. For is not our Republic being transformed into a socialistic, proletarian State? Surely no one can deny that "democracy" has not worked, for are we not now on the eve of internal strife? Is not our Nation almost in the hands of the Communist? Are not our industries and business dormant? And is not our economic and social structure undergoing rapid deterioration? Certainly it is, and that in itself is the best sign that "democracy" is working.

In my early days as a Member of Congress, I felt alone in my advocacy of perfectly obvious sound principles, but I now note that many of the Members are beginning to speak on these lines, and for that I am grateful. I am also appreciative to the public for its interest, which has found expression in letters from many patriotic bodies and from a large number of sincere and patriotic citizens throughout the United States.

In their desire to help, a few overzealous patriots reach a little too far when they attempt to speak for me, for no one is authorized to speak for me or to act in my behalf. Naturally, I prefer to do that myself. In order that I will not be misunderstood, it is my desire to say that, excluding my party, I am not connected with any political or "anti" society, anywhere in the world. I am instead free from political entanglements, free from subservience to anyone, and I sincerely hope that I will always remain so. I have always been of the opinion that elective and appointive members of the Government should dedicate themselves and their work to the general welfare of the United States, instead of to political parties. I have always held that the Government can render the greatest help to the people and to the Nation by attending to its duty which is clearly set forth in the Constitution of the United States. It is rotten politics, political grafting, fraud, waste, and outright stealing of public wealth, irresponsibility, and incompetence, that are the causes for the mess we are in today. Our nitwitted politicians do not seem to realize that when the Government collapses, everything worth while falls with it; that in the ruins of fallen government lie strife, suffering, and poverty. It is in the knowledge of this danger that I have tried to arouse public interest so that the people will act and restore the sound government that the politicians have destroyed. I dread sharing the fate of other nations that have been ruined and destroyed because of public indifference to their own interest.

President Washington aptly said, "Tyrants arise on the ruins of public liberties." My greatest desire is to clean out the enemies within our Nation, and if this is done now, we will prepare ourselves to meet assaults from without.

My political faith is simple: I am a firm believer in sound, constitutional government. I believe in the equal rights of all people who are loyal to our Government and to the fundamental principles upon which our Nation was created. This makes me a pro-American.

I am opposed to communism, anarchism, and all those who attempt to destroy our Government, no matter in what manner such destructive attempts are made. That makes me anticommunistic, which I am in fact.

He who attacks my stand must therefore be opposed to my principles and consequently anti-American and pro-Communist.

The Communist, to hide his activities, calls those who oppose him Nazi, Fascist, or anti-Semitic. This is done, first, to divert public attention from himself; and second, to enlist the people as crusaders for his cause, by directing their activities against those patriotic citizens who denounce communism and destruction of the Government. In other words, all of our people who are now directing their efforts against the Fascist, the Nazi, and the anti-Semitic are aiding and abetting the Communist, so that he may without interference or danger of exposure, destroy the Government and convert it into a proletarian State.

This is not new. As a matter of fact, it is over 20 years old, and the United Mine Workers of America exposed this plan to Congress and to the country by publishing in the newspapers, yet Congress nor anyone paid the least bit of attention to this expose, and now as we rapidly approach the final dissolution of the Government, a person may wonder what is wrong with Congress. Congress and the people were warned that the Communists were active over 20 years ago, and Congress is still waiting, and thereby helping the Communists to consummate their plan.

I quote from Senate Document No. 14, Attempt by Communists to Seize the American Labor Movement, prepared by the United Mine Workers of America and published in

newspapers of the United States. Presented by Mr. Lodge January 3, 1924, and ordered to be printed:

THE AMAZING SCHEME

The United Mine Workers of America with this article begins an expose of the Communist revolutionary movement in America, as promoted and fostered by the Communist International at Moscow, and dealing with it as it involves the welfare of the miners' union, and other similar labor organizations, and the interest of the American people as a whole.

The purpose and object of the United Mine Workers of America in bringing to the attention of the American people the far-reaching and intensive activities of the Communist organization in this country is twofold. The United Mine Workers of America wants the public to know what this thing is. It wants the public to know something about the fight which the miners' union is waging to stamp it out. First, it desires to reveal and make known the sinister and destructive groups and elements attempting to "bore from within" its own ranks and membership and to seize possession of the organization, and, through such seizure, to later gain possession of all legitimate trade-unions; second, to inform the American people of the scope and purpose of the hostile and inimical movement being carried on within their midst.

Imported revolution is knocking at the door of the United Mine Workers of America and of the American people. The seizure of this union is being attempted as the first step in the realization of a thoroughly organized program of the agencies and forces behind the Communist International at Moscow for the conquest of the American continent.

The overthrow and destruction of this Government, with the establishment of an absolute and arbitrary dictatorship, and the elimination of all forms of popular voice in governmental affairs, is being attempted on a more gigantic scale, with more resolute purposes, and with more crafty design, than at any time in the history of this Nation.

The Communist regime at Moscow, bent on world conquest, is promoting and directing one of the best organized and most far-reaching campaigns in America with which any country has ever been confronted. The Communist organization on the American continent is composed of more than 6,000 active leaders and lieutenants, and approximately 1,000,000 members, adherents and sympathizers, scattered in every State and province of the United States and Canada, and who are actively or tacitly promoting the scheme to import bolshevism and sovietism to this side of the Atlantic.

I shall now quote the concluding paragraph in this report, and shall ask you to read it carefully:

The Communist movement in the next 12 months will be conducted along more intensive lines than it has at any time in the past. The labor organizations will meet their greatest assaults and attacks, and the Communists will make greater efforts than they have at any time in the past to get possession of them. The movement is aimed not only at the labor unions but at the entire industrial, social, and political structure of the country, and with the single aim of eventually establishing a Soviet dictatorship in the United States, and converting the country into a vassal colony of the Communist International at Moscow. It is a situation that challenges not only organized labor but every employer as well. This is one occasion when labor and the employer might very well join hands and fight together instead of fighting each other.

This should be a credit to the United Mine Workers of America, for they advocated that business and labor should unite in peaceful solution both of their own problems and for the security of the United States by eliminating communism. Continual failure to heed this warning leaves all responsibility upon the Congress of the United States.

The United Mine Workers of America realized the danger of communism and bolshevism. They complained to Congress about it, and their findings were inserted in the CONGRESSIONAL RECORD, but that was the end of it, like other warnings inserted in the RECORD. Had the Nation been blessed with statesmen instead of political fools, communism would have been nipped in the bud. As it is now, it is a full-fledged, well-ncurished monster bent upon destruction of our Nation and the enslavement of our people. I might be a little harsh in my statements about Members in Congress, but my purpose is not to be vindictive, yet facts are facts. "Statesman" is a misnomer for a person whose vision reaches no farther than the end of his nose. It was that type of "statesman" that did not heed the warning of the United Mine Workers of America.

The question may be asked, What is communism and who are the proponents of this vicious doctrine?

The proponents are Karl Marx and Engels. It is a part of their philosophy and interwoven in the life of their own people. Communism is a special prepared socialism that is employed to destroy sound government, and the proponents are composed of radicals led by those who subscribe to the communistic doctrine. If this were not true, they would not shout "anti-Semitic" or "Nazi," for they do not hate communism but they hate those who discover them, instead.

It was Germany that discovered the insidious wiles of these internationalists, first, when they brought about inflation and second, when they attempted to take charge of the German Government by the control of gold and credit. It was only natural for Germany, understanding the socialism of Marx and Engels better than any other country, to call their hand. But when Germany said to the money changers, "You are discovered. You are destroying the morale of our people, and you are undermining our nation," the Communist, in dismay at having been caught red-handed, exclaimed, "Germany is anti-Semitic, and the Nazi is our enemy."

In the United States, the same crowd, filled with hatreds, has organized over a thousand anti-Nazi leagues, the sole purpose of which is to boycott Germany. Nazi is a word coined by the international Communists. They want it to be known that Germany is an enemy to civilization, and they advocate, "Do not trade with the enemy." It is indeed strange that this particular group of people should take it upon themselves to designate a friendly nation as an enemy to the United States because such nation set its own house in order. They do not seem to consider that 120,000,000 Gentiles or Christian Americans may not agree with them. They assume instead that because Germany is selected by them as their enemy, that in itself is sufficient grounds for the whole Nation to rally to their support. This, if nothing else, is extraordinary reasoning. As a matter of fact, it borders on the ridiculous. Let us suppose that other nationals in the United States presumed to pursue the same course. We would then have thousands of leagues advocating that those who discover their attempted destruction of our Government be declared anti-English, anti-Irish, anti-Scandinavian, and so forth. And if they pursued this course further, as is now done by the Jews, then we would have the slogan, "Do not trade with any foreign nation, for they are enemies to civilization."

The United States being made up of many nationals would therefore find itself in a ridiculous position where we would not have any foreign trade because some particular people took the liberty upon themselves of speaking only in their own interest.

Let us ask ourselves this question: Why should the Jew consider himself so sacred or important that the whole Nation must join hands with him to fight those he chooses to designate anti-Semitics? Have we reached the point where one particular race may consider itself more important than 120,000,000 other people? I hardly think so, for is it not better for us to be a Nation of united Americans than a Nation divided by many nationalities?

It should now be clear that when we follow such faulty reasoning, all patriotic organizations, papers, and periodicals, that stand in defense of constitutional government and for the American ideals of our founding fathers are called anti-Semitic, Nazi, Fascist, reactionary—by whom? By the Jew-Communist and the international fanatics; and, believe it or not, these words were coined by them.

The American patriot, being aware of this danger, calls those who are engaged in destruction of our Government Communists or communistic Jews. The patriot stands in defense of the country and the flag. The communistic Jew fights for himself and for those in the invisible government who have a fantastic desire for world power.

To those who read this let it be understood that I use the term "communistic Jew" because the group I am speaking of classifies itself as such. It is my desire to draw a distinction, because we have many Jews in the United States who are good, stanch American citizens, so no one must blame all for the sins of the few.

As proof of my statement let me read into the RECORD a few paragraphs by Mr. J. Soltin in The Struggle Against Anti-Semitism—A Program of Action for American Jewry:

We, the Jewish Communists, have to render account to ourselves concerning the contributions we have made through our work among the Jewish masses toward the accomplishment of this great task of the present moment. * * *

"The Struggle Against Anti-Semitism Is a Struggle for Democracy." This is the title of the first chapter. What is the real meaning of this title? Let me interpret: The struggle against Americanism is a struggle for communism. This is the subtle psychology of the communistic Jew to deceive the tolerant gentile.

Continuing with the quotation:

Two years ago, at our conference of September 1936, we signalized the danger of an international pogrom upon Jews prepared by fascism in all capitalist countries. Basing our forecast upon the Marxist-Leninist analysis of the Communist International and our American Party, which foresaw a sharpening of the struggle between the forces of progress and reaction, we pointed out that in this struggle fascism would to an ever greater degree make use of anti-Semitism as its sharpest weapon of attack. * * *

Millions of the working population in the United States, Jews and non-Jews, ask the question, How can anti-Semitism be successfully combated; how can it be defeated? To this question we Jewish Communists must furnish the answer. We must point the way and dispel the feeling of despair and hopelessness among the Jewish masses; we must draw up a program of action that will be acceptable to the Jewish masses and find support in the camp of progressive American democracy.

May I reply to the question, How can anti-Semitism be successfully combated? by pointing out that it will stop of its own accord if every Jew in the United States becomes a good American citizen? We have no trouble with the problem of anti-Semitism in Montana, because we have no Communistic Jews. The very fact that the Jew fights for himself and for his race is cause for anti-Semitism, so he brings it upon himself when he does not support constitutional government and American ideals.

The Jewish workers in the needle industry, with the Jewish Communists in the vanguard, have before them an important task. * * * The Jewish Communists must be in the front ranks of the fighters for a constructive program in the unions that will create harmony among the workers in the industry. The Jewish Communists must consider it their duty at all times to explain to the Jewish, Italian, Negro, Greek, Polish, and other workers in the various trades that the Fascists seek only to create antagonism and disunity in the ranks of the workers; that the Fascists are actuated only by antilabor aims: To divide and demoralize the workers in this or that industry in order to smash the working class as a whole.

The strange part of this philosophy is that the Jewish Communist does exactly what he accuses the Fascist of doing. It is well for the American people to bear in mind that the Jewish Communist disguises his activities by ascribing them to others, as he does in this paragraph. No one in the United States has seen a Fascist and there is no record of an organization of that sort. Yet it is used in this instance as a cloak for the very thing that the communistic Jew is doing. He spreads this "unity" among the workers. He sets up class hatreds between Italian, Negro, Greek, and Polish. He divides and demoralizes the workers by willful prevarication as a shield for his own activities.

THE SOVIET UNION POINTS THE WAY

The great Stalinist constitution expresses the fact that the land of socialism is the greatest and broadest democracy in the world. This constitution embodies the unity of the workers and other toilers in the Soviet Union, the unity of the Soviet people with its Bolshevik Party and its Soviet government, the unity of the peoples and nationalities comprising the Soviet Union—the unity which has made the Soviet Union into a power unequaled in this world.

We base our approach to Jewish culture squarely upon the teachings of Lenin and Stalin, which are already being carried out in the life of the Soviet Union, where national cultures of peoples, among them also Jewish culture—socialist in content and national in form—are being built with the greatest devotion and enthusiasm.

We Jewish Communists have not, however, taken full advantage in our daily work of the influence and prestige of our party among the Jewish masses. Knowing that a great, strong Communist Party is the strongest bulwark for the Jews and all oppressed groups against the attacks of all their enemies, we have not done enough to build our party among the Jewish masses. We have not exerted enough effort to convince the most militant elements among the toiling Jews to recruit them as members of our party.

The great importance of our party in the life of the masses is due to its correct line based on the scientific doctrine of Marxism-Leninism * * *.

The question of the organizational work of the Jewish Communists is one of the most important before this conference. No matter how correct may be the line of struggle that we have presented here and the program that we propose, it will not lead us one step further unless we simultaneously take the proper measures to strengthen our organization, to improve our organizational methods. In the words of Comrade Stalin, "Organization decides everything." We must eliminate the serious shortcomings and frequent blunders in our organizational work and methods.

It should now be clear to all who read this that the word "democracy" is synonymous with "communism," and that the reactionaries are those who object to the Communist; that the Nazi and Fascist are the "stooges" of the Jewish Communist, and the so-called "anti-Semitics" are patriotic American citizens who are interested in the welfare of our country and the security of our Nation. Unfortunately, this movement is conducted and nourished by Jewish Communists in the invisible government, the money changers, and those who now have control of the Nation's gold and credit. It is this group that furnishes the money to finance these subversive activities. To pursue a program as outlined in the letter which I shall now quote is bound to cost a lot of money, and the poor Communist cannot pay for that. It must be paid by the rich Communist.

JOINT BOYCOTT COUNCIL OF THE
AMERICAN JEWISH CONGRESS AND JEWISH LABOR COMMITTEE,
New York, N. Y.

DEAR FRIEND: The struggle between the Nazis and the democracies is now entering its final and decisive stage. By increasing the number of his victims and by bringing new misery to countless millions, Hitler is endeavoring to break the resistance of world democracy. However, to submit at this point would render all previous sacrifices futile and would make any future struggle with Hitlerism hopeless.

Mere protests are unavailing, but economic sanctions can still bring Hitler to his knees. The anti-Nazi boycott, resulting from an aroused world public opinion, has already proven its damaging effect on German economy. Hitler admitted it when he declared, "Germany must export or die." Even the booty of Hitler's latest conquest cannot for long stem the tide of the economic disintegration that has overtaken the Third Reich.

The Joint Boycott Council is now planning to intensify its anti-Nazi boycott campaign throughout the United States. For this purpose we will employ every means of propaganda and persuasion through the distribution of anti-Nazi boycott literature, public meetings, mass demonstrations, and radio programs. We will also enlarge our boycott bulletin, which is to serve as the mouthpiece and rallying instrument for our anti-Nazi activities.

May we, therefore, ask you to subscribe to our bulletin and help destroy the Nazi serpent? We look forward to your joining the ranks of the anti-Nazi combatants by sending us your check and by approaching your friends for them to do likewise.

Sincerely yours,

JOSEPH TENENBAUM.

Senate Document No. 14, entitled "Attempt by Communists to Seize the American Labor Movement," was compiled about 20 years ago as I have already said, and in this pamphlet, communism and bolshevism were described fully. These subversive activities are still going on and they are now nourished by the many appropriations to various Federal projects. We, the Members of Congress, know that, for we have heard exposés of communism in writers' projects, art projects, W. P. A., and many other Federal political relief organizations.

We now have before us a spending and lending bill, and we will soon have the low-cost housing bill, both of them unsound, and directly or indirectly responsible for nourishing communism by employing the Communist. We employ hundreds of professors in the Government, and I advise the Members to look over the list of their names in the Appendix of the CONGRESSIONAL RECORD, page 3552. This list was inserted by the gentleman from Missouri [Mr. DEWEY SHORT], and it is very enlightening, for it proves conclusively that the Government must be operated on fundamental business principles and common sense, instead of on theoretical, professorial flights of imagination.

The Medical Society of New Jersey

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

STATEMENT BY THE PUBLIC RELATIONS COMMITTEE OF THE MEDICAL SOCIETY OF NEW JERSEY

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following authoritative information on State-wide activities of organized medicine in New Jersey, just released by the Public Relations Committee of the Medical Society of New Jersey:

[From News of the Medical Profession in New Jersey]

It is estimated that New Jersey physicians will donate more than $20,000,000 worth of medical services in 1939 to persons unable to pay for those services. This will approximate almost $4,000 worth of services per physician.

This estimate is contained in the final report of the survey of the need and supply of medical care conducted by the Medical Society of New Jersey and its component county medical societies during the last year. The estimate does not include the value of free maternity service, the figures for this category of service being too incomplete to permit their inclusion.

Seventeen percent of the total number of visits made by a representative group of physicians during 1 week of October 1938 were free visits. More than 5,100 physicians were asked to present a résumé of their practice during this 1 week. One thousand one hundred and eighty-two physicians returned questionnaire forms. These 1,182 doctors reported 16,070 free office and home calls for the week. They also reported 1,985 operative procedures performed during the week for which they received no payment.

From these figures an estimate was made of the amount of service given throughout the year by 4,630 physicians in active practice in New Jersey. To this estimate was added the value of services given toward cases in 75 general hospitals of the State.

The estimate for the year is broken down as follows:

Estimated total free office and home calls by 4,630 physicians in 1 year	3,342,560
Estimated value, at $1.50 each	$5,013,840
Estimated number of free operative procedures performed in 1 year	412,880
Estimated value, at $25 each	$10,322,000
Estimated value of services given to ward cases in general hospitals of the State	$4,040,000
Total estimated value	$19,375,840

The report states that "the attending physician or surgeon in our hospitals receives no pay for his work and responsibility for the care of ward cases. Many patients receiving this free service actually believe that the physician is being well paid."

Other observations set forth in the report include these:

"There is a feeling that hospital facilities for the average-price patient are inadequate and should be increased by additional facilities in the form of moderately priced semiprivate hospital beds."

Hospital insurance is favored by physicians as a solution of the hospital problem for the low-income group.

Reports from rural areas do not indicate that general hospital facilities are inadequate in those areas.

There appears to be some lack of facilities for the care of the chronically ill.

Social-service investigation relating to hospital facilities, clinic practice, and free private practice is inadequate.

There appears to be some need for additional public funds for drugs and medical supplies for home care of the indigent.

Referring to the general adequacy of medical facilities in New Jersey, the report states:

"Within the scope of any reasonable definition of the term (adequacy), the facilities and their distribution in this State are adequate. Lack of acceptance of these facilities is the only reason for any person in this State not receiving medical care."

The Medical Society of New Jersey proposed no specific recommendations in this report, stating that it preferred to leave recommendations to the New Jersey health and welfare conference committee appointed by Governor Moore to investigate the status of medical and health care in the State.

In a preliminary report of the national findings, the American Medical Association cited the report of the Medical Society of New Jersey as being particularly noteworthy. Its report read: "Some State medical societies deserve special mention for the services which they rendered the medical profession of their own State and of the whole country in making such a summary. New Jersey may be offered as an outstanding example; its State report forms a large volume which covers every type of medical problem and lays the foundation for further study and for solutions where these are possible."

America Was Built From the Dreams of Our Torchbearers

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

ADDRESS BY HON. HOMER D. ANGELL, OF OREGON, JUNE 24, 1939

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Indianapolis Townsend convention on June 24, 1939:

As a Member of the Seventy-sixth Congress of the United States I voted for the Townsend bill. I am proud of it. I want here to express to this great gathering of the representatives of the Townsend organization from every State in the Union my acknowledgment of the great privilege to have my vote permanently recorded in the public records of the Congress in support of this plan.

At the outset, I want to express to you my appreciation for the privilege of appearing before this great group of earnest, enthusiastic men and women pledged to support a great humanitarian cause. Coming from the State of Oregon, way out on the Pacific shore, the most western rim of continental United States, "out where the West begins," I want to bring to you here assembled the greetings, good wishes, and a message from the Townsend folks of my own State assuring you of the renewed and continued support of the Townsend program by the enthusiastic membership of my own State. In my office in Washington every day I am receiving scores of letters from home telling of the enthusiasm prevailing in the clubs of my district and of the thousands of new members that are being continually added to the membership rolls. The reports coming to me show that the support of the movement there is growing by leaps and bounds. I have received and filed with the Congress petitions signed by many thousands of Oregon citizens urging Congress to adopt this plan. My people are loyal, enthusiastic, and determined workers in this great cause which has as its purpose the alleviation of human suffering, caring for our aged, and restoring the youth of America to honest, remunerative employment under the American system of government.

In my experience in public life, extending over a number of years, I have never come in contact with any folks who were more enthusiastic, earnest, and devoted to a cause than the supporters of the great movement inaugurated by our beloved friend, Dr. Townsend. In my own State of Oregon we placed upon the ballot a petition urging an amendment to the National Constitution embodying the Townsend plan, which was carried by a majority of the voters of the State, over 183,000 voting in favor of the proposal. Pursuant to the mandate of this vote, I have offered in the Congress a resolution for a constitutional amendment providing for the levying of a tax for old-age pensions. My own State legislature in several sessions has petitioned the Congress of the United States to consider the Townsend plan. As a Member of Congress, I took occasion to compile a list of all the States of the Union which had petitioned the Congress to consider the Townsend program, and I found at that time that 18 sovereign States by formal resolutions of their respective legislatures had taken such a course. Calling this to the attention of my colleagues on the floor of the House, I issued a challenge to any Member to produce any legislative proposal now pending or proposed in recent years which had received such support from the legislatures of the States of the Union. That challenge remains unanswered.

As one of the participants in the great contest recently had in the National Congress on the Townsend bill, H. R. 6466, I bring to you a personal report from one on the firing line who participated in the battle. While some who were not present and who did not have a part in the day-to-day struggle during this session of Congress and preceding Congresses to bring this bill out on the floor of the House may have been discouraged with the vote in the House, I want to assure you that the rank and file of the Townsend adherents in Congress who carry the sears of battle are not in the least discouraged.

We feel that a great victory has been won. For the first time the Ways and Means Committee, the most powerful and outstanding committee of the Congress, gave a full and complete hearing on the bill and permitted its proponents to present in detail without limitation the evidence in support of the program. For the first time we were permitted to bring the measure on the

floor for open debate and a vote upon its merits. It was a long hard fight, it involved many hours of persistent and laborious work, but in the end our efforts were crowned with success. The veteran chairman of the Ways and Means Committee, Congressman DOUGHTON, said in all his experience it was the first time they had reported out a bill without a favorable or an adverse report. It is true we did not have sufficient support for the passage of the bill, but I want to call your attention to the fact that every great movement in America for the alleviation of suffering or for the embodiment in law of a great social plan has suffered many, many defeats before ultimately success was achieved. No measure pending before this Congress has received more publicity through the press, the radio, and on the platform than has the Townsend program. Chairman DOUGHTON stated on the floor of the House:

"Never in all my knowledge of the work of our committee has there been such universal or general demand that the House be given an opportunity to consider any measure that has been before our committee. I received more than 25,000 letters urging, and some demanding, that this measure be reported out by our committee so that the Members could have an opportunity to express themselves upon it.

"In addition to this, Mr. Speaker, scores, and I may say hundreds, of Members of this House, some for and some against the measure, some favorable and some unfavorable, have said to me that they felt that this bill is of sufficient importance to the membership of the House and to the entire country that the Members should be given an opportunity to vote on it."

The vote upon the measure, although adverse, has enabled us to know who are our friends and who are our enemies and will enable us to draw the lines of battle and map our course so that we may go forward with renewed energy and ultimate success. Some of those who voted against our bill, in the election campaign gave assurances they would support the plan. I respect my colleagues who honestly believed the measure was without merit and voted against it, but I have only contempt for those who pretended before election they favored the plan and would support it, in order to curry favor with the Townsend group, and then after winning their seats in Congress with Townsend support brazenly voted with the opposition.

The legislation is not merely a tax measure, it is not merely an old-age program, but it is a philosophy of life; it is a great social-welfare movement for the restoration of prosperity in America by putting back on the pay rolls of private industry the unemployed millions who are now tramping the streets and highways of our country, and at the same time giving decent care to our aged. It is generally conceded by all students of our economic and social structure that we will never attain prosperity until the millions of unemployed, those in the lower walks of life, and our aged citizens are again provided with purchasing power. The difficulty lies not with the machinery of production nor the ability to produce efficiently and cheaply, but with the proper distribution of the products of industry. The means must be provided whereby the necessities of life may be acquired by the great masses of our people who are now without purchasing power. The Townsend program by providing this purchasing power regularly and adequately to all of our people will supply this much needed impetus to recovery.

The forced spending each month of the old-age annuities distributed pro rata to our old people in every city, hamlet, and countryside will provide a uniform purchasing power throughout the Nation. The wheels of industry will start again. The men and women on the farms, in the fields, in the forests, in the factories, stores, and shops—workmen everywhere—will find again gainful employment in supplying the wants of some 8,000,000 Americans who will receive these annuities and who must, under the plan, spend the funds within the current month. This will not only make necessary the supplying of goods and merchandise for the annuitants, but the great numbers of workmen who will be put to work in providing these necessities will likewise consume, and their needs also must be supplied. No group of Americans will fail to feel the impetus given to industry by this renewed activity in blood streams of industrial enterprise.

This legislation is easily comprehended. It merely levies a tax of one-half to 2 percent on transactions, the proceeds of which shall be divided pro rata among our aged citizens, 60 years or over in age, providing they retire from gainful pursuits and spend the money during the month received for American services or American-made goods. The plan is a pay-as-you-go program. It is based on the tax formula of a direct tax, widely distributed. It is a tax on everyone to help everyone who grows old. It is not based on borrowing and spending; it does not mortgage tomorrow to pay today's debts. In this respect it differs materially from the social-security program.

The followers of this program urge its adoption because it is a real contribution to national recovery. For over 6 years now we have been laboring in the throes of a depression. We are the only one of the great family of nations of the world that has not been able to throw it off. We are the only one of the leading nations that has piled up an immense public debt in an endeavor to beat the depression. During the last 6 years the revenues of the Federal Government have increased from $3,115,554,000 to approximately $5,750,000,000 in the current year. During that time the public debt has doubled, and the Federal expenditures have increased from $7,105,050,000 in 1934 to approximately $9,000,000,000 in 1939. The deficit during this period amounted to $20,889,000,000, which, added to the public debt, has reached the grand total of over $41,000,000,000. In addition the Federal Government is liable on contingent liabilities guaranteed as to principal and interest in the sum of approximately $5,500,000,000. The per capita public debt has increased from $131 in 1931 to $305 in 1939. That means that each one of you here today and every other citizen of the United States has as his share of this public debt $305, and if there are five in your family, the family debt is over $1,500. The interest on this public debt is over $1,000,000,000 a year, more than the total cost of government a few years ago. In 1913 only 6.4 percent of the total national income was required for Federal, State, and local taxes. In 1930, 14.2 percent was required for such taxes, and in 1938, 23.6 percent of the total income of the American people was handed over to the tax collectors. Approximately one-fourth of the time of everyone who labors in the United States is spent in working for the tax collectors. In 1913, 1.9 percent of the national income went for Federal taxes. In 1930, 4.8 percent was required, but in 1938 it increased to 10.9 percent. State and local taxes in 1938 had increased to 12.7 percent.

The burden on the taxpayer has been increased almost threefold in the last 7 years, as shown by tax revenues collected, which are as follows:

1933	$2,080,000,000
1934	3,116,000,000
1935	3,800,000,000
1936	4,116,000,000
1937	5,294,000,000
1938	6,242,000,000
1939	5,520,000,000

The appropriations for the next fiscal year will be approximately $10,000,000,000. The public debt in 1931 was $16,801,000,000. It will approximate $41,132,000,000 on July 1, 1939, and, it is estimated, will reach $45,000,000,000 by July 1, 1940, which is the maximum allowed under the law. Notwithstanding the huge increase in taxes, the deficit each year is increasing. The deficit is estimated to be for the current year an all-time high of $3,972,000,000, except for 1936, when the soldiers' bonus was paid. The deficits for the last 7 years are—

1932	$3,148,000,000
1933	3,063,000,000
1934	3,939,000,000
1935	3,575,000,000
1936	4,764,000,000
1937	2,811,000,000
1938	1,449,000,000

It is obvious that the policy we have been pursuing for 6 years of attempting to borrow and spend ourselves into prosperity has failed miserably. It has only succeeded in piling up an immense Federal debt and in tripling the tax burden and keeping out of employment some twelve or thirteen million of our people. Isn't it time that those in charge of the Government put into operation some plan, if not the general recovery act, which will solve these problems and save our country? Well may we ask, Why is it that America, with the greatest resources of any nation, with two-thirds of the world's gold and half of the world's wealth, is on its knees and starving, with 12,000,000 of its workers unemployed—apparently permanently resigned to idleness, poverty, misery, and a Government pittance? Must America continue to live on relief and charity? Must the millions of young Americans released from our colleges and schools face idleness and uncertainty, with only the hope of a W. P. A. job? Our President has said that one-third of our people are underfed, poorly clad, and poorly housed. It is true that a million new homes are needed in America every year, and only 300,000 were built last year. This building program alone should absorb 2,000,000 men. Over 30 percent of our railroads are insolvent and the whole railroad system needs rehabilitation. Half a million men could be profitably employed in restoring our railroad system to full efficiency. Public utilities are in need of modernization and expansion. One billion dollars could be expended profitably in this endeavor alone, giving employment to another million men.

The durable-goods industry has been allowed to deteriorate, with practically no plant betterments, extensions, or repairs. A million men could profitably be employed in this industrial activity. The National Bureau of Economic Research shows that expenditures for durable goods and for private construction dropped from $14,500,000,000 in 1929 to $3,500,000,000 in 1933, and had increased to $6,000,000,000 in 1935 with 2 years of heavy Government spending. To provide the necessities of life, clothing, food, and shelter for the lower one-third of which the President spoke would require the services of several millions of laborers in the factories, the fields, the shops, the mines, the forests, and the transportation systems.

The industrial machine of America, the finest and best on earth, manned with the most efficient and intelligent workmen, is idle. It is ready to start production—it only needs the green light to go ahead. Our whole economic and social structure is bogged down and is not functioning. Our national house is out of order. Our emergency measures, adopted to meet the situation, have apparently become permanent and the crisis chronic. Spending has deluged the Treasury and has frozen unemployment into our industrial structure. The only result of the whole miserable process is the ever-increasing tax burden, greater public debts, mounting deficits, increased unemployment, stagnation of business, and loss of confidence in our Government and its ability to bring order and

normal industrial activity out of the whole sordid mess in which we are wallowing.

Uncle Sam should right-about-face in this whole "crackpot" effort to borrow and spend himself into prosperity. He should inaugurate a pay-as-you-go program, reduce the back-breaking tax burden now strangling industry, and substitute in its place a good-neighbor policy of friendly cooperation with industrial enterprise. Our 12,000,000 unemployed can only be restored to pay rolls by private industry. Private industry under proper supervision and regulation by government has made America what it was at the beginning of this depression, and private industry alone can restore it. The Brookings Institution, in a recent study, said:

"The vital problem is to secure a great increase in national production and income. The central issue with respect to all public finance is whether such an expansion of production can best be stimulated by extravagant Federal expenditures, increasing deficits, and heavier taxes, or by some modifications of taxes and a reduction of Federal expenditures—within the limits set by essential requirements * * *.

"Unless we can promptly secure a substantial increase in the national income it will be necessary to conclude that the United States has already reached the danger point in the growth of public indebtedness."

The national recovery plan for which we stand offers some hope for the beginning of a solution to this problem. The American people are pension-minded. The Gallup poll, released February 26, 1939, shows that 94 percent of our American people are in favor of a reasonable pension. The American public is determined that our old people, who have labored through the years in making America and in preserving our democracy, are entitled to share in their old age in what America produces by reason of their contribution during their productive years.

There are some 8,000,000 Americans over the age of 60 years who could qualify under this plan, and half of them are employed in gainful pursuits. This would reduce the unemployment rolls by some 4,000,000. The forced spending of these funds would immediately provide buying power and would at once put to work great numbers of other workers in providing the necessary goods, which, under the provisions of the act, must be manufactured or fabricated in the United States. It would mean that the laborers in the woods, in the fields, in the mines, in the shops, in the stores, as well as professional workers, would find a market for their goods or services. It is reasonable to believe that these incentives given to business and the increased volume of trade would largely absorb the transaction tax.

As soon as this program comes into full operation and effect it will save immense expenditures on the part of the Federal, State, and local governments for relief which will be taken care of under the Townsend program. First of all it takes the place of titles I, II, and VIII of the Social Security Act, with a load of approximately $1,000,000,000 a year. It would also give aid to many who are now on W. P. A. and P. W. A. rolls. Being a uniform pension to which our citizens are eligible eventually it would take care of all pension obligations of the Government. Immense offsets from veteran pensions would thus be available. It can only be determined by experience under the operation of the legislation as to the particular aggregate savings of the plan, but it is reasonable to believe that the total expense on the Government from the tax imposed will to a large measure be balanced by the elimination of these other tax burdens.

The social-security program for old-age assistance has not worked out as planned. It was a commendable effort looking toward social justice. Its old-age-relief program needs fundamental amendment. On August 14, 1935, our Social Security Act became effective. It is computed that under title II there will have been collected up to June 30, 1940, $1,826,000,000. This is exacted from the industries of America and some 40,000,000 workers. Out of this huge sum, however, we will have paid only $60,000,000 to the beneficiaries. Approximately 3 cents out of each dollar will go to the beneficiaries and 97 cents for the reserve account. The employers are now taxed 1 percent of the pay rolls and the employees a like amount. The employers, however, are paying 3 percent for unemployment insurance.

Under the schedules of the act these taxes will increase until 1949, when the employers will be required to pay 6 percent and the employees 3 percent, making a 9-percent pay-roll tax taken directly out of industry. It is patent that this tax is and will be added to the cost of the goods produced and, therefore, will fall upon the consuming public. Should the provisions of this act be carried out and the full amount of taxes exacted, the reserve account will have by 1980 nearly $47,000,000,000. Furthermore, the social-security law is much restricted in its application and affords relief to only a selected group of workers rather than to all senior citizens equally deserving. This huge sum of money exacted from industry and workers is not being devoted to the relief of the beneficiaries, the workers, but is being used to finance the ordinary activities of the Government. Statisticians and economists tell us that it is not necessary to carry a full reserve account to protect these payments. This is apparent to the layman as well. These funds, collected as trust funds, having been spent by the Federal Government to meet its running expenses, necessitates the levying of taxes hereafter to pay the beneficiaries as the obligations become due. The plan should be revised or superseded by another plan so framed as to cover all senior citizens 60 years of age or over, with tax provisions designed to raise only such funds as are needed on a pay-as-you-go basis, with a contingency fund sufficient only to meet emergencies. The funds so raised should be restricted to the use for which they were raised.

Mr. Roger W. Babson, the outstanding financial expert, said:

"If the social-security system is not changed, I doubt very much if the young people of 20 to 30 years of age will ever receive any benefit from it. When their time arrives to get their $40, $50, or $60 monthly Government check it may not even buy a pair of shoes or a roast of beef. The Townsend plan on some reasonable basis is far safer."

And the economist John T. Flynn, testifying before the Ways and Means Committee of the House, said:

"Over the next 40 years what they are actually going to do under the guise of creating a reserve is to collect $47,000,000,000 more than they pay out, and this $47,000,000,000 is never going to be paid back in any form to the social-security system.

* * * * * * *

"I want the Government to stop collecting money it is not going to use for social security. * * * Next year it is going to take $714,000,000; it is going to pay out $22,000,000 in benefits and spend $52,000,000 to run the system, making $74,000,000 in all, and it is going to borrow the balance and use it to pay the expenses of running the Government—maybe buy a battleship or two and a few other things. That money is never going to be used for social security."

Dr. A. L. Epstein, executive secretary of the American Association for Social Security, referring to the social-security law for old age, said:

"Moreover, to the extent that our system, contrary to that of any other nation, and therefore, again, to the extent that our system contemplates the private insurance system of reserves, and seeks to build up in the worst years of depression, in the years when we need every penny we earn to spend, in years when we are saving all our lives to get money for that purpose, when we in these years of the worst depression are trying to save money, then trying to take out in taxes billions of dollars more than we are actually paying in benefits, obviously what you are doing is deliberately not to create social security, not to increase or enhance security of the workers, but deliberately to decrease the purchasing power of the workers and to enhance unemployment and enhance depression."

The immense sums of money being exacted from employers and employees under the social-security program for old-age assistance are being spent as received for carrying on the ordinary activities of the Government. In the place of the tax dollars he has collected, Uncle Sam is placing I O U's in the till. Eventually when these annuities must be paid the Government will have to levy another tax upon the American people to meet these obligations.

This, in effect, is a fraud upon industry and upon our workmen who are compelled to pay these taxes. The taxpayer's burden has increased threefold in the last 7 years, notwithstanding that our deficit has averaged $3,000,000,000 a year, and the public debt has increased over twenty-three billions, now exceeding forty billions. We are piling this immense debt on the backs of future generations and are squandering the borrowed money on ourselves.

While it is true that the Townsend plan failed to pass in the House, everyone must concede that the force of Dr. Townsend's program and the millions of his loyal supporters have changed the whole course of pensions and old-age assistance in America. There was little legislation on this important subject at the time Dr. Townsend began his crusade. The social-security legislation which became effective August 14, 1935, was incited to a large extent by Dr. Townsend's efforts. While the House recently voted down the plan, it did, through the leadership of the Ways and Means Committee, liberalize the social-security law, extending its provisions and increasing the payments. This was unquestionably due largely by reason of the drive of the Townsend group for decent old-age annuities. The amendments to the Social Security Act as passed in the House speed up payments to start next January instead of January 1942, as originally provided by the law. It has also been extended to include the dependents of a deceased annuitant. The monthly annuities have been increased, and the pay-roll taxes have been frozen at 1 percent for the next 3 years. Furthermore, the assistance provided by the act by grants to States for old-age pensions has been modified by increasing the Government's contribution to $20 a month for each annuitant to be matched equally by the States.

This, however, is a mere gesture, by reason of the fact that only one State in the Union now, namely California, is matching the Federal Government's present authorized contribution of $15. The average old-age pension throughout the United States is $19.27, half of which is provided by the Federal Government and half by the States. It ranges from the low of $6.22 in Arkansas to $32.39 in California. The State of Oregon pays $21.28. It is a travesty on social justice to maintain such wholly inadequate and indefensible payments to our old people. Even though the proposed Federal aid of $20 per month becomes a law, our experience shows that the States cannot take advantage of it as they are unable to meet the existing $15 contribution, the average contribution being less than $10.

It is significant to note that the Federal Government proposes to pension its mules that have passed the age of usefulness at a cost to the Government reported to be $1 a day. Uncle Sam can afford to pay $30 a month for pensioning his mules, but the average contribution he makes to the old men and women of America who have passed the age of their usefulness in the present economic set-up is less than $10. Our Uncle believes in giving

adequate housing and care to his mules, but wants to turn out to pasture our old men and women who worked through the years to give us America. But then mules are mules, and old men and women are only human beings.

At rare intervals in times of great emergency when catastrophe seems about to engulf us, an individual is raised up whose vision and insight enable him to pierce the gloom that encompasses us and discern the eternal truth and to lead the way out onto the heights of progress and happiness. The dreams of these great leaders of men, impelled by the visions of great human accomplishment for the upbuilding of mankind, become the realities of tomorrow. Woodrow Wilson said:

"We grow great by dreams. All big men are dreamers. They see things in the soft haze of a spring day or in the red fire of a long winter's evening. Some of us let these great dreams die, but others nourish and protect them, nurse them through bad days till they bring them to the sunshine and light which come always to those who sincerely hope that their dreams will come true."

"Great lives and great ages never grow from dead hopes." Life itself is a great adventure. America was built from the dreams of our torchbearers. Columbus led the way when he followed a dream across an uncharted ocean to find this New World. Faith pushed our frontiers across a continent, over plains and mountain ranges to the Pacific, faith, vision, and leadership will continue to take America on new adventures into the world of prosperity and happiness. May we have the vision to follow such leadership.

"God, give us men! A time like this demands
Strong minds, great hearts, true faith, and ready hands;
Men whom the lust for office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor; men who will not lie;
Men who can stand before a demagogue
And damn his treacherous flatteries without winking;
Tall men, sun-crowned; men who live above the fog
In public duty, and in private thinking."

After all is said, the ultimate solution of the problems of social, economic, and political welfare of our people, which threaten to engulf us, lies in our response to the unseen spiritual realities. Through sheer necessity we are forced back to the simple faith of our fathers for a solution of our troubles which seem about to tear civilization into tatters.

When the history of this decade shall have been written there will be emblazoned on its pages in bold relief the record of the vision and work of Dr. Francis E. Townsend, the great humanitarian of our times, the indomitable leader of men, who has towered above the crowd in these dark hours of our Nation's woes and, like a beacon light on a mountain top, has pointed the way—the man who made the United States pension-minded and gave us the plan of effective social security and justice to all of our old folks, thereby restoring to America prosperity and contentment.

Trend Toward National Socialism in United States Housing Authority

EXTENSION OF REMARKS

OF

HON. HARRY B. COFFEE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. COFFEE of Nebraska. Mr. Speaker, I am convinced that before prosperity returns to the people of this country we must restore confidence. Private enterprise with its billions of dollars of idle capital must eventually absorb the army of unemployed. The Federal Government can employ at best only a relatively few people in comparison with the number employed in private industry.

Now the question arises as to how we can best encourage private industry to put to work its idle cash and our idle men. First we must restore confidence; confidence in the future financial stability of our Government; confidence that personal and property rights will be preserved; confidence that dollars invested in productive enterprise will have a fair chance to earn a profit; confidence that competition by the Federal Government in the field of private enterprise will be discouraged. Unless confidence is restored and private employment of capital and labor encouraged, the trend toward national socialism will be inevitable.

It should be remembered that practically every country in Europe that has fallen into a dictatorship first became financially impaired. What has happened in Europe since the World War should be a solemn warning to the people of this country. The issues involved far transcend partisan politics and present a challenge to the patriotic statesmanship of every Member of this body.

The United States Housing Authority bill, which has already passed the Senate and has been reported for consideration in the House, would more than double the scope and activities of that agency. It is designed to provide low-cost housing for slum dwellers in metropolitan centers. Under this bill the United States Housing Authority will be authorized to bind the future credit of the United States Government in outright grants for rent subsidies to the extent of $45,000,000 per year for the next 60 years, or a total of $2,700,000,000. That is exactly what is contemplated. I consider it an unsound socialistic deterrent to the restoration of confidence.

Under previous authority granted by Congress the United States Housing Authority was authorized to issue $800,000,000 in bonds, interest and principal guaranteed by the Federal Government, and to loan this money to local housing agencies on slum-clearance projects up to 90 percent of the cost. Ten percent of the development cost is supposed to be subscribed locally.

There was also authorized an annual appropriation of $28,000,000 for Federal rent contributions. Under the terms of the contracts already executed by the United States Housing Authority with the local housing agencies the Federal Government will be bound to contribute $28,000,000 annually for the next 60 years, or a total of $1,680,000,000. This amount added to the authorization in the present bill would make a grand total of $4,380,000,000 which the Government will be obligated to pay during the next 60 years in rent subsidies. On the projects now built or under contract the average Federal contribution amounts to $215 per year per family unit for the next 60 years. In addition to the annual Federal contributions, the local authorities must make annual contributions by way of tax exemptions, which under the contracts now executed amount to approximately 65 percent as much as the Federal contributions. Consequently States, municipalities, and school districts share this burden indirectly through tax exemptions with the Federal Government.

According to the evidence submitted in the Senate when this bill was under consideration, the average over-all cost per unit in these slum-clearance projects was $5,520. I have been advised by the United States Housing Authority that on the 55 projects now under construction, containing 24,600 units, the average over-all cost per unit is $4,728. While this shows a reduction in unit cost, nevertheless, it is still more than the cost of the average American dwelling, and as a consequence the average home owner will be taxed for 60 years to provide a better home for these selected subsidized tenants than he himself enjoys.

I am convinced these slum-clearance projects tend to discourage confidence in our Government and its future financial stability; that these projects will furnish only temporary employment to building trades, but will tend to discourage private construction and private employment in the future. This program is not the answer to the need for low-cost housing. We must strive for more business in government and less government in business. When the United States Housing Authority was created I cast one of the 86 votes in the House against the measure. I hope the House will defeat this Senate-approved measure which would greatly enlarge the scope and activity of the United States Housing Authority. If it is defeated, the action of the House will have a very salutary effect in aiding business recovery and helping to restore confidence.

I am one of those old-fashioned Jeffersonian Democrats who still believes in State rights and who is opposed to further centralizing bureaucratic control in Washington. I have confidence in the American people and in our institutions. I believe they will in the future as they have in the past be able to solve the many complex economic problems now confronting labor, industry, and agriculture. There are maladjustments between these groups as well as

within each group that must be corrected. Experience has taught us that one group cannot prosper long at the expense of another, nor can one section of the country long prosper at the expense of the other sections. A normal, balanced, free economy must be preserved. Agriculture must receive its fair share of the national income if it is to have the purchasing power to buy its share of the products of labor and industry. Labor must be employed at fair wages to be able to purchase its share of farm and industrial products at a fair price. Industry must have an opportunity to make a reasonable profit if it is to provide normal employment at fair wages and pay a fair price for agricultural products. The economic machinery that has developed this country into the greatest Nation of the world, is very intricate and sensitive and it does not take much tinkering to throw it out of gear.

Farm Security Administration

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. HAWKS. Mr. Speaker, I note in the July 25 issue of the Washington Post the following article:

REMAKING THE SOUTH—A SOUND INVESTMENT

(By Ernest K. Lindley)

Here are 116,000 farm families in the South. Three or four years ago they were worth $451 per family. This, on the average, represented everything they owned—including farm equipment, furniture, and clothes—after their debts had been deducted.

By the end of the 1938 crop year, the net of these 116,000 families had risen by a total of $35,000,000—or to $752 per family—after all debts had been deducted. Most of that $35,000,000 was invested in tools and equipment made by northern industries.

How did it happen? These families could not borrow money from the banks. They were not even suitable risks for the Farm Credit Administration, which helps to finance more prosperous farmers. Most of them, in fact, were on relief or in need of relief.

What happened was this: The Farm Security Administration made small loans for equipment, mules, seed, etc. In tens of thousands of cases it worked out written leases under which tenants would have an incentive to improve the land and buildings. Most important, it sent people into the field to show these families how to raise something besides cotton, how to enrich the soil by crop rotation, how to produce and preserve for winter use a considerable part of their own food (better and more varied food, too, than many of them had known before).

Last year these families canned more than 23,000,000 quarts of fruits and vegetables for their own use—more than 200 quarts per family. Until F. S. A. agents showed them how, many of these farm wives had never canned anything in their lives.

Most of these families have been put on their feet. Many of them have been paying off their F. S. A. loans more rapidly than the installments become due. F. S. A. expects to recover, with interest, more than 80 percent of the total amount it has put out in the South in rehabilitation loans.

83 FAMILIES PICKED FOR F. S. A. EXPERIMENT

There are 83 other southern farm families, more fortunate than most of those 116,000. They were picked to live in the experimental farm community which F. S. A. made out of a bankrupt cotton plantation in Georgia. Each has a good house and about 75 acres of land which he rents and may eventually buy. The community has its own store, cotton gin, and seed cleaner, and carries mule insurance. Instead of cotton alone, these farmers raise also tobacco, peanuts, melons, and livestock, as well as vegetables, fruits, and poultry for their own use. For small monthly payments they receive regular medical attention.

Most of these families were absolutely destitute when they got the chance to try their luck in this experimental farm community. They have been increasing their net worth—over and above all debt—by about $250 per family per year. The average family in the original group of 28 which have lived in the community since its beginning in 1935 now owns $232 worth of work stock, $115 worth of farm equipment, $267 worth of cattle, hogs, and poultry, and $231 worth of home-raised food. The Government will get back most of its investment—not all, because the housing was a bit too expensive.

There are 83 F. S. A. experimental communities in the South. They are of many different kinds. Part of the cost will have to be charged up to experimentation. But some probably will pay out in full. F. S. A. has gradually evolved a simple, solid farmhouse that can be built for $1,100. This is within reach of thousands of southern families, although it is still too expensive for a family earning less than $500 a year. With a moderate subsidy, such as is now paid for "slum clearance" in the cities, houses of this type could replace dilapidated shacks throughout the Cotton Belt.

Then there are those families—7,000 so far—who are buying farms with the help of the 3-percent, 40-year loans which F. S. A. makes under the Bankhead Farm Tenant Act.

REBUILDING OF SOUTHERN AGRICULTURE NOT CURE-ALL

The rebuilding of southern agriculture at the bottom is not a cure-all. The birth rate on the farm is high; machinery is reducing the need for farm labor; there isn't enough good land to provide a subsistence homestead for every rural family. But the purchasing power growing out of a rehabilitated agriculture will give jobs to many who cannot be absorbed on the land.

Dr. Will Alexander, F. S. A. administrator, says that the Government could profitably invest a billion dollars a year for many years to come in rehabilitating the southern farmer. Profitably from every angle—the improvement of people, the improvement of land, the reduction of relief costs now and in the future, the increase of the national income and wealth—all in addition to the direct repayment to the Government of most of the money invested. This is what the "Budget balancers" call an "orgy of spending." To me, it looks like a sound business proposition.

First, I doubt the accuracy of the statements that are being sent out by the Farm Security Administration; and, secondly, I challenge the Farm Security Administration to have the Agricultural Economics Department or the Secretary of Agriculture attach their names to the political propaganda that is emanating from this most effervescent source.

(1) If this so-called Farm Security Administration can take people from the relief rolls, set them up in communistic colonies or in private farming, and have them increase their net worth "by about $250 per family per year," why has it been necessary to pour over $1,000,000,000 of the $2,500,000,000, appropriated for agriculture, into 13 Southern States the past 6 years? Why 40 percent of the appropriations for less than 10 percent of the crop value of the United States?

(2) Why ask for parity payments when these farms can be turned over to the Farm Security Administration, as they can show profits with new men from the relief rolls, when regular farmers are losing their farms? Of course, when they do not pay they can call them "experiments," but the average farmers cannot do this.

(3) Why does not this so-called Farm Security Administration give us the facts on the financial returns from the Arthurdale (W. Va.) agricultural enterprise?

(4) This may be farm security to the few, but it is farm insecurity to the great number of farmers already on their farms, and losing them by the thousands due to the New Deal agricultural program.

(5) As long as the New Deal agricultural prices are 26 percent less for cheese, 17 percent less for eggs, and so on, I cannot see any sense in trying to set new farmers up in business in competition with the ones already on their farms. We are making landlords out of tenants, and tenants out of landlords.

(6) We should try to get an agricultural program that has some fairness and equity in connection with it. We have one now, where during the past 6 years, Southern States have already obtained from 15 to 21 percent of their farm values from the United States Treasury. Many real agricultural regions where farmers are workers have had only 1 to 3 percent in Agricultural Adjustment subsidies.

(7) We are sure that here is one Federal agency that will have to be more careful of the political propaganda it is sending out if the Hatch bill is signed by the President. Common horse sense is the greatest need of our agriculture today.

Amendments to Social Security Act

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, August 1, 1939

ARTICLE BY ERNEST K. LINDLEY AND EDITORIALS FROM LEADING NEWSPAPERS

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article written by Mr. Ernest K. Lindley, one of the most eminent and widely read writers on political economy and social subjects, having particular reference to the amendments to the Social Security Act which are now pending in conference; and also several editorials from leading newspapers expressing the same sentiment, and expressing the hope and the prayer that the amendments will finally be agreed upon by the conferees and adopted by both Houses before the adjournment of Congress.

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post of July 31, 1939]

MAJOR BILLS IN DANGER

(By Ernest K. Lindley)

RECORD FOR DIZZINESS

The last days of the session of any legislature seldom reveal those qualities in our form of government which are celebrated in textbooks and Fourth of July orations. It looks, however, as if the wind-up of this session of Congress would set a record for dizziness surpassing even the crazy period around June 30 of this year.

The Hatch bill, noble in purpose and sound at the heart, was trimmed with amendments which raise grave questions of public policy, wholly apart from the constitutional "ifs" (which may not prove to be very substantial). As the bill stands it is a greater joy to the professional politicians who want to prevent the nomination of a Progressive Democrat in 1940 than to many of the friends of good government who want to curb the power of the professional politicians.

The works finance bill is floundering through clouds of oratorical hokum. Take Senator GEORGE, as an example. Last summer when the President was opposing his renomination, Senator GEORGE and his friends insisted that the Senator had been a supporter of the New Deal. They pointed to his voting record to prove it, and said that the President was sore only because GEORGE had opposed his Supreme Court plan. A few weeks ago GEORGE voted to boost the agricultural appropriation bill about $300,000,000 above the Budget estimate, and more recently he voted to give Senators another clerk all around. Now GEORGE professes to be panicky about the effect on Federal finances of a conservative set of proposals for self-liquidating loans. An ordinary observer is entitled to suspect that the current outpourings of GEORGE and many of his colleagues do not originate in high-principled concern for the state of the Federal Budget.

CONFEREES HOLD UP SECURITY REVISIONS

The social-security amendments are deadlocked in conference, and there is real danger that no action will be taken on them. This after months of detailed committee work in both Houses. Neither the Senate nor the House version of the amendments could be called streamlined. Both are rather botchy, although well above the standards of the present Congress. (Compared to the W. P. A. appropriation bill, they are perfection.) Both sides have taken firm positions in conference, and the result may well be nothing.

If there is no action, old-age insurance taxes will go up January 1, in accordance with existing law—at a cost to employers and employees of about $275,000,000 during 1940. The present rate of 1 percent could be "frozen" by a special resolution. But the bill, in both versions, contains other important changes.

If there is no action some $110,000,000 will be bottled up in the old-age insurance fund which otherwise would be paid out to the aged and their survivors under the new liberalized plan. This figure is based on the more liberal Senate plan. The House plan would put out only $42,000,000 more than under the existing law.

MILLIONS WILL BE DENIED PROTECTION

Even more important than the money, and its effect as a stimulant to business, is the fact that if no action is taken protection will be denied to millions of citizens. Wage salary earners with wives and young children will lack the protection offered by the new survivor insurance. About 1,300,000 workers—mostly seamen and bank employes—who are now outside the insurance system would remain out.

There are benefits at stake, too, for employers under the proposed changes in the unemployment compensation system.

More money for public health, maternal and child care, and crippled children is involved. So is a better break for dependent children—the new amendments put Federal aid for them on a 50–50 basis and increase the allowance per child.

MORE GENEROUS AID TO AGED AT STAKE

Finally, more generous aid for indigent old people is at stake. This is one of the main points of issue between the House and the Senate. The House bill increases the maximum Federal grant to $20—which helps a few wealthy States—but otherwise does nothing for the indigent old people. The Senate adopted the Connally plan, under which the Federal Government would put up $10 to go with the first $5 put up by the State.

The Connally plan would bring up the average of old-age assistance, although it is not as well devised as the Social Security Board's scheme for variable grants (ignored by both Houses) and creates some new difficulties of its own. But the House conferees seem to be dead set against it, chiefly because it would increase the cost to the Federal Government by about $120,000,000 a year.

Such is the state of one of the most important pieces of legislation before this Congress. The deadlock appears to be unbreakable unless the people who are affected—which means almost everybody—promptly take bricks in hand and heave them at the conference committee.

[From the Washington Daily News of July 29, 1939]

THE SENATE SHOULD YIELD

Both branches of Congress have passed social-security amendments to do these things:

Save American employers and workers $275,000,000 a year for the next 3 years by postponing scheduled increases in the payroll tax for old-age insurance.

Make available next year $110,000,000 in more liberal benefits to the aged, to widows, and children, and others.

Extend social security to about 1,100,000 seamen, bank employees, and others not now included in the program.

These changes, we think, are wise. But there is danger that they may not go into effect because the Senate insists on another change that is not wise. That is the Connally amendment, which would require the Federal Government to put up two-thirds of the money paid out to aged persons on the States' pension rolls. A Senate-House conference committee is deadlocked, with the House Members standing firm for the present system of 50–50 pension contributions by the States and the Federal Government.

The House Members are right. But if the deadlock continues until Congress adjourns, employers and employees may lose that $275,000,000 saving next year; the $110,000,000 in more liberal social-security benefits may have to be withheld; the additional persons may not be included in the program. It is the Senate which should yield and permit the wise social-security amendments to become law.

[From the Washington Times-Herald of August 1, 1939]

AMEND THE SOCIAL SECURITY ACT

Some time back, before emotions in the present Congress came to their present flash point, some important amendments to the Social Security Act were amicably agreed on by majorities in both the Senate and the House, and were sent to conference.

CONFERENCE DEADLOCKED

These proposed amendments extend the old-age pension benefits of the Social Security Act to about 1,000,000 more people—bank clerks, employed persons over 65, and sailors. They provide for beginning old-age-pension payments next January 1 instead of January 1, 1942. And they hold the old-age-pension-tax on employees and employers at 1 percent each for the next 2 years instead of allowing it to jump to 2 percent next June 1. This amendment, if adopted, will cut down that $47,000,000,000 reserve which will accumulate under present arrangements by about 1980, to the vast dislocation of our economic and financial set-up.

Congressional emotions now, however, have reached the aforesaid flash point; and these amendments are tied up in conference. There is a grave possibility that Congress may adjourn without adopting them, since a lot of Members have it in for a lot of other Members.

This would be a sad mistake, we believe. Nor can we make out how anybody in Congress would profit by it politically.

BUILD ON THIS FOUNDATION

If any New Deal measure has more popular approval than any other, we believe the Social Security Act has. It is an act to spread mass buying power and to insure great masses of people against various hazards which they cannot combat single-handed in our complex society—hazards of unemployment and of bankrupt old age.

The proposed amendments are aimed at building on that foundation—improving the Social Security Act as experience up to now shows it can be improved. We believe most people want these improvements made; and that they will be pretty mad at Congress if political divisions and animosities keep them from being made.

These social-security improvements are a good deal more desirable, not to mention being much more truly conservative, than such things as the contemplated sabotaging of the wage-hour law and the Smith bill aimed at putting our alien population in a legal strait jacket. We'd suggest that if Congress is in such a hurry to adjourn it pass the S. S. A. amendments and forget to do anything further about the wage-hour law and the antialien bill.

[From the Washington Daily News of July 29, 1939]

PENSION PLAN FACES DEATH IN CONFERENCE

(By Marshall McNeil)

Hailed when passed as a major "business appeasement" measure and a real liberation of the social-security program, the bill amending the Social Security Act lies deadlocked in conference.

It is possible that the bill may be shelved until next session, jeopardizing the $825,000,000 3-year tax savings to workers and employers provided in the measure.

TWO-FOR-ONE ISSUE

The deadlock exists because Senate conferees won't recede from, and House conferees won't agree to, the two-for-one old-age pension amendment of Senator TOM CONNALLY (Democrat, Texas).

The amendment provides that for the first $15 of monthly pension, the Federal Government shall put up $10 and the State $5, and that thereafter contributions shall be split 50–50. This, it is estimated, would cost the Federal Government $80,000,000 the first year.

Senator CONNALLY, supported by three other Senate conferees, including Chairman PAT HARRISON (Democrat, Mississippi), of the Senate Finance Committee, by one House conferee, and a 43-to-35 vote of the Senate itself, insists his amendment gives necessary help to the poorer States.

SEEK SEPARATION

Strategy of the Senate conferees from the outset has been to sit tight until House conferees either agree to the amendment or consent to take it back for a separate vote.

There is a chance that arrangements for the separate vote will be made at the next meeting of the committee, probably Tuesday.

It would require a coalition of Democrats and Republicans to put over the Connally amendment in the House, where similar proposals were soundly defeated (but not on record votes) when the bill was being debated there. That Republicans may not join such a coalition was indicated today when Minority Leader JOE MARTIN (Republican, Massachusetts) said he expected his partisans, generally, to vote against the amendment.

Third Term Urged for President Roosevelt

EXTENSION OF REMARKS

OF

HON. REUBEN T. WOOD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

RESOLUTIONS OF THE MISSOURI STATE FEDERATION OF LABOR AND THE KANSAS CITY CENTRAL LABOR UNION

Mr. WOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions:

Whereas we have today in the White House a Chief Executive of unsurpassed ability and statesmanship; a man of unimpeachable character and stainless record, whose great sympathy and understanding of the needs of the common people have endeared him to the masses of this Nation, and whose championing of the cause of the wage earners of our country has brought down upon his head the enmity and the hatred of the privileged class; a man whose recognition, support, and encouragement to our American labor movement have enabled us to carry on in our resistless march toward the liberation of the American working man and woman; and

Whereas this great humanitarian, President Franklin Delano Roosevelt, has by his liberal and progressive administration, his persistent and resolute opposition to the chiseler and the profiteer, the exploiter and the parasite, aroused against him all of the reactionary forces of the Nation; and

Whereas there is no legal nor logical reason why our great President cannot accept a third term as Chief Executive, and in view of the overwhelming sentiment of the great mass of people in his favor: Be it therefore

Resolved, That the forty-third annual and third biennial convention of the Missouri State Federation of Labor go on record as urging upon Franklin Delano Roosevelt, in the name of the common people, for the sake of the "forgotten man," and in the cause of humanity, to accept a third term as President of the United States, and thereby pledge our loyal support to his success; and be it further

Resolved, That all interested parties be furnished with copies of this resolution.

This is to certify that the above is a true and correct copy of resolution adopted at the Springfield convention of the Missouri State Federation of Labor, May 24, 1939.

[SEAL] FRANK J. MURPHY,
Secretary-Treasurer, Missouri State Federation of Labor.

To the officers and delegates of the Kansas City Central Labor Union in regular meeting assembled, greeting:

Whereas we have today in the White House a Chief Executive of unsurpassed statesmanship, a man of unimpeachable character and stainless record, whose great sympathy and fine understanding of the needs of the common people have endeared him to the masses of this Nation, and whose championing of the cause of the wage earners of our country has brought down upon his head the enmity and hatred of the privileged class; a man whose recognition, support, and encouragement to our American labor movement have enabled us to carry on in our resistless march toward the liberation of the American working man and woman; and

Whereas this great humanitarian, President Franklin Delano Roosevelt, has by his liberal and progressive administration, by his resolute and persistent opposition to the chiseler, exploiter, and profiteer, aroused against him all the reactionary forces of the Nation; and

Whereas there is no legal or logical reason why our great President cannot or should not accept a third term as Chief Executive of the United States, and in view of the overwhelming sentiment of the great mass of our people favoring such a course: Be it therefore

Resolved by the Kansas City Central Labor Union, That we go on record as urging upon Franklin Delano Roosevelt, in the name of the common people for the sake of "the forgotten man" and in the cause of humanity, to accept a third term as President of the United States; and be it further

Resolved, That a copy of this resolution be sent to the President's secretary in Washington, and a copy given to our official labor paper and to the press.

Industrially Owned Child Nurseries

EXTENSION OF REMARKS

OF

HON. CHARLES O. ANDREWS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 1, 1939

STATEMENT BY HON. CHARLES O. ANDREWS, OF FLORIDA

Mr. ANDREWS. Mr. President, I ask to have printed in the Appendix of the RECORD a statement prepared by me on the subject of Industrially Owned Child Nurseries to Aid Married Working Women Who Have Small Children.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I wish to call the attention of my colleagues to a most significant development taking place in the industrial South. In these days it is encouraging to point to something that is good and wholesome among businessmen and industrialists. Particularly does this seem to be the situation in regard to southern businessmen and industrialists.

I believe it is worthy of the time and attention of this Senate to be informed that one of our Florida industrialists, who employs over 3,000 persons, is taking a stride in the field of social service and labor relations which is not only unique, but at the same time could well serve as a model for other businessmen and industrialists in the country. There are a few other instances of this kind in other localities also deserving highest commendation.

I refer to the establishment of a nursery at the new cigar plant in Jacksonville, Fla., the King Edward Industrial Nursery, which I hope will be the first among thousands of establishments designed to lighten the burden of all parents who must labor and thus provide a better life and a better chance for their children.

It is an enterprise conceived and executed by Mr. Swisher because throughout his life he has maintained an intimate and sympathetic contact with the thousands of men and women who are engaged in his manufacturing establishment.

It is an enterprise that grows from a realization and understanding of the problems of those workers. It is a sincere, and, I am sure, will be a successful attempt to solve one of the greatest of those problems.

The trials and tribulations of parents who labor in the factories are severe, regardless of our place in society. They are much more severe for the father or mother who, in order to earn a livelihood, must leave his child for the greater part of the day while he goes to his work.

Often such a child must be left in the care of those who are without any training in their handling, are without proper sympathy for their needs, and are without any conception of the means of meeting the emergencies which almost constantly surround a small child. Such circumstances are not only bad for the child, but demoralizing to the parent and disruptive to the home. Yet they have been permitted to exist among millions of workers, and but very few industrialists have attempted to remedy these conditions.

Some months ago this Jacksonville factory was confronted with the necessity of building an addition to its plant. It was then that the concept of this new type of nursery came to Mr. Swisher. After consultation with other executives of the plant, it was decided that the top floor of the new structure and its roof should be devoted to the nursery.

I understand that some time after the planning, the mounting costs began to worry the executives of the company, to the extent that they called for a conference with Mr. Swisher. He told them that their job was to get the finest nursery possible, whatever the cost. I think that at that time Mr. Swisher had a vision of these children of his factory workers, much as Dickens saw children when he wrote:

"They are idols of hearts and of households;
They are angels of God in disguise;
His sunlight still sleeps in their tresses;
His glory still gleams in their eyes."

Our Nation, Mr. President, has, in recent years, been experiencing the bitterness of struggle against the economic catastrophe to which we have been subjected. Instead of uniting and fighting against the common enemy we have been too willing to fight among ourselves. The differences of these groups, instead of being softened by our common adversity, have been permitted to grow and develop. When each fights against each, we all lose. We have disregarded the common touch and each man looks upon the other as his enemy. Our gravest need is to restore mutual understanding; to come to a realization that man is man's greatest friend; that we are human, not predatory beasts prowling and seeking whom we may destroy.

Sometimes I despair that this restoration of understanding shall come in the time of our generation. But I know, as certainly as I know that I stand here, that if our industrialists throughout the Nation will follow this example, we shall, in the coming years, have a generation which will get back to the fundamentals of Americanism and of humanity.

The Swisher plant employs about 3,000 persons, 2,000 of whom are women. It is this preponderance of female labor—labor well paid by any standards of comparison—that lends the plant so ideally to the experiment which the Swishers are conducting.

Employees' children of preschool age will be eligible for admission to the nursery. It is planned that each case for admittance will stand on its own merits, the aim being to admit first those whose condition most urgently demands such action. Since the nursery will be open at all times, even over the week ends when the plant is closed, children will be cared for for varying lengths of time, again depending on the individual circumstances. There will be no charge.

It is stated that the company now is consulting with the greatest authorities in the country on the conduct of nurseries and schools, to the end that the most efficient methods of care and education will be used. But to my mind, it is more important that the human note is to be retained throughout, and that each child will keep its individuality.

I am informed that the nursery is nearing completion and that within the next 2 months the first child will be admitted.

With this information comes to me authority to invite the Members of the Senate to visit Jacksonville and attend the dedication of this industrial nursery, and we should welcome it as a great forward step in man's relation to his fellow beings.

High Cost of Agricultural Implements and Machinery

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. CURTIS. Mr. Speaker, I rise in support of House Joint Resolution 368, which has been introduced by Representative GOSSETT, of Texas. This resolution calls for definite action on the part of Congress with reference to the situation of the high cost of agricultural implements and machinery.

I call attention to the remarks of the gentleman from Texas who introduced the resolution, which appear on page 10252 of the RECORD, and I urge the House to take favorable action thereon. In order to show the need of the enactment of this resolution, permit me to say that on June 12 I wrote the chairman of the Temporary National Economic Committee on this very important subject. To date I have not received a reply thereto. My letter to that committee was as follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 12, 1939.

Hon. JOSEPH O'MAHONEY,
Chairman, Temporary National Economic Committee,
Washington, D. C.

MY DEAR SENATOR O'MAHONEY: I am addressing this inquiry to you concerning the farm-machinery industry. For some time the farmers of our country have had a back-breaking burden in their machinery costs. The situation is steadily growing worse. The spread between what the farmer receives for his labors and products and what he is compelled to pay for farm machinery is growing larger.

In the first place, I would like to have you inform me what your committee has already done or what it expects to do in the way of determining the facts and information which are causing this unfair situation.

In the second place, I wish you would inform me what, if any, corrective legislation your committee will prepare and submit to Congress to remedy the situation.

I thank you very much for a reply.

Yours truly,

CARL T. CURTIS.

Freight-Rate Discriminations

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 1, 1939

ADDRESS OF HON. LISTER HILL TO THE ALABAMA FURNITURE DEALERS' ASSOCIATION AT BIRMINGHAM, ALA., JULY 26, 1939

• Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on July 26, 1939, to the Alabama Furniture Dealers' Association at Birmingham, Ala.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

At the beginning of this session of Congress a number of bills were introduced whose purposes were the removal of the unfair discriminations in freight rates as between the different regions or sections of the country. The distinguished chairman of the Senate Committee on Interstate Commerce, Senator WHEELER, appointed a subcommittee composed of the Senator from Florida, Mr. ANDREWS; the Senator from Minnesota, Mr. LUNDEEN; the Senator from New Hampshire, Mr. TOBEY; the Senator from North Dakota, Mr. GURNEY; and myself, as chairman, to consider these bills and the general subject of interterritorial freight-rate discriminations. The subcommittee heard many witnesses from practically all the different parts of the country and went into the matter thoroughly. At the conclusion of the hearings I introduced in the Senate, Senate Joint Resolution 99, and Congressman RAMSPECK, of Georgia, introduced an identical resolution in the House of Representatives. This joint resolution was favorably reported by the subcommittee of the Senate Committee on Interstate Commerce. The provisions of the joint resolution in their entirety were written into the general railroad bill (S. 2009) by the Senate Committee on Interstate Commerce, were adopted by the Senate, and the bill was passed by the Senate embodying them on May 25, 1939. The House of Representatives has this day passed the general railroad bill with the provisions as written in the bill by the Senate.

The first provision amends section 3 (1) of part 1 of the Interstate Commerce Act by inserting in that section of the law the words "region, district, territory." This section has always made it unlawful for any common carrier by railroad to make, give, or cause any undue or unreasonable preference or advantage, prejudice or disadvantage as between persons, natural or artificial, localities, and particular descriptions of traffic, and the inclusion of the words I have mentioned will make the inhibitions of this section apply also to regions, districts, and territories.

The second provision of the act authorizes and directs the Interstate Commerce Commission to institute investigations into the rates on manufactured products and raw materials between points in one classification territory and points in another such territory and into like rates within any of such territories for the purpose of determining whether said rates are unjust or unreasonable or unlawful in any other respect in and of themselves or in their relation to each other and to enter such orders as may be appropriate for the removal of any unlawfulness which may be found to exist. Under the provisions when the bill becomes law any undue or unreasonable preference or advantage of one region, district, or territory over another region, district, or territory is made unlawful and prohibited and the Interstate Commerce Commission is directed to investigate immediately and upon finding such undue or unreasonable preference or advantage to exist to enter such orders as may be necessary for the removal of same.

The necessity for the writing of these provisions into the law and for the removal of unfair interterritorial freight-rate discriminations constitutes one of the most compelling and challenging problems before the country today. Transportation is a vital necessity to our civilization. It is as much responsible for the economic and social development and for the political unity and solidarity of the United States as any other single factor. The future growth, development, and destiny of our country will depend in large measure both upon the adequacy of our transportation facilities and upon the efficiency, economy, and uniformity with which such facilities function in the interest of the country as a whole. Attainment of a sound national economy demands equality of opportunity for all parts of the United States to develop in a manner and to an extent justified by the human and natural resources present in the various regions. To have a full and fair opportunity to participate in the commerce of the entire Nation in a Nation-wide market on a basis of free and fair competition to all concerned is a right that not only belongs inherently to all the people of all the States and to all the regions of the country, but unless such a right is accorded there necessarily follows a denial of a free flow of commerce, which retards the social and economic growth of certain sections of the country, and this is to inevitably retard the economic growth of the whole country.

Business expansion, the unemployment problem, the problem of wage inequalities, the farm problem, the development of our national resources, the attainment of a sound and balanced national economy are all involved and interwoven in the matter of freight-rate inequalities. These inequalities constitute a key log in the economic jam which is holding back our national recovery and progress.

Our railroads, which have been and still are the dominant transportation agency, are entitled to great credit for their part in the amazing economic growth and power of the United States; but as important as this contribution has been in the past we are now able to perceive certain uneven results and unbalanced conditions that ought to be corrected in the public interest, which, of course, includes the welfare of the railroads themselves.

Through the development of engineering skill railroad service, as evidenced by the physical ability and capacity to move goods from place to place over the country, has been nationalized. Every citizen who has to wait at a railroad crossing for the passing of a freight train witnesses, in the variety of cars from different railroads which usually make up the train, a visual demonstration of this nationalized service. It is, indeed, a great achievement.

The economic side of railroad transportation, however, has not kept pace with the physical and technical developments. The freight-rate structure of the country, which epitomizes the economic phase of railroad operations, has, in fact, followed a contrary trend to the growth of service. On the one hand, uniformity and standardization of service on a national scale appears to have been the ultimate goal, while on the other hand, regionalization has been the outcome, whether by design or circumstance, in freight-rate structures.

Today we have no national freight-rate structure. We have five separate regional or territorial freight-rate structures, namely, eastern or official, southern, southwestern, western trunk-line, and mountain-Pacific. We find the region lying north of the Ohio River and east of the Mississippi the official territory; that south of the Ohio River and the Mississippi River the southern territory; that west of the Mississippi and taking in Arkansas, Oklahoma, Texas, most of Louisiana, and the southwestern part of New Mexico, the southwestern territory; that west of the Mississippi River and due north of the southwestern territory, the western trunk-line territory; and all the region west of the trunk-line territory and the southwestern territory, the mountain-Pacific territory. These territories have a number of subregions and zones which have differing rate structures.

Present railroad rate territories were not fashioned according to any predetermined plan. They are simply the outgrowth of tradition. The rate structures within them grew up topsy-turvy. The aim of the railroads was to get the traffic, and they got the traffic by meeting competition. The railroads from the very beginning have paid little attention to costs, equality, or relativity in fixing their rates. The Interstate Commerce Commission, in readjusting those rates and taking the basic railroad patterns, has largely disregarded transportation costs. It has proceeded on what is called the value of the service theory of rate making, rather than the cost of service. As a result, the Commission has felt itself compelled to endorse as reasonable a rate on comparative noncompetitive traffic which may be four or five times as high as a rate which they likewise endorse on what is called competitive traffic.

In the official territory we find greater consideration given to the manufacturer and his freight than to the producer of raw products and his freight. Railroads in the official territory naturally established their rate structure with the idea of moving the existing traffic and serving the manufacturers as they predominated in furnishing the traffic. From the very beginning it has been the policy of the eastern railroads to bring in from the outside essential industrial raw materials to the manufacturers at favorably low rates and to carry the finished products at low rates as compared with southern and western sections of the country. The southern and western railroads were not much concerned with the building up of manufacturing in their territories. They did not have manufacturing. On a whole their policy was to keep rates as high as possible where competition did not compel reductions and to put them as low as possible where competition required it. There could be no better picture of how freight rates have been made than the one given in the so-called southern Governors' case when Mr. James P. Harrington, a member of the auxiliary committee of the New England Freight Association, testified as follows on examination by one of the attorneys for the southern Governors:

"Q. To get specific, assuming a cost of service, the costs of transportation in New England are 25 percent higher than from the South, how can you make a lower rate from New England into Central Freight Association territory than you are willing to join with in the South?"

And Mr. Harrington answered:

"A. We don't figure cost in there at all, because you can't figure cost, one factor against the other. You have got two different things to talk about.

"Q. The cost of hauling freight in the South as contrasted with New England and the South as compared with Central Freight Association territory doesn't enter into the determination of your

particular rate?—A. No; that is the last thing that has to be looked at. I am afraid that the rate would be adjusted before we looked at that."

A witness named W. L. O'Neil testified. He was employed by the Trunk Line Association as chairman of the general freight committee, with headquarters at 143 Liberty Street, New York City. A lawyer asked him this question:

"You do know that southern carriers can put in a rate to St. Louis regardless of what the official carriers do?"

And he answered:

"A. That is correct.

"Q. You know that the southern carriers cannot put in a rate to Cleveland without the consent of official carriers?—A. That is correct."

I read this for the purpose of pointing out that all of this rate structure is arbitrary. It discriminates not only between territories or regions but between cities within a region and between zones within territories.

For instance, in the territory represented by my distinguished friend the Senator from New Hampshire they arbitrarily charge the States in the north corner of the country a higher rate than they charge other States within official territory. It is all a matter of arbitrary rate making.

Mr. O'Neil was asked this question:

"Q. You men don't care anything about cost?—A. Rates are not made based on cost.

"Q. So, it does not make any difference to you in performing your function what it costs in the South, New England, or the North to haul the freight?—A. What we are interested in, Judge, is what the traffic will bear, and the revenue needs of the carriers.

"Q. You get all you can regardless of what it costs you to haul it?—A. We will get what the traffic will bear, or we try to get what the traffic will bear.

"Q. You do not know and do not care to know what it costs to haul it?—A. Again I will say, I do not think anyone would be in a position to determine what it"——

He was interrupted by this question:

"Q. You do not try to determine?—A. No, sir, because I couldn't.

"Q. But you do know that the Commission has made many studies to determine that question. Have you ever looked at any?—A. All of the reports I have seen issued by the Commission. I don't know of any report where the rates were based on cost."

He was asked if he had ever looked for costs, and he said, no, he had not in making freight rates. Then he was asked this:

"Q. It does not make any difference if it costs 25 percent higher to haul freight in eastern trunk-line territory than it does in the South. You would make the rates regardless of cost?—A. What we are vitally interested in, and one of the determining factors, is what the traffic will bear."

Then he was asked:

"Q. Well, your broad statement was that when you made freight rates you did not pay any attention to costs whatever. That is a little too broad, is it not? You do not go below cost, if you know it, do you, when you make a freight rate?—A. I have never as a rate man taken into consideration the elements of cost of transportation, that is, in a physical sense."

Because rates have been made on the basis of competition and of all that the traffic will bear rather than on a basis of cost and of the economy and well-being of the entire Nation, we find shocking disparities as between the rates in the different regions. Class-rate levels in official territory established and maintained by the railroads are on a much lower level than the class rates in the West and South. To illustrate, for 500 miles the rate level established immediately west of the Mississippi River is 29 percent higher than in the official territory; the rate level west of the Missouri is 46 percent higher; in western trunk-line territory and in the Southwest the level is 60 percent higher; in the differential territory, west Texas, Wyoming, and that section the level is 85 percent higher, and in the South the level is 41 percent higher. With these different levels as the basis for interterritorial rates we can well understand the discriminations in such rates. As a result the shipper outside of official territory is tremendously handicapped as compared with any competitor located in that territory and the consumers in official territory are denied the right to purchase goods and commodities at the lowest and most reasonable costs.

Even shippers in Canada enjoy a material advantage in shipping into the official territory over shippers in the other territories of the United States. For example it is 748 miles from Omaha, Nebr., to Columbus, Ohio, and the first-class rate is $1.87 per hundred pounds. It is 738 miles from Montreal, Quebec, to Columbus, Ohio, and the rate is $1.66. It is 743 miles from Fitchburg, Mass., to Columbus, Ohio, and the rate is $1.52. We see that the rate from Omaha to Columbus is 21 cents higher than from Montreal to Columbus and is 35 cents higher than from Fitchburg to Columbus.

It is exactly 560 miles from Des Moines, Iowa, to Cincinnati, Ohio, from Peterboro, Ontario, to Cincinnati, and from Baltimore, Md., to Cincinnati, and yet the first-class rate from Des Moines to Cincinnati is $1.58 per 100 pounds, from Peterboro to Cincinnati $1.45 and from Baltimore to Cincinnati $1.28.

It is exactly 657 miles from my home city of Montgomery, Ala., to Springfield, Ohio, from Ottawa, Ontario, to Springfield, and from New York, N. Y., to Springfield, and yet the first-class rate from Montgomery to Springfield is $2.02 per 100 pounds, from Ottawa to Springfield $1.60, from New York to Springfield $1.41. The rate is 42 cents higher from Montgomery to Springfield than it is from Ottawa to Springfield and 61 cents higher from Montgomery to Springfield than it is from New York to Springfield.

From Trenton, N. J., to Peoria, Ill., is 928 miles and the first-class rate is $1.74. From Valdosta, Ga., to Peoria is 935 miles and the rate is $2.44. From Houston, Tex., to Peoria is 928 miles and the rate is $2.73. From Colorado Springs, Colo., to Peoria, Ill., is 923 miles and the rate is $2.67.

The further west we go the greater are the differences in the rates. From Dallas, Tex., to Toledo, Ohio, is 1,100 miles and the first-class rate is $2.84. From Boston, Mass., to Toledo is 1,109 miles and the rate is $1.85. In other words Dallas, Tex., has to pay a 99-cent higher rate into official territory than the rate within the territory. We could go on indefinitely with these comparisons and I do not know of a single one that can be made in favor of the western and southern territories over the eastern territory on manufactured commodities ready for use by the ultimate consumer.

In the Cullom report made in 1886 by a Senate committee out of which came the original Interstate Commerce Act creating the Interstate Commerce Commission in 1887, we find the following statement:

"It is substantially agreed by all parties in interest that the great desideratum is to secure equality so far as practicable in the facilities for transportation afforded and the rates charged by the instrumentalities of commerce."

At a little later date we find the Supreme Court of the United States declaring that the fundamental purposes of the law regulating railroads and common carriers is "to compel the carrier as a public agent to give equal terms to all and cut up by the roots every form of discrimination, favoritism, and inequity." And yet we find a system of rate structures prevailing throughout the country today which has perhaps best been described by Commissioner Joseph B. Eastman, of Massachusetts, in his 1934 report as Federal Coordinator of Transportation, in the following language:

"An objectionable phase of the railroad situation for many years has been the maintenance of regional differences and distinctions, which are very imperfectly related to differences in costs, and of territorial boundary lines ('Chinese walls') where rate systems and practices change. It has tended to provincialize the railroads and discourage national unity of action. It has been a prolific source of complaints to the Commission. Regional competition in rates and service has been as keen as the direct competition of parallel lines, and has had equally undesirable and uneven results."

It was doubtless these thoughts that caused Commissioner Eastman a year later, in 1935, to declare:

"The freight-rate structure of the railroads in particular is a complicated product of conditions of former days. Many of those conditions no longer exist or have been greatly modified. They have been superseded by new conditions created or influenced by the new means of transportation. Already this freight-rate structure shows signs of much disturbance and unsettlement. It is bound to suffer revision, and order will gradually be established on a new and, I hope, much simpler basis. The revision will have an important and perhaps profound effect on industrial conditions, but I am not yet clear what that effect will be."

Commissioner Porter, of the Interstate Commerce Commission, from Iowa, has recently declared:

"The wide difference between the rate levels in the respective major territories of the country rested upon quite secure foundations in the earlier days of railroading before the population became as well scattered as it is today; but the time is here when, because of the increased density of the population and the industrial development of all of the major territories with which we are here directly or indirectly concerned, the differences in the costs of transportation in those territories have become less and less until today, as appears to some extent upon this record * * * those differences are very much less than the differences in the class rates. Reason dictates that the narrowing differences in cost should be reflected, at least to some extent, in narrowing differences in rates * * * already too great, between the Southwest on the one hand and officials and southern territories on the other."

Commissioner Mahaffie, of the Interstate Commerce Commission, from Oklahoma, in the Western Trunk Line class-rate case, emphasizes that the Commission ought to take note of what has happened in connection with traffic in recent years and that both the Commission and the railroads ought to be willing to abandon theories that no longer even approximately fit the facts.

Considering the influence of transportation charges on the flow of commerce and upon the consequent development and utilization of the natural resources of the country, it is not surprising in the light of distinct regionalization to find uneven results in the economic progress of different regions and sections of the country. The effect of the regionalization of freight-rate structures has been to localize commerce by hampering a natural flow of goods across the territorial boundary lines. In analyzing the present unequal economic situation in the country it should be borne in mind that transportation charges en masse always have a pronounced impact on both regional and national economies. Railroad freight charges, considering only class 1 carriers, which are the roads having an annual gross operating revenue of a million dollars or more, now aggregate annually approximately $3,000,000,000. If we should add to this the revenues of smaller railroads, motortruck lines, electric railways, pipe lines, and water carriers, the total would reach somewhere in the neighborhood of $5,000,000,000 per year, or approxi-

mately one-fifteenth of the total national income from all economic activities. The commerce of the country must bear these heavy charges.

The burden may be spread out among different regions and sections so as to make the impact proportionately uniform, or it may be distributed in an uneven and distorted manner, thereby tending to create and perpetuate unbalances in the economic growth of the Nation. The economic effect of regional discriminations in transportation charges cannot be measured simply by the quantitative differences in the total revenues accruing to the railroads in the several regions of the country. The total amount of the charges received by the railroads, of course, has an important influence on regional development, but the manner in which these charges are spread over the different classes of commerce, or the way in which the general rate burden is distributed, frequently has a much greater effect than the amount of the charges. In one region, for instance, freight charges may be so distributed among the different articles of commerce as to result in relatively low rates on manufactured and processed goods, while in other regions relatively low rates on raw materials and high ones on manufactured and processed articles may be the characteristic features of the rate structure.

A continuation of such divergent systems of rates may result in making a workshop of one region of the country and raw material producers of another region with all the economic and social consequences which flow out of such disparities.

Exactly this situation has developed in this country. In the area of our country extending from Boston, on the north, to Baltimore and Washington, on the south, the average density of population runs well over 1,000 people per square mile. This is the area of heavy manufacturing and the area where freight rates are holding industry and pulling more industry to it. In contrast, the average density of population throughout the United States is only some 41 people per square mile. In the great western section of the United States, comprising 70 percent of the country's area, the average is less than 10 persons per square mile. In the Southeast the average is about 50 persons per square mile. So long as competition makes freight rates it is obvious that the areas that now have the lowest freight rates will continue to have them. They had them originally and they have them now, as all transportation agencies in these areas compete for the heavy volume of traffic from the manufacturing plants that keep the millions upon millions of people occupied supplying themselves and the rest of the country.

While we speak of manufacturing it is interesting to note the distribution of manufacturing plants in the United States by counties. We find that 25 percent of the manufacturing plants in the country are located in 7 of the more than 3,000 counties in the United States. We find that another 25 percent of the manufacturing plants of the country are located in 46 counties. In other words, in 53 counties of the more than 3,000 counties, 50 percent of the manufacturing plants of the United States are located today. Of these counties 41 are in official territory, 2 in southern territory, 4 in western trunk-line territory, 1 in southwestern territory, and 5 in Pacific territory. The official territory has 71.65 percent of the manufactures of the country and three-fourths of the purchasing power of the Nation.

These figures show one of the results of interterritorial freight-rate discriminations based on the competitive theory of rate making. They show how these discriminations tend to concentrate plants in greater and greater degree where they already are and prevent development of those parts of the country that have little in the way of competitive force to bring down freight rates. They show how regions rich in raw materials have a serious if not fatal handicap when they undertake to convert their raw materials into finished goods and market them in the face of the existing regional discriminations in freight-rate structures. They show how one region of a country may be an empire while other regions of that same country may be but satrapies of that empire.

The discriminations cannot be justified by any differences in the cost of the transportation of freight in the different regions. This is clearly shown by the reports of the Bureau of Statistics of the Interstate Commerce Commission, and particularly the report entitled "Territorial Variation in the Cost of Car Load Freight Service on Class One Steam Railways in the United States for the Calendar Year 1936." The following table, taken from the latter report, gives the picture of the relative costs in the different regions:

Ratio to United States average taken as 100

Regions and districts:	
Eastern district	99.3
New England region	132.1
Great Lakes region	96.1
Central eastern region	100.6
Southern district	89.2
Pocahontas region	73.3
Southern region	95.5
Western district	106.7
Northwestern region	109.8
Central western region	107.9
Southwestern region	101.4

From this table it would appear that in 1936, the same as in the other years for which studies have been made, there is no controlling reason from the angle of cost of transportation service for higher rates to be charged on traffic between western territory points or between southern territory points and the official territory points than the rates charged between points in the latter territory. From the standpoint of cost of service some sections of official territory, such as the New England region, have much higher costs than do the less-favored-rate territories. The cost of performing the service in the entire area west of the Mississippi River is rapidly approaching the cost in official territory. The cost in the area south of the Ohio and Potomac Rivers has already been clearly shown to be less than the cost in official territory for the same service. The interests of the East and the official territory, as well as the interest of the whole country, demand that there be an end to the gross and unjustified inequalities in freight rates and that the country be permitted to develop and progress on natural lines. The development of industry in the West and South does not mean to rob the East of industry. The development of industry in the West and South means to give a higher standard of living to the people in those sections and to increase their purchasing power for the products of eastern industry. If we can raise a farmer in the West or the South from an 80 cents a day income to a $3 a day income as an industrial worker, we have furnished a consumer with a new purchasing power for the products of the work of a high-priced mechanic in the East.

Several years ago Dr. H. A. Morgan, the present Chairman of the Tennessee Valley Authority and former president of the University of Tennessee, made a study of the value that comes from the decentralization of industry. He compared the States of Mississippi and Ohio. In Ohio he found industry distributed almost ideally. Mississippi has practically no industry. In Mississippi he found only 13 percent of the population urban. In Ohio the population is 63.8 urban. Dr. Morgan asks "* * * and what of agriculture?" Mississippi, with an area larger than that of Ohio and with farming practically its only occupation, produces annually agricultural products to the value of only $965,000,000. Ohio, a smaller State with less land in agriculture and fewer farmers, produces for the comparable year $3,096,000,000 in agricultural products, nearly three and a third times as much in value as Mississippi. Dr. Morgan asks, "Do you see what industry does for agriculture?" Industry does two important things for a locality. It decreases the tax rate of the farmer; it produces an industrial wage to buy diversified farm products and thereby increases farm income and the purchasing power of the locality. When I think of the people of the East and the freight-rate problem, I am reminded of an extract from a speech made by President Roosevelt on July 5, 1937, at Mount Marion, N. Y. The President was addressing the descendents of the old Hudson Valley farm families. His invitation to do so had come from a Mrs. Meyer, whose forebears came into that particular section of New York about the same time the Roosevelt forebears came there. The President said:

"I was reading a book the other day, a book talking about the politics of a little over a hundred years ago and the good people of the Hudson River Valley who were all opposing this "crazy" idea of Governor Clinton to build a great, big ditch from Albany out to Buffalo. Well, the people here in the Hudson River Valley had a reason to object to the building of the Erie Canal because we of that time were the granary of New York City. Most of the wheat for the city of New York, most of the oats for the horses down there, most of the rye, most of the corn that was used in the city was grown in the Hudson River Valley for the very simple reason that the people out in the western part of the State had no means of transporting their products to the city.

"But Gov. De Witt Clinton was thinking about the whole State. He was thinking about thousands of people who had moved out beyond the Catskill Mountains—think of it, away out in the wilderness—and they had no way of making a decent livelihood if they couldn't get the products of their farms into the city. And so, over the opposition of us people here in the valley who, frankly, were too selfish in thinking only about ourselves, the legislature and the Governor built "Clinton's big ditch," the Erie Canal.

"Well, it did hurt our farms in the Hudson River Valley to a certain extent, but I noticed that the Meyer family did not become extinct because of that and neither did the Roosevelt family. Since then, in the later generations, we have invented new kinds of crops—not just the crops that we raise on our own soil but the crops that come to us every summer out of the big city, and they are very welcome."

While we speak of the East, it is interesting to note a letter from Mr. D. Scrivanich, president of D. Scrivanich & Co., of Philadelphia, written to Hon. A. LEONARD ALLEN, Member of Congress, in which Mr. Scrivanich says:

"It is about time that everybody may realize that the Civil War is over and has been over and that discrimination in transportation is hurting the entire Nation, no matter where this discrimination is effective. Transportation is one of our major problems, and many of our economical ills are due to the difficulty which the flow of trade finds in keeping an even keel because of the unfortunate barriers raised everywhere by the high cost of transportation.

"It is, indeed, a shameful thing when in an age of plenty, and in a country as rich as ours, we may have sections of our country in dire need of the very same staples which are even too plentiful in other sections.

"You might have seen by the papers recently the story of scurvy spreading through Maine and Vermont because our northern brothers are unable to get cheaply enough oranges from Florida and California, and yet both in Florida and California many oranges which could save life on the Canadian border are rotting away waiting for buyers.

"Right here in Philadelphia we have to pay 35 cents per dozen for eating oranges, for which the Florida grower does not get a nickel."

Mr. Scrivanich speaks as one consumer living in the region enjoying low rates on manufactured and processed goods. It is plain that these consumers are deprived of the opportunity to draw on all sources of products in the United States in meeting their daily requirements. Their source of supply for finished goods is largely limited to one region irrespective of whether or not it is the region where goods may be produced most efficiently and at the lowest cost. The consumers of official territory, as well as the consumers of all the territories, have the right to purchase their goods and their necessities in a Nation-wide market at the lowest possible prices. To deny them this right is to impose undue and unjust burdens upon them and to deprive them of the fair treatment which as American citizens they are entitled to.

One may ask, what of the railroads of the West and South if rates are to be reduced? From the standpoint of these carriers, and certainly in the interest of a sound, long-range policy, it might be desirable that rates be reduced. Indeed a study of the situation of many of these carriers indicates that one of their chief problems is to reconcile their immediate revenue needs with sound, long-range policies. Unless this important question is satisfactorily settled, these railroads may continue to be confronted with serious difficulties. Recent experience with freight-rate increases in these regions indicates that this procedure does not offer a permanent cure for railroad ills. Today, for instance, the railroads of the West and the South, notwithstanding the high-rate levels which they charge on manufactured goods particularly, are not more prosperous than the eastern railroads. In fact, the very contrary is true in some cases. A revision of freight levels which would give the railroads in and between each of the territories a greater volume of traffic would result greatly to the benefit of western and southern railroads. The railroads of the West and the South need business and this business can only come through the development and industrialization of these sections, based upon a better and wiser utilization of their natural resources. To relieve any unnecessary apprehension on this score, however, it may be pointed out that the removal of discriminations does not always require reductions in rates. Some may be reduced where found to be too high and others that are unduly low may be increased.

Mr. Joseph G. Kerr, chairman of the Southern Freight Association, in testifying as a representative of the southern railroads in behalf of the reduction of rates in the so-called Governors' case, said: "We believe that the making of competitive rates from the South to official territory on the basis which we advocate is not only in the interest of southern railroads and southern shippers but is likewise to the interest of the great mass of consumers in northern territory and therefore in the general public interest."

The problem of regional differences in freight-rate structures in reality receives its major emphasis from the increasing consciousness of the American people of the importance of properly conserving and utilizing their human and natural resources. It is impossible logically to divorce the function of transportation from the broad subject of conservation. The demand for the removal of regional freight-rate discriminations is one of the expressions of our conservation-minded democracy.

It was only a few years ago that the American people came to realize that their natural resources were not inexhaustible. With the settling of the West there came a realization that these natural endowments were by no means unlimited, but were being wastefully exploited at the ultimate expense of human welfare. With the increasing maturity of our economy we began to cast about for means by which to improve our guardianship of human and natural resources, which responsibility heretofore had rested too lightly on us. A policy of better conservation and more rational utilization has become the order of the day. We have developed a keener sense of responsibility toward our natural resources as the potential wealth which our generation and the generations to come must use to support, expand, and improve our civilization.

In analyzing the treatment of our natural heritage of land and raw materials we have come to realize the permanent differences in freight charges as between regions accelerate the removal of products and materials without just or adequate compensation to the regions which furnish them. In the light of our experience of more than a century with organized transportation service, we ask that each region be given freight rates that do not confine the means of livelihood of the people of such region to the depletion of its soil and the exploitation of its essential raw materials, primarily, for the enrichment of another region. May I quote here the words of the illustrious Henry W. Grady, spoken in 1887, the year the Interstate Commerce Act was passed? These words are as true today as they were the day they were spoken 52 years ago. Mr. Grady said:

"But agriculture alone—no matter how rich or varied its resources—cannot establish or maintain a people's prosperity. * * * No Commonwealth ever came to greatness by producing raw materials. Less can this be possible in the future than in the past. The Comstock lode is the richest spot on earth. And yet the miners, gasping for breath 1,500 feet below the earth's surface, get their existence out of the splendor they dig from the earth. It goes to carry the commerce and uphold the industry of distant lands, of which the men who produce it get but dim report. Hardly more is the South profited when, stripping the harvest of her cotton fields, or striking her teeming hills, or leveling her superb forests, she sends the raw material to augment the wealth and power of distant communities."

And yet, this is exactly what the West and the South have been doing ever since this country was founded.

And as a result of this economy the East owns between 80 and 90 percent of the man-made wealth of the United States, if not more. Its proportion of ownership is increasing each year. Of the 200 greatest corporations in America, 180 of them are chartered, operated, and have their home office in the East. The East furnishes between 90 and 95 percent of the national advertising, while the West and South divide the remainder about equally. The life insurance companies of the East have 95 percent of the $105,000,000,000 of life insurance held by the people of the country.

Where is the money of the United States? If we look at the demand deposits of the banks of the Nation, we find that the East has 79.37 percent of them, the South 9.72 percent, and the West 10.91 percent. To put the matter another way, about half the people living in one-fifth of the country have nearly four-fifths of the dollars in American checking accounts. If we look at time deposits, we find that for each southern dollar the East has $14 and for each western dollar the East has $7. Adding individual time and demand deposits, as distributed, we find that each eastern person would have $41,942, each southerner $80.78, and each westerner $222.80. In an emergency, and on the basis of $30 a month for each individual, every person in the East could live for 14 months, the western people could live for 7½ months, and southern people could go for 2 months and 18 days on their savings.

As Prof. Walter Prescott Webb, of the University of Texas, reminds us: "Extreme as this picture is, it fails to do justice to the situation; it leaves out of account two important factors; northern corporation deposits in southern and western banks and southern and western indebtedness to northern individuals and institutions. If all the national chain stores, oil corporations, and railroads of the East should withdraw their deposits from southern and western banks; if life insurance and other financial interests should call their loans and foreclose their mortgages, it is quite probable that the East would have in its possession more than 95 percent of the money of America, a goodly share of real property, to say nothing of a miscellaneous assortment of automobiles, radios, refrigerators, and other installment items."

The East has this enormous ownership and control of the money and the wealth of the Nation, although the West and the South together have 79 percent of the land of the country, produce all of its gold and silver, 95 percent of its oil, 90 percent of its lumber, 63 percent of its agricultural dollars, and, on the basis of yearly production, have practically a monopoly on the natural wealth of America with the exception of coal and iron. The time has come when there must be an end to this condition if the Nation is to endure. The Omaha World Herald sounds the clarion call in the following editorial of August 29 last:

"THE MIDWEST MUST FIGHT

"The Middle West, laggard in growth, needs to face facts squarely.

"There is a wall around it, restricting its markets to local areas, binding its towns and cities, limiting the profits on its farms, keeping its population, in comparison with more favored regions, stagnant.

"It is the wall of discriminatory freight rates.

"It was built when the railroads, competing with the Panama Canal, began to bid for business against coastwise water carriers. They were permitted by the Interstate Commerce Commission to extend favors to east and west coast centers at the expense of the land-locked Midwest.

"Then the Midwest began to slow up. The process was gradual, and only the passage of the years has made clear how heavy the blow has been.

"By inequitable freight rates the Midwest's agriculture, its business, its industry, are being constantly constricted and restricted, its growth stunted, its opportunities narrowed.

"And in the process the railroads themselves that serve this territory are drifting into insolvency.

"A crazy freight-rate structure with reference to livestock and dressed meats is building up packing centers on east and west coasts, although their natural home is the Midwest. Iowa hogs are shipped through Omaha to Los Angeles to be slaughtered and dressed. Western Nebraska cattle seek distant markets instead of the home market. It is cheaper to ship livestock, in spite of the expense of handling en route and the shipment of waste, than to ship dressed meat.

"Sugar is produced by the ton in western Nebraska. But an Omaha factory, using sugar, was forced to move to Chicago to gain lower freight rates.

"The whole freight-rate system is based upon precedents established in the days of rebates, bears little or no relation to actual traffic costs, and is marked by discriminations against the Midwest in favor of the coasts.

"And we take it. We take it although it has blocked the natural growth of this vast and fertile area, with even, in many places, a dwindling of the population.

"We take it, although it penalizes our farmers and cripples our industries.

"We take it, although in the end it means doom of the railroads themselves.

"But we need not take it passively and without effective protest. This western empire must band together to fight for a fair deal in freight rates.

"It must fight with the railroads and the I. C. C. in one field. And it must fight for river service and barge-rail competition in another field.

"If we don't fight and fight hard, we accept death by attrition."

If the West dies, if the South dies, the Nation dies. Once again, a house divided against itself cannot stand; once again we cannot remain half slave and half free. We cannot remain half rich and half poor. No longer can one great region grow richer while the other two great regions grow relatively poorer. If our Nation is to endure there must be that unity of our people which alone can come from all regions growing and becoming richer in all those things which please and prosper human kind. We must be a Nation in our economy as well as in our geography.

Portrait of Hon. Royal C. Johnson

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. RANKIN. Mr. Speaker, on June 29, 1939, an oil painting of our former colleague, Hon. Royal C. Johnson, of South Dakota, who was for many years chairman of the Committee on World War Veterans' Legislation, was presented to that committee by the friends of Mr. Johnson throughout the country through Hon. Stephen Chadwick, national commander of the American Legion.

It was my privilege, as chairman of the committee, to accept that painting, which now hangs on the wall of the World War Veterans Committee.

Under permission granted me to extend my remarks in the RECORD, I insert at this point a copy of the proceedings on that occasion.

PRESENTATION OF PORTRAIT IN WORLD WAR VETERANS COMMITTEE ROOM JUNE 29, 1939

Mr. RANKIN. The Chair recognizes Hon. Stephen Chadwick, national commander of the American Legion.

Mr. CHADWICK. Mr. Chairman, on this occasion, if it meets with your approval, I would like to have the colors of the American Legion advanced by our national color guard of Washington.

(Advancing of the colors.)

Mr. CHADWICK. So long as a free and self-governing people provide for the necessities of the dependents of those who die in the service of the people and provide for the necessities of those who are broken in mind and body by reason of their service, so long those free people will never want for defenders of the institutions which make them free.

Born out of the World War there was a great fraternity, a fraternity which discovered that "a man was a man for a' that." It made no difference whether he were Jew or gentile, and made no difference whether he were black, white, red, yellow, or brown, if he expressed himself as willing when the opportunity was afforded to him to defend the institutions of his Nation. Some were called upon to die. Some were broken in mind and body. Some of us lived in health because of the sacrifices of those men, of every race or creed.

The House of Representatives of the United States, after the World War, with the responsibilities of the Nation to its defenders scattered among several countries, saw fit to organize the World War Veterans Committee of the House of Representatives. The man instrumental in the formation of that committee is the man whom we, as Legionnaires, today seek to honor. Sometime ago we asked if we might be privileged to present to the committee, so that it might adorn these walls for all time, a portrait of Royal Johnson, late a Member of the House of Representatives from the State of South Dakota and first chairman of this important committee.

So today I am happy that, as national commander of the American Legion, and through the action of some of the members of the American Legion, we can be here. Mr. Johnson, at the time I made the request, had met with an accident, but I am happy that he could be with us today. Not alone was he important in the formation of this committee and in the formation of all the laws, but he himself was a distinguished soldier in the World War, and we think this a fitting tribute to him as the chairman of the first committee and who for a period of 9 years was instrumental in the direction of its course, a course of which we were so proud. All of the veterans' facilities have been established through the legislation which went through this committee. He introduced in Congress in 1919 the bill creating and incorporating the American Legion.

This is one of the few public opportunities that I have had, as the representative of a million-man organization and 500,000 women who constitute our auxiliary, to express our appreciation to you and your committee, and particularly to Royal C. Johnson, the man whom we seek to honor.

And so, on behalf of the American Legion, I tender you this portrait that it may be hung in this committee room, so it may be hung as a memorial charting a course which will long redound to the credit of this great and free country, a course which can only be approached through well-directed legislation.

It was my pleasure and privilege through a number of years to serve with Royal Johnson in these Halls. In public hearings and in private conferences I had fullest opportunity to observe him in action on legislative matters and to collaborate with him in the days of trial and tribulation as he strove toward equitable treatment of those bearing the scars of war. The very foundation of the whole system of Federal relief as it exists today is based upon the Reed-Johnson Act of June 7, 1924. While many pieces of legislation of various sorts and covering many activities were sponsored by Royal Johnson, I believe if he should be called upon to name one which should lastingly carry his name, it would be the act of 1924. On the other hand, if every bill for the relief of veterans that was sponsored by this man should carry his name, the list would be most extensive.

Mr. Chairman, there never has been and never will be either written or enacted any measure that, in one swoop, would do all that everyone desired in the way of veterans' legislation. Indeed, there has never appeared before this committee a single bill that finally found its way into the statute books which was not amended in some way. In other words, between what is desired and what is practical is what makes the word "legislation" almost synonymous with "compromise." Time after time I have seen Royal Johnson face insurmountable obstacles in his endeavors to obtain certain objectives for those with whom he served, and on many occasions when it appeared that any legislation whatsoever was impossible it was the honesty and popularity of this man that made it possible for him to achieve something.

It has become a trite saying around the Capitol, "This is all a nonpartisan matter." No matter what is the nature of the legislation this is always a convenient expression, although it usually means nothing. However, the records show, and I can attest, that during his leadership of this committee Royal Johnson's consistent effort was to place veterans' legislation on a plane above partisanship. Just as a single example typical of his endeavors, I recall that when there were many complaints about the conditions in the hospitals and he decided that the true facts should be developed regardless of where the chips might fall or the responsibility might be placed, he named a member of the other party as chairman of a subcommittee to investigate certain sections of the country under instructions that the truth should be brought out regardless of whether pleasant or unpleasant and responsibilities for failures should be placed without regard to the official who might be to blame. I might interpolate at this point that the present chairman of this committee, Mr. RANKIN, is endeavoring to follow the same policy of nonpartisanship in the conduct of the present committee.

One of Royal Johnson's first acts when war came was to resign his congressional seat. He enlisted, went through the rigors of severe training as a private and noncommissioned officer; he went overseas and was promoted; he led his troops through the hell of enemy shell fire, and for valor in action he earned the Distinguished Service Cross. After a long siege of hospitalization he returned to congressional duties and was among the first to realize that the treatment of the returning wounded men was intolerable.

At that time the handling of the disabled was scattered through a labyrinth of Federal agencies totally uncoordinated, and in chaotic condition from broad policies down to the handling of the individual cases. Indeed, Congress itself was no more prepared to handle the problem than were the other Government bureaus, so it was largely through his efforts that one committee in Congress was named to meet the situation and largely through his efforts that the confusing and conflicting Federal bureaus were gathered under one head with one responsibility.

I believe General Hines would probably be the first to deny that the Veterans' Administration of today is perfect or approaches perfection. Nevertheless, those of us who have been close to the scenes during the interim since the armistice can understand and appreciate that things are incomparably better. In this improvement it is doubtful if one individual is entitled to a greater share of credit and appreciation from the disabled and their dependents than is Royal Johnson.

Mr. Chairman, there are other speakers here today, and I do not desire to trespass further upon the time of this meeting. But, in conclusion, I do desire to express the sincere appreciation of the Disabled American Veterans to Royal C. Johnson for his consistent consideration of our programs during the time we were privileged to cooperate with him as chairman of this committee. Furthermore, both officially and personally I extend to this man our very best wishes for his continued happiness and prosperity, and it is only proper that there should be placed in this committee hall this attractive painting as a constant reminder of one who performed well his sacred duties as a soldier and as a legislator.

Mr. RANKIN. The Honorable Millard W. Rice, legislative representative of the Veterans of Foreign Wars.

Mr. RICE. Honorable Chairman, Hon. Royal C. Johnson, it gives me real pleasure to have the opportunity of saying a few words in this program as a tribute to you for the service which you have rendered to your less fortunate comrades of the World War, as the first chairman of the House Committee on World War Veterans' Legislation.

Prior to the World War, I was one of your constituents, living in a small town in northeastern South Dakota. I recall first seeing your name while a student at the University of South Dakota at Vermillion. Your name, Royal C. Johnson, was written and carved out in the drawer and top of my first study table, in a rooming house, in which you had apparently lived and studied several years before that. I then wondered who you might be. Soon thereafter you became a Congressman from the State of South Dakota. My father took you around places, among the townfolks and nearby farmers, during your campaign.

During the World War I served overseas with the United States Marine Corps. The State of South Dakota took the trouble to give to all of its citizens, even though serving in the Army, Navy, and Marine Corps, the opportunity of voting in its annual elections in the fall of 1918, by sending ballots overseas to them. I received one of such ballots, and then had the privilege of voting for you for a Member of Congress, even though you were then yourself serving in the Army in France.

After my return to this country I became engaged in veteran activities, and several times had the occasion for personally contacting you, and for sending detailed briefs to you, in your capacity as chairman of the House Committee on World War Veterans' Legislation.

Because of these many and varied points of contact with your name and with you personally, I have long felt a peculiar attachment to the name of Royal C. Johnson. It is with unsual pleasure, therefore, as an individual, and as the legislative representative of the V. F. W., that I extend to you, personally, and as former chairman of this valued Committee on World War Veterans' Legislation, best wishes for a very happy and prosperous life, with the continued esteem of your former constituents, your former associates in Congress, your comrades, and your friends.

Mr. RANKIN. Since the House is to meet in a few minutes, we will have to hurry on. The next speaker will be Gen. Frank T. Hines, the Administrator of Veterans' Affairs.

General HINES. It has been my privilege and honor to sit on the opposite side of the table from the committee first presided over by Royal C. Johnson and later by our distinguished chairman at this time. This is a most fitting tribute to the splendid work done by Royal Johnson on behalf of the veterans of the World War. That work also extends beyond the veterans of the World War, because this committee brought out the basic legislation which gave to the veterans of all wars the greatest benefit, in my judgment, that has ever been given—that of hospitalization.

I am glad to be here to see this splendid tribute brought about by the great American Legion. It demonstrates the appreciation of the veterans' groups that the work of those men who took part in building the original structure upon which our present laws are based, resulted in laws which show to the American people that we do recognize service to our country.

I appreciate greatly, Mr. Chairman, the opportunity of being invited to say a few words in commendation of the work which Royal Johnson did in the early days in setting up the present structure. Without the support, the assistance, and the cooperation of the members of the World War Veterans Committee of the House of Representatives from the time that I started in, now something over 16 years ago, it would have been impossible to have carried out your wishes in building and carrying on our great system of hospitals of which the national commander has spoken. Most certainly in after years, when those who come before your committee have an opportunity of appearing here, they will have occasion to recognize in that portrait a picture of a man who believed in the veteran and believed in taking care of him and his dependents.

I thank you, Mr. Present Chairman, and I certainly hope for Mr. Royal Johnson continued life and happiness, and I am sure the veterans will be always grateful for what he has done.

Mr. RANKIN. The gentleman from North Carolina.

Major BULWINKLE. While I realize Royal Johnson is a very handsome man, yet the picture flatters him, and I think that we should see the artist from South Dakota who painted this picture—Miss Brisbine—and Senator BULOW here will conduct her up.

(Senator BULOW conducts Miss Brisbine to the Chair.)

Mr. RANKIN. Ladies and gentlemen, I agree with Major BULWINKLE, that I thought when we got through with Royal Johnson on this committee, that he was just about perfect, but he certainly has improved in the last few years. If you don't believe that, just look at this portrait; and I am going to present to you now one of his greatest benefactors, who put the finishing touches on that improvement. I present to you Miss Margaret Brisbine.

(Miss Brisbine rose and made her bow.)

Mr. RANKIN. The Chair recognizes the representative of the United Spanish War Veterans, Honorable Edward Inman.

Mr. INMAN. Mr. Chairman, Thomas W. Payne, commander in chief of the United Spanish War Veterans, is in Detroit and found it impossible to come to Washington in time for this presentation. He has asked me to express his regret that he could not personally pay tribute to Royal Johnson today, although he did authorize me to bring his greetings to the chairman and to the first chairman of this important committee.

It is proper that organized veterans of the Spanish-American War, and the 2-years' period of conflict immediately following, participate in this deserved tribute to the eminent soldier who was chosen by his leaders in the Congress to be first chairman of the Committee on World War Veterans' Legislation. It will be remembered that a great many men who served in the ranks or in the lower commissioned groups between 1898 and 1902 assumed the leadership in the World War. Their earlier experiences had furnished the background which gave them necessary qualities of leadership. Their interests, therefore, in the problems which faced the World War group after demobilization were one with the rest of those who served.

When Comrade Johnson assumed the chairmanship of this committee, his intimate knowledge of the veteran problem, gained from his own outstanding service overseas, peculiarly fitted him for the task he undertook. He not only accepted but he also sought the advice of those Spanish War veterans who also served in the great World War. Those men like to feel that they were a part in the building up of the ground work of veteran benefits which have maintained the morale of the younger men with whom they served.

The policies first adopted by this committee are being carried out in large part by its present membership, a monument to the wisdom and sagacity of Mr. Johnson and those who labored with him. Veterans will ever be grateful for the security guaranteed to them and to their dependents by the Committee on World War Veterans' Legislation.

The United Spanish War Veterans are glad to have the opportunity of paying tribute to Royal Johnson and to his accomplishments. They wish for him many more years of active service in a cause to which he is intensely devoted. They trust, as has been suggested, that the precedent established here today will be followed in the future, to the end that there may adorn these walls portraits of the present and future chairmen of this committee, dedicated to their great service for our needy living in devoted memory to our honored dead.

Mr. RANKIN. This meeting would be incomplete without an expression from you, Major BULWINKLE.

Major BULWINKLE. After nearly 20 years' experience in the House of Representatives, I want to say Royal C. Johnson was one of the very best chairmen that I served under. At the time that we started the committee back there in 1922, I think there were only 9 or 12 Members of the House who were service men of the World War. Today there are 155 in the House.

During the years that I served on that committee there was no partisan politics in it, as the chairman so well expressed. There was no man who could be fairer to the minority members of a committee than Chairman Royal Johnson was. I was chairman of the subcommittee that investigated the veterans' hospitals, and, of course, we had the assistance of General Hines and his staff, and I mustn't forget Milliken, Watson Miller, and some others, but we two Democrats collaborated with Royal C. Johnson in writing the act of 1924. We had a great committee, and it is a great committee yet. I hope that it will still continue to do as it did in those days, and I know that it will under you, Mr. Chairman. We are first Americans, we are next service men of the World War.

I am delighted that this picture is presented by the Legion, and I hope that they will place in the committee room the portraits of each succeeding chairman of this committee down through the years.

Mr. RANKIN. We have the representatives of the other veterans' organizations with us, and I am going to introduce now the Honorable Thomas Kirby, of the Disabled American Veterans of the World War.

Mr. KIRBY. Mr. Chairman, I am pleased to add the felicitations of the disabled American veterans to the one whom we are honoring today.

In looking over this assembly, which overflows into the corridors, it is believed that it is representative of the very cross-sections that would make Royal Johnson proud. We have here today not only members of the Senate and House, and ranking representatives of the Veterans' Administration, and the service organizations, but there are included relatives, classmates, former colleagues, professional associates, and those with whom Royal Johnson served in the crucible of war. It is doubtful if any former Member of Congress or former soldier ever had gathered in his honor a more representative host.

Mr. RANKIN. The Chair recognizes at this time our distinguished former chairman, the Honorable Royal C. Johnson, of South Dakota.

Mr. JOHNSON. Mr. Chairman, Commander Chadwick, and friends: The few words I shall use today will express nothing of the emotions I feel, because I shall not allow myself to show them.

This is an occasion which can never happen twice in the life of any man, and the expressions of the commander and the chairman of the committee concerning the Committee on World War Veterans' Legislation, and my connection with that work between 1923 and 1931, savor much of the reading of one's own obituary. Perhaps it is much like a decoration awarded posthumously.

It will always be impossible for me to really tell you how much I appreciate this occasion.

I have been fortunate in that there has been much of happiness in my life—the happiness of college days, the happy time

when I was in the Army, and the 18 wonderful years as a Member of the House of Representatives.

After all of those years in Congress, I may say rather advisedly that no one will receive much from congressional service but self-respect outside of the wonderful friendships that one makes.

Many of those friendships are terminated forever because at least half of the original Members of this famous committee have gone to their final reward.

I am not particularly modest, but I do feel modest today because I am being honored above my deserts. The chairman of this committee did not enact the legislation. No man does anything by himself. If there is anything that I did, Mr. Chairman, to alleviate the condition of the service man after the World War, or anything that you are doing today with the same purpose in mind, it is the work of Congress and the work of the committee, assisted by this great organization, the American Legion, and those other great veterans' organizations, the Veterans of Foreign Wars and the Disabled American Veterans.

I am sensible enough to know that this painting will hang here forever, so long as the building exists, and the fact that it hangs here would be of the greatest satisfaction to me if some of those who come after me would say, "With all his limitations he did his best."

We are all so much older now than we were in the World War. For myself, I have two grandchildren here today. Long after you service men are taking a great rest at Arlington Cemetery and after every one of you who knew of the faults, frailties, and inconsistencies and mistakes of Royal Johnson are gone, it might be possible that these little children can come in and take some satisfaction at having been present today.

It would be at a time when no one living could tell of the mistakes we made.

There is great satisfaction in living long enough to make close friends and retain them. This cross section of old and young, men and women, of all political faiths and religions who are here today gives me the satisfaction of having made some friendships.

From the bottom of my heart, Mr. Commander, Legionnaires, former Members of Congress, three or four of you who were with me at Montfaucon in combat days, and you, Mr. Chairman, who were with me so many years, I thank you for this courteous gesture to me and to mine.

Mr. RANKIN. Mr. Commander, Mr. Johnson, veterans of the World War, I cannot express my feelings this morning as I stand before you, the representative of this committee of which Royal C. Johnson was the first chairman, to accept this portrait of a worthy man, a brave soldier, and one of the best friends the service men of this Nation ever had.

Someone has said that the friendships that spring up between members of the different political parties of the House might well be called the flowers that overhang the wall of party politics. Whatever I might say about Royal Johnson this morning would be colored by an unaffected friendship that grew out of our years of association on this committee, when we were passing through the troublous times of its organization, putting it on its feet, and establishing a policy for the care and protection of the veterans of the World War and their widows and orphans.

I am the only member of the committee now who was on it the first time we met. I don't know whether or not there are any other members in the room at this time besides Mr. Johnson and our very distinguished and very able colleague, Major BULWINKLE, of North Carolina.

During those years, under the guidance of the leadership of Royal Johnson, we not only passed laws for the protection of the World War veterans and their widows and orphans but we established a policy under which we have built the finest system of veterans' hospitals under the shining sun. No country on earth can boast of as fine a system of veterans' hospitals as we have in the United States. Now remember we haven't done everything that we wanted to do. No committee ever does. We are having the same troubles now that we had when Royal Johnson and I were "shadow boxing" on this committee, each one fighting for what he thought was best.

We are most delighted to have him here today and to have his grandson, Royal C. Johnson, 2d, with him. I hope it will not be necessary for us to send that grandson to another foreign war. The greatest assurance that we can have against another conflict of that kind is for us to properly take care of the veterans of the last war. That has been one of the outstanding objectives of the membership of this committee ever since its organization.

Royal Johnson was not only a distinguished legislator, but he was a distinguished soldier and made a most enviable record in the World War. He had bestowed upon him the American Distinguished Service Cross, the French Croix de Guerre, and the Order of the Purple Heart for extraordinary heroism against an armed enemy of the United States.

I am delighted, on the part of this committee, and as a Representative of Congress to accept this portrait not only on behalf of the committee of World War veterans but on behalf of the Congress of the United States, that it may hang on these walls long after we have disappeared from public life, as a constant reminder of the patriotic services rendered by Royal C. Johnson in his efforts to do justice to the veterans of the World War, those men and their dependents, who have suffered as a result of their services during the conflict of 1917–18. On behalf of the committee and of the Congress, I accept this portrait with pleasure and with greetings to our former chairman, Royal C. Johnson.

Civil Aeronautics Authority

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, August 1, 1939

RADIO ADDRESS BY ROBERT H. HINCKLEY, CHAIRMAN OF THE CIVIL AERONAUTICS AUTHORITY

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of the Civil Aeronautics Authority, delivered by Robert H. Hinckley, chairman of the Civil Aeronautics Authority, over the National Radio Forum, on Monday, July 31, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

With the organization of the Civil Aeronautics Authority just a year ago, the relation of this Government to civil aviation was set on a new footing. After a year of experience we can take a new look at aviation's position. Scarcely more than an infant in years, much of its development has been through years of unprecedented depression. Yet the record of its achievement would have been fabulous even in the supremely prosperous 1920's.

When the Government began to publish records on civil air transportation 13 years ago air transport lines were operating on 8,000 miles of routes within the United States. Tonight they are serving over 36,000 miles of air routes within the United States and over 47,000 miles in foreign countries, and American-built airplanes under foreign ownership and pilotage fly on many thousands of miles in addition. In a dozen years the spread of American-operated air transport has increased tenfold.

Like the clipper ships of a hundred years ago, the air lines established by American enterprise with Government encouragement and sponsorship range nearly from one Arctic region to the other, cover both oceans, and touch upon a hundred ports, both great and small. During the few minutes in which I talk to you tonight American transport planes will have traveled a distance greater than that from Miami to Seattle. The miles that they fly daily and the passengers that they carry almost double the combined figures of the air lines of Great Britain, France, Germany, and Italy.

A 300-PERCENT INCREASE

In the whole year of 1926 our commercial air lines carried no more people than could be seated in many an auditorium. During the 12 months just ended they carried more than the population of Detroit or Los Angeles. For every air traveler in 1926 there are 300 today.

More than 2,000 prepared landing places for aircraft spot the map of the United States, 11,000 airplanes use those airports, and there are 26,000 pilots to use the airplanes. In the year since the Civil Aeronautics Authority took office, passenger travel by air has increased by a third and the number of pilots is 5,500 more than it was a year ago.

All of these figures and illustrations add up to a single conclusion. They dramatize the fact that, moving irresistibly ahead, American civil aviation has multiplied itself many times over without check by economic disturbance. American civil aviation has become big business.

In aviation's growth it encountered laws and regulations, and even the development plans of cities that had been drafted without consideration of the needs of this fastest-growing youngster in the transportation family. Aviation's many problems were parceled out piecemeal to whatever public agencies seemed fitted to cope with them. The Department of Agriculture handled its weather reports, the Department of Commerce its airports and airways problems, the Post Office Department awarded the contracts for carrying the mails, the Interstate Commerce Commisison fixed the rates at which the air lines would thereafter be paid for mail service, and the Departments of State, War, Navy, Treasury, and other agencies of government all intervened to varying degrees.

RAN WILD IN THE THIRTIES

The aviation business ran wild in the early 1930's. In a frenzied effort to get control of air routes, transport companies made suicidal bids on air-mail contracts and engaged in so many types of cutthroat competition that by 1938 over 80 percent of the country's transport firms had failed. It was said that more than half of all private capital invested in American air transport had been lost. The situation is fairly expressed in the report of a committee of the House of Representatives early last year. That report said:

"The result of this chaotic situation has been to shake the faith of the investing public in the financial stability of the air carriers and to prevent the flow of funds into the industry."

The committee of Congress that I have just quoted had been investigating a proposal to create a new independent Federal agency, the Civil Aeronautics Authority, designed expressly to draw together at one point all the governmental relationships to civil aviation, then so widely scattered.

Just a year ago Congress passed the law which set up the Civil Aeronautics Authority, not as something to harass the industry, but on the industry's own recommendation and request to provide a central agency through which Government would watch the interests both of the industry and the general public. So far as this is regulation, it has been sought by those regulated.

COMPOSED OF THREE ELEMENTS

Administratively, this Civil Aeronautics Authority is composed of three elements: The Authority of five members, which develops economic and safety policies and enforces them through its Bureaus of Economic and Safety Regulation; an administrator, whose principal concern is the construction and operation of the vast ground plant of the Federal airways system; a three-man safety board, which is left free of restriction and charged with the duty of finding out actual facts concerning accidents.

At this point I would like to thank the National Broadcasting Co. and the Washington Star, not only for myself and the individual members of the Authority, but also for the administrator and the safety board, for making possible this radio report to the public.

In the light of world events during the past year, most of us now understand the reason that Congress had for passing the Civil Aeronautics Act. Congress was thinking far beyond the long recognized importance of airplanes to the Postal Service, and said so in the new law. Air transport had to be strengthened because of its vital importance both in modern commerce and in national defense.

In its relation to the economic problems of air transportation the Civil Aeronautics Act enters wholly new territory. In the first place, it puts an end to the unrestrained, cutthroat competition among air carriers which a year ago threatened the wreck of the industry, by requiring that the test of public convenience and necessity be met before a new line could be established. The new law also gives the Civil Aeronautics Authority the power and responsibility of determining the amounts that air lines are to receive from the Government for the transportation of mail. The determination has to be made after considering both the needs of the community for the service to be rendered and the need of the transport company for an amount of revenue sufficient to serve the public properly.

FIXING OF MAIL PAYMENT

An air line is a permanently continuing enterprise. It comes into existence in most cases partly because of the desire for improved postal service. To insure that such service can be supplied and at the same time permit the development of an air transportation system that will properly care for passenger and express transportation and meet the national defense, the payment to be made for the carriage of mail must be fixed after examining all the circumstances of the particular route and keeping a continuous watch on all the changes that they undergo.

The way in which mail compensation is paid can largely determine the kind of service that is rendered and the manner of its development. It is the Authority's policy to seek means of payment that will provide the greatest possible incentive for development on sound commercial lines and the display of commercial initiative in seeking increased traffic.

Payments must be sufficient to make it possible for an efficient management to do everything necessary to keep the service at the highest standard of safety and reliability.

NOT A SUBSIDY

Air transportation has a status similar to that of some other classes of mail service for which it is traditional to pay amounts sufficient to insure that they will be adequately performed, even though the expense thereby incurred exceeds the postage on mail that is carried. One sometimes hears the word "subsidy" used as if all payments for the carriage of mail by air could be properly so described. To pay the sum necessary for the proper maintenance of a necessary public service would hardly seem to be a subsidy in any event; but certainly it would be absurd to describe as subsidy the amounts paid for the maintenance of a service which automatically and at the very same moment brings most of its cost back to the Treasury in Washington. That part of the pay for carrying air mail which is covered by the postage on the letters does not come from the Government, but from the people who mail the letters. The Government is merely the channel of transmission, and that is not subsidy.

The whole domestic air transport system has been swift in its approach to a balance of the Government's books in that sense. For the fiscal year 1938, the last for which figures are complete, the total amount paid out to air transport lines for carrying air mail within the United States was some $15,712,000, whereas the Post Office Department's computation of the total postage on air-mail letters showed about $15,301,000. While a part of the postal receipts may, of course, be regarded as having been spent for handling the letters on the ground and making the final delivery, the striking fact remains that last year the United States Government paid to domestic air lines only about $411,000 more than came back to the Post Office through purchase of air-mail stamps, as against eight times that amount of direct deficit in 1936, and a difference of more than $14,500,000 in 1932. For the fiscal year just ended, the postal revenue may be expected for the first time to exceed direct payments to domestic air lines.

AVIATION'S GROWTH

There will be further extensions of the air-transport network. Some of them will require rates which will substantially exceed the postal revenue that may be expected. From the moment when each line is established, however, it begins a development of inherent commercial and economic strength that tends on the whole to a steady reduction of its dependence on government.

One of the most dramatic aspects of American civil aviation in which the Civil Aeronautics Authority has been engaged in the past 12 months, has been its expansion beyond our own borders. In 12 years the route mileage operated has shown the almost unbelievable increase of 30,000 percent. Last year our foreign routes alone carried 192,000 passengers.

These far-flung, high-speed facilities also are vitally important to commerce and national defense. To the north and south, they bind the commercial interests of the two Americas much closer together. And across the broad oceans our clippers show the way to the world in luxury, economy, and efficiency. Our great airliners are now being purchased in many nations, and these purchases make it possible for us to maintain at home manufacturing plants which would be priceless in any emergency.

ACTIVITIES GO AROUND THE WORLD

To serve our foreign air routes, the responsibilities and activities of the Civil Aeronautics Authority extend in varying degrees literally around the world. One American company has within the past 2 months inaugurated regular commercial air service between the United States and Europe, while a second is completing survey flights looking toward similar commercial service in the future.

Behind these great accomplishments are months of intensive study and work not only by the Civil Aeronautics Authority, but by other agencies of Government, producing for the first time a definite national policy on trans-Atlantic air service.

In close cooperation with the State Department we have been active in a great number of international aviation conferences and in conducting diplomatic negotiations for aviation agreements with other countries.

No form of transportation could succeed if it asked its patrons to assume undue risks, and in the recent record of air transportation nothing is more impressive than its high standard of safety. In the 12 months that ended last night, the domestic air lines of the United States flew more than 73,000,000 miles with passengers and carried an average of more than eight passengers in each airplane, yet there were fewer serious accidents than in any year since 1926, when there was less air-line flying in that year than there is now in a month.

SAFETY DOUBLED

By any of the conventional statistics by which safety is measured, air transport during the 12 months just ended has been more than twice as safe as in any past year.

I can report tonight that there have been more than 28,000,000 miles of airline flying since any life has been lost in an airline accident. The total amount of passenger traffic during that "no accident" period has been equivalent to moving the entire half-million population of the city of Buffalo from their present home to Chicago without a single mishap, or of transporting the entire Regular Army of the United States from New Orleans to New York with a similar freedom from misadventure.

The superstitious may feel that I should knock on wood when I recite such figures, but it is not necessary to regard them in superstition's light, for they are not the result of luck. They are the result of hard work and wise planning, great skill and great care. They tell a story of air transport lines and their people and of Government and its people all pulling together.

Constantly improving standards of safety come from a constant emphasis on safety, and an insistence that no chances shall ever be taken and no precaution neglected. They come from the airline pilots' pride in their profession and constant study to meet its demands. They come from the work of research laboratories and airplane designers in improving the airplanes, and from that of the Civil Aeronautics Authority in setting the requirements that new airplanes must be able to meet in all matters affecting safety.

CONTRIBUTIONS TO SAFETY

Increased safety comes from the research of the airline operators on means of navigating safely and surely to the intended landing place, and from the research of the Civil Aeronautics Authority's own people in the same field.

Safety comes from 25,000 miles of modern airways, lighted and furnished with a network of radio beams for guidance and radio markers of various types to give the pilot his location along his course—a vast ground plant set up and maintained under the direction of the administrator in the Civil Aeronautics Authority, and improved from time to time as new discoveries in radio science permit.

Finally, safety comes from the ceaseless study of accidents—not only the accidents that have happened, but those that might possibly happen and that can be prevented if they are foreseen and the necessary precautions taken. It is for precisely that purpose that the Air Safety Board was established within the Civil Aeronautics Authority, having no other responsibilities to break

into its time, and free to devote itself exclusively to study and recommendations that will save lives and increase public confidence in the airplane.

Take all the work of government, add to it the constant efforts of the aircraft industry in its various parts, and you will know why we look forward with confidence to seeing air transportation break its own safety records over and over again.

THIRTEEN COLLEGE TRAINING COURSES

Almost as soon as it was organized, the Authority began to develop a plan for training a large number of civilian pilots. As a trial effort, with the aid of funds from the National Youth Administration, we already have conducted 13 training courses at as many colleges in various parts of the country—courses using not only the college facilities but those at nearby flying fields. At the first 9 schools to get this course under way, 220 students were enrolled; and of these, 215 already have received their private flying certificates.

We believe that these experiments are the beginning of proof that a very large percentage of the general public can fly airplanes—particularly since qualified instructors are extravagant in their praise of these graduates, rating their general level of efficiency far above the graduates of flying schools that have not heretofore employed the well-planned flight course now prepared by the Authority.

On the basis of this experience, we asked and Congress has authorized a much larger program for the future.

This program is in line with the democratic philosophy which maintains that one of the best means for national defense is the development of civilian personnel and facilities which can be quickly turned to defense when emergency arises, but which may be used for peacetime activities if no such emergency develops.

PROGRAM WON'T BE A LOSS

If no military emergency develops, there will be no economic loss. These pilots will use their training in aviation in peaceful pursuits. As mechanics in airplane and airplane-motor factories, as dispatchers in the airport towers, as workers in the weather stations, as radiomen, as aeronautical engineers, as airport managers, as administrators and executives in aviation companies, they will be more efficient and therefore more desirable workers because of their knowledge and skill as pilots. Furthermore, they and their friends and families are more likely to become customers of the scheduled air lines. Many will be purchasers of airplanes for business and for pleasure.

Already the effect of our small experimental training program has been felt by the light-plane industry. All companies manufacturing light airplanes report increased business, and some of them report difficulty in filling orders in spite of 100-percent increase in their production. Certainly the increased employment that will grow out of the proposed training program will be a byproduct that will not be the least of its desirable features.

That is the story I wanted to tell you—the story of how American civil aviation has become today supreme in the world, and of how the aviation agency of your Government—the Civil Aeronautics Authority—has coordinated the Government's part in this achievement, during its first year of existence.

Should anyone come before the microphone a year from now to speak to a similar title, the figures he will give you will be still more impressive; the industries that deal with civil aviation will be producing still more planes, and flying still more miles with even greater safety; and still more of you in the radio audience will listen to him with more understanding interest because you will have become regular air travelers and users of aviation's service.

Remember Goliad!

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

ADDRESS BY HON. HARBERT DAVENPORT AT DEDICATION OF GOLIAD MONUMENT ERECTED TO THE MEMORY OF COL. J. W. FANNIN AND HIS MEN

Mr. MANSFIELD. Mr. Speaker, on Palm Sunday, March 27, 1836, at Goliad, Tex., occurred one of the most barbarous and revolting scenes ever perpetrated by men in ancient or modern times. Col. J. W. Fannin, Jr., a soldier and officer in the Army for the Independence of Texas, with about 329 men in his command, all of whom were prisoners of war, were marched from their prison at daylight, faced before firing squads, and shot to death without warning. In their terms of surrender to General Urrea they had been guaranteed the rights and privileges of prisoners of war under international law.

Their execution was ordered by President Santa Anna, President of Mexico. It is historically referred to as the Goliad massacre, and shared with the Alamo in the battle cry at San Jacinto of "Remember the Alamo! Remember Goliad!"

The Battle of San Jacinto occurred nearly 1 month later and resulted in one of the most brilliant victories ever achieved upon the field of battle. About 600 Americans, under Sam Houston, actually killed more than 700 Mexicans, and captured as many more, including the Commander in Chief, Gen. Santa Anna, President of Mexico, the self-styled "Napoleon of the West."

The Goliad massacre was one of the important events which led to the independence of Texas and its ultimate admission into the Union.

The State of Texas has erected a monument and established a State park at Goliad in honor of Colonel Fannin and his men. This park was dedicated on June 4, 1939, when the dedicatory address was delivered by Hon. Harbert Davenport, of Brownsville, Tex. His address is of great historical and educational value, and is herewith embraced:

It is proper and fitting now that the people of Texas have at last performed the sacred duty of commemorating the men who died for Texas, at Goliad, March 27, 1836; and of marking the grave where now they lie, that their memorial has been erected by the State of Texas and paid for by the United States. They died as soldiers of Texas; but their place in history is not so much in that they lived and died for Texas, as in that they were slain as Texas volunteers from the United States. The memory of their wanton and needless slaughter was for three-quarters of a century the controlling influence in the international relationships between Mexico and the United States.

Though part of the Texan battlecry at San Jacinto was "Remember Goliad!" (more literally, "Remember Labadee!" "Remember the Alamo!") was what the Texans really meant. "Forget Goliad" was then, and has always been a more precise expression of the mingled shame and pride with which Texas regarded Fannin's men. That anarchy in Texas councils; incompetent Texan leadership and worse; petty personal prejudices, factional intrigues, and high-handed determination of minor Texan leaders, each to have his own way, were directly responsible for the horrors of Goliad, was well known, to all Texans, in 1836. But struggling Texas had then no time for mortification, and could not afford shame. Harmony in council and unity in action were as necessary after San Jacinto as when the want of them led to the shameful sacrifice of Fannin and his men. If those responsible should be pointed out and punished, unity and harmony could not prevail. Colonel Fannin, who was dead, and General Houston, now the popular idol, could conveniently be made to shoulder the blame. And the Texans, in another sense, had a shame-faced feeling that the men of Goliad had let them down. Texas undertook her unequal struggle with Mexico sustained by an almost insolent reliance on race pride. That Texans were natural soldiers and brave men, and invincible as against Mexican courage, and Mexican numbers, and Mexico's material means, were the touchstones of Texas confidence and Texan faith.

In the first capture of Goliad, and at Conception, Lipantitlan, the taking of San Antonio, and at the Alamo, and San Jacinto, the legend of Texan invincibility had been abundantly sustained. Defeat of the Grant and Johnson parties could be attributed to overwhelming numbers, assisted by surprise. But if looked to too closely, the defeat and capture of Colonel Fannin would have to be explained; and the explanation admitted that even Texas courage was not proof against hunger, thirst, and blunders in strategy and tactics, and that Mexicans could be brave. Before such admissions were forced upon the Texans, the story of Mexican faithlessness at Goliad, and of the treacherous deaths of Colonel Fannin and his men, had spread like wildfire over the United States. No other moment in American history has surpassed, for indignation and deep-seated horror, that when the tragedy of Goliad was thus made known. The victims of Goliad now fought more effectively for Texas, in death, than they could ever have fought in life with all their gallantry and courage. The Texans were glad to bury their recollections of the self-seeking and inefficiency, and almost criminal apathy, which had brought about the sacrifice of Fannin's men and join in the world-wide expression of indignation and horror, ending from Santa Anna's stupid and ghastly mistake. Texas made provision in land bounties for the heirs of the Goliad victims, and remembered the Alamo, glorified San Jacinto, and cursed Santa Anna and all Mexicans, thereby forgetting Goliad and softening the memory of their own sins. And that is what we of Texas have been doing ever since. It is no accident, nor yet is it an error of those charged with responsibility for building in Texan memorials, that this one com-

pares with the magnificent shaft commemorating San Jacinto as the faint, cold radiance of Polaris compares with the noonday splendor of a Texan summer sun. Such is and always has been the Texan point of view. It is part of the unconscious tribute that we pay to self-confidence and racial pride.

THE TEXAS REVOLUTION, 1835–36

As a proving ground of history, the Texan revolution was unique. Though fought on a terrain comparable with that of the World War of 1914–18, and, as regards the value and area of the contested region, affected for a comparable prize, the numbers engaged were so small that the historian can trace the mainsprings of human action and human conduct which caused its every move, and actuating motives, mental oddities, and moral obliquities of the participants, their shifting plans—their increasing heartbreaks—as can be done with no other event of similar importance in the history of the world. Every problem, economic, political, personal, governmental, emotional, military, and financial, that vexes our so-called modern era passes beneath the microscope of the student of history, who examines the story of Texas from May 1835 to May 1836. And under the microscope of history, these are seen in clear relief, even as a slow-motion picture passes, in detailed review, action too rapid for the normal eye. Human motives, and human conduct, and human reactions to hardship, ambition, selfishness, and greed, and to a government that is either too arbitrary, or too weak, are in all ages, much the same. The United States, Mexico, and Texas suffered, and, from 1835 to 1880, for the most part solved, all the problems—social, political, economic, and governmental—that threaten world peace and human happiness today.

Mexico, in 1834 to 1835, sought relief from the uncertainties and weaknesses, hardships and petty tyrannies, which arose from an ill-conceived and badly working effort at democracy, for which the Mexican people, not yet accustomed to self-government, were not prepared, and yielded to the personal dictatorship of Gen. Santa Anna, as a measure of relief from lesser ills. For this error, Mexico paid such penalties as those nations that have surrendered themselves to despotism have always paid; in this case, loss of half her territory and an unmerited reputation, through many decades for cruelty, treachery, and bad faith.

Texas, resisting despotism and fighting for the natural right of a free people to have and maintain a free, orderly government, failed in her first attempt to establish one because many of her leaders were unwilling to make those personal sacrifices without which free government cannot exist, and failed, until too late, to subordinate their selfish aims, individual prejudices, factional intrigues, and personal jealousies and ambitions to the common good.

SANTA ANNA'S GHASTLY AND STUPID MISTAKE

But Santa Anna then set about proving that no democratic Government, however vicious, bad, or weak, can ever be as bad, or as stupid, or as cruel as despotism, even at despotism's best. Prior to Goliad, Santa Anna, though notoriously crafty and cunning, had not been thought a cruel man; and in spite of the cautery a generation of desperate internal fighting, beginning with the first Mexican outbreaks against Spain, the Mexican people had acquired no reputation for cruelty or bad faith. Mexico, from the point of view of Americans, was a friendly Republic, not too well governed, according to our lights, but a land newly aspiring to freedom, and immune, absolutely, from American aggression and from undue interference at American hands. This was but too well proved in November and December 1835. Gen. Jose Antonio Mexia, in league with some of the Texas leaders and as part of the general plan to use the disturbances in Texas as an opportunity for the rising of the Mexican liberals against Santa Anna's usurpation of arbitrary power, made an attack on Tampico, with Americans recruited at New Orleans, about 150 men. Twenty-eight of these were captured in the course of the fighting, tried as pirates, convicted, and shot. The American reaction, almost universal, was "served them right."

It was common knowledge that the Texans, in undertaking to fight Santa Anna, had done so in reliance on help in men, munitions, and money from the United States. It was too much to expect Santa Anna, or any other despot, to understand the gulf existing in American public opinion between aiding the cause of Texas, resisting despotic government, and a predatory expedition undertaken by filibusterers or soldiers of fortune against a purely Mexican town. Technically, and from Santa Anna's viewpoint, Texas and Tampico alike, were Mexican soil. That many of the Texan leaders failed also to see this distinction was one of the underlying causes of the sacrifice of Fannin's men. Even so, there is no excuse for Santa Anna in so completely misjudging his means to an end. Relying on the Tampico precedent, he decreed, before beginning his invasion of Texas, that all "foreigners" taken in arms in Texas should be treated as pirates and shot. He thought thus by intimidation to cut off Texas from American aid. It was, of course, a complete misunderstanding of the American people to suppose that such a fulmination would be likely to have that effect. But when Fannin's men were captured by Urrea, the first wave of American sympathy for Texas was spent. Even at New Orleans, where American interest was most consequential, the Texan commissioners had difficulty in finding money and were compelled to secure it on drastic terms. There was a marked reaction against Texas because the marine underwriters and the New Orleans merchants trading in Mexico were effectively backfiring Texan support. American reaction against the Tampico expedition; the stupidity of the Texan provisional government; tales of neglect and hardships whispered by volunteers returning from Texas; and the serious divisions in Texas counsel, apparent to all, were having their effect. The storming of the Alamo and the surrender of Fannin had restored the prestige of the Mexican arms. As at no other time during the revolution, Texas was dependent on aid and sympathy from the United States. Had Santa Anna seized the opportunity of Fannin's surrender to dump Fannin's men with Miller's on the wharves at New Orleans, starving, half naked, penniless, homesick, humiliated, and forlorn, and each with his painful story of Texan mismanagement and Texan neglect, Texas' standing with the American people would have fallen to a new low; and American men and American money for the Texan venture would have been scarce indeed. Killing them was exactly the fillip needed to American sympathy and American pride to insure for Texas the financial and moral backing of which the struggling young Republic was in such dire and desperate need.

CROSS-CURRENTS OF REVOLUTION

For a story of the cross-currents of the Texan revolution, this is neither the time nor the place. These began at Monclava, Coahuila, and Texas capital before the revolution itself and continued until after the sacrifices of Fannin and his men. An important group of Texans planned, at Monclova, with Vice President Gomez Farias, of Mexico, and Gov. Augustin Viesca, of Coahuila and Texas, a counter revolt against the despotism of Santa Anna, to be fought by American soldiers, whom the Texan party undertook to find, and armed by the State government of Coahuila and Texas—that is, a Mexican, rather than a Texan, revolution—to be paid for from the proceeds of an authorized speculation in Texas lands.

This plan was unpopular with a large majority of the Texan settlers, who were as strongly opposed to mixing in the internal affairs of Mexico as this character of speculations in Texas land. Other cross-currents developed from the personal aims and ambitions of Texas' "50 would-be great men" as well. Demagogues urged upon the Texan "army" assembling at Gonzales in October 1835 that since Texan patriotism and much of Texan virtue was gathered there, the "army" ought to take over the responsibilities of civil government in Texas as well as becoming its fighting arm.

Gen. Stephen F. Austin and Gen. Sam Houston were the two big men in Texas, in American eyes, and in this estimate American public opinion was largely right. Austin and Houston, working together, could and would have avoided practically all of the costly Texan mistakes. Had General Austin been permitted to attend the consultation, this doubtless would have bene arranged. But it had become a desideration of both the demagogues and the speculators to keep the two big men of Texas working, and thinking, apart. General Houston was not immune to the influences of personal vanity; General Austin could be persuaded, on occasion, to yield his own better judgment to the importunities of his friends. An agreement that General Austin should be the head of Texas' new civil government and General Houston the new commander in chief was prevented from being put into effect.

General Austin was sent to the United States, as Commissioner—that is, in honorable exile—and General Houston, after having been deprived by the Provisional Council of all his real duties and responsibilities as commander of the Army, through the council's appointment of Colonel Fannin as agent, with similar powers, and—of more practical importance—with sole control of Texas' small quota of supplies and cash, left for eastern Texas, on furlough, to treat with the Indians, and made no pretense of functioning as general of the army from the 21st of January until reappointed by the new convention on March 4. At the critical period of preparation for Santa Anna's coming, Texas was thus without the effective services of her two essential men. Henry Smith, who had been made Governor in Austin's stead, was without executive sense. Besides, the council, on January 11, deposed him, and then, in its turn, never functioned as a council after January 17. Lieutenant Governor Robinson, made Acting Governor by the remnant council and recognized as such by Colonel Fannin, had even less executive ability, and much less character and courage, than Governor Smith.

No Texan can read the records of that fatal month of January without a sickening sense of mortification, wounded pride, and shame. This complete break-down of the provisional government arose from the determination of those allied with the Gomez Farias party to continue the fighting as a contest for "constitutional liberty" in Mexico, just when a majority of the Texans had become convinced that an outright war for independence was Texas' only way. Texas was dependent on American help and sympathy; and that, now, was definitely the American point of view. The "constitutional liberty" party professed to believe—some of them, doubtless, did believe—that the shortest road to Texan security and independence lay through an alliance with the Mexican liberals. But after Mexia's failure at Tampico, the Mexican Liberals, as a party, had virtually ceased to exist. But there were many Liberals in Tamaulipas, and the Texans who favored the Liberal alliance now proposed an expedition to Matamoros to take that city and organize further efforts in conjunction with the Liberals there. To understand the actual merits of this project, one needs only to know that it was suggested both to the Texan leaders and to the Tamaulipas Liberals by Capt. Pedro Julian Miracle, Santa Anna's clever spy.

MILITARY PROBLEMS OF THE GOLIAD CAMPAIGN

To understand what happened at Goliad, it should be borne in mind that the military problems of the Texan Revolution were, essentially problems of supply; and that the port of Aransas Pass, with its interior landing at Copano, played an important part in both Texan and Mexican plans. In the years immediately prior to the revolution, Copano had become the principal port for Goliad and Bexar. A Mexican army advancing from the Rio Grande must draw its supplies by mule train from the Mexican interior, unless Copano and Aransas Pass, its Gulf entrance, were Mexican controlled. The Mexican campaign in the Texan colonies involved opening Copano as a Mexican port and military base. On the Texan side there were no means of transport available sufficient to supply, from elsewhere than Copano, a sizable Texan garrison at Bexar. Of the importance of controlling Copano, both Mexicans and Texans had recent proof; Cos' army had landed there, and his army had later been starved into capitulation when the Texans, at Goliad, had cut his communication with the coast. Texas, in feeding a besieging army at San Antonio, had had to denude the Texan settlements of supplies.

Since it was essential for the Texans to control Copano in order to prevent its becoming an enemy base, and necessary for the security of Texas that its growing volunteer army should be assembled, organized, disciplined, trained, and fed, these ends could all be most conveniently accomplished by assembling the Texan troops near Copano, particularly since that vicinity also provided a healthful location, good water (at least at Refugio; Copano was of itself deficient in that respect), and easy access to rations of beef. General Houston planned, therefore, to assemble the Texan forces at and near Copano, and on December 30, 1835, ordered Colonel Fannin to transport the volunteers at the mouth of the Brazos to Copano, by sea. Immediate execution of this order was postponed owing to the disturbances arising from the proposed Matamoros project; and the plans, even of those who favored taking Matamoros, were upset by the added scheme of Dr. James Grant and Col. F. W. Johnson, who had organized their own Matamoros expedition, for which they had enlisted six companies—four of infantry, one of cavalry, and one of artillery—from among the eager and restless volunteers at Bexar. Their scheme contemplated an army to be commissioned, armed, fed, and clothed by Texas, but managed, privately, by Johnson and Grant. The council did not take kindly to this independent idea, but in the general breakdown of the provisional government were browbeaten into a vague acceptance of his plans.

In the meantime, however, General Houston had overtaken Grant's army at Goliad and persuaded all but two of the companies to enlist in the service of Texas rather than in the private army of Johnson and Grant. The latter then proceeded to San Patricio with their two remaining companies—60 men—in order to maintain a semblance of independent command. This was on January 22, on which same day General Urrea occupied Matamoros with reinforcements sufficient to hold that place against any force the Texans, at that time, could bring to bear. The flank and rear of a Texan force advancing from Copano toward Matamoros would be exposed, of course, to attack by Santa Anna's principal army then concentrating at Laredo and points north for its march to Bexar. The small Texan army left by General Houston at Refugio—7 companies and about 200 men—were without breadstuffs or adequate supplies of ammunition and could only await the coming of Colonel Fannin's command.

That officer sailed from the mouth of the Brazos on January 24 with the four companies of the Georgia battalion and Capt. Luis Guerra's Mexican artillery company (brought by General Mexia from the fort at the Tampico bar), and was followed by the *Invincible* with Capt. Burr H. Duval's company on January 26. Fannin, after a rough passage, made his landfall at Aransas Pass on January 28 and moved up to Copano and had disembarked his troops and stores by February 4. The *Invincible* brought cheering news. Col. John A. Wharton, General Houston's adjutant general, had just arrived off the Brazos from New Orleans with Captain Turner's and Hart's companies of recruits—100 men—and with the schooner *Tamaulipas*, laden with powder, munitions, clothing, and ordnance, and the schooners *Caroline* and *Emeline*, laden with provisions purchased by the Texan agents at New Orleans with the new money the Texan commissioners had found. This flotilla, convoyed by the naval schooner *Liberty*, would be due at Copano within 3 or 4 days. The brig *Mattawamkeag*, with the New York battalion—184 men—was also eagerly expected, though some weeks overdue. Colonel Fannin wrote happily from Copano on the 4th of his plans for an effective Matamoros campaign. He was disillusioned by a letter from Maj. R. C. Morris on February 6. Morris, commanding the Grant and Johnson party then at San Patricio, sent definite advices of Urrea's arrival at Matamoros and of the extraordinary measures undertaken by General Santa Anna to overwhelm the small Texas garrison at Bexar. A few days later Colonel Fannin also learned that the *Tamaulipas*, in attempting to sail from the mouth of the Brazos with Captain Turner's two companies and the Texan army's stock of powder, shoes, clothing, and ordnance supplies, had been cast away on the Brazos bar, and that the *Emeline* was also lost in Matagorda Bay with her cargo of flour and corn. The other provision schooner, *Caroline*, discharged her cargo February 14 at Cox's Point.

As a result of these mishaps Captain Turner's men never came to Goliad nor were the men with Colonel Fannin, many of whom had marched on foot from Natchitoches, La., to Refugio, and thence back to Goliad, without a change of shoes or raiment, never adequately supplied with clothing or shoes: And the *Mattawamkeag* had been seized as a pirate by the British in the Bahamas and detained for 2 months at Nassau. The men on this ship finally sailed for New Orleans, arriving there February 12. Even so, they should have joined Colonel Fannin in March, but never did.

As early as February 7 Colonel Fannin decided to withdraw his small army to Goliad and look to the *Lavaca*, instead of *Copano*, for his supplies. New Orleans underwriters refused to insure vessels or cargo consigned via Aransas; and, with the enemy in force at Matamoros, Colonel Fannin had also concluded that Aransas Pass was unsafe. By February 12 he had concentrated all his forces at Goliad, except the companies of Captains Cooke and Burke, sent forward to San Patricia, February 7, to support Major Morris and Captain Duval's company, which had also marched to San Patricio on February 12, escorting teams and cars, to enable Captain Cooke to bring off a large quantity of ammunition, and three cannon, left behind at the Irish village by Johnson and Grant.

GOLIAD AND ITS INHABITANTS, FEBRUARY 1836

Dr. Barnard has left us a graphic picture of Goliad as it appeared on February 12 to Colonel Fannin and his men. Because Goliad, as rebuilded, was on an entirely different site, we can still visualize the typical Mexican frontier village as they saw it on that day. In outline and outward appearance the presidio church and the old fort are now much as they were seen by Fannin's men. The few stone houses of the wealthier citizens, flat roofed, with shuttered, glassless windows, and floors of hardened mortar, are no more. It is not too difficult to imagine them as outworks in close proximity to the fort. Fifty or a hundred jacales, housing the humbler inhabitants, then sprawled about, for the most part seemingly between the river and the fort. But Goliad, as Colonel Fannin found it, was not an inhabited town, for its Mexican citizens, as Dr. Barnard tells us—

"Fearful of compromising themselves too far, had removed to some 'ranchos' about 15 miles below the town."

This removal of the Goliad inhabitants was reported to General Austin by Captain Dimitt, October 25, 1835. Dimitt wrote:

"For some reason or another the people of this place have nearly all left town. I have done and have said everything which I could to inspire them with confidence—but they had seen the brilliant equipment of General Cos, his sword and retinue; * * * they had listened to his flattering and captivating speeches; they had attended his parties and tasted his wine."

Since October this situation had not changed. Joseph T. Williams, of the Georgia battalion, thus describes Goliad as he saw it as one of Fannin's men:

"At the commencement of difficulties between this country and Mexico, this village contained not less than a thousand inhabitants. * * * Since this period the inhabitants, who were * * * native Mexicans, have gradually retired down the river to another port, and this place is now inhabited * * * by volunteers. I do not believe there are 10 native citizens here at this time. One-third of the place affords ample and comfortable quarters to the soldiers, and the residue is abandoned to cattle and dogs."

It may be remarked, in passing, that Colonel Fannin and other Texans underestimated the importance of these Mexicans of Goliad, and the resentment in their hearts due to having had to leave their homes. Unlike the Mexican citizenry of San Patricio and Victoria, who came for the most part of good ranchero stock, the "Badenos," as they called the people of Goliad, were descendants of the presidial soldiers stationed at La Bahia through the years, and were not too highly regarded by their countrymen or by anyone else. They were indolent and none too honest, but they were expert horsemen—among the world's best—knew every acre of the Goliad region and for a hundred miles around; and, contrary to the prevalent belief of the Texans, were anything but cowardly when convinced of the advantages of being brave. Their leader, Carlos de la Garza, had dignity and force of character, and courage and intelligence as well. They had abandoned Goliad at his bidding, and it was to his "rancho" on the San Antonio that they had gone. He and his men were "everywhere" after General Urrea came.

FANNIN'S MEN

It was a remarkable body of soldiers in the making which gathered at Goliad under Colonel Fannin in February 1836. Almost half of those who escaped from the massacre achieved, afterward, commissions in the Texan army, or rose to other important place. There were promotions in similar ratio for those spared at Victoria, and among the men who escaped capture through having separated from Colonel Ward, many of the other survivors failed to achieve like promotion only because they died young.

Col. Reuben M. Potter, who met at Matamoros some 16 or more prisoners from the command of Johnson and Grant, wrote that—

"The followers of Johnson and Grant, if the survivors may be accepted as a fair sample, were, I think, about the average of the men who composed the volunteer forces of Texas from abroad. * * * Some were gentlemen, none of the lowest filibuster type, and in their case we see fine material for soldiership."

Actually, the Johnson and Grant party averaged below, rather than above, the rank and file of Fannin's men.

Dr. Barnard attests that—

"The men, for the most part, were altogether superior to the ordinary material of an army in intelligence and education. They were far from being a class of mercenaries, but were men of char-

acter and standing, and some of them of wealth, who had left their homes from sympathy for a people who had taken up their arms for liberty."

And Capt. Burr H. Duval, writing to his father, then Governor of Florida, from Goliad, on March 9, exclaimed:

"I have never seen such men as this army is composed of—no man ever thinks of surrender or retreat. They must be exterminated to be whipped. Nothing can depress their ardor. We are frequently for days with nothing but bull beef to eat, and, after working hard all day, could you at night hear the boys crowing, gobbling, barking, bellowing, laughing and singing, you would think them the happiest and best fed men in the world."

Considered by units, and in the order in which they came to Goliad, under Colonel Fannin's command, his little army consisted of:

1. A detachment of regulars, called, usually, Captain Westover's company, but consisting actually of:

A small company of regular infantry enlisted by Capt. John M. Allen from among the survivors of Mexia's Tampico men, which was marched to Refugio under Lt. Francis W. Thornton, about January 1, 1836, and returned to Goliad, by order of General Houston, on January 19. It then consisted, all told, of 29 men.

The nucleus (say 14 men) of a company of regular artillery, recruited in the Irish colonies by Capt. Ira J. Westover, about January 7, 1836.

Eight or ten regulars recruited by Lt. B. F. Saunders at Matagorda during January and sent forward to Goliad, and assigned to Captain Westover's command.

2. A volunteer company, 29 in all, enlisted by Capt. John Chenoweth, in December and January, from among volunteers who then were, or had been, at Bexar, for the special purpose of garrisoning Copano, where they arrived about January 20, 1836. Some of Chenoweth's men returned to the Alamo and were there killed; others went forward under Captain Chenoweth, on February 26, to guard the Cibolo crossing on the road to Bexar. These joined Colonel Neill's forces at Gonzales and did not return to Colonel Fannin's command. The residue transferred to, and were killed with, other companies of Colonel Fannin's command.

3. Six companies that were organized, by Grant and Johnson, at Bexar, in December 1835 as a nucleus for their proposed Matamoros campaign. These were:

(1) The San Antonio Greys under Capt. William G. Cooke, composed almost entirely of men from the Cooke or Morris company of New Orleans Greys, which had distinguished itself in the fighting at Bexar.

(2) The Mobile Greys, under Capt. David N. Burke, the nucleus of which was a company of about 30 men, organized at Mobile early in November 1835 by James Butler Bonham, A. C. Horton, and Samuel P. St. John; which, through a combination of delays, failed to arrive at the Texan camp at San Antonio until 3 days after the surrender of Cos. It was enlarged by several transfers from Captain Breece's company of New Orleans Greys.

(3) The "Mustang" company of Capt. Benjamin L. Lawrence, a combination of the United States Independent Cavalry company, originally from Tennessee, and the mounted portion of Capt. James Tarleton's company of Louisville Volunteers. This company was recruited as the cavalry unit of the Johnson and Grant Army; hence the nickname "Mustangs."

(4) Capt. H. R. A. Wigginton's company, the core of which was the unmounted portion of the Louisville Volunteers, with accretions from broken companies and other groups of volunteers at Bexar.

(5) A company of artillery, under Capt. Thomas K. Pearson, who had landed at Paso Cavallo, in November, with a small company of men, and aided in transporting an 18-pounder cannon from Dimmitt's Landing to Bexar—a feat of engineering which caused his arrival at Bexar to be 3 days after the capitulation of Cos.

(6) Capt. Thomas Lewellen's company, composed of men who had served with other companies during the San Antonio campaign, but who had reenlisted for new service after having been discharged with General Burleson's men.

Lewellen's and Pearson's companies went ahead from Refugio to San Patricio with Grant and Johnson before Colonel Fannin reached Refugio and assumed command, and so were never regularly enlisted in the service of Texas, nor became, except nominally, units of Colonel Fannin's command.

4. Two companies recruited by Capt. Peyton S. Wyatt, of Huntsville, Ala., and at Paducah, Ky., and en route to Texas, in November and December 1835. Captain Wyatt left Huntsville November 8, with "50 first-rate United States muskets," borrowed by Captain Wyatt from the State of Alabama, and 18 men, and arrived at Nacogdoches, in December, with two companies totaling 67—being his own company, armed with the United States muskets, and a "light company," armed with rifles, 19 men, commanded by Capt. Amon B. King.

5. The four companies of the Georgia Battalion included:

(1) The "First Company," under Capt. William A. O. Wadsworth, enlisted at Columbus Ga. (home town of Colonel Fannin and of Mirabeau B. Lamar), but much enlarged by recruiting at New Orleans and en route.

(2) The "Second Company," under Capt. Uriah J. Bullock, being one moiety of a very large company, enlisted at Macon, Ga., and vicinity by Maj. William Ward. When this company left the Brazos on January 24 Captain Bullock was sick with measles and unable to travel, and he never thereafter rejoined it or exercised command.

(3) The "Third Company," under Capt. James C. Winn, of Gwinnett County, Ga., being the second moiety of the large company organized at Macon by Maj. William Ward. This company was also enlarged at the mouth of the Brazos or en route, the additions being, for the most part, Mississippi volunteers.

(4) The "Alabama Greys," under Capt. Isaac Ticknor, recruited by Edward Hanrick, at Montgomery, Ala. This company arrived at the mouth of the Brazos only a few days before Colonel Fannin sailed.

6. A company recruited by Capt. Burr H. Duval, of Bardstown, Ky., from which place he began his journey to Texas in early December with only 6 or 8 men. These had increased to more than 20 upon their arrival on the Brazos the last week in December 1835.

7. After his arrival at Goliad, Colonel Fanning was reinforced successively by:

(1) The "Red Rovers," enlisted at Courtland and Tuscumbia, Ala., under Capt. Jack Shackelford, and armed, as was Captain Wyatt's company, with muskets borrowed from the arsenal of the State of Alabama. This company also received additions after landing in Texas and en route. It was well commanded and well equipped and had increased by March 19 to almost 70 men.

(2) A squad, or small company, 10 men, recruited in Tennessee and Mississippi by Capt. John C. Grace, which joined Colonel Fannin, at Goliad, in company with Captain Shackelford's command.

(3) Another squad, or small company, eight or nine men, sent forward by the council from San Felipe, on February 9, under Lt. Samuel Sprague.

(4) The Refugio Militia Company, under Capt. Hugh McDonald Fraser; 15 or 20 men mentioned by Colonel Fannin as being in active service on February 11 and 12. This company was diminished by details as couriers and to care for fleeing families until it was only a squad when the actual fighting began.

(5) Capt. A. C. Horton's company of Matagorda Volunteers, 42 in all, which did not join Colonel Fannin until after the loss of the Georgia Battalion and Captains King's and Wyatt's men.

(6) Five of those who escaped from Grant's defeat at Agua Dulce, three who had been at San Patricio with Johnson, and one or more of General Houston's couriers were captured with Colonel Fannin on March 20 and shared the fate of his command.

REORGANIZATION OF COLONEL FANNIN'S COMMAND

While still at Refugio, on February 7, Colonel Fannin began organizing a regiment from the volunteers there, of which he was chosen colonel and Maj. William Ward lieutenant colonel without debate. The Georgia Volunteers insisted upon choosing a major, instead of Major Ward, promoted; and Dr. Warren J. Mitchell, of Columbus, Ga., was elected to that post. Organization of the Second, or LaFayette Battalion, was not effected until after Captain Cooke's companies had returned to Goliad from San Patricio, about February 18. Several of the companies, including Captain Cooke's, were much reduced in size. Upon his departure from Refugio, on January 21, General Houston took with him Captains Lawrence and Wigginton, in order to send them on recruiting service to the United States. Many men of both their companies and a number from Captain Cooke's, dissatisfied, and some of them ill, were released from the service at the same time.

Upon Colonel Fannin's arrival at Copano, on February 4, Captain Wyatt, unwilling to participate in the Matamoros project, took advantage of the vessels that brought out Colonel Fannin to return, for recruiting service, to the United States, taking with him, and paying the passages of, a number of his dissatisfied men.

As reorganized by Colonel Fannin, what remained of Captain Lawrence's "Mustang company" was consolidated with Captain Duval's, called, henceforth, "Duval's Mustangs." The remnant of Captain Wigginton's company, under Lt. Edward Fuller, was absorbed by Captain Wyatt's company, with First Lt. Benjamin F. Bradford, a Kentuckian, in command. Captain Cooke resigned and was succeeded by his first lieutenant, Samuel O. Pettus, another Virginian, and the company was enlarged by being consolidated with Captain Grace's small company, Captain Grace, from Memphis, Tenn., being chosen first lieutenant in Captain Pettus' former place.

Until after his arrival at Goliad, Colonel Fannin's artillery was served by Capt. Luis Guerra's company of Mexican artillerymen and the Texan regular artillery from Captain Westover's command. Upon the arrival of Santa Anna's army at San Antonio, the men of Captain Guerra's company were, at their own request, discharged and were replaced by a small company of volunteer artillery, recruited from the other companies of Colonel Fannin's command. They were commanded by Capt. Stephen D. Hurst, from Philadelphia; Benjamin H. Holland, engineer and sailor, from New Orleans, and four Polish engineers commanded guns.

Benjamin C. Wallace, from Erie, Pa., who was chosen as major of the Second, or LaFayette, Battalion; Capts. Joseph M. Chadwick, a West Pointer, born in Exeter, N. H.; John S. Brooks, of Staunton, Va., who had had 11 months' service as private and corporal in the United States marines; and Nathaniel R. Brister, from Fredericksburg, Va., the regimental adjutant, who had served, also, as adjutant in the San Antonio fighting and who had come to Texas as a member of the New Orleans Greys were the working members of Colonel Fannin's staff.

FANNIN AT GOLIAD

Soon after his arrival at Goliad his evil genius prompted Colonel Fannin to strengthen and rebuild the fort. This was unwise for two reasons: Little good could be had from such fortifications, and the time spent in this relatively useless labor was badly needed

for training his men. An American volunteer could not be made to labor unless he was first interested in his work. Convinced of the importance and usefulness of his labor, he wished to stay around and see its results.

Even though much of their 6 weeks at Goliad was so wasted, Colonel Fannin's men, in the battle with Urrea, were much the best trained and most efficient army that Texas, as State or Republic, has ever placed in the field. The weakness of Texan armies in 1835 and 1836 was the unwillingness and inability of the average frontiersman to subject himself to military command. He was invincible with flanks and rear protected—in his own language, when "fighting from the brush"—but a prudent enemy was unlikely to afford opportunities from many conceptions. Offensively, a frontiersman's army could only be used, as at San Jacinto, in a single headlong rush, at the end of which, win or lose, it was entirely out of hand. An attack of that nature could not be risked where there existed the possibility of hidden enemy reserves.

Colonel Fannin was well aware of this fundamental weakness of the Texas armies, and with the efficient help of Captain Brooks and Chadwick, he accomplished miracles in taking it out of his Goliad men. They were not frontiersmen, but came from cultured homes in settled communities and could be made to understand the necessity for discipline and of military training and drill.

Their want of frontier training was a weakness, however, in another respect. Such details of life in Texas as yoking and driving wild oxen, and keeping and riding horses, "on the grass," were without the scope of their knowledge, and this ignorance in the long run cost them dear. And instead of such learning they spent their precious weeks at Goliad strengthening the old fort. This was done under the tutelage of Captains Brooks and Chadwick, and of the Polish engineers. Strangely, it was the Virginian, rather than the son of New England, who was the inventive genius of the twain. It was Brooks who designed a half-moon battery, designed to cover the sally port or entrance to the fort; and it was Brooks who invented an "infernal machine" mounting, in a wooden frame, a hundred old muskets which Collingsworth had captured in October, which could all be fired with a single match—an early nineteenth century version of the principles of machine-gun fire.

FANNIN'S GOLIAD CAMPAIGN

Before the Goliad fortifications were completed—about the time, indeed, that the volunteers had become really interested in that work—there came a courier from Colonel Travis with the report that the enemy in overwhelming numbers had invested Colonel Travis in the Alamo, after retaking the town of Bexar. Colonel Travis called urgently for help. Colonel Fannin made an instant gesture of responding, but his heart was never in the movement, and it ended on the north bank of the San Antonio, 2 miles from the Goliad fort. Colonel Travis' message was received on February 25. Colonel Fannin's gesture toward San Antonio began next day.

Captain Westover's regulars and Captain Guerra's company were left in garrison at Goliad, and Captain King's company was recalled from its outpost duty at Refugio to join them, while Captain Chenoweth, with the available mounted men, went forward to cover the crossing of the Cibolo, on the Bexar-Goliad Road. Colonel Fannin took with him all the other volunteers. A cart broke down, and oxen strayed, and the day was spent at the San Antonio ford. A "council of war in the bushes" ended the movement next day. It was thought best to return to Goliad and continue rebuilding the fort.

Johnson and Grant, after a horse-buying visit to Rancho Santa Rosa and beyond, had separated; Johnson returning to San Patricio with a hundred horses, so acquired, and 34 men; while Grant wandered toward Camargo for more horses with 26 men. General Urrea, after a forced march from Matamoros, attacked Johnson at San Patricio, in cold, rain, and darkness, at 3 a. m. on February 27—the same morning that was spent by Colonel Fannin's command on the north bank of the San Antonio at the end of their futile movement toward Bexar. Johnson's men were encamped in five separate parties, without sentinels, and were asleep. There was no opportunity for resistance, and they were all killed or captured but 6, including Johnson, who escaped. On March 2 Grant's men were surprised, while on the march, at the crossing of the Agua Dulce, and, in their turn, were all killed or captured except 6.

At this time Colonel Fannin, at Goliad, was also becoming seriously embarrassed by problems of supply. Though the cargo of the *Caroline* was landed at Cox Point (now Port Lavaca) on February 14, and another cargo which followed was soon discharged at Cox Point and Dimmitts Landing, none of this abundance of provisions had as yet reached Colonel Fannin in larger quantities than an overnight supply. He did not receive them in quantities until the afternoon of March 10. Of this he complained bitterly, as a reproach to the people of Texas, in a private letter written on February 28.

That indictment requires some explanation, even now. That explanation is that the people of Texas—that is, Austin's old settlers; those whose families were in Texas; those who owned and tilled the soil—had been told, and had believed, since the previous autumn, that Cos' defeat meant the end of the war. They had exerted themselves to the utmost to supply the Texan army before Bexar. Cos was beaten; and insofar as the old Texans were concerned, that was the end of the war. Their present job was planting corn. To do it, they had urgent need of their wagons, teams, and tools. They had no interest in Mexican politics; and felt sure that after they had expelled the obnoxious Mexican garrisons, the Government of Mexico would not dare trouble them again; and they were, for their part, more than willing to let Mexico alone. The Matamoros Expedition was no affair of theirs. Feeding the army, if an army was needed (and that one was needed, they did not really believe) was the business of the government; and if the provisional government failed, or refused, to function, the new convention would assemble March 1. January had been punctuated with rumors of a new invasion. The rumors had had no basis, and Colonel Fannin's alarming messages were likely others of the same sort. Texas' job for the present was growing corn; and if Texas did not grow corn, Texan families, as well as the Texan soldiers, would surely go hungry before the end of the year. War was a pleasurable excitement, after the crops had been gathered in the fall. Meantime, the Texans and their families had to eat. Most of this was wrong, of course, but it was, at that time, the normal Texan's point of view.

In their thought that feeding the army was, first of all, the duty of the government, they were right; and that the government did not so feed them, Colonel Fannin, as much as any other individual, was to blame. His letters were all directed to Acting Governor Robinson, and the discredited remnant of the Council, which was too lacking in character and credit, and had become too impotent and feeble, to so much as hire a courier, much less find wagons, teams, provisions, and military transport or supplies. And yet it lacked the patriotism and intelligence to get out of the way, and permit others to discharge the duties it had failed to perform.

Copano had now been abandoned by the Texans, and remaining at Goliad with the means at Colonel Fannin's command could not save Copano from being put to the enemy's use. Goliad had, therefore, become unimportant as a military post. Of this Colonel Fannin was always quite aware. But having interested his soliders in rebuilding Goliad, and they having become, while so doing, enamored of their work, they were most unwilling to leave it until the enemy had tried it out. Colonel Fanning well knew that he ought to put the Guadalupe between his forces and the enemy, fall back to Victoria, a place "Most defensible by a small force of any, whatever, in Texas," and put himself in contact with, and in position to defend, his supplies; but he lacked the moral courage to suggest "a retrograde movement" to his "sanguine, chivalrous volunteers." These, fed for months on bull beef, were spoiling for a fight. They had not yet come to realize that war was other than an exciting and pleasurable game.

Colonel Fannin, seeking an order that would explain and justify a retiring movement to his men, wrote the rump government, to which he still paid homage, on March 1:

"I should be pleased to have one more express from Washington, and if we are not to be sustained in a proper manner, and in good time, receive orders to fall back to the provisions, and on to the colonies, and let us all go together. Let me repeat to you that I consider myself bound to obey your orders. * * * I have orders from you not to make a retrograde movement, but to await orders and reinforcements."

There was small excuse for his having directed this letter to Robinson and the remnant council—the new convention met the day it was written, March 1. He did so believing, doubtless, that the members of the old council, were, at least, his personal friends. And even that imbecile council should have been able to interpret his letter for what it was—an urgent invitation for an order to retreat. Futile to the end, the ineffective Robinson could only write, on March 6:

"We * * * instruct you to use your own discretion to remain where you are, or to retreat, as you may think best for the safety of the brave volunteers under your command, and the regulars and militia, and the interest of our beloved country requires, unless you shall be instructed otherwise by General Houston, who has by this convention been confirmed and appointed commander in chief of the army of Texas, militia and volunteers, as well as regulars."

Discretionary orders were of small use to Colonel Fannin, who had pleaded for a direct and positive order that would satisfy his men; but even this discretionary order came too late to be of use.

He could have retreated, and, of course, should have retreated, without orders; but that he was "not, practically, an experienced commander," he had already discovered, for himself. But he was a good soldier, though not yet ready for the responsibilities of chief command, and should have been able to guard his soldiers from the errors that destroyed them so rapidly after March 12. The fate of the Johnson and Grant parties should have warned them against going about in small parties of 25 or 30 men. Against this danger General Houston had repeatedly advised them; but Colonel Fannin had seen it done, for months, with impunity in the presence of an unenterprising enemy at Bexar, and could not be made to realize that he was now facing a different type of foe. This practice was now especially dangerous since Colonel Fannin's army, while it continued at Goliad, was virtually blind. He was without cavalry, and every road and trail from Goliad was now under the observation of enemy horsemen.

Pressure, as yet, was but lightly applied; but northern, southern, and western roads were held by the enemy scouts, while the lithe horsemen from Carlos' Rancho kept watch on everything moving toward the East. Fannin's every movement was known to Santa

Anna in less than 30 hours; to Urrea in less than 15; while Fannin, in his turn, had no means of knowing, nor even surmising, what his enemy was doing, day by day. The situation left small hope for Fannin, unless he had evacuated Goliad before March 12, on which day Urrea began his movement from San Patricio, while Colonel Morales also marched to engage him, with two battalions of veteran infantry, and two 12-pounders, from Bexar. Yet, even as these movements were beginning, Colonel Fannin, whose men could not be made to believe in danger from an enemy, particularly a Mexican enemy, whom they could not so much as see, had out at least two parties, of only 20 to 30 men. One, sent under Lieutenant Francis to Carlos Rancho, was not molested. The Goliad people were not yet ready to take chances with the American's wrath. But Captain King, at Refugio, had marched, on an errand of mercy directly into the path of Urrea's advance, and had stirred up a hornet's nest of armed rancheros, allied Indians, and enemy scouts; and then sent to Colonel Fannin, at Goliad, for help. Taking council of his heart, rather than of his military education, or his head, Colonel Fannin hurried the Georgia battalion and Lieutenant Bradford's company, under Lieutenant Colonel Ward, to King's relief. This happening, which led directly to Colonel Fannin's destruction, illustrates the amateurism, as well as the knight errantry on Colonel Fannin's part to send King and his company to Refugio, directly in the path by which Urrea was daily expected to advance. King, at Refugio, had to turn knight errant also, in order to punish some rancheros who had disturbed the Texan families and plundered their deserted homes.

Fannin, as another act of chivalry, sent Colonel Ward to Captain King's relief. He had intended sending Brooks and Chadwick, his two best officers, to insure this expedition's prompt return; but they became lost in the prairie, failed to overtake Colonel Ward, and, finding themselves at daylight near Goliad, returned there at dawn. Ward, at Refugio, was as anxious for the fun of a brush with the enemy as King had been 2 days before. King and Ward quarreled as to which of them was best entitled to stir up the new excitement; and, as a result, King decided to turn knight errant on his own. Urrea was promptly informed of all these movements and would have overtaken them on the open prairie had they kept together and endeavored to return to Goliad by road. Their military errors, therefore, were not of much importance in what ultimately occurred. But they illustrate the hopeless amateurism of the Texan point of view. King and Ward both fought, and fought well, until their ammunition was spent; when, unable to resist longer, they separately attempted to retreat. King was taken on the 15th and shot, with 14 of his men, next day. Ward wandered for a week through swamps and prairies, but was finally taken, on the Garcitas, on March 22, with the greater portion of his men, and was returned with them to Goliad, where they shared the common fate of Fannin's men.

Colonel Fannin, at Goliad, received, on March 14, the long-awaited orders from General Houston to retreat. The retreat was not attempted until March 19. Two days were lost awaiting Ward and King, as well as the coming of Capt. A. C. Horton and his Matagorda company, from Victoria, with teams and carts. No good reason has ever been suggested for not marching on the 17th. It was not done, doubtless, because Colonel Fannin was still awaiting Ward and King. But no good could come from waiting, if they were involved with the enemy; and they could have fallen back as well to Victoria as to Goliad, if they were not. Captain Horton, scouting, on the 17th, toward Bexar, discovered Morales' column, which encamped that night on the Manahuilla, in position to command the Victoria road. The 18th was spent in the excitement of a series of skirmishes with the cavalry of Morales' command.

This wore down the Texan horses—part of Captain Horton's company were mounted men—and left the all-important oxen to stand in the corrals and starve. A plan to retreat that night was abandoned, Captain Horton believing it impracticable to find the roads in the dark. For Fannin's men, who were not frontiersmen, that was no doubt the case. Fannin had nine brass cannon and insisted on taking all of them along. Amateurs to the end, his men brought out all their arms, including the 9 cannon and 500 spare muskets, but loaded all their ammunition in a single oxcart and forgot to bring along anything they could eat. The morning of the 19th was spent chasing hungry and unmanageable oxen and in dragging an unwieldly howitzer across the San Antonio ford. In the prairie beyond the Manahuilla, Colonel Fannin halted so for his oxen to rest. Captains Duval and Shackelford, his best company commanders, objected to this halt without water and where no good military position could be had. Their men smiled. They believed, in all simplicity, that their prudent captains were personally afraid. Pursued and overtaken, Colonel Fannin's men deployed cooly and bravely and, as calmly as veterans could have been, formed a hollow square. The ammunition cart broke down and brought them to a halt. Surrounded in the open prairie without protection flank or rear, without water, and without food, they had reached their end.

But they did not recognize that fact. They fought courageously and calmly through the long afternoon, and only quit when their sympathy for the suffering of their wounded became more than human feelings could endure.

That they were told that their capitulation was an honorable one, and that they would soon be sent to New Orleans on parole, and in that belief surrendered, there can never be a doubt. Whether there was ever such a capitulation, or General Urrea only promised, as he claimed, to intercede with Santa Anna for some such terms, is now beside the point. Santa Anna was solely responsible, on either version of the facts, for the heartless and useless sacrifice of Fannin's men.

CONSEQUENCES

Few events in American history have so gripped the imaginations of the American people as did this bloody and futile slaughter, and no other happening on the North American Continent has more profoundly influenced human affairs.

Paroled and landed at New Orleans, the men who died at Goliad would have become so many witnesses to the incompetence, and worse, of the Texan leaders, to the strange apathy of the Texan people; to the anarchy existing in the Texas government; to Texas' lack of appreciation for the brave volunteers who had hearkened to her call.

They would have become 400 advocates of toleration for Mexico, from 400 cultured Americans, residing in every portion of the United States. Even our racial egotists, weltering in insolence and pride, would have been forced to the admission that the Mexicans, even though not as our people, were not at all bad. Any thought of American interference in the internal affairs of Mexico, or forcible conquest of Mexican territory would have been banned for two generations from all right-thinking American minds.

That any good could come to Mexico from killing them, only the inflamed ego of a despot could have ever believed. The better Mexican officers, loathed, or disapproved, the deed.

But terror is the body servant of the dictator; and ruthlessness is the invariable element in every despot's creed. Santa Anna's was the creed of the dictator, and he took the despot's way.

The grim effect of his cruelty on American opinion was not due to the mere execution of prisoners; its depth lay in the odium of killing prisoners such as these. These men had been guilty of no outrage; they were not filibusters or soldiers of fortune; they were incapable of an act of pillage, looting, or rapine. They were among the brightest and ablest of America's young men; who had foregathered from the best of American families; they were high-minded gentlemen, whose coming to Texas had been without thought of profit or advantage to themselves. Young, imaginative, daring, their hearts were charged with high emprise; in consecrating themselves to the service of Texas, their only wish had been to help a struggling people to liberty and freedom, in the right to which each of them devotedly believed.

Despotism can kill such men; but if it does so, it must pay the price. Nations which yield to despots must pay, regrettably, as well. Santa Anna's payment has been made in the universal obloquy that envelops his name. Mexico, however innocent, has also paid in territory and in pride and in an unmerited reputation for barbarity and want of public faith.

Portilla's volleys, echoing from the banks of the San Antonio, above the bloody forms of Fannin's men, reechoed in after years from the fertile banks of the Rio Grande; from the high passes of the Sierra Madre; from California's forests, shores, and ranchos; from Chapultepec and Churrubusco; from the historic shadows of Mexico itself.

That American opinion sanctioned war in 1846 only by reason of Goliad, we are not left to surmise or doubt. Even with the infamy in which, in American public opinion, Goliad had enveloped the Mexican name, America tolerated a war of conquest against a sister American republic only by reason of the personal management and insistence of President Polk; and James K. Polk became President through the grim determination and inspired leadership of the brother and father of a victim of Goliad, Samuel Smith Sanders, who lies buried with the others in this, their common grave. And no President of the United States, however chosen or however shrewd, could have brought about a war with Mexico but for the bias in American public opinion which the Goliad slaughter had produced.

It is not to the credit of Texas that the men of Goliad should have reposed for a century in an unmarked, unhonored, and almost unknown grave. A hundred and three years have passed since the Texan army, having retaken Goliad, buried their bones where now they lie; and since General Rusk, betrayed by his feelings, broke down in attempting to deliver the simple though eloquent eulogy he had prepared for delivery at their grave. Even now, when Texas, at a very long last, has remembered them, their monument is not in keeping with some that have been builded, to commemorate smaller men and less important deeds. But their real memorials are elsewhere; this one but preserves their names and marks their grave. The flag of their country floating over the Rio Grande's orchards and gardens; New Mexico's, and Arizona's cattle ranges, mines, and farms; the great dams on the western Colorado and its kindred rivers; the city of El Paso, and the even greater cities, as Los Angeles, San Diego, and San Francisco, arisen on America's Pacific slope; the western islands, and the mighty works which span the Golden Gate; these are their true memorials, and although they never knew it, it was for these they gave their lives and such has been the measure of Mexico's atonements for Santa Anna's deed.

And while Texas and Texans have been derelict in consecrating the grave of these, their heroes, there is another tribute due them, in which Texas must not fail. There is an immortality of memory which is close akin to immortality of the soul. Men who die for

their country are due an eternal remembrance in the consciousness of those for whom they die—that immortality of memory, enshrined in human hearts and human minds, which makes their memories live forever in the remembrance of what they have done, and as we dedicate to them this memorial of bronze and stone, we do so in the sure hope and fond belief that the story of their lives, and of their deaths, and of their devotion to the freedom for which they died, will live on in the hearts of the men and women of Texas, and that through the years that are coming, and all the changes that occur, our prayer, at their grave, shall always be, "Lord: Keep their memories green."

James A. Farley

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 1, 1939

EDITORIALS FROM THE DANBURY (CONN.) NEWS-TIMES AND THE HARTFORD (CONN.) TIMES

Mr. SHANLEY. Mr. Speaker, I appreciate the courtesy of this body in extending to me unanimous consent to insert in the RECORD two editorials commenting on the remarkable record of our Postmaster General, James A. Farley, as follows:

[From the Danbury (Conn.) News-Times of July 24, 1939]

FARLEY AS POSTMASTER GENERAL

Reading the address of James A. Farley, Postmaster General, made to the annual convention of Connecticut Chapter of the National Association of Postmasters, one will scarcely realize that the speaker is one of the most successful politicians of the Nation.

The Postmaster General talks of efficiency, courtesy, and duty to the Service. Reminding that the post office handles $8,000,000,000 annually, that it is the biggest single business in the country, that it makes an astonishingly small number of mistakes in handling mail, he says that the credit is not his. The credit belongs, he says, to the long line of those who, in many previous years, gave their lives to the Service.

Its gross for the year was $745,098,350, a record year. This is $17,000,000 more than the figure for 1938, which was then highest of all time. Postal receipts in Connecticut were $11,374,134, which is 20 percent more than the gross in 1934. Mail volume is increasing, working conditions are improving.

The work done by Connecticut postmasters and their staff during the hurricane was commended by Mr. Farley. He said: "If ever the Department's motto, "Neither rain, nor snow, nor heat, nor gloom of night stays these couriers from the swift completion of their appointed rounds' was carried out in its full meaning, it was certainly during those difficult days of last fall when transportation and communication facilities in this State were so badly crippled."

Mr. Farley does a good job at the head of the post office. Many will regret his retirement, if this should unfortunately take place.

[From the Hartford Times of July 24, 1939]

THE POST OFFICE DEPARTMENT

When Postmaster General Farley speaks about the Post Office Department, as he did in New Haven Saturday night he does so with all the satisfaction that a successful administrator of a tremendous business takes in the accomplishment of his organization. The Postmaster General is as felicitous as a narrator of the record of his Department as he is persuasive in his operations as national chairman of the Democratic Party. At the moment he seems likely to go down in history as an outstanding administrator of a great Department of the Government as well as one of the most popular and efficient chief executives of his party.

The Postmaster General is justified in taking pride in the fact that the Post Office Department operated at a "net profit of $10,000,000" during the 1939 fiscal year that ended June 30, during which postal revenues rose to $745,098,350, an all-time high. It is the fifth year that a profit has been reported under Mr. Farley's administration of the Department. It is, of course, a book-keeping profit, for the free services it renders the Government create a deficit.

Interesting, too, is the contribution which Connecticut makes to the postal revenues. Mr. Farley told his audience that in the calendar year 1938 the increase in Connecticut was "one of the best of any State in the Union during the last 4 years." Postal receipts were $11,374,134, slightly under $1,000,000 a month. They represent a 20 percent increase over Connecticut receipts for 1934, said Mr. Farley.

It is doubtless true that postal receipts are a barometer of business conditions, and Mr. Farley's figures indicate a welcome improvement. To this Mr. Farley has contributed considerable through his salesmanship ability. No Postmaster General readily recalled ever was so active in producing new issues of stamps and encouraging their purchase. The substitution of "permit postage," which obviates the use of stamps, has resulted in large savings to the Department as well as to large users of the mails. The Post Office Department is one Branch of the Federal Government of which little complaint is heard from business or the public.

Connecticut seconds what Mr. Farley said to the postmasters about their service during the hurricane last September, and about their general cooperation with the public. While he did not say it, many observers will declare that elimination of politics from the operations of the Department, through the extension of the civil-service system to include postmasters has had much to do with the increased efficiency and the public's general satisfaction with the Postal Service.

But Don't Forget 1940

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 1, 1939

EDITORIAL FROM THE NEW YORK WORLD-TELEGRAM

Mr. MICHAEL J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein an editorial which appeared in the New York World-Telegram of July 31, 1939, relative to the pending Barden amendments to the Wage and Hour Act, which is an excellent illustration of the tremendous good that may be accomplished by the press of our country, whose editorial policies are sincere and straightforward. When these policies are utilized constructively for the purpose of familiarizing millions of readers with the legislative processes, pointing out advantages here and fallacies there, this, indeed, is a civic duty well done. I am bringing to the attention of the House of Representatives their editorial entitled "But Don't Forget 1940," because it is both meritorious and timely, and in doing so I wish to commend the World-Telegram for their series of similar articles on the Wage and Hour Act.

It is my conviction that the Barden amendments to this act by eliminating more than 2,000,000 of the least protected workers from its requirements that a minimum of 25 cents an hour in wages be paid, and by further excluding many millions of other workers from the maximum-workweek provision, is one of the most despicable attempts to oppress the living conditions of the laboring classes that has ever come to my attention. All of organized labor, regardless of its affiliations, is united in bitter opposition to the Barden bill. Should it be presented to the House during this session or next for consideration, I shall continue my efforts in opposition to this bill, or any bill tendered for the purpose of emasculating an act designed for the sole benefit and protection of the workingmen and women of my city and country. The editorial follows:

[From the New York World-Telegram of July 31, 1939]

BUT DON'T FORGET 1940

The House is expected to choose this week among three sets of amendments to the Wage-Hour Act. One is the Norton bill, most of the provisions of which have been recommended by Wage-Hour Administrator Andrews. One is the Ramspeck bill, which goes somewhat further. And one is the Barden bill which would strip the 25-cents-an-hour protection of the Wage-Hour Act from more than a million workers, most of them engaged in processing farm products.

A week or two ago it looked as if the dime-an-hour crusaders who were behind the Barden amendments had decided to retreat. Their principal champion, Representative EUGENE COX, of Georgia, announced that in view of President Roosevelt's denunciation of

the Barden plan, and his apparent intention to veto it if passed, a compromise seemed to be the best way out.

Since then, two things have happened:

1. Administrator Andrews, in an unfortunate press-conference remark, said he no longer favored the plan to exempt from the overtime provisions all workers earning $200 a month or more—because "organized labor" opposed it and "organized labor has done such a swell job of fighting my battle for me."

2. John L. Lewis, in testifying against the Barden amendments, made a sensational attack on Vice President Garner.

The Andrews and Lewis statements played into the hands of the men who think $11 for 44 hours of work in a canning plant is more than the American system can tolerate. The House Rules Committee, dominated by conservatives, quickly decreed that the House should have a chance to vote on the Barden amendments.

The Wage-Hour Division and the House Labor Committee had been fighting to avert such a test on the floor, because they were afraid the Barden bill would win. This newspaper, while it regards the bill as a scandalous assault on a measure of far-reaching potentialities for the public good, cannot honestly concur in the widespread regret at the Rules Committee's action. The House is supposed to legislate. If a majority of the members of that body deem it wise to support the Barden bill, let them vote for it. But let them also look forward to 1940 and reflect that their opponents will inevitably plague them with that "dime an hour" tag.

Or, to put it on a higher plane than that of vote getting, let them explain how real prosperity is going to return to this country unless purchasing power is spread a little thicker in the lower brackets.

National Debt Policy

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

REPORT ON THE WORKS FINANCING ACT BY THE REPUBLICAN CONFERENCE COMMITTEE ON NATIONAL DEBT POLICY

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the report on the Works Financing Act by the Republican Conference Committee on National Debt Policy, made public July 26, 1939:

On June 21, 1939, President Roosevelt announced the fourth New Deal spending scheme. In the month since legislation embodying the President's lend-to-spend proposal has been drafted and introduced, hearings have been held, and the majority leadership, under White House insistence, is bringing the measure to an early vote.

Since New Deal pressure tactics and the desire for adjournment are serving to prevent adequate public consideration of this measure, we, your Special Committee on National Debt Policy, have studied its provisions most carefully so the conference would have the advantage of our findings. We believe the issues involved in this latest artifice of the President to create a gigantic political pork barrel should be disclosed to the Congress and the Country.

Our examination of the scheme reveals that this is but a device for increasing the public debt through a subterfuge; that it is spending by deception; and that it is state socialism by stealth. Consequently, we strongly condemn the undue haste and the dangerous strategy employed by the administration to force enactment of this legislation. The citizens of this country should be given a fair opportunity to decide whether they wish to embark upon such a completely new and questionable policy.

A. A. Berle, Jr., Assistant Secretary of State, admittedly a spokesman for the administration, said:

"If wealth is to be created by creation of Government debt, the scope of Government enterprise must be largely increased. Briefly, the Government will have to enter into the direct financing of activities now supposed to be private and a continuance of that direct financing must be inevitably that the Government ultimately will control and own those activities. * * * Over a period of years the Government will gradually come to own most of the productive plants of the United States." This is socialism.

Only those who have lost faith in America and, as a consequence, have fallen prey to the collectivist infection would propose such a bill as this. The President evidently believes that America is permanently stagnated because in proof of that he points to "vast reservoirs" of private credit. He alleges that this inactive credit justifies a permanent spending program. The President, however, ignores the paramount fact that these reservoirs of credit have been created and rendered stagnant by his own unsound deficit financing program. He refuses to recognize that because of various and devious New Deal policies, contradictions, inconsistencies, and studied hostility toward business the American investor is afraid to risk his capital in ventures that hold little prospect of safety, let alone of profit.

This program of deficit financing and tinkering with the economic mechanisms ensnares us in a vicious circle. The more we spend the more we borrow; the more we borrow the more we spend; and the reservoirs of stagnant credit necessarily grow apace. As these stagnant pools of credit increase, investors become more and more fearful of the future.

Specifically, our analysis reveals that the new program differs in two major and highly dangerous respects from previous New Deal spending efforts. First, spending from now on will take the deceptive form, as well as the deceptive name, of lending; and, second, runaway spending by lending will become a permanent function of the Federal Government and will be under the absolute discretion of the President.

Against this background our analysis leads us to the following conclusions:

(1) This program of deceptive spending is an insidious and pernicious attempt to avoid the $45,000,000,000 statutory debt limit the Congress so wisely set. In addition, let us remind you, Congress has already authorized various and sundry Government corporations and establishments to incur $14,000,000,000 of contingent liabilities which are guaranteed both as to principal and interest by the American taxpayers. Although $9,000,000,000 of these contingent liabilities has not as yet been utilized, the President nevertheless requests that this already staggering sum be increased by $3,000,000,000. The administration apparently lacks the courage to come before Congress and frankly ask for an increase in the debt limit. Instead, it attempts to accomplish the same end by underhand and deceptive back-door methods.

(2) The administration has within its own experience the absolute proof that these so-called self-liquidating projects will not pay their own way. Although the Home Owners' Loan Corporation, the Federal Housing Administration, the Tennessee Valley Authority, the United States Maritime Commission, the Commodity Credit Corporation, the Rural Electrification Administration, and the Farm Security Administration all have incurred vast losses, the administration still pretends that these same things done again tomorrow will turn the losses of yesterday into the profits of the future.

The whole premise is fallacious. The arguments for the bill are specious. The policy is utterly dangerous to the welfare of the Nation, and both the proposals and the underlying principle should be denounced and rejected by the Congress.

Submitted unanimously by the Republican Conference Committee on National Debt Policy.

Daniel A. Reed, New York, chairman; Dewey Short, Missouri; Edward H. Rees, Kansas; Albert E. Carter, California; Albert J. Engel, Michigan; Albert G. Rutherford, Pennsylvania; Albert E. Austin, Connecticut; Albert L. Vreeland, New Jersey; L. L. Marshall, Ohio; Frank O. Horton, Wyoming; Charles Hawks, Jr., Wisconsin.

List of Daily Newspapers Which Are Supporting Editorially the Legislation to Create the Kings Canyon National Park

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. GEARHART. Mr. Speaker, pursuant to the consent of the membership of the House, unanimously expressed just a moment ago, it is my privilege to hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD a list of publications, magazines and daily newspapers, of wide circulation and high influence, which have from time to time editorially endorsed the pending bill to create in California a new national park to be known and called the Kings Canyon National Park, the legislation which passed the House of Representatives with the emphatic approval of the membership just 2 weeks ago today.

The list follows: Alameda Times-Star, Christian Science Monitor, Daily Californian (University of California newspaper), Field and Stream Magazine, Fresno Bee and Republican, Lodi News-Sentinel, Long Beach Press-Telegram, Long Beach Sun, Los Angeles Times, Los Angeles Daily News, Los Angeles Evening News, Modesto Bee, New York Herald Tribune, New York Times, Pasadena Star-News, People's World

(west coast labor daily newspaper), Riverside Press and Enterprise, Sacramento Bee, Sacramento Union, San Diego Sun, San Francisco Argonaut, San Francisco News, Santa Barbara News-Press, Santa Monica Outlook, Santa Paula Chronicle, Santa Rosa Press-Democrat, Vallejo Times Register, Ventura Star-Free Press, Woodland Democrat.

Statement of the Progressive Bloc of the House of Representatives Relative to the W. P. A.—Liberals Fought Injustices Incorporated in Woodrum Bill—Point Out Cruelties and Inequities—Pledge Continuation of Fight to Restore Fair Treatment to Unemployed

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. COFFEE of Washington. Mr. Speaker, Americans, through all their history, have been proud that theirs was a government of the people, by the people, and for the people.

We have been eager to claim that here equality of opportunity existed. And for many years the bounty of nature made this equality of opportunity a reality almost as much as an ideal.

In recent years the scourge of unemployment has fallen upon the Nation, and so far no Congress has had the wisdom and the courage to solve that basic human problem.

Precisely because we needed time to solve it, the administration of President Roosevelt inaugurated, among other agencies—and Congress created—the Works Progress Administration, to hire, at a small monthly wage, people who found it impossible to secure employment in private industry. Through the years these people—W. P. A. workers—have been building roads, making garments, constructing buildings, digging sewers, making parks, and doing many other things for the benefit of the Nation.

Congress has, on the whole, had little concern about these millions of people. They have been dismissed at times by the hundreds of thousands because Congress decided to economize. Then hundreds of thousands have been rehired because Congress changed its mind. Never have they known—these W. P. A. workers—from one month's end to the next what would happen to them. Always they have wished for one thing more than anything else—that they could get a job in private industry.

But they could not. And they cannot now. And until the very Congress that so freely buffets them about goes to work in earnest to solve the fundamental economic problems of America they will, most of them, search in vain for private employment.

The Members of Congress who are termed the progressive bloc are as eager as anyone to see a balanced Budget and an end to increasing Federal public debt. We believe sincerely that legislation already introduced in the Congress—notably in the field of basic reform of our archaic monetary system—would accomplish these ends.

But we are utterly unwilling to cut the ground from under the meager livelihood of the unemployed and the trade of the small-business man by attempting to balance the Budget by further reducing the living standards of those on W. P. A. or by increasing idleness among our people.

Our position is that from any realistic standpoint it is clearly evident that the Nation as a whole is bound to be better off as a result of a policy of employing unemployed people at constructive labor than it can possibly be if a policy of supporting people at a starvation level in idleness is pursued.

So long as unemployment lasts we believe that there should be a sufficiently broad program of public works to employ at least one member of every totally unemployed family. We are convinced that a large proportion of such a long-range program can be made self-liquidating and that by a scientific national accounting system its cost need not be exorbitant. Therefore we have tried to do what we could to protect the basic right to work of the American people. We have done this partly from humanitarian motives and a sense of justice, partly because we knew that it must always be better economy to employ people at useful constructive labor than to permit a wastage in idleness of their talents, their skill, their effort, and their hope.

We condemn without qualification the action of the present Congress in its dealing with the unemployed of America. We are reluctantly driven to conclude that the reactionary forces which dominate the Congress at present are willing to traffic in human misery to gain a political end.

We, members of the Progressive bloc, feel we have a right to make the record straight. In conjunction with one American Labor Party, two Progressive Party, and one Farmer-Labor Party, Members of the House, we fought as hard as we could while the so-called relief bill was under consideration against its harsh provisions. We have never ceased to fight against them. We stand ready to do anything we can about the situation. But until we can command a majority of the House and Senate it is obvious that neither we, who are sadly outnumbered in Congress, nor those charged with the administration of W. P. A. can do anything to change the law.

One or two specific matters should be spoken of. We supported as vigorously as we knew how the Casey amendment which would have provided 3,000,000 instead of 2,000,000 W. P. A. jobs in the coming year. That was the first and most important thing. One of the many reasons impelling our support of the Casey amendment was the inclusion of a provision for the continuation of the prevailing hourly wage for skilled labor. We lost the fight.

We fought the provision for the arbitrary dismissal of everyone, regardless of need, number of dependents, age, or anything else, who has been employed for 18 months. We fought the elimination, or virtual elimination, of the white-collar and arts projects. We endeavored to raise to $123,000,000—the Budget figure—the appropriation for the National Youth Administration. We endeavored to raise the appropriation for the Farm Security Administration on the ground that it is the only agency of Government which is doing work directly calculated to save the American family-sized farm or to meet the desperate need of several hundred thousand homeless migrants.

Since the bill was passed we have followed with sad hearts the evidences of dismay among our unemployed people. Bills have been introduced by members of our group to restore the "white collar" projects including the theater, to correct the wage scales, to eliminate the enforced dismissals of 18-month workers where they affected heads of families and to make the rotation a gradual one with regard to everyone. We have begged for hearings on these bills, but we have been denied such hearings by the committee. Above all, the Casey bill which would provide an additional 1,000,000 jobs is still before the House and could be acted upon if there were enough support both in and out of Congress.

Meanwhile we have done and shall continue to do everything in our power to pass other legislation, the bill for self-liquidating loans for public works, a continuance of P. W. A., and similar measures to increase the employment of our unemployed people. We still hope for success with some of these things. But the same forces that were responsible for the provisions of the so-called relief bill are busily at work trying to defeat these other bills.

In conclusion, it should be made very plain to everyone that the provisions of the Emergency Relief Appropriation Act of 1939 were written into law by a tory coalition comprised of the

solid support of the entire Republican membership of the House—with, literally, not over four or five exceptions—together with a reactionary segment of the Democratic membership consisting of about one-third of the total. The bill in all but name is a Republican measure, and it is only fair that it be so regarded by the Nation.

Construction and Financing of Self-Liquidating Projects

EXTENSION OF REMARKS
OF
HON. JOSHUA L. JOHNS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 1, 1939

Mr. JOHNS. Mr. Speaker, I have reviewed with considerable interest the proposed bill now being considered which was originally entitled "A bill to provide for the construction and financing of self-liquidating projects" (H. R. 7120), but has now been changed under Senate 2864 to the Works Financing Act of 1939. I think it was a mistake to change the title of this bill because if put into full force and effect it certainly would liquidate the Government as the taxpayers would never be able to earn enough money to carry out all the projects that would be started under this bill and the money that would be required to finish and maintain them after their completion.

To me the bill is an admission that we have no formula for economic recovery at the present time. Congress, with little if any encouragement from anybody, except the people back home, have made some progress toward eliminating some of the difficulties under which the people have been suffering by correcting faulty tax policies and reforming the relief program. The public must understand that the present bill is no more or less than a plan to dodge the responsibility of borrowing money to spend under the Budget, which is limited to $45,000,000,000. In it there is the gravest danger to the Government's credit, and there is also grave danger to American business and industry. There is no doubt in my mind, and in the minds of many Members of Congress, that this scheme is the first step in a well-conceived plan to rule the country's economy. The complete socialization of industry is one of its chief aims.

There is no reason for such a program of this kind, and there are many reasons why we should refuse it. We have been assured that everything would be self-liquidating, and would not cost the taxpayers a cent. This, of course, is highly doubtful. Such a program might help this or that particular group, who have some particular pet project they would like to see finished at this time, but who have not the courage or confidence to borrow the money from the banks, or the project may be so questionable that private bankers would not care to finance the project or speculate on loaning the money. The effect of the whole program can only be to carry us still further in the direction of a Government-controlled economy and away from Federal solvency.

We have now had over 6 years of trying to spend ourselves back to prosperity without success and the promise of further efforts along this line will hardly help any by setting up a double budget and calling some of the expenditures self-liquidating. In the end the taxpayer will pay the bill. The greatest need at the present time that I can conceive of is a Government policy that will encourage the flow of billions of dollars of private funds into productive industry. I have seen many magicians perform in my time but those who are handling this bag of magic have brought forth one of the most staggering propositions that I have ever heard or read about in the field of financing.

This spending program began as an emergency measure, and for a time we talked about the amount of money we owed. It finally reached the point where the amount we were owing, or may I say deficits, are now referred to as investments. In the President's letter to Senator BYRNES the President proposes to make this spending a permanent policy. We are assured, of course, that we have nothing to worry about, because all the money that is being spent and the deficits being created through the issuance of the obligations of the Government is money that is owing to ourselves.

If we were assured that all these projects would be self-liquidating, then there would be no reason for the Government to loan anyone money, because the answer would be very simple and without argument. If the projects are self-liquidating, then there is absolutely no need for the Government to go into the loan business, because the commercial banks of the country can and will provide all the financing needed without any risk to the taxpayers. On July 20, 1939, we had $4,490,000,000 in reserves that is ready and willing to be invested in private industry or public programs of improvements.

Mr. A. A. Berle, Jr., Assistant Secretary of State, in a statement before the Temporary National Economic (Monopoly) Committee, stated that the program of large-scale Government financing over a period of years would mean that the Government will gradually come to own most of the productive plants in the United States.

To make it more clear, the money which the Government would borrow under this scheme would not appear in the Budget nor as a part of the public debt, but, of course, the amount that would be borrowed would be added to the large contingent liabilities which the Government is now obligated with. It is simply a piece of trick bookkeeping, which fails to show the actual condition of the finances of the Government, but will, if ever adopted, exceed the present statutory debt limit of $45,000,000,000 fixed by the Congress.

I cannot sum this up better than Westbrook Pegler, writing in the Scripps-Howard newspapers, when he said:

> It is certain also that private business will quit trying to operate as such, but will throw in with the Government and accept political management rather than go to smash resisting. This may be the only way out now, but if so, this will be fascism, American style, and the nature of the substitute for the American form of government and capitalism should be stated openly by those who are trying to create it so that the people may make the decision. Instead, up to now they have been inched along toward fascism by leaders who constantly reiterate their devotion to democracy.

Frank R. Kent, writing in the Baltimore Sun, puts it in very few words, but which are understandable to every American citizen:

> It is a straight stride toward a socialistic state, where all credit will be controlled by the Government—all business, big and little, will lean upon the Government; States and municipalities be so heavily obligated to the Government and so many persons supported by the Government that individual independence and initiative will be wholly lost.

No wiser words have ever been uttered by anyone than these.

The figures I am going to give you ought to convince Members of Congress that the program outlined in this bill should not be adopted. I feel, however, before giving them to you I ought to discuss with you briefly the spirit of the American people who have through their sacrifices in the past built the great institutions that have so gloriously made the United States the outstanding Nation of the world. There is written in every marker that identifies this Republic's sacred shrines, every monument that pays tribute to its immortal dead, the story of a militant and indomitable spirit that overcame every obstacle in the realization of a prosperity, a freedom, and happiness never known this side of Paradise.

With our trials and tribulations, if we really wanted to put our finger on the sore spot in America today, I do not think we would have any difficulty in doing it. It can all be boiled down to the obvious truth that we the people, aided and abetted by our Government, are trying to find a substitute for hard money and hard work. And the only known substitute for hard money and hard work is hard times. Science has performed many a miracle, but the alchemists in the Middle Ages who tried to transmute lead into gold could

not fool Providence. And the poets and philosophers who have long dreamed of an indolent Utopia, where man could become prosperous and happy without work, all died in poverty. We shall earn our bread in the sweat of our brows.

Could we summon from their tombs the martyrs of Lexington, Concord, and Bunker Hill and let them testify how they died that we might be free, then we all might be moved to write a new Declaration of Independence. The Declaration of Independence and Constitution were sacred to our forefathers because they were written in blood, and I think that America as we have known it for 150 years will be insecure until we, their sons, if need be, are also willing to die to crush any form of tyranny that threatens to destroy the liberty they handed down as our richest inheritance.

Need we be reminded that freedom is not something fixed and permanent? Every page of recorded history testifies that freedom is something for which men are forced to fight for over and over again and again.

For the purpose of the consideration of this bill, we need not concern ourselves here with despotisms abroad in which cowering peoples, through the fear of tyrannies, or in exchange for a bit of gold braid, have goose-stepped themselves into subjugation. We have troubles enough of our own, as we barter our ancient freedom for a mess of patronage, and an easy way for living.

We are free here to act today and do something to stop the reckless spending that has been going on and help save the Nation, and I feel that it is our duty to exercise our independence right here to do so. Of all the slaveries known to our kind from the time that men, as chattels, were chained to their carts, there is none as subservient as that which enslaves the mind or puts men's souls in fetters.

There is nothing vainglorious in the boast that I am a happy spirit today because I am free. Thank God, there is no issue in America that I am afraid to meet, no crisis that I am unwilling to face. I have no mortgage, political or otherwise, on my soul, and I accept the challenge of these changing times as a personal and patriotic responsibility.

A man might become more prosperous with his tongue in his cheek and his conscience on his sleeve, but he cannot do it and be happy. We live in a superselfish epoch. Thousands of organizations of one kind or another give lip service to great ideals, but pinch their purses and a coward squawks. I drank my democracy from my mother's knee, but greater than either a Democrat or Republican is to be first a good American citizen. And even greater than being an American is to be a free and unselfish patriot.

With these few preliminary remarks I am going to quote the following from an American, with whom every Member of this Congress is acquainted. He is no less a personage than the President of the United States, when on October 18, 1932, he made this statement, and certainly, if it was true at that time, it is just as true today. I quote:

> The credit of the family depends chiefly on whether that family is living within its income. And that is equally true of the Nation. If the Nation is living within its income, its credit is good. If, in some crises, it lives beyond its income for a year or two, it can usually borrow temporarily at reasonable rates. But if, like a spendthrift, it throws discretion to the winds and is willing to make no sacrifice at all in spending—if it extends its taxing to the limit of the people's power to pay and continues to pile up deficits, then it is on the road to bankruptcy.

I feel, before we can conscientiously vote for or against this bill, we should have before us some of the facts and figures regarding the tremendous amount of money that has been spent to remedy some of the same conditions that this bill is intended to cure. I am going to give you the expenditures of this Government beginning with June 30, 1933, and down to the fiscal year 1939, a period of 6 years. For the fiscal year ending June 30, 1933, these expenditures amounted to $3,559,000,000:

1934	$6,353,000,000.00
1935	7,581,000,000.00
1936	8,969,000,000.00
1937	8,550,000,000.00
1938	7,684,000,000.00
1939	9,268,338,030.54

Of course, with these great expenditures it has been necessary for us to keep the Budget out of balance for 6 years, and it was out of balance for 3 years prior to that time. We have reached the point where those responsible for these deficits no longer refer to them as deficits but as "investments." Of course, you realize as individuals an investment in deficits soon leads to disastrous consequences with the individual, and, of course, it is no different with the Government, which is a collection of individuals. The deficits for the fiscal years beginning with 1933 are as follows:

1933	$1,942,000,000.00
1934	3,238,000,000.00
1935	3,780,000,000.00
1936	4,853,000,000.00
1937	3,256,000,000.00
1938	1,442,000,000.00
1939	3,940,591,612.61

These deficits have constantly increased, except for the years 1937–38, and this has been true notwithstanding the fact that the taxes of the Government have also constantly increased since June 30, 1933, when the receipts were:

1933	$2,079,000,000.00
1934	3,115,000,000.00
1935	3,800,000,000.00
1936	4,115,000,000.00
1937	5,293,000,000.00
1938	6,241,000,000.00
1939	5,327,746,417.93

In 1933 we had approximately 11,000,000 unemployed people looking for work. Today we have approximately the same number, and our relief expenditures have constantly increased. At the end of the fiscal year 1934 they were $1,846,000,000; 1935, $2,353,000,000; 1936, $2,387,000,000; 1937, $2,505,000,000; 1938, $1,983,000,000; 1939, $3,104,687,554.41. The increase this year over 1938 is approximately $1,000,000,000.

I also desire to call your attention to the fact that on July 15 of this year our public debt was $40,612,115,666.77. For the corresponding period 1 year ago it was $37,164,662,338.70, or an increase of $3,447,453,328.07.

We are now paying, with the lowest rate of interest on record, about $1,050,000,000 interest on our public debt each year. With the expenditure of all of this money, we have more people on relief and unemployed than we had 4 years ago. In 1928 we were using new capital in private enterprise at an average monthly rate of $446,000,000. Last year the average monthly rate was less than $70,000,000. That was not even enough to keep modern equipment for the workers now employed, as it takes about $4,000 of capital to equip a job for each worker. In 1928, 75 percent of our new capital went into private enterprise and 25 percent of it into governmental expenditures. Last year less than 20 percent of it went into private enterprise and more than 80 percent of it into governmental expenditures—20 percent into jobs which produce the wherewithal to pay taxes, 80 percent into jobs which consume taxes. Of course, the result of all this is that the Government apparently grows richer and richer, while the population grows poorer and poorer.

This bill proposes the spending of a great deal more money for public works and other purposes. From the figures I have given you, you will realize that we have spent billions of dollars, and so far as any perceptible recovery from the depression is concerned, we seem to be about where we were when we started in 1933, except we have created billions of dollars of indebtedness.

You may be interested in some of the amounts of money spent for public works. In 1931 we spent for public works $421,000,000; 1933, $472,000,000; 1935, $766,000,000; 1937, $1,100,000,000; 1939, $1,250,000,000. In 9 years we have spent approximately $7,000,000,000 in public works and so far as recovery is concerned it is still not in sight. These figures do not include the Works Progress Administration but include only nonrelief public works.

It is of interest to note some of the items for which this money is being spent. For public roads the estimated expenditures this year is $232,000,000. At first it extended only to roads between municipalities. It now extends in millions

of dollars a year to roads within municipalities. To begin with it extended only to the main roads. Now it extends also to feeder roads. Last year to feeder roads $5,000,000, this year $20,000,000, and next year $25,000,000. This expenditure for a time did not extend to the elimination of local grade crossings. Now we are using money for this purpose also. Last year for grade crossings $10,000,000, this year $40,000,000, next year $50,000,000. This will give you an idea how these expenditures increase from year to year and these projects also increased and added to. Herein lies the great danger in the passage of this bill.

This year we will have spent $60,000,000 in Federal public buildings in more than 700 American cities and villages. In addition to this we have given grants to local governments for structures wholly non-Federal and wholly local in the amount of $392,000,000. These projects cover all of the 48 States and are grants for school buildings, dormitories, zoos, hospitals, laboratories, nurses' homes, viaducts, street lights, traffic signals, police stations, jails, sewers, water mains, drains, bird farms, fish hatcheries, gymnasiums, stadiums, bathhouses, swimming pools, parks, and country clubs. Of course, the Public Works Administration does not have to force municipalities to take these gifts because the public is constantly asking for more and more from the Public Works Administration. The latest list covers approximately 6,000 proposed projects, which would cost nearly $800,000,000. It has reached the point where the Congress is constantly being pressed for more money to be given to the Public Works Administration to build more and more projects.

The Works Progress Administration has cost the American taxpayers a neat sum of money in the last few years. For the fiscal year 1936 the sum of $1,263,661,000; 1937, $1,896,447,000; 1938, $1,472,499,000; and for 1939 approximately $2,250,000,000. Congress has just appropriated for the year beginning July 1, 1939, $1,477,000,000, which in my opinion will not be sufficient unless business improves more than I anticipate it will during the coming year, and I think Congress will be called upon again after we convene next January to take care of people unemployed and on relief. Over $200,000,000 a month was spent last year, and of course with a reduction this year it means a direct loss to business of $36,000,000 a month. Officials estimate that a total of $72 per month is spent for each W. P. A. worker. It is estimated that 22,000,000 persons receive some form of public aid annually. These costs, moreover, show little indication of shrinking. Old-age assistance, either under relief or social-security benefits, are certain to increase. Furthermore, the administration, by separating the National Youth Administration from W. P. A. in 1940, indicates that young persons, too, will continue to demand special treatment. Old people and youth, in fact, constitute the gravest relief problems in the land, for private industry is reluctant to employ persons beyond 45 years of age and shies at hiring inexperienced workers between 18 and 25 years. These groups will remain longest on relief rolls.

I shall not mention the tremendous increase in the expenditures for the Army and Navy, because this is an item that we all agree is necessary for national defense, but many agree that it is much more than is necessary for the defense of the Nation.

It may be more interesting if we just take the first 15 days of this fiscal year and take the deficit, which was at the rate of $22,359,366 a day, or $931,223 an hour or $15,520 every minute, we can more fully appreciate perhaps the speed at which we are reaching the point of repudiation, inflation, or bankruptcy. Our total expenditures for the first 15 days was at the rate of $32,097,333 per day.

I am indebted to the American Federation of Investors, Inc., for the figures I am going to quote to you, who have made a comprehensive study of 163 typical business corporations, representing a cross-section of American industry showing how enormous expenditures of Government are consuming more and more of the earnings of American industry, the loss falling most heavily on millions of workers, savers, and investors. This survey was made for the year 1938 and cover some 163 typical business corporations having forty and one-half billions of assets, six and one-half million stockholders, and three million employees.

Out of every dollar that they took in last year 61.6 percent went for taxes, and the net earnings were 38.4 percent. The total income from these 163 corporations was $2,666,192,399 and the taxes of these companies for 1938, Federal, State, and local, took the sum of $1,643,466,791 of this income, leaving only 38.4 percent available for dividends to the investors, or for conversion to surplus to meet the needs of plant expansion or other necessary purposes.

Some of the interesting figures are that American industry paid more than twice as much in taxes for 1938 as was paid in dividends to common stockholders. The total number of employees of these 163 companies in 1938 averaged 2,854,000, or less than one-half the number of investors in common stock. The average number employed per company in 1938 was 17,601 compared with an average of 21,141 per company in 1937. The taxes paid in 1938 by these companies were equivalent to $283 per common stockholder and to $576 per employee. These companies had 602,683,000 shares of common stock and these taxes amounted to an average of $2.73 on each share of this stock, while the dividends paid to the 5,806,000 holders of common stock was equivalent to but $1.33 for each share of common stock. Nineteen of these companies reported a deficit before taxes, while the earnings of 15 others were wiped out by taxes, leaving net deficits for the year.

I agree with the final statement of this organization in which it states:

> Self-protection is nature's first law. Unless the thrifty, middle-class citizens who constitute the workers, savers, and investors of America unite for self-protection, their hard-earned savings and investments may be completely wiped out by taxes resulting from huge governmental expenditures. Government debts and obligations must be paid. The only way to reduce taxes is for the people to insist that their representatives reduce governmental expenditures.

Our taxes today take from the people approximately $16,000,000,000 annually. This is approximately 25 cents on every dollar out of an income which has been very low for 10 years, and still the Government debts and taxes keep getting higher and higher every year. These taxes today amount to more than twice the entire farm or agriculture income. In other words to bring home clearer to the farmer this tax burden is so great that it requires 2 years' work and the entire income of the 40,000,000 of our people who work and live on farms to pay the national tax burden for 1 year. As a result not only agriculture, but business, industry, and labor are in a depressed and chaotic state today. These destructive and burdensome taxes naturally destroy purchasing power, curtail consumption and production, lead in the end to unemployment and then relief, which means more debts and more taxes and as a result we have a vicious circle that continues all the time. It has reached the point where these burdensome taxes are so depressing that they destroy the incentive for capital, business, and industry to go to work and build up our Government and develop it as has been done heretofore in the past.

We all know that in the final analysis these governmental debts and taxes must be paid and must be paid through the sweat and toil of our farmers, laborers, and workers. It is self-evident that we can have no substantial recovery, or any sound recovery and these conditions will continue to grow gradually worse until the people are given relief from these mounting debts and taxes. They are undermining the principles and the very foundation of our Constitution and our representative Government that we have enjoyed for so many years in the past.

I cannot sum up what I have said any better than to quote the words of Mr. Robert M. Harriss, of New York City, which was placed in the CONGRESSIONAL RECORD a few days ago, when he said:

> In conclusion, we have the choice of two roads ahead. One road is the road we are traveling, the wrong road—the road of

Government borrowing, spending, crop reduction, regimentation, interference, and competition with agriculture, industry, labor, business, banking, increasing governmental debts, and uneconomic, punitive, and strangulating taxes. The end of this road is inflation, repudiation, and disaster.

The other road is the right road, the constitutional road. It will require courage, and fortitude to take the constitutional road because we must have the strength of mind and justice to face and equitably adjust the tax, debt, or money question and adopt a sound, constructive, economic, and financial program. Delay may mean the loss to us and our children of that wonderful God-given form of constitutional government we inherited from the founding fathers. Therefore, before it is too late, whether we be Democrat, Republican, or Independent, let us all unite in this most serious crisis in the history of our country and demand that Congress take the right road, the patriotic road, the constitutional road. "The price of liberty is eternal vigilance."

Heretofore in these remarks I quoted from an address, also of the President, who had this to say on September 29, 1932, at Sioux City, Iowa, and certainly if the language used by him at that time was appropriate it is much more so today. I quote:

We are not getting an adequate return for the money we are spending in Washington, or to put it another way, we are spending altogether too much money for Government services that are neither practical nor necessary.

This Congress has appropriated approximately $13,000,000,000, more money than the last, although it was elected on the promise it would be more economical.

We are now asked to add to the billions already appropriated—much of which I voted against—this new and additional indebtedness creating new and larger deficits. I know not what other Members of this Congress intend to do, but for myself, I intend to vote against this bill and all others during this session that put additional burdens upon the people. I shall keep my campaign pledge to my people who elected me.

Progressive Republicanism Required for 1940

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

RADIO ADDRESS BY HON. JAMES C. OLIVER, OF MAINE, JULY 29, 1939

Mr. OLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on July 29, 1939:

Citizens of the First District, the past 2 weeks in the Congress—a period of uncommon hustle and bustle, born of the desire to bring the session to a close—have been in their nonproductivity sadly reminiscent of the many weeks gone before. Wisdom and desire to advance the best interests of the American people have been lost in the hectic jockeying of forces designed to enhance the chances of predomination of this or that school of thought in the Congress and during the coming Presidential campaign. Such jockeying makes for strange bedfellows, strange results, and strange ignoring of the demands of justice and service to the great mass of the people. It breeds an unhealthy state of government and its defeatist aims can inspire nothing more than contempt and loss of faith upon the part of the people. Sad to say, this session of Congress has resulted in just such a loss of faith. Faced by problems of vital and tremendous importance, this Congress has failed to meet its obligations. The results are manifest everywhere throughout the Nation.

Since that dark day when the very heavens poured their portent of woe in a veritable cloudburst upon the sodden, blurred, discomforted pageantry of President Roosevelt's second inauguration this evil result has been unmistakably indicated. The ensuing years have seen the ripening of the inevitable harvest—the harvest born of folly, of impractical theories, of deliberate evasion of avenues of escape from economic misery, of nonsense gilded to imitate wisdom, of selfishness and personal ambitions run amuck in a frenzy of Democratic Party back stabbing and throat cutting and brawling, of one mad scheme after another desperately seeking to stem the crash of madder schemes condemned.

Desperation has ruled at one end of Pennsylvania Avenue; jealousy and disloyalty to party and to leader at the other. Upon all the land which these men were elected to govern wisely and to rescue from misery, have fallen the ever-deepening shades of disillusionment and discouragement and chaos; have fallen want and increasing economic misery to presage what we must inevitably behold again and very soon—pitiful queues of fellow Americans stretched into bread lines.

Let no man mistake the bold handwriting upon the wall. The house of cards men termed the "New Deal" has collapsed. The once immeasurable personal popularity of the leader of that New Deal has paled into a pitying regret of the sadly mistaken; into sorrow that one so magnificently favored by opportunity to perform great service to his fellow men has been betrayed into folly upon folly by his weakness for harkening to opportunists and theorists and fools. The vaunted cry of abundance has produced only greater want, only wider spread destitution, only a greater number of pauperized citizens, only greater dependence upon governmental and local charity for the existence of the many; only, such lessening, as to border upon stagnation, of buying power among the mass of the people; only the amassing of a national and of State and local governmental debts such as beggar the imagination and shake the very foundations of faith in governmental solvency. The shade of Barnum must shake its head sagely as it scans the shambles, for, true again is proven by this New Deal harvest, the old adage that "you can't fool all of the people all of the time." The time of fooling is past. Even the most faithful cannot but accept the fact of the collapse of the house of New Deal folly upon its contents of impractical theories.

No, my friends; no longer may a radio voice alone suffice to mesmerize its hearers into forgetfulness of want and misery and discouragement. No longer is hope content to find sustenance in glib but empty promises of recovery. No longer is faith content to repose in the works of the New Deal nor in those of the bickering, warring, recovery-impeding "brain trusters" of whom the New Deal stands as a symbol. Mark well my words. The great debauch of common sense and practicality in government nears its end. Remains but the dread aftermath—the inescapable menace of the morning after—the day of reckoning. Awaits thereafter the need of a man in the White House and courageous men upon Capitol Hill to clean up the mess left by the present administration. And where shall America find such a man and such men?

Let desperate New Deal job holders babble as they will of a third term for Mr. Roosevelt; but, to my mind, the possibility of such national calamity is as remote as the stars; just so remote, as enlightened America knows, and Mr. Roosevelt himself knows, that he couldn't be reelected, even were he miraculously nominated in the face of the bitter and widespread opposition in his own party. It is doubtful that he could be elected even in the event of war or threatening war, no matter how many Wilsonian devices he might use to try to keep America from changing horses while crossing a stream. That Mr. Roosevelt is well aware of the hopelessness of any third-term ambition appears manifest by his recent about face toward organized labor, once his especial pet when votes were to be needed. That, the frank among his advisers who dare speak truth to him, must have warned him of the futility of seeking a third terms appears logical to believe. And that the American public knows he hasn't a fiddler's chance to be reelected is evidenced everywhere. The reign of Mr. Roosevelt draws to an end. And the stalwarts of his own party, the leaders he swept and swung into office and affluence, long ago sensing the approach of that end, turned from servility to insolence, from respect to disrespect, from cooperation to deliberate obstruction of his wishes. Began then the jockeying for strange bedfellows, the face for prominence, the ignoring of duty, and the forgetting of the people. The back-stabbing and the throat-cutting and the intra-party warfare of the brothers of the donkey goes furiously on, my friends. The fruits of this session have been poisoned by it, the hope of America have been destroyed, and the peope have been forgotten in its fury.

But the people, ladies and gentlemen, the citizenry which these self-centered and forgetful party warriors have failed to aid but have permitted to plunge deeper into economic misery, the people who have watched a glorious hope die ingloriously and who have awakened at last to the terrible hoax played upon them, these people are not going to forget. As months rolls on and the bread lines grow before their eyes, they will recall other bread lines—shorter bread lines once deemed so horrible in that day when a man in whom they had reposed their faith and a party in which they hoped to find salvation voiced great promises of abundance and justice and a new deal for all. They will remember. Have no doubt of that. They will remember and they will be filled with bitterness and resentment against those who have betrayed them and they will be in no mood for crooners upon the radio nor pompous mouthers of platitudes upon the stage of Congress. Their revulsion will be against Roosevelt and his cronies, as it was against Hoover, Andy Mellon, Ogden Mills, and all the rest they swept from the national stage in 1932; and what then, my friends? To whom will they turn in their desperation and wrath? From whom will they expect guidance out of the morass into which the New Deal has led them? That is the question in 1940. But be not too certain that you know the answer, now.

On the face of things one might hazard the prophecy of a Republican victory—of the election of a Republican President and a general defeat of Democrats. But that is a snap judgment and one based upon the ignoring of a great many considerations. It leaps at the erroneous conclusion that a repugnant Democratic Party presupposes an attractive Republican Party. Nothing, my friends, could be further from the truth, nor less likely to satisfy the demands which the American people may be expected to press when next election rolls around. Let us not forget the ability to remember of those whose votes swept the last Republican administration out of office. The bitterness impelling that purge may have faded somewhat and the ugly opinion of things Republican so generally prevailing in 1932 may have softened with the years, but you can bet that people are not going to be content to vote for any revival of republicanism under leaders of the type then in control of the Republican Party.

If the Republicans are to win in the national elections, their victory must be predicated upon a sound, easily understood, and immediately effective program designed to rectify the faults underlying our present chaos and unemployment and general economic misery. Promises will not serve. High-sounding but empty references to economy and conservatism and a return to the "good old days" are not going to be sufficient to attract the voters. Success cannot be won by following leaders whose names awaken ugly memories and arouse instant suspicion. We can't go back to Old Guardism with even the faintest hope of victory. We can't offer candidates whose reputations savor of reaction or whose only stock in trade is solely vague babble about economy or normalcy or "return of confidence." When we offer economy it must be an economy not of dollars alone but of human values, an economy pointed toward the widened extension of opportunity for our people to rescue themselves from misery and destitution and pauperization and despair. If we are to offer normalcy, it must be the normalcy of decent living and decent working conditions and decent promotion of honest trade. It must be a normalcy in which social justice reigns; a normalcy in which businessmen are free of the thousand and one senseless impositions of government which serve no purpose but to employ a horde of political proteges; a normalcy in which there shall be work for the willing and labor is insured a just wage in return for honest effort; and it must be a normalcy in which the Government is not supporting but is supported by its people as it rightfully should be.

The success or defeat of the Republican Party in 1940 lies wholly in the hands of the rank and file of that party. The Nation is normally Republican. Only the follies of reactionary leadership brought republicanism to the sorry pass where America disowned it and turned in desperation to the opposition. And today the question of the leadership Republicans choose to follow in this State and in every other part of the Nation is the vital one. Upon that choice hinges success or failure, for that choice must be such as to restore confidence and faith among the mass of the people, among those who turned away from the party in disgust in 1932, and among those desperate millions of our fellows who are disillusioned and distrustful and determined to become pawns of politicians no more. The choice of the Republicans must lie between the outmoded, reactionary, self-interested, and self-ordained leadership once dominant and now eager to dominate anew, and the younger, newer, more aggressive, far-sighted, and well-informed men who alone possess the qualifications and the records of service and the honesty of purpose warranted to appeal to the exacting demands of the American voter of 1940.

You are aware, ladies and gentlemen, of both types of leaders here in the first district and in the State. You know the reactionaries whose leadership shared in putting the party on the rocks in 1932. You know that those same leaders are striving to regain control, to insinuate their stooges into office, to rule the roost for their own purposes and for the furtherance of their own egotistical desires rather than for the welfare and advancement of the people. Their stooges are unmistakable, for their platforms are built upon nothing more substantial than vague references to economy and service and return of confidence; references devoid of specific substance, devoid of definite form, and mouthed with a glibness that betrays frequent rehearsals at the behest of their scheming masters. Of such beware! Their ilk created the debacle of 1932 and stand repudiated by the American people.

And, too, ladies and gentlemen, you are aware of the other type of leader, the leader whose efforts are expended solely in the interests of the people and who recognizes no master but the will of the people he serves, rich and poor, humble and affluent, alike. Upon such rests the true destiny of the Republican Party and the only hope of political victory in 1940. The choice is yours, to go onward toward the restoration of national faith and prosperity behind such leaders, or to go back to the leadership of the reactionaries and their stooges; the fruits of whose leadership no man can forget.

That choice will face every Republican in 1940. As you, the good people of Maine choose between self-seeking reactionaries and forward-looking, sincere servants of the people, so must the Republicans of America choose. Upon that choice rests success or defeat for the party—defeat, if reactionaries be chosen; success, if wisdom prevail and leaders deserving of faith and confidence lead the way into the battle of ballots. May your choice and the choice of all America be wise.

Friends, on January 14, I started my scheduled broadcasts for the first session of the Seventy-sixth Congress with the statement that congressional action in 1939 must be appraised with the 1940 Democratic political convention and Presidential nomination contest in mind. So, tonight, in the shadow of adjournment, as I close this series of congressional reports, it is completely apparent that major legislative activity on Capitol Hill in Washington has been strenuously influenced by those factors. Seven months of political jockeying at the expense of the American people with its resultant confusion and chaos for all.

It has been a real pleasure for me to have been of this radio service to you. I hope my efforts have held your interest. After adjournment I shall be available and shall welcome your personal call on me at 305 Federal Court Building in Portland.

Good wishes and good night.

A Pain in the Industrial Neck

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. HOFFMAN. Mr. Speaker, the President seems to feel that everyone who does not agree with him in every particular is "out of step" with the times.

Not so long ago he asked a committee to tell him why people would not invest their money, engage in business enterprises, and give employment. If President Franklin Delano Roosevelt would send out "in the sticks" for a few hundred copies of little daily newspapers, small weeklies and semiweeklies, whose editors and publishers get down to their offices around 7 o'clock in the morning and who leave only when the day's tasks are finished; who are industrious, thrifty, and economical; who live cleanly and think clearly; who meet and solve practical problems every day as they arise—and read what those men, reflecting as they do the thoughts and the considered judgment of thousands upon thousands of workaday, taxpaying, patriotic Americans, he would learn that the thing that frightens those who could and would give employment and bring back prosperity is the fear of what they believe a very unreliable man named Franklin Delano Roosevelt may do.

The trouble with the President is that he listens to the "yes-boys." He surrounds himself with self-seeking, ambitious, impractical men who have nothing to offer but vague, extravagant promises incapable of fulfillment.

Here is an editorial from the Sturgis Daily Journal, published in the southern section of Michigan, down near the Indiana line, by Mark Haines. I do not know whether Mark drinks whisky—if he does, I hope he drinks the same brand used by Grant and JACK GARNER. I do not know whether he plays poker, seven-up, casino, authors, or old maid—but I hope, if he does play cards, he is as successful at it as JACK GARNER is reported to be. I do know that he is the same kind of a family man that JACK GARNER is; and, with all due respect to the President and his friend Lewis, Jack's example in his domestic life is not a bad one to follow. In fact, it is one of which most Americans are proud.

But back to the editorial, which reads:

A PAIN IN THE INDUSTRIAL NECK

Ray Tucker, in his National Whirligig Column, points out that the wage and hour law is well along the road to being nullified in the same way that the Volstead Act was nullified. The Federal dictatorship over the number of hours that a man shall work is being resented by employer and employee alike. Tucker says that the law is being violated in full or in part almost every day and everywhere, usually with the connivance of employers and employees. Already there are 19,000 complaints piled up in the central office of the Wage-Hour Administrator in Washington, with little likelihood that even a small fraction of them will ever be acted upon. Administrator Andrews' staff of investigators is hopelessly inadequate to run down and check up on all of the complaints that are being made. Congress is notably unsympathetic toward the statute and refuses to increase appropriations for its administration.

The wage and hour law is a loosely drawn statute that was filled at the outset with the seeds of controversy. There was and is very little objection upon the part of employers to the minimum-wage feature. It is the arbitrary limitation on hours that has worked to the disadvantage of worker and employer alike.

The chief objection to the wage and hour law is its inflexible regimentation of all kinds of businesses under a single formula. It should have been obvious to the lawmakers at Washington that there is no fixed workweek that can be adapted to all types of industry. There are some occupations where even 40 hours is too long a workweek. There are other trades in which 48 or even 50 hours can be worked with no serious drain upon the worker's strength.

What has happened is that the law has forced employers and employees to enter in to a conspiracy to evade the provision of time and a half for overtime. This creates a situation that is manifestly unfair to the firms that are conscientiously observing the provisions of the act.

The law as it now stands is detrimental to both employer and employee. The theory, of course, which has not worked out in practice, is that restricting hours of work would increase employment. It hasn't worked out that way. Pay rolls have not been increased and there has been no obvious increase in the number of jobs. On the contrary hundreds of thousands of workers in all kinds of industries have been forced to accept a cut in their weekly earnings because of the restriction on hours worked and the punitive time and a half for overtime. Owners of businesses have found that they cannot operate profitably on time which costs them 50 percent more than their industries have been accustomed to. They have simply dropped to the 44-hour week and reduced production to that schedule.

Nullification is always a drastic and dangerous expedient because it tends to destroy respect for all law. The wage and hour law should be amended to eliminate the restriction on hours, or at least provide machinery for different types of business to establish their own limitation on hours. Otherwise the act faces the same fate as the effort to impose prohibition on the country.

If the President will examine into the workings of his social-security law, his Wagner Act, and his wage-hour law, he will discover the real causes that are preventing recovery.

Mark Haines knows what he is writing about because he knows conditions outside of Washington, as do the thousands of other editors. The President would do well to mix a little common sense with his idealistic theorizing.

The Oriental Crisis—What Can We Do?—H. R. 5432, the Japanese Embargo Bill

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 31, 1939

RADIO ADDRESS BY HON. JOHN M. COFFEE, OF WASHINGTON

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I append hereto a radio speech recently delivered by myself in the city of Norfolk, Va. I have introduced a bill, H. R. 5432, which, in effect, embargoes the shipment of munitions and essential materials of war from the United States to Japan, and otherwise restricts or interdicts commercial intercourse between such two countries. The following radio address discusses this bill and the reasons justifying its proposal:

More than 10 months have rolled by since the "peace" of Munich deepened the war crisis in Europe, intensified Japan's war of conquest in the Far East, and brought home to every American family the truth that our own national security, our own peace, are in danger.

In that brief period the people of the world learned the lesson that peace is not to be bought by "appeasing" the Fascist war makers. They learned that if we are indeed to know "peace in our time" there must be no more Munichs. Even Mr. Chamberlain was forced by the people of his own country and by the bitter logic of facts to admit that what followed Munich "cannot accurately be described as peace."

THE PRICE OF APPEASEMENT

These were expensive lessons. The free and independent Republic of Czechoslovakia, a foster child of our own great democracy, died while we were learning. The peace forces of the world surrendered its powerful army, its great munitions works, and its impregnable fortifications to the German war machine. Betrayed by the policies of "nonintervention" and American "neutrality," Spain became a new and important base for fascism, from which it could strike at Britain's life line to the Empire and at our own vital interests on the Western Hemisphere. Italy seized another strategic advantage by swallowing Albania. Hitler helped himself to Memel. The Japanese militarists took Hainan and the Spratley Islands, commanding the approaches to French Indochina, Hong Kong, British Singapore, and the Philippine Islands.

It was clear that peace and the interests of all peace-seeking nations are indivisible. It was clear also that the smallest surrender to any one of the three axis powers strengthened the axis as a whole and whetted the appetite of its rapacious partners, Germany, Italy, and Japan.

We in America have not escaped payment for these lessons that we were so reluctant and so slow to learn. We are paying for them in the loss of foreign markets and the damage to our domestic economy consequent on that loss. We are paying billions for a rearmament program forced upon us by the policy of isolation which allowed aggression to grow unchecked, until it became a menace to our national security which we can no longer ignore. We are paying a heavy toll of fear, the fear of parents for the future of their sons, the fear of a democratic people who see the future of democracy in doubt.

We have paid a heavy price for these lessons of history. Now we must see that at least the lesson has been well learned. As President Roosevelt said in his opening message to this Congress, we must make sure that what has happened does not happen any more.

EMBARGO WAR TRADE WITH JAPAN

I believe that on the whole the American people are better students of history than are their representatives in Congress. The most recent public-opinion polls show that the majority of the people support President Roosevelt's foreign policies, and oppose the so-called neutrality which builds up and strengthens aggressor nations. The popular support which has begun to rally behind my bill for an embargo on trade and credits to Japan convinces me that the American people want to rid this country of its present share in Japan's war guilt.

News from the Far East tells us these days that it is not impossible to resist Fascist aggression. The Chinese people, against overwhelming military and economic odds, are resisting—heroically and successfully. A story by Hugh Byas in a recent issue of the New York Times adds one more link to the long chain of evidence proving that Japan and her war partners are not invincible.

Writing from Tokyo, Mr. Byas said:

"The struggle in the Far East has entered a phase in which economic power is more important than military. The military effort was relatively easy for Japan; she was fighting on her strongest ground. She is now fighting where she is weak."

This statement, which can be substantiated from many other sources, shows what we must do. We do not need, either out of sympathy for the Chinese people or in the interest of our own national safety, to send an expeditionary force to foreign soil. We do not need to fire a single shot or shed one drop of American blood. We need only to stop bolstering up Japanese economy by providing essential foreign exchange for Japanese silk and manufactured products. We need only to stop providing the scrap iron, the pig iron, the oil, and other raw materials which today make America a munitions dump for the Japanese war machine.

BAN SHIPMENT OF SCRAP METAL TO JAPAN

In 1937 a third of the raw material used in Japan's steel industry came from American scrap. In 1938, while maintaining about the same rate of scrap buying in this country, Japan sharply increased the purchase of pig iron. This pig iron is an alternative raw material to scrap in smelting steel. But it is of better quality than scrap and is made to exact specifications which make it especially suitable for military purposes.

In addition to the raw materials for making steel we have been selling millions of tons of finished steel to Japan since her war machine began its operations in China. These finished American steels are alloyed with such metals as copper, aluminum, nickel, and molybdenum. Japan lacks these alloys. We supply them to her.

Almost all of Japan's oil supply, without which her mechanized army cannot move, is imported. In 1937, 80 percent of Japan's oil imports came from California.

The figures I have cited only begin to tell the story of our partnership with Japan in the invasion of China. I will be glad to send you fuller figures, gathered from official sources, if you will write me in Washington.

THE COFFEE EMBARGO BILL

It is because the evidence shows that we are rearming Japan, not only against China but also against the Philippines and against ourselves, that I introduced in the House of Representatives my bill (H. R. 5432) to place a complete embargo on all trade with Japan.

We hear a lot these days about the world armament race. It is a particularly strange and dangerous race in which the United States is engaged today. We are rearming at an unprecedented rate—trying to keep up with a potential enemy whom we, ourselves, are helping to rearm.

Does that make sense to you? Would it not be far saner and safer to stop feeding scrap and pig iron and oil and money to Japan—in order that we could beat our own swords into plowshares, and put our money into housing, schools, hospitals, and machinery for the production of all the goods our own people need for peacetime living?

PROFITS AND EXPEDIENCY VERSUS JUSTICE AND LOGIC

There are those who say that an embargo is dangerous, that it will lead us into war. But you will remember that, following a statement of policy by Secretary Hull, American manufacturers ceased selling Japan airplanes from which to bomb the helpless women and children of China. I am sure this did not please Japan, any more than the passage of my embargo bill would please her. But Japan did not come over here and attack us as a result of this action. Japan did not make war on Australia, although Australia has forbidden further exports of iron ore to Japan on the ground that a national issue is involved. Acting under the powers granted him by the Tariff Act, President Roosevelt applied countervailing duties to imports from Nazi Germany. I am sure this did not please Herr Hitler. But he has not made war on the United States because of it. As former Secretary of State Henry L. Stimson said before the Senate Foreign Relations Committee, "The mere fact that we are a democracy irritates the dictators." The interests of our own national security will not be served by cajoling or kow-towing to the dictators, by avoiding any course of action calculated to irritate or displease them. On the contrary, our national security, our very existence as a free and democratic nation, our peace demand that we use those methods, short of war but more effective than mere words, which will check the war-makers and bring peace and order again to the world.

CEASE OUR PARTNERSHIP WITH NIPPON'S WAR LORDS

Economic embargo is one of those methods. If we apply the embargo, as proposed in my bill, to Japan we do more than defend our own far-western frontiers. Aggressions in Europe and in Asia are bound together by the Rome-Berlin-Tokyo axis. An embargo against Japan would weaken Hitler and Mussolini, as well as Hirohito. It would strengthen the campaign for revision or outright repeal of the un-neutral Neutrality Act. It would follow up President Roosevelt's peace message with such practical action as must place the United States on the pages of history as a decisive force for peace in the world. Such leadership by us could not but be followed by other peoples and their governments.

War is even now not inevitable. The Fascist war makers can be stopped, as the growing anti-Fascist bloc makes us hope they will be stopped. But the time is passing swiftly, and we cannot afford to learn as slowly and as expensively as we have learned in the past. Congress must master the lesson and act upon it in this session—now. It is from the people back home that Congress learns most surely, and from them that it takes its orders. And so it is up to you to see that Congress acts.

Effects of Government Spending

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

LETTER FROM A CONSTITUENT

Mr. SMITH of Ohio. Mr. Speaker, the following letter was received by me from one of my good friends and constituents, a "country phyiscian of the 'horse and buggy' days." It shows you how the really forgotten man feels about the way his Government, if that you can call it, is treating him.

At no time in the history of our country has it ever been more essential that we return once again to those principles of government which have for their essential purpose the protection of just what Dr. Mundy so forcefully states are now being destroyed.

FOREST, OHIO, *July 3, 1939.*

Hon. FREDERICK C. SMITH.

SIR: Conditions appear to be growing worse. Surely no man can spend his way into prosperity. No man can last long financially that continually spends more than his income. Neither can a state or a nation. True, a nation can tax its citizens and thus exhaust the source of its income. Like the fellow in the fable, they can kill the goose that laid the golden egg. The Nations is doing that very thing today. The middleman, the man of small income, the industrious, frugal fellow, is totally forgotten, is really penalized for his frugality, thrift, and efforts to provide for his household when that proverbial rainy day comes. The ne'er-do-well is glorified and provided for in his old age by a too generous government. I need only to cite you what they have done to the returns on your life-insurance policies, your bonds, your stocks, and your bank deposits.

I am near my eightieth year, no longer able to work as of yore, trying to live on the returns from my savings, and I know what the Government has done to the income from that source. It is men in my class that are feeling the heavy hand of the Government. The administration is glorifying profligacy, shiftlessness, and dependency. The individual who desires to be independent of charity is punished for his frugality.

The stupendous amount asked for by the President as a loaning proposition is fallacious and dangerous, and is but another wedge in curtailing business. This is the province of the banks. I would advise the administration to read Wilson's account of the panic of 1837 in his History of the American People. Please use your efforts to stop this wild orgy of spending being indulged in by the present administration. I know some would call me an economic royalist by reason of my objections. I am a country physician of the "horse and buggy" days, and have endeavored to live honestly and economically, and have lived long enough to see my Government depriving me of a portion of the fruits of my labor.

Sincerely yours,

W. N. MUNDY, M. D.

The United States Customs Service

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. McCORMACK. Mr. Speaker, today marks the sesquicentennial of our United States customs organization and of the first Federal tariff it was assigned to collect. I should like to call the attention of this House and of the entire Nation to the splendid century and a half record of this service which bore the pioneer burden of raising revenue for a new republic and continues today to carry out the responsibilities assigned to it by the Congress.

Plans for the first tariff were in the making before the First Congress, which assembled in New York on March 4, 1789, had finished its initial task of electing the first President.

On April 14 of that year a delegation from the Congress arrived at Mount Vernon and notified George Washington he had been chosen for the Presidency. Washington took his oath April 30. A month later, on June 1, 1789, he signed the first piece of legislation of the First Congress, "An act to regulate the time and manner of administering certain oaths," to be taken by Members of the Congress, members of the State legislatures, all Federal appointive officers, and all executive and judicial officers of the several States. The form prescribed is yet employed: "I do solemnly swear or affirm (as the case may be) that I will support the Constitution of the United States."

It was more than a month later—while the young Nation was celebrating the thirteenth anniversary of its independence—that President Washington signed the second law of the First Congress, "An act for laying a duty on goods, wares, and merchandises imported into the United States."

The several duties listed were to be laid, the pioneer Senators and Representatives declared, "from and after the first day of August next ensuing."

With the Federal Government hard pressed financially, the Congress next delivered to the new President "an act imposing duties on tonnage," which he signed on July 20. Its effective date was August 15.

With that accomplished, the attention of the Congress was diverted to the status of the United States in the family of nations, and on July 27 Presidential approval was given to the fourth act of the Congress, legislation setting up a Department of Foreign Affairs, forerunner of the State Department.

August 1 was not far off, and still no machinery had been provided for the collection of the tariff which was to become due on that date. A law-making task of great import confronted the Congress. But they met their responsibility, spread over 40 sections of their fifth act, "* * * to regulate the collection of the duties imposed by law on the tonnage of ships or vessels, and on goods, wares, and merchandise imported into the United States," and sent it to the President in time for his signature on July 31.

The following morning a very small and youthful organization was ready to collect the first United States customs duties.

For 75 years before the Revolution there was an annual trade balance against the American Colonies and in favor of Great Britain. It was estimated in 1754 that the Colonies ran behind annually to the extent of $1,000,000. In 1760 the Colonies imported more than they exported to the extent of $9,000,000, not a large total according to the standards of today, but to the Colonials of 1760 it was a staggering sum. These debts were carried along as open credits or transformed into the more solid form of mortgages.

There was hardly any English money in circulation in the Colonies. Instead of sending money across the sea, the merchants and money lenders of London wanted money sent to them to cover past-due indebtedness. The result was that America was always drained of English currency.

Lord Cornwallis surrendered in 1781. His troops marched out of Yorktown to a tune called The World Turned Upside Down. The American Revolution ended officially in 1783, with the signing on September 3 of the Treaty of Paris. From then until March 4, 1789, this country was not a nation. It was a small set of independent nations.

When it came to taxation the Continental Government was a pleading pauper. The Congress did not have power to levy taxes directly; it made requisitions on the States in proportion to the assessed value of their land. As a rule the States ignored the requisitions, and there was nothing to be done about it. At one time the Treasury did not possess a dollar. In 1781 the Continental Government needed $9,000,000. The Congress hoped to raise $4,000,000 in loans, and $5,000,000 was asked of the States. Only $442,000 was collected from the States. However, the Congress could issue bonds, or certificates of indebtedness. These issues depreciated at once, as there was nothing back of them but promise.

Every State had a different tariff law and some States set up tariffs against neighboring States.

The Bureau of Customs, 1939, is a branch of the Treasury Department having charge of the collection of duties on imports, the collection of tonnage taxes, fees, and penalties assessed against vessels, the enforcement of laws relating to vessels and navigation, the registering and licensing of vessels, the enforcement of laws and regulations restricting imports and exports, the transmittal of papers yielding statistics of imports and exports, and the enforcement of laws and regulations governing the departure of persons.

The Customs Bureau is the agency controlling the movement of commodities, persons, vessels, air, and land vehicles between the United States and foreign countries, except that the admission of aliens is controlled by the Bureau of Immigration and Naturalization of the Department of Labor, the documentation of vessels is under the Department of Commerce, and the administration of the national quarantine system is under direction of the United States Public Health Service. Customs officers collect all immigration, navigation, and public-health charges and fees. Officers of the customs act at some places for these and other services not there represented. Other departments, particularly the Departments of Commerce, Labor, Agriculture, State, and other bureaus of the Treasury Department, promulgate regulations to be enforced by customs officers, advise these officers regarding specific action, and hear appeals in cases of dissatisfaction with customs rulings.

Investigative and advisory powers are vested in the Customs Agency Service.

Up to the beginning of the World War more than one-half of the ordinary receipts of the Government were derived from customs revenues. The Bureau, however, has never published annual reports describing its operations and organization. A few formal pages in the annual report of the Secretary of the Treasury are about the only source of information concerning the customs.

THE FIRST TARIFF ACT, JULY 4, 1789

Thirteen years after the signing of the Declaration of Independence at Philadelphia, on July 4, 1789, the first United States Tariff Act was signed at New York by George Washington. It become effective August 1. James Madison, a free trader, proposed the tariff measure as a temporary expedient intended to provide operative revenues.

Madison's plan was a flat 5-percent levy on all imports, but protectionists, wishing to encourage domestic production, amended the bill to provide higher levies.

Duties were assessed against imports of beverages, foods, candles, steel and iron, carriages, harness, footwear, glass, furs, paper, spices, fruits, and cane products.

The debate on the bill was not without acrimony. There was not a little logrolling, according to the Journal of Senator William Maclay of Pennsylvania.

Madison, on April 8, offered a resolution levying duties on rum and spirituous liquors, molasses, wines, teas, pepper, sugar, cocoa, and coffee. The next day, Mr. Fitzsimmons, a representative of Pennsylvania, offered an amendment adding a hundred more articles to the Madison list.

When Washington signed the first tariff act it contained Madison's items, those of Fitzsimmons, and many others offered in amendment by Senators and Representatives whose constituents resided in the industrial centers of the North.

The South demanded protection also, mainly for tobacco, cane products, hemp, and coal, iron, and steel. New England rum distillers wanted free trade in molasses; Southern producers favored a duty up to 6 cents per gallon; Pennsylvania brewers asked for a tax of 9 cents per gallon on beer in casks, but wanted beer bottles admitted free. Maryland demanded a glass tax to protect a vital industry. Virginia—then including West Virginia—sought protection for its coal mines; and tobacco-growing States demanded a duty that "ought to amount to a prohibition."

This tariff act caused great rejoicing throughout the country and in the newspapers was referred to as a second declaration of independence.

The next act of the Congress was a law placing tonnage taxes on vessels. The tariff act was a duty on merchandise, the other a tax on common carriers. This distinction maintains to the present day.

As finally approved, the act embraced a long list of specific duties, and five classes of goods imposed with ad valorem rates. It contained a short free list, made provisions for the repayment of all duties upon goods again exported, and admitted the principle of discrimination in favor of commodities imported in vessels built or owned by citizens of the United States.

Upon specific duties, spirits were taxed up to 10 cents per gallon; wines up to 18 cents per gallon; beer, ale, and porter in casks, 5 cents per gallon; molasses, 2½ cents per gallon; tea, from 6 to 45 cents per pound; manufactured tobacco, 6 cents per pound; salt, 6 cents per bushel; and twine and packet thread, at $2 per 112 pounds.

Carriages and parts were assessed an ad valorem duty of 15 percent, while goods—not tea—not brought in American ships were imposed with 12½ percent.

On the free list was tin pigs and tin plates, wire, dyes, and furs.

According to the Customs Service of the port of New York, or the Gateway of the Continent, by Samuel Stockvis:

> The first vessel to arrive at the port of New York under the new law—that of 1789—was the brigantine *Persis*, James Weeks, master, from Leghorn, with a miscellaneous cargo. She arrived August 5, 1789, and was consigned to William Seton who paid $774.71 in duties.

John Lamb was the collector of the port. Lamb was one of the heroes of the capture of Fort Ticonderoga. It will be noted that Collector Lamb waited 5 days for his first ship.

Total duties collected the first year of the Customs Service were approximately $2,000,000. Customs revenues steadily increased until in 1929, the peak year, they amounted to more than $600,000,000.

Customs revenues fell off measurably during the World War, but the work increased very materially and customs personnel took on much additional work for other departments.

Prior to 1929 the total number of authorized employees of the Customs Service was about 10,050. Since 1930, many positions have been abolished. There were no dismissals, enforced furloughs without pay, or reductions in salaries, but vacancies were not filled as they occurred. The reduction in personnel was necessary because of reduced revenues from customs and the decreased number of transactions. The authorized personnel (1939) numbers 8,879.

Neither the Tariff Act nor the Tonnage Act created any machinery for the collection of duties, so on July 31, 1789, there was approved by the Congress an Organization Act providing for the establishment of customs districts and ports of entry, the appointment of customs officers, and the method of collecting duties and paying employees.

The original act required the collector to board vessels and authorized him to acquire or hire boats or cutters. But it was not until August 4, 1790, that $10,000 was appropriated to build 10 cutters. This was the beginning of the Revenue Cutter Service, now the United States Coast Guard.

Rates of the original act underwent their first change in 1791, when a duty of 9 cents per pound was fixed against raw cotton, and an ad valorem rate of 7½ percent against cotton fabrics.

Five years later the young Republic financed its campaign against the Barbary pirates by an additional duty of 2½ percent levied on goods paying an ad valorem rate, and 10 percent additional on goods imported in vessels not American-owned. Two men of war were sent to the Mediterranean against the pirates.

Before Commodore Stephen Decatur had conquered the Tripoli marauders the new Government was forced to raise funds to finance the War of 1812 with England. On July 1, 1812, Congress passed a supplemental impost act increasing by a hundred percent existing duties on imported wares. This rate continued to June 30, 1816, when it was reduced to 42 percent.

So by 1816, despite the free-trade sympathies of Jefferson and Madison, the duty on coffee had increased from 2½ cents per pound in 1789 to 10 cents. Other items subjected to comparable changes over the period include coal, from 2 to 10 cents per bushel; leather shoes, from 7 to 30 cents per pair; ready-made clothing, from 7½ to 30 percent; calicoes, from 7½ to 35 percent. Duty increases on teas averaged 500 percent.

The Organization Act of July 31, 1789, created 59 customs districts in 11 States, no provision being made for North Carolina and Rhode Island, as those States had not adopted the Constitution. For a short period these States were required to pay import duties on goods shipped into other States.

The office of Commissioner of the Revenue, paying a salary of $1,900 per year, and under the Secretary of the Treasury, was created by the Second Congress, in 1792.

Another act, approved July 16, 1798, created the Marine Hospital Service, now a part of the Public Health Service, and required customs collectors to gather hospital dues of 20 cents a month from every seaman arriving from foreign ports. In 1799, collectors were required to "aid in the execution of quarantine," and in enforcing health laws of the States.

Early in 1803 new legislation provided that collectors assist in the protection of seamen by requiring masters of vessels bound to foreign ports to file a roster of the crew and furnish bond to produce the seamen upon their return.

The security of maritime passengers and the obtaining of statistics concerning immigrants were required by the act of March 2, 1819, whose enforcement was assigned to the customs collectors. The act regulated the number of persons that might be carried by ships and provided for minimum quantities of water and provisions. A manifest was required for each immigrant.

Salaries of collectors were the proceeds of specific fees fixed by law, with a commission on the amount paid into the Treasury. The commission was one-half of 1 percent at the larger ports and 1 percent at the others; office rent and stationery costs were paid by the collector. At ports of entry where naval officers served also as collectors, the officer received half of the fees and was required to pay half of the rent and stationery costs. He received no commission on sums paid into the Treasury. Surveyors, measurers, gagers, and weighers were paid from fees; inspectors were paid $1.25 per day. The erstwhile naval officer now is known as comptroller of the customs.

Early laws governing the customs specified no term of office, and appointees usually continued in office during good behavior. On May 15, 1820, there was passed the Tenure of Office Act, which established the 4-year term for collectors, surveyors, naval officers, and other officers in the Service. The act is still in force.

Loose appraisement methods of the early days were changed from time to time, and by 1823 "the respectable resident merchant" appraiser system had vanished and many of the larger ports were provided with permanent appraisers of merchandise. In the smaller ports collectors were empowered to order the appraisement of merchandise. Appeals were allowed to the Secretary of the Treasury.

By the act of May 19, 1828, it was made mandatory for the collector to cause an appraisement to be made of all goods subject to ad valorem duty, or on which the duty was estimated on the value of any quantity.

The Tariff Act on August 30, 1842, provided that in case of disagreement between the appraiser of merchandise and the importer the collector should choose two experienced merchants to fix the value. Previously the merchant chose one of the appraisers. It was not until 1890 that the Government dispensed with opinions of persons outside the Customs Service and established a Board of General Appraisers.

The early customs laws provided that customs duties should be payable in cash if not exceeding $50. If the duties exceeded $50, the importer was granted 4, 6, or 12 months to pay them, according to the kind of merchandise. The importer was permitted to give a bond or to deposit merchandise in double the amount of the duties as security. In 1842 credits were abolished, and in 1846 the Warehousing Act permitted merchandise to be stored in the custody of the Government without the payment of duty. This system of warehousing is still in operation. Private bonded warehouses were authorized in 1854.

In 1847 and 1848, with the passage of laws further regulating the carrying of passengers on merchant vessels, customs officers were given the added duties of inspection to insure the limit of passengers according to deck area and rules for ventilation and sanitation.

The first regulatory act giving Customs officers control over specific classes of imports became effective on June 26, 1848, by which all drugs, medicines, and chemicals were required to be examined by Customs officers. Special examiners of drugs and medicines were appointed by the Secretary of the Treasury at New York, Boston, Philadelphia, Baltimore, Charleston, and New Orleans.

The act of 1849 created the office of Commissioner of Customs. His duties were primarily with accounts of customs officers.

Customhouses, July 29, 1850, were made the recording offices for all papers affecting the title to vessels. This made possible a national system of recording title to marine property which has continued to the present with little change.

Before June 30, 1849, Congress made no appropriations for the operation of the Customs Service, all expenses being deducted from receipts before transfer to the Treasury. In this year the law was amended to provide that all receipts be paid into the Treasury, and Congress made an annual appropriation of not more than $1,560,000, plus fees from cartage, labor, and storage, until such time as specific appropriations should be made. Congress did not make specific appropriations until 1913, although the indefinite appropriation was increased to $5,500,000, plus receipts, by various Congresses.

Inspection of steamboats in the early days had been made by appointees of district judges, but the Steamboat Act of

1852 created supervising inspectors of steamboats and placed the appointment of local inspectors under a board consisting of the collector of customs, the district judge, and the supervising inspector of the district. This law provided that no document should be issued to a steamboat until all the inspectors had certified that safety provisions had been complied with. This act is the foundation of the present steamboat-inspection laws. Much of the authority conferred on customs officers by this act is still retained, but the selection of inspectors by the board, of which the collector was a member, was terminated in 1896.

By 1852 the Customs Service had reached the height of its development as the branch of the Government dealing with matters relating to imports, exports, and shipping. For over 50 years there had been no legislation affecting the organization of the service, and but few minor laws changing the character of its activities.

The War between the States caused little change in customs laws and practices, though a provision was enacted in 1863 allowing for the establishment of manufacturing bonded warehouses where certain articles could be fashioned for export without payment of tax. In 1866 the statutes were changed to allow the exportation of distilled liquor tax free.

Transportation of merchandise in bond was first provided for in the act of 1846. The act of 1870 elaborated the procedure, and the act of 1880, as amended by the act of 1899, simplified the procedure and placed it on its present basis.

Shipping commissioners for the protection of seamen were first provided by the act of June 7, 1872, which provided also that collectors of customs should act as shipping commissioners at ports where there were no such officers. The registration of Chinese laborers was made the duty of customs collectors in 1882. The next year came the first legislation providing for control of importation of impure tea through the collector of customs.

When the office of the Secretary of the Treasury was reorganized in 1875, provision was made for a Division of Customs. The Chief of this Division was first named specifically in the appropriation act for the fiscal year of 1879. The first appropriation for the personnel of this division as a separate unit was approved March 3, 1885, but that act did not specify the duties of the division.

Customs affairs are by law directly under the Secretary of the Treasury. The act of 1885 and all subsequent appropriation acts simply have provided an administrative unit for carrying out the orders of the Secretary.

There were several tariff acts during this period after the War between the States and many minor acts creating ports of entry or establishing new customs districts. All of these added to the difficulties of interpretation and in 1889 the Secretary of the Treasury called attention to the fact that the administrative laws were "derived from 263 acts of Congress passed during a period of 90 years."

The act of June 10, 1890, established the Board of General Appraisers, nine members appointed by the President.

On July 1, 1903, there was transferred to the new Department of Commerce and Labor the direction of all matters relating to the measurement, enrollment, licensing and inspection of vessels, although the duties of customs officers in these matters did not change.

Although the Board of General Appraisers promoted uniformity in the appraisement of merchandise, there resulted a lack of harmony on appeals to the circuit court of the United States, and as late as 1908 the Secretary of the Treasury in his annual report declared that the law made "each of at least 120 judges a possible final judge of customs appeals.

Dockets of the circuit courts were so congested that appeals from decisions of the Board of General Appraisers awaited an average of 4½ years before judicial decisions.

Removing delays and inconsistencies, the Tariff Act of 1909 created the Court of Customs Appeals and gave it exclusive jurisdiction in reviewing decisions of the Board of General Appraisers, with provisions for review by the Supreme Court of the United States in certain cases.

Legislation looking toward the consolidation and realinement of customs districts finally came on August 24, 1912, and authorized the President to cause the changes. There were unnecessary offices, antiquated regulations, and inequitable compensations. Along the Canadian border, for instance, collectors were allowed to charge 10 cents for each blank prepared and executed, some of them aggregating an annual earning of $17,000, more than the salary of the collector for the port of New York. There were 35 methods for payment of collectors and surveyors.

By Executive order on March 3, 1913, 49 customs districts were established to replace the 126 districts and 38 independent ports. This order placed all collectors on a salary basis.

In 1915 the Secretary of the Treasury abolished the Division of Special Agents, in charge of investigative work, and placed the supervision of special agents in the Division of Customs, where it remained until the creation of the Special Agency Service in 1922.

Between the outbreak of the World War in 1914 and the declaration of war by the United States in 1917, the work of the customs was increased by the necessity of watching for violation of neutrality laws. Customs officers acted as local agents of the Bureau of War Risk Insurance, engaged in insuring vessels, cargoes, and seamen against risks incident to the war. When the United States entered the war the work of the customs was still further increased. In April 1917 customs officers seized 79 German and Austrian ships in United States ports, and retained possession until they were transferred to other Federal branches. Enforcement of import and export licensing under the War Trade Board was made a responsibility of customs officers.

An aftermath of the World War was the system of licensing imports of sodium nitrate, dyes, coal-tar products, synthetic organic drugs and synthetic organic chemicals. It operated until November 1922.

An order of the Secretary of the Treasury, effective February 1, 1922, created the Special Agency Service as a separate unit in customs administration, coordinate with the Division of Customs. The new unit was given control of all investigative work of the service, including the examination of the accounts and actions of customs officers and employees, the investigation of frauds by importers, and the collection, in both the United States and foreign countries, of information which might be of value in the administration of customs laws.

Nearly a third of the Tariff Act of September 21, 1922, was devoted to a codification of the administrative provisions of the customs laws. The administrative code in the act of 1922 superseded many of the older statutes and repealed many obsolete acts. The old designation of naval officer was changed to comptroller of customs, and provision was made for extension of the work of the comptrollers over all districts and ports.

Statistics of imports and exports were compiled by the Treasury Department from the reports of collectors from the beginning of the Government. The statistics were published by the Office of the Register of the Treasury from 1820 to 1846, and by the Bureau of Statistics of the Treasury Department to 1903. That bureau, transferred to the Department of Commerce and Labor in 1903, continued publication of import and export statistics until its consolidation with the Bureau of Manufactures in 1912 to form the Bureau of Foreign and Domestic Commerce. The collectors still report statistics to the Department of Commerce for publication.

The act of March 4, 1923, authorized the appointment of a Director and two Assistant Directors of Customs, and of a Director and Assistant Director of the Special Agency Service. A law enacted in 1927 provided for the establishment of the Bureau of Customs, and for the appointment of a Commissioner of Customs to head the Bureau.

The Commissioner of Customs, October 14, 1929, divided the Bureau into three units—administrative, legal, and investigative. The legal unit was composed of the Divisions of Classification, Enforcement, Drawback, Entry, and Appraisement, to which was later added a Division of Appeals and Protests.

The administrative unit was composed of the Divisions of Finance, Personnel, Records, Mails, and Files, and the Scale Engineer, and later the Statistical Division.

Abolishment of the administrative unit was effected January 26, 1933, and the Divisions of Personnel and Fiscal Administration and the Wool Administrator were set up as separate units.

Effective February 1, 1936, the office of Deputy Commissioner of Customs, in charge of administrative activities, was reestablished. The Wool Administrator and the newly created Division of Laboratories were placed under the administrative unit on May 5, 1937.

The Commissioner of Customs, July 5, 1935, established in the Bureau of Customs a school of instruction to assist customs officers and employees in acquiring a more comprehensive knowledge of customs law, regulations, and procedure.

A Division of Laboratories was established March 28, 1936, with chemists of the nine laboratories and the field service under the supervision of the Chief of the Division of Laboratories.

The Secretary of the Treasury, in the summer of 1936, transferred the customs border patrols from the jurisdiction of various collectors of customs to the Customs Agency Service and created four patrol districts with headquarters at Buffalo, N. Y., Jacksonville, Fla., El Paso, Tex., and Havre, Mont. This unit is now known as the Customs Patrol Service.

On September 1, 1937, and June 1, 1938, the Secretary of the Treasury separated 32 appraisers of merchandise, at the principal ports of entry, from the administrative control of the collectors of customs and made them coordinate officers. These 32 appraisers were placed directly under the administrative control of the Commissioner of Customs, who created an appraisement unit in the Bureau of Customs to have immediate supervision of the work and personnel.

By an order effective March 15, 1939, the Secretary of the Treasury consolidated into one division, known as the Division of Tariff Administration, the legal divisions of Tariff Classification, Entry and Appraisement, Drawback and Bonds, Enforcement, and Appeals and Protests, under a Deputy Commissioner.

It is the function of the Customs Service to prevent smuggling, whether it be of persons, permissible merchandise, or prohibited merchandise.

If prohibited aliens get into the country, or permissible or prohibited merchandise gets by the customs without the usual formalities, it is still the function of the customs to arrest the persons or to seize the merchandize except in cases coming under the Immigration, Narcotics, or Internal Revenue Services.

United States Coast Guard officers are ex-officio officers of customs, with authority to board and search vessels on the water. They have cooperated closely with customs officers since 1790, when the Coast Guard was established as the Revenue Cutter Service.

Customs officers perform a service in the protection of life and health of humans, animals, and plants in the examination and seizure of pests and infected or diseased animals and plants, and their products, which importers attempt to bring into the country.

The Customs Patrol Service is engaged in the detection and prevention of smuggling. This Service was formerly known as the Mounted Inspectors, many of whom were recruited from the Texas Rangers and the ranks of law-enforcement officers along the Canadian border. These men patrol large areas of waste and uninhabited land, remain long away from their posts and are frequently in danger of their lives. The Bureau has a large honor roll of Customs Patrol men who have lost their lives in line of duty.

The Customs Agency Service is the investigating branch of the customs. Its officers have Federal authority to carry firearms, make searches and seizures, make arrests, and secure evidence.

Tin Investigation (H. Res. 275)—Facts Developed by Former Tin Investigation by the Committee on Foreign Affairs, Strongly Indicate That Further Examination of This Matter at This Time Is Desirable

---

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. BLOOM. Mr. Speaker, an investigation by the Committee on Foreign Affairs pursuant to House Resolution 404, Seventy-third Congress, second session, and reported under date of April 15, 1935, developed the following important facts:

(1) Tin is an element, mined from the earth. There is no production in the United States.

(2) Tin is a metal so essential to the commercial and military needs of this country that the stoppage or serious curtailment of the supply imported from foreign nations would be a real disaster, and in time of war would give rise to an extremely critical situation.

(3) The United States is wholly dependent upon foreign nations for its supply of the metal. It consumes approximately one-half the total world production. Our normal annual consumption will average between 60,000 and 90,000 tons. An average approximate price of tin is $1,000 per ton, making our annual tin bill payable to foreign countries from $60,000,000 to $90,000,000.

(4) The world production and price of tin are controlled by the International Tin Committee, officially representing the producing nations (principally Great Britain, Holland, Bolivia, Nigeria, and Siam). This committee is under de facto control of Great Britain. The United States must pay the prices supported by the committee. Frequently these prices bear no relation to the cost of production.

(5) There is no known substitute for tin. It is absolutely essential to the manufacture of tin cans and all tin-plate articles, solder, babbit, all incandescent electric lights, automobile and airplane motors, machinery of all kinds, electric motors and generators, telephone, telegraph, and radio equipment, machine guns, rifles, pistols, gun carriages, tanks, helmets, batteries, gun mounts, cables, propeller shafts, and so forth.

While no tin ore is produced in the United States and no commercial deposits have been developed, the former investigation brought out that the following locations show sufficient indications of possible commercial deposits to warrant further examination: Virginia, West Virginia, North Carolina, South Carolina, Alabama, Washington, Idaho, South Dakota, Wyoming, California, Nevada, New Mexico, Texas, and Alaska.

RESULTS OF THE FORMER INVESTIGATION

(1) This was the first thoroughgoing investigation by Congress of a vital strategic material, and, although confined almost wholly to tin, it served to emphasize and bring to the attention of Congress not only the dangerous situation of the United States as regards this metal but other materials as well.

(2) Passage of the act prohibiting the exportation of tin-plate scrap, except under license, was a direct result of the investigation (Public, No. 448, 74th Cong.).

(3) Passage of the act authorizing the purchase by the Government of stock piles of strategic materials (Public, 117, 76th Cong.) was largely founded on the facts brought out by this investigation. This act also provides for exploration and research with regard to strategic materials in general.

(4) In the light of the investigation and its emphasis on the great need of the United States for more assured supplies of tin, the State Department has on several occasions endeavored to improve the position of the Government as regards this metal through—

(a) Reciprocal trade treaties, notably with Great Britain (1939) and Holland (1936).

(b) Barter agreements with both these countries under which cotton or wheat might be exchanged for tin.

None of these efforts has so far secured a pound of tin. In fact, our position regarding possible supplies of the metal has been materially weakened by a provision in the reciprocal-trade agreement with the United Kingdom under which the United States undertakes not to place a duty on metallic tin; thus for the time being preventing our employing imposing a tariff on the metal and encouraging free importation of the ores for smelting in this country—this being one of the principal possible methods by which our position could be strengthened as against the international committee.

PRESENT SITUATION AND USEFUL PURPOSES WHICH THE PENDING RESOLUTION IS DESIGNED TO SERVE

(1) More than 4 years have elapsed since the former report on this subject by the committee. During that period world conditions have undergone vital changes which affect unfavorably our tin position. Notable among these are:

(a) The practical shutting off of China by Japan, removing the Yunnan tin mines as a potential source of supply.

(b) The apparently increased influence of Germany over Holland which has resulted in the latter country's declining to exchange tin for cotton or wheat.

(c) The reciprocal trade agreement with the United Kingdom above referred to, which prevents our taking at least one remediable step by way of a tariff on imported metallic tin for the purpose of forcing foreign producers to send in tin ore to American smelteries instead.

(d) The more than doubling of our military and naval program, which has greatly increased both our military and commercial requirements.

(e) The collapse of the Bolivian situation, and other realignments between tin-producing and tin-consuming countries.

(f) Greatly increased armament programs of other nations. This has tended to increase competition between nations for available tin production and resources.

The tin situation of the United States was dangerous to the national welfare in 1935. Today, its gravity has greatly increased. We have been forced to fall back upon a policy of purchasing stock piles of this material. This is, no doubt, a wise procedure under the circumstances, but, because of the enormous quantity of the metal required for a 2-year supply—the stock preferred by the Military Establishments—it can at best afford only a minor safeguard. A 2-year war supply of tin would approximate 200,000 tons at a cost of $200,000,000. The purchase and storage of any such quantity of the metal under the existing law is manifestly impossible, when it is remembered that the total authorized appropriation for all strategic materials is $100,000,000, spread over a 4-year period. This must cover purchases of rubber, chromium, nickel, manganese, and many other materials beside tin. If the entire annual authorization of $25,000,000 were expended on tin, we should have, at the end of the first year, about 3 months' supply on hand.

The Stock Pile Purchasing Act also provides for research and exploration by the Department of the Interior looking toward the development of possible domestic resources and possible substitutes for strategic materials in general. But no emphasis is placed on tin. It is not even specifically named in the law.

Facts developed by the former tin investigation by the committee strongly indicate that further examination of this matter at this time is desirable and might well result in the development of factual bases for legislation which would lead to the establishment of an American tin-smelting industry, based on foreign or domestic ores, or on both. The committee has previously unanimously recommended such establishment as the best possible solution of the problem.

Perpetual Planning and Permanent Spending—H. R. 7120, Considered August 1, 1939

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. CRAWFORD. Mr. Speaker, having grown tired of the essentially transitory effect of funds operating under and dependent upon annual appropriations provided by appropriating committees the recommendations of which are subject to review and revision by the House and the Senate, the drafters of this bill presented it to the committee well implemented for perpetual planning and permanent spending.

The draftsman's skill is well measured by Secretary Morgenthau when he says:

> I do not wish to contend that the program embodied in this bill constitutes a final or adequate solution of our economic problem, but it does constitute a realistic approach to that problem.

Indeed! Should the Congress leave in the bill the revolving mechanics and the pipe line from the Treasury to these projects, the "realistic" approach will be measured by the streams of dollars which flow from the pockets of taxpayers to the Treasury and then on to the disbursing agents of the Department of Agriculture, the Public Roads Administration, the Public Works Administration, Reconstruction Finance Corporation for railroads, the rural electrification agency, and the reclamation projects agency.

The entirely adequate, self-appropriating provisions of the bill carry us directly into the whirlpool of totalitarian prosperity. If we approve the bill we sell our birthright for a mess of spoiled pottage.

With self-liquidating public enterprise no longer hampered by a legislative budgetary control, and with the solvency of each and every project literally guaranteed by the taxpayers, we can well appreciate the apparent sincerity of those chiefs of departments of Government and bureaus who appeared before the Senate and House committees sponsoring the respective bills.

While the hearings were in progress, I briefly quoted to Secretary Morgenthau from the analysis and warning of Dr. Berle. I think it is fair to say that the Secretary somewhat felt I was far off the range in interrogating him about something the Under Secretary of State had said about our economy. But I was very much interested in the observations of Dr. Berle. I think his approach to our problems was much more realistic than those of Mr. Morgenthau. I am frank to say that in my opinion the notion that these projects are a sound basis for reviving private enterprise will largely serve to fool the people. I believe the enactment into law of this proposal will merely cajole a great many of our people into the policy of drift noted by Dr. Berle and against which we may well be warned.

I personally felt Mr. Morgenthau in a way attempted to overlook and minimize what Dr. Berle had said. If only Dr. Berle expressed such ideas we might, in a way overlook them. But he is not alone in all of his views. Dr. Guy Stanton Ford, president of the University of Minnesota, in the preface to his recent and notable volume of essays on dictatorships observes that "the unconscious fascism of many of the prescriptions to preserve democracy should give the thoughtful citizen more anxiety than the vague danger of a handful of radicals." Let me quote from a statement of Dr. Golden-

weiser, of the Federal Reserve System, who, sometime ago said:

I am firmly convinced that monetary control does not exist and that within the framework of our economic and political organization monetary control can never exist. It will not exist until such time * * * when the Government will control substantially all economic activity.

Will anyone rise up and say this is not the trend in Europe? Yea, do we not precipitatively follow in the footpaths of western European totalitarian states? Look at the presentation of Dr. Lubin. Are not his figures predicated on the idea that government must create spending for the sake of spending and not for the sake of the projects themselves? Does he not argue that because private enterprise is a failure, Government projects must be undertaken, even as armament is undertaken, to create what is euphemistically called private employment?

AN ECONOMIC SCREW LOOSE SOMEWHERE

The presentation made by the Secretary of the Treasury, the sweeping estimates made by Dr. Lubin, wherein he explored derivative industry and employment, the dramatic—in its simplicity—approach of Mr. Jesse Jones taking the position that herein we have found a way to do these things without at the same time increasing the debt of the Government, all challenge our deepest thought. In all sincerity I plead with you to closely analyze every sentence of their statements. This we here are about to do, involves the highest policy of our Government.

What is the loose screw in civilized society today that is everywhere preventing the private use of the savings of our people in normally motivated competitive industry? No one can contend these spokesmen of Government do not recognize there is a loose screw. Planned economy in the form of pump priming has been practiced. In recent months we have heard much about the ebb and flow of Government funds or spending volume. We are acquainted with the claims made to the effect that continuity of remedial effects is essential. We also know that in a normal world appropriating committees will not give that constant, continuous stream of funds which the spenders demand. But here, we find open sesame. We find it in the form of the pipe line to the Public Treasury. That is the "catalytic" agent which makes this bill the thing. Take the Government guarantee here proposed but remove from the mechanics of the bill the formula by and through which annual inventories are made and all losses automatically covered by remittances from the Public Treasury to the corporation, and the "catalytic" influence would disappear and the operating forces would not be brought together.

CANNOT AGREE THIS IS A REALISTIC APPROACH

This bill proposes additions to lending authorizations. I believe Congress has already made these top-heavy. I do not believe they should be increased. In my opinion, we have gone too far and the people have now sensed the dangers involved, all evidenced by the cutting from the kite of tax-financed projects the tail of private activity which is supposed to keep it balanced. If this is true, we have reason to believe the whole contrivance will end its flight in a nose dive. This bill presents a scheme for meeting the problem of needless poverty and unemployment. It implies the necessity, if spasmodic operations are to be avoided, for perpetual, noncompetitive projects.

Dr. Wilhelm Roepke makes an appropriate, timely, and worthy contribution to the subject here under consideration in the July number of Harper's Magazine under the title "Totalitarian Prosperity." Introducing the author of this article, Harper's editors say:

When the reader has finished Wilhelm Roepke's Totalitarian Prosperity and has run over in his mind the internal condition of Russia, Italy, Germany, and Great Britain and when he has glanced at the gold hoard pouring into Fort Knox, Ky., and then glanced again at the huge reservoirs of "cash" in the great New York banks be will be inclined to wonder which wall of this blind alley will break first. * * * He (Dr. Roepke) is an economist known throughout Europe and English-speaking countries as well for his work in business cycles. * * * He left the University of Bonn with the advent of Hitler for the University of Istanbul.

The editors add that Dr. Roepke is now working with the Rockefeller Foundation on research into international economic disintegration. His work is, to my mind, precisely of the sort that should have been presented before the Temporary Economic Committee of this Congress. We need just such a rebuttal to the purely statistical and superficial approach which has been substituted for logic and reason in interpretation of facts by technical witnesses and which constitute the basis of the argument presented for this bill in the report of the Senate committee.

The July 27 statement for the press showing the condition of Federal Reserve Bank System says:

Excess reserves of member banks on July 26 were estimated to be approximately $4,490,000,000; unchanged for the week.

The Treasury's daily statement of July 27 shows $16,232,607,280.11 of gold on hand. The last report of the Federal Deposit Insurance Corporation, page 166, shows total demand deposits of operating insured commercial banks to be $27,851,772,000. The figures just quoted illustrate the different walls of the blind alley referred to by the editors.

SAVINGS VERSUS SPENDING

In the Senate report we find this language:

We have in this country a volume of available savings which under present conditions is in excess of the profitable outlets for such savings.

With this statement I am in violent disagreement. You and I know that all about us are outlets clogged by failure of money to circulate. And why? Let Chairman Jesse Jones answer this question. I quote from the hearings:

Mr. CRAWFORD (interrogating Mr. Jones). Will you lend money unless you expect that there will be a profit or an interest rate that will pay you to lend it?
Mr. JONES. Do you mean privately?
Mr. CRAWFORD. Privately; yes, sir.
Mr. JONES. Money lenders usually expect to get a profit.

You and I know how interest rates have been sabotaged by Government debt and its concomitant of unsound banking institutions.

This bill and its philosophies are interwoven with what has been said before the Temporary National Economic Committee. Government spokesmen, such as Messrs. Currie, Henderson, Frank, Berle, and Lubin, along with Dr. Hansen and Dr. Nehemkis, have prepared the way for this proposal. These gentlemen, in their presentations before the committee, have not, in my opinion, adequately or clearly defined the powers of savings and investment. In their discussions, whether intentionally or not, they have confused money and credit with real capital or wealth and presented effects as if they were causes. They are, therefore, recommending only the use of salve on the pimples. They would have us treating the symptoms instead of the disease—doctoring our ills with what have been well termed "econostrums."

I do not believe they have found the weak link in the long chain of modern economic sequences, as they seem to think they have when they recite for us the statistics of the situation which has resulted from—not caused—the failure of that weak link. It appears to me the presentations which have been made have led the distinguished chairman of the Economic Committee far afield and to a point where he expresses his naive belief that revision of the antitrust laws can bring "the most prosperous era ever imagined." The statement of the chairman gives me concern. I wonder if he proposes to attain his results and bring about the prosperous era through control of so-called monopoly by a scheme, the result of which will be a direct persecution of those engaging in honest business and seeking a profit on their investments. At the same time I do not personally accept the theory that Utopia will be at hand even if monopoly is curbed. No one yet has convinced me that price effects we find involved in the cycle of business are caused primarily by monopoly.

Briefly summarizing, a human economy erects its capital structure primarily as a matter of "outlay" of "savings" as we are told it does in the hearings before the T. N. E. C. On the contrary, capital values and prices are a matter of speculative estimates of future net income capitalized at the natural, competitive interest ratio, which is approximately 1 to 20, or 5 percent. "Outlays" for costs are, in basic fact, immaterial. Capital may, therefore, arise in large measure as a mere double-entry bookkeeping transaction without any previous income or savings whatsoever. Capital does not necessarily arise in thrift, nor does thrift implicitly result in formation of capital.

A system of capital values, therefore, cannot be kept in equilibrium for trading if we subsidize interest rates or permit or induce sweeping changes in money conditions. It is hardly surprising under the circumstances of these illusions that we find, as my colleague on the House committee [Mr. WOLCOTT] has pointed out, that "a low rate of interest constitutes one of the most potent weapons for a stimulating business activity" in his immediately preceding statement that "investors are reluctant to place a large amount of their funds in long-term investments at low rates of interest." The economic crackpot has always held that interest is unjustifiable and results only from an unnatural scarcity of capital, zero rates being the ideal. That idea has never been, and cannot be, sustained by reason of experience.

This will is not an approach "back to the American way." Solicitor General Robert H. Jackson recently observed:

> The way of life of the American is practical, hard-headed, and concrete. It is not made of what Justice Holmes once called "pernicious abstraction." Its distinguishing ideology is that it has no ideology except to get results.
>
> No ideology is going to stand in the way of the instinct to eat regularly. Americans prefer private capital to run our business, to build our bridges, and to employ our workmen. But when private capital cannot or will not on reasonable terms do these things, then the people turn to their Government for big bridges, for T. V. A.'s, for big dams, and they will turn to it to relieve unemployment and provide for dependent old age and to meet other problems along the whole social and economic front where private effort fails or falters.

This bill is designed to turn our people away from their preference of private capital to their Government. It is the opening wedge and will greatly accelerate the shift referred to by Dr. Berle when he said:

> The Government can create, and does create, wealth in the form of roads, parks, public buildings, public hospitals, and the traditional public services of the Federal, State, and local units. Plainly these as they now stand are not sufficient to serve as the market for more than a fraction of the capital-goods production in the United States. If, therefore, wealth is to be created by creation of Government debt, the scope of Government enterprise must be largely increased. Briefly, the Government will have to enter into the direct financing of activities now supposed to be private; and a continuance of that direct financing must be inevitably that the Government ultimately will control and own those activities. Put differently, if the Government undertakes to create wealth by using its own credit at the rate of $4,000,000,000 worth a year, or thereabouts, over a period of years the Government will gradually come to own most of the productive plants of the United States.
>
> This is certainly so fundamentally a change in the course of American life that the decision to make it should be taken for reasons other than relief of a series of temporary difficulties. If the country desires to make wealth creation a function of government (I personally believe it must do so in larger measure than it has heretofore), the choice should be the considered choice of the country, and not the result of a policy of drift.

And in this connection Wilhelm Roepke makes the keen observation that—

> Historical evidence seems amply to prove that this traditional system is incapable of achieving permanent full employment. With all the greater fervor the new experients in maintaining full employment on a collectivist or semicollectivist basis are being watched. Here on the side of capitalism, it seems, is disorder, anarchy, and slackness, whereas on the other side of the fence we find order and hectic activity. True, nobody can be unaware of the inconvenient fact that these assets have to be bought at a heavy price—the loss not only of economic but also of political and spiritual freedom. He must be rather naive who can believe that a rigid and really efficient control of prices, wages, profits, investments, consumption, and foreign exchanges is to be had without concentration camps, secret police, and the shadow of prison and death above everyone. But if at this price permanent full employment and economic stability can really be bought how many today would regard this as a square deal and be prepared to pay the price, especially as this means selling something which is not fully appreciated unless it is definitely gone?

Mr. Speaker, it is my sincere hope that the United States will never see the enactment of the provisions set forth in H. R. 7120.

America's Homeless Families, a Problem That Congress Must Face

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. VOORHIS of California. Mr. Speaker, throughout the United States today there are probably close to half a million people who are members of homeless, migrant families, seeking a place where they can once more strike root in the soil of their native land. Most of these people are dispossessed farm families from the middle and lower Mississippi Valley. About half of them are now in the State of California. Though for years the problem of these American families has been staring us in the face, it is only in very recent months, with the publication of various studies of the problem, a number of magazine articles, and two or three books, that the Nation as a whole has begun to wake up to its seriousness and to think of doing something about it.

In the first session of the Seventy-fifth Congress I introduced two bills which were aimed to meet the most serious and immediate aspects of the problem. The principle of the two bills was, and is, the same, namely, that the Federal Government should reimburse the States for any moneys expended by them for the relief or medical care of nonresidents. One of the bills dealt with relief, the other with medical care and health. Both bills were reintroduced with minor improvements into the present Congress. To date they have received scant attention. I am hopeful of making some progress with them at the next session. For this problem is one of the most dramatic, heart rending, and socially serious ones in the entire American scene today.

CAUSES OF MIGRATION

The forces that have caused these migrant families to abandon their homes and travel elsewhere in search of work are severalfold. Poor farm prices, general agricultural distress, the drought, and unemployment have all contributed. Most important of all, however, are two—the increasing use of machinery in southwestern, middle western, and southern agriculture, and the exhaustion and misuse of the soil in the Great Plains area. The first of these causes simply means that the small farmer and the tenant are being displaced by the tractor on the land. The second cause is described as follows in the 1937 "Report on the Great Plains":

> Indeed, the danger is that the movement may cease with a temporary return of good rainfall. The exodus of the 1930's was needed to correct the misguided development of this area in the 1920's. * * * The minimum reconversion of this land to grazing, which has been recommended by soil experts, would require as many more people to move out as the number which has already left, and a complete return to grazing would displace 900,000 people. To return this area to its best economic use, emigration from the Great Plains would have to proceed continuously at the present rate for more than a decade.

A FEDERAL, NOT A LOCAL, PROBLEM

No more evidence than that should be needed to prove beyond a shadow of doubt that this problem is and will continue to be a national problem requiring action by the Federal Government rather than one with which local relief agencies should be expected to struggle.

The conservative Washington Post in its issue of Monday, July 17, 1939, took cognizance of the problem in an editorial entitled "Grapes of Wrath." It pointed out the great sales of John Steinbeck's book by that title and also that "comparatively little is being done to help the tens of thousands of families who have left their former homes and are adrift in a country that no longer has free land to offer them."

Again, on the importance of recognizing the national nature of the problem, the Post editorial remarked that:

Because of its interstate nature, it is generally admitted that the problem is one which the Federal Government must help solve. Federal relief was granted the transient unemployed in 1933, but was terminated 2 years later when it was believed that all needy employable people would be taken care of by W. P. A. Now, according to a report to the President by W. P. A. Administrator Harrington, special legislation is needed to meet the crying needs of these people.

Colonel Harrington's three recommendations to which the Post referred are as follows:

First. The resettlement of the migrants who are now in California and other destination States and who can become self-supporting there.

Second. The return of those migrants who are willing to resume residence in their State of origin and giving assistance in establishing them there.

Third. The resettlement of other migrants in those areas where employment suited to their abilities is most likely to be found.

Few will question the soundness of those recommendations, and certainly they offer the only permanent solution of the problem. The immediate need, however, must, it seems to me, be met by measures such as the bills referred to above. It is most earnestly to be hoped that, whether or not Congress passes the entire lending program recommended by the President, it will at least provide for a program of broad scope for the resettlement of these uprooted farm families. There would seem to be little reason why a portion of the half billion dollars proposed to be used by the Department of Agriculture for "rural security" should not be used to enable some, at least, of these migrant families to make a new start on the land. Indeed, if the plan of enabling them to acquire small acreages in regions where considerable seasonal employment is available were followed, a considerable number could be taken care of with these funds, the tide of migration slowed down, and many of these now homeless people enabled to become an integral part of new communities.

It is little wonder that States like California, facing at best a staggering problem of unemployment and relief, should balk at accepting the full burden of caring for the needs of tens of thousands of people from other States. Already there is a serious oversupply of labor, and the consequence of such a condition so far as wage levels and living standards are concerned, are only too apparent. Furthermore, schools become terribly overcrowded and county hospitals overburdened. The worst of the situation is that resentment is sometimes directed not against the causes of migration but at the people who have migrated. This is no less tragic than it is perhaps understandable. But the migrant family and the community to which he has gone alike have a right to expect that a growing national interest in the problem will result in some national action at a very early date.

OUTLINE OF ACTION THAT SHOULD BE TAKEN

And the outline of that section should certainly include at least the following points:

First. Continuous and systematic effort on the part of such agencies as the United States Employment Service and Farm Security Administration to spread information about employment opportunities—and lack of such opportunities—and thus to attempt to prevent continuous movement of people into areas where the search for work is hopeless.

Second. Passage of legislation providing for Federal grants to States to reimburse the States for money spent by them or their political subdivisions for relief for out-of-State people.

Third. Continuance and augmentation of the program of grants to State health departments and agencies by the United States Public Health Service. Such grants to be made, among other things, for purpose of enabling local health authorities to care for health needs of nonresident migrants—for example, H. R. 2974. Until a permanent solution for this health problem has been effected a continuance of the F. S. A. health program is necessary.

Fourth. Continuance and wherever possible expansion of the work of the Farm Security Administration, particularly in the field of rehabilitation of distressed farm families in the States of their present residence.

Fifth. Development of F. S. A. migratory labor camps in parts of the Nation where migratory farm labor is essential and in connection therewith a complete information service carried on by cooperation between F. S. A. and Farm Placement Service of the United States Employment Service so that workers can be constantly advised as to where employment opportunities exist and where they do not. State and particularly local cooperation with this program should be enlisted to the greatest possible extent.

Sixth. Above all a long-range program of resettlement on available lands to match the stream of migration from worn-out lands and from regions where mechanization of agriculture is taking place.

Economy Versus Children

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

LETTER FROM MRS. LILLIAN HARRISON

Mr. HAVENNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I quote a letter which I have received from Mrs. Lillian Harrison, of San Francisco:

DEAR MR. HAVENNER: When I took my little boy to nursery school this morning, I was shocked to learn that two of the San Francisco W. P. A. nursery schools were closed up today, and the children released. I presume that this is a result of the recent "W. P. A. economy" measures we have been reading about.

I realize that you took no part in passing these measures. However, you are in a position to bring this matter again before our elected legislators. My impression of the "economy bloc" is that when they talk about economy, they are thinking in terms of figures, and not in terms of human lives. When they supported the Woodrum amendments they didn't have in mind a few score 2- and 3-year-old children, as well as the hundreds of thousands of other people affected.

I wish you would tell them about those children, Mr. HAVENNER. You come from San Francisco; you know how hard it is to raise children decently here. We live in crowded, dark apartments; in many cases we have to share baths and toilets; we have no yards for our children. By the time we scrape up enough money for adequate food, cod-liver oil, and clothing for our children, there just isn't enough money left for rent on the kind of a house we know we should have for our children. And there aren't enough decent dwelling places in the whole city to take care of those who need them.

You've driven down the narrow streets here, and seen the little children playing in the streets. That isn't the mothers' fault. There isn't any other place for those children. This week there was a little boy killed on Hickory Street. The driver of the car was sick over the accident; but it wasn't his fault. The child, 3 years old, was playing with a crowd of children, and had crawled into a packing carton where the driver couldn't see him. And houses on Hickory Street don't have yards. That little boy should have been in a nursery school, playing under trained supervision with other children of his age, examined daily by a public nurse, learning to observe habits of cleanliness and consideration which would serve him throughout his life.

We don't want less nursery schools; we need more of them to take care of every single child like that little boy who was killed. I hope you will tell your fellow Members of the Congress about that.

Government Spending

EXTENSION OF REMARKS
OF
HON. CHARLES L. GIFFORD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 1, 1939

Mr. GIFFORD. Mr. Speaker, my mail and a considerable reading discloses scant support for the new spending plan of the President. Rather it indicates a violent protest and revulsion for a continuance of a fully demonstrated failure. Seven long years has amply demonstrated its utter futility. It has brought a great fear of national bankruptcy to the consciousness of thinking citizens. The Representatives in the Congress recognize this, and only under the lash of the administration over its huge majority can these further billions be voted.

Already has a mortgage of astronomical figures been placed upon our children and grandchildren. World unrest and general conditions would predict sufficient future burdens, without placing upon them futile expensive experiments tried out by those now in power in an attempt to remake America.

Violent reforms have killed the initiative of the business of the Nation. Investment and expansion have been terrorized. The dictatorial methods of other nations have no place in a republic such as ours. Subservience of the judiciary and the legislative branches of government to the executive branch has paralyzed our representative government.

Accumulated savings are hoarded in the banks fearing the risk of investments. Honest business will not proceed because the meager profits do not make it worth while. Government regulations are so multifarious and punitive that fear of full compliance makes honest citizens hesitate.

Sudden reforms, although needed and advocated with the purest of motives, upset completely the economy of our business life. Reforms come slowly. Readjustments must be made gradually that they be not only understood but accepted as justified and reasonable.

Threats of punishment for violations of one or more of a multitude of rules and regulations not at once recognized as even applicable have wrought real havoc to nearly all classes of business activities. With full knowledge of this condition, a stubborn administration is now asking a special investigating committee to find out why idle funds are not put to work.

Any citizens with such idle funds can readily answer—he can find no experienced or professional advisor who dares suggest even a safe repository let alone where to risk it as investment. With the huge national debt increasing at this very moment at even a more accelerated rate, a great distrust and fear has been engendered.

The Congress will appropriate some thirteen billions this year, knowing full well that not more than five and one-half billions of income can be expected. Largesses once bestowed may not be discontinued or even lessened—the attempt to curtail only a little of W. P. A. funds amply demonstrates this statement.

More than eight billions have been appropriated for the farmers the past 6 years and three more billions at this session of the Congress. Great surpluses of wheat, corn, and cotton have resulted and the farmers' plight is still perhaps the major problem of the Nation. The taxpayer must pay the price of dumping and gain the ill will of other nations.

In the vain attempt to change inexorable economic laws we have brought ourselves to an unhappy state. If it were only the actual monetary loss of these subsidies we could mark it off the books and forget it. But the problems left in its wake are far worse than at the beginning.

Housing enthusiasts have induced us to embark on the expenditure of billions of Government funds, under the most fantastic and ridiculous plan of finance that seemingly could be devised. To plan for tenants and repayment for a term of 60 years is utterly impractical. Sentimentality has supplanted reason. Much could and should be done in this field by reasonable and safely demonstrated methods.

However, once gaily embarked upon, by postponing settlement more than a half century, the road seems easy.

How long will our people be willing to finance their Government for such operations? We furnish the money to build—all of it—and then contribute each year for 60 years in full for its repayment. To spend by easy borrowings and be not obliged to tax is indeed "the politicians' paradise."

Entire opposition to the philosophy of this spending orgy with borrowed funds makes attention to the actual details of these measures distressingly difficult. Again we suffer the "weariness of futility" in our opposition. However, let it be understood, that we in the opposition claim in full measure real sympathy for that one-third of our people so often of late exploited for the purpose of making these huge appropriations. We simply have regard for the solvency of the Nation, knowing full well the devastating effect on the entire three-thirds when that solvency is threatened or overthrown.

This administration and its blindly devoted followers have no patent on "love of country and their fellow men." It would be harsh to suggest that these largesses have been granted with somewhat of an expectation that the donors might more safely repose in their public positions. "The whisper goes so." Recent investigations give ample reason for the suggestion.

However, a somewhat brighter picture is now presented. Members of the Congress, hitherto most anxious to cooperate with their leaders, have been pressed to the limit of their endurance. Independence is asserting itself. Orders are unwillingly obeyed. Mutiny is in the ranks. Sentimental outbursts are no longer so persuasive. Recognition of stark failure of policies is recognized. Reason seems once more to be enthroned. When this is demonstrated to the country the wheels of industry will turn. Confidence will be restored. Men will return joyfully to private jobs. Such relief as necessary would be gladly extended. Such a contribution by sufficient Members of the majority will be enthusiastically supplemented by the minority Members of the Congress.

The Extension of T. V. A. Rates Into Arkansas

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 1, 1939

ADDRESS OF HON. E. C. GATHINGS, OF ARKANSAS, TO THE EASTERN ARKANSAS YOUNG MEN'S CLUB, AT MEMPHIS, TENN., MAY 25, 1939.

Mr. GATHINGS. Mr. Speaker, under leave heretofore granted, I wish to include in the extension of remarks an address made by me before the meeting of the Eastern Arkansas Young Men's Club, at Memphis, Tenn., on May 25, 1939, as follows:

It was highly pleasing to learn that the Eastern Arkansas Young Businessmen's Club, at the annual convention held at Jonesboro, Ark., adopted a resolution urging the Tennessee Valley Authority to extend its lines across the Mississippi River to furnish power to eastern Arkansas, the towns and the rural sections, at the T. V. A. yardstick rates.

I want to congratulate your committee on arrangements for their splendid work in preparing for this meeting, particularly

do I refer to the co-chairmen of the T. V. A. committee, Mr. Ray Burch, of Helena, and Mr. C. B. Dennis, of Marked Tree, whose untiring efforts have brought together this large representative delegation of the business leaders from as fine and fertile lands as that of the Nile Valley. East Arkansas bows to no section of the United States in the fertility of its soil and the character of its citizenship.

When I went before the electorate of the 11 eastern Arkansas counties, that it is my privilege to represent, during the summer last past I stated to the people that I would use my efforts to bring to this fertile valley the benefits of cheaper power. To this very moment I have done the very best that I could to make this pledge a reality.

CONTRACT BETWEEN THE TENNESSEE VALLEY AUTHORITY AN THE ARKANSAS POWER & LIGHT CO.

On June 16, 1939, an agreement was made by the Tennessee Valley Authority and the Arkansas Power & Light Co. in which the Authority agreed to furnish to the Arkansas Co. certain surplus power to be transmitted to the consumers in Arkansas. That contract is a 5-year agreement and provides that in order to cancel the agreement 30 months written notice of intention is required. We are today using a great deal of Tennessee Valley Authority power, but, I want to say, that we are not being charged Tennessee Valley Authority rates for this power.

I hold in my hand an absolute copy of this agreement between the Tennessee Valley Authority and the Arkansas Power & Light Co., and anyone interested may have an opportunity to read this contract to determine the amount paid for the energy by the Arkansas Power & Light Co. and compare this cost to them with the ultimate charge made by the company to you as an actual consumer. The only provision that I find in the contract in which the consumer has the right to object is in section 12, paragraph B, page 13, from which I quote in part.

"If Arkansas Co. shall resell to the ultimate consumer any power supplied by Authority hereunder, for an amount which is in excess of any applicable schedule fixed by Authority for the resale of such power, the remedy of Authority shall be to cancel this agreement, and if Authority shall elect to cancel this agreement for the cause aforesaid, such cancelation shall be effected by delivering to Arkansas Co. 2 years' written notice of intention to cancel this agreement."

COMPARISON OF RATES CHARGED

During the early part of 1939, I wrote many people in the First Congressional District of Arkansas asking for receipted bills showing the actual cost of the electrical energy used by them both in their residences and in their various businesses and received many responses showing the amount actually paid for electricity in Arkansas.

I find from a comparison of these bills that the rate seems to be less in the cities who own their electrical distribution system. I have here a paid bill issued by the Arkansas Power & Light Co. to Max Miller, West Memphis, Ark., showing the consumption of 684 kilowatt-hours, and the amount charged was $34.10. This is a charge of 4$^{9}/_{10}$ cents per kilowatt-hour for this place of business. According to this paid bill of 692 kilowatt-hours for a drug store in Corning, Ark., the price paid was $29.38, or a cost of 4$^{2}/_{10}$ cents per kilowatt-hour. The city of Corning is served by the Arkansas-Missouri Corporation.

The Arkanses Utilities Co., of Helena, charges the sum of $41.76 for 843 kilowatt-hours consumed in accordance with the bill I hold in my hand, a charge of 4$^{9}/_{10}$ cents plus per kilowatt-hour.

In the city of Blytheville, in accordance with the Arkansas-Missouri Corporation bill, which I have here, the charge of $9.28 for 284 kilowatt-hours was made on the consumer, which is the residential rate of 3$^{7}/_{8}$ cents per kilowatt-hour.

In accordance with the bill issued by the West Memphis Power & Light Co. for a place of business in the city of West Memphis, 1,693 kilowatt-hours of electricity were consumed at a cost to the consumer of 4$^{8}/_{10}$ cents per kilowatt-hour, or the sum of $83.08.

In accordance with a Tennessee Valley Authority bill issued by the city of Tupelo, Miss., to R. W. McAlister, in which 1,666 kilowatt-hours of electricity were consumed, the amount of the bill was $11.56, which is approximately seven-tenths of a cent per kilowatt-hour.

I have here excerpts from the CONGRESSIONAL RECORD of April 6, 1939, in which a table is included showing the charges and overcharges for electrical energy in the State of Arkansas and in other States for the year 1937. Arkansas has 27,333 consumers using 110,699,000 kilowatt-hours at a cost to the consumer of $3,641,700. This same power at Tennessee Valley Authority rates would have cost the electrical consumers of Arkansas the sum of $1,664,300. In other words, the people of the State of Arkansas are paying $1,937,400 more for their power to the power companies than this same energy would cost should they be given the benefit of the T. V. A. yardstick rates. This figure is more than double the amount that is being paid for T. V. A. power in the States of Tennessee and Mississippi.

Tupelo, Miss.: Tupelo, Miss., is known as America's first T. V. A. city. This city of approximately 6,500 people in northeast Mississippi finds that each year's operation is a greater success. That is to say, that the profit to the city and the savings to the consumer increase each year.

At the time Tupelo obtained T. V. A. power in 1934 the average residences in that city consumed 49 kilowatt-hours of power at 7$^{1}/_{2}$ cents per kilowatt-hour. Today the average residential consumption has jumped to 215 kilowatt-hours, and the rate has dropped to 1$^{1}/_{2}$ cents. This rate is made to the consumer of Tupelo after taking into consideration the actual costs of the power, the operating expenses, maintenance, and the taxes and interest paid, although the enemies of the T. V. A. program continuously state that taxes and interest are not included.

RURAL ELECTRIFICATION

I am proud to have been of assistance to the Woodruff, Clay, and Mississippi County Rural Electrification Associations in obtaining the approval of the R. E. A. for the erection of several hundred miles of rural lines through many eastern Arkansas counties. Other applications are on file in Washington, and every effort will be made to assure their immediate consideration by the R. E. A. officials.

We are far behind many other countries in rural electrification. Practically every country in Europe has 90 percent of its farms electrified. Even in New Zealand, that far-off country, 65 percent of the farms are electrified, while in the United States less than 15 percent of them have rural electrification.

The South's problems: The South's main problem is on its way to a successful solution. In my opinion, that is the dependence on one crop. Diversification of farms is being speeded up, low feed costs are stimulating livestock raising and dairy farming, and chemists are discovering new uses for soybeans, sweet potatoes, cotton, tobacco, and peanuts.

FREIGHT RATES

Another serious problem confronting the South is the differential in freight rates that exists between shipments originating in the South to be shipped to different geographical freight-rate zones in the country. It was stated on the floor of the House last week in a speech on the question of Argentine beef that there was a reason for the restaurants in the city of Washington serving Argentine corned beef, since it could be shipped from Argentina to Washington and delivered to the consumer for less than the freight on the beef from Texas to Washington.

A bloc has been formed in the House of Representatives by the Representatives from the southern and western States to eliminate this differential. It is very difficult to pass a freight-rate bill due to the fact that the large eastern States have many votes in the House. I introduced a bill in the present Congress which was referred to the Interstate Commerce Commission where no action has been had on this proposed legislation to this date.

If the influences of this selfish interest in the East continues to penalize the South and West in freight-rate discriminations, then they may look for the South and West to retaliate, and it will doubtless spell doom for eastern industry. Without the markets in the South and West grass would grow in the streets of eastern cities. The South and West can manufacture their own goods and keep their money circulating in their own localities, thereby enriching their own people and making them independent.

WHITE RIVER DAM

The South is blessed with water-power resources second to none. The waters of the White River in Arkansas should be harnessed and a flood-control dam constructed with penstocks for the generation of hydroelectric power. It was my pleasure, in company with a delegation from Blytheville, to call on that grand old man whose hair has become ashen white and footsteps unsteady in the service of humanity—the Honorable GEORGE W. NORRIS, of Nebraska—who wholeheartedly endorsed the extension of the T. V. A. line across the Mississippi River into Arkansas and offered his every assistance. Just before we left his office he stated that before he passes on he would like to see a power project instituted along the White River in Arkansas, and he is mapping his plans accordingly. I too am in favor of this development. He stated that he would like to come to Arkansas next summer and meet with representative citizens to discuss this matter.

But, in the meantime, we have met here for the purpose of obtaining what we are justly entitled to receive, and that is cheap power for eastern Arkansas at the earliest possible moment. The Honorable David E. Lilienthal, Director of the Tennessee Valley Authority, called by my office last week and discussed this matter. He suggested that each city that is making application should determine the amount of power now being consumed in each city and give him that information first. He then would have a survey made to determine the economic feasibility of the extension and find out whether or not the Authority has available surplus firm power to serve this area.

I want to take this means to congratulate this forward-looking and progressive organization in making this fight to build a better Arkansas and to bring happiness and prosperity to its people. It was the intention of the original T. V. A. Act to make available T. V. A. power to as many people as is possible at a rate that they can afford to pay. The Honorable JOHN E. RANKIN, of Mississippi, co-author of the Tennessee Valley Authority Act, is untiring in his efforts to bring to the people of Arkansas cheap electricity, and, as for me, I wish to say that with the continued help of the E. A. Y. M. C., I will not take "no" for an answer and will not only urge that this be done but will demand it.

Humor and Pathos in Foreign Trade

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 1, 1939

ARTICLE BY RICHARD A. STADERMAN AND A. PAGE WEEKS

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a supplement of July 25, 1939, to the American Good Government Review. This article is by Richard A. Staderman, president of the society and editor of the Review, and A. Page Weeks, vice president of the society.

This article presents some interesting statistics and suggestions which I feel are well worth careful study and serious consideration.

The matter referred to is as follows:

[From a special supplement to the American Good Government Review, Washington, D. C., July 25, 1939]

HUMOR AND PATHOS IN FOREIGN TRADE: INCLUDING AN ANALYSIS OF THE EFFECTS OF THE RECIPROCAL TRADE AGREEMENTS ON AMERICAN AGRICULTURE

(By Richard A. Staderman, president, and A. Page Weeks, vice president, the American Good Government Society, Washington, D. C.)

Foreign trade is a fascinating subject, yet one fraught with serious effects on the lives and well-being of millions of our citizens.

It is pleasant to look over the list and pick out strange and almost unbelievable items. How many of us know that we import "dragon's blood" from the Far East? This is not a fairyland tale and they don't have to kill dragons for it. It is the name given to a red gum used by certain of our druggists and varnish makers.

Who would think that we imported "apatite" from Russia? This is not a gnawing feeling in the pit of the stomach, but a mineral unlikely to trouble our stomachs in the manner which Owen Meredith relates in his book, Lucille, wherein he likened pangs of hunger to the Furies which afflicted Orestes in ancient mythology.

"Bibulous paper" appears on our import list. Far from being an article for imbibers or for a substitute for an ice pack the morning after, it has true absorption qualities, being a paper used as a filter.

Were one to mentain "divi-divi," many people would think of some type of 50-50 proposition. Actually it is a fruit product from the Tropics from which we extract a tanning material.

Who could read of "Job's tears" without visualizing some hitherto Biblical calamity? But all for nought, for they are seeds from the Philippines which are used for jewelry, and are said to make attractive necklaces—as they should, in view of their price of up to $10 a tear.

TRADE AGREEMENTS—FACTS AND FANCIES

When the trade agreements program was passed in 1934, many economists hoped that this might result in an increase in exports of our surpluses to countries not producing such products in exchange for some of their surpluses of things not competing with products of our own farms, factories, and labor.

Unfortunately this principle of striving to encourage foreign trade in products not competing with one's own producers, was not followed. What did seem to be the objective was that of attempting to increase both exports from and imports into the United States regardless of, or with insufficient regard to, the fact that many of these increased imports might displace our own producers. The theory of the trade-agreements proponents apparently was that all would adjust itself in the long run, presumably on the assumption of a perfect fluidity in business.

By "fluidity" one means that as soon as a farmer were for example ruined by competition of some cheap imported meat or other agricultural product, he might in some magical way transform his farm and himself into a factory and a skilled worker and export something for which the trade agreement was supposed to have increased the demand.

At first it appeared that the proponents of the agreements were succeeding from their standpoint, notwithstanding the ruthless aftermaths on some of our own producers. In 1934, before the trade-agreements program actually got under way, our total exports were $2,130,000,000 in round numbers. By 1937 this had increased to $3,350,000,000.

Thus our export trade seemed to be thriving. One manufacturer of breakfast foods who couldn't sell his product abroad as such, removed the word "breakfast" from the package and advertised its benefits as a bedtime dish for children, and scored good success. Presumably our exports of "weasel's tails" to China also increased. This strange but true item is used by the Chinese to make those fine brushes with which they write.

IMPORTS INCREASE FASTER THAN EXPORTS

During this same period, imports per year in 1934, before the agreements began, came into the United States to an amount of $1,660,000,000. By 1937 this had grown to $3,100,000,000. Offhand this concomitant growth of exports and imports to the tune of the "good-neighbor" melody appeared on the surface to justify the proponents of the scheme.

The first rift in the rainbow occurred when the growth of imports was shown to be $1,440,000,000 or $220,000,000 more than the above $1,220,000,000 increase in exports from the United States in these years. That is, the foreign nations had sold us more in 1937 than in 1934, we had sold them more, but they had sold us over $200,000,000 worth more than we had sold them, on a net basis.

A second rift became apparent when prices received by farmers dropped on the average to less than they had been since before the trade agreements had started. The combined index of prices received by farmers for all their products stood at 107 percent at the beginning of 1935, before the trade agreements had really gone into effect (only the Cuban agreement had been signed before this, the remaining 17 or so agreements were subsequently signed). After a temporary rise due largely to drought in the intervening years, this index dropped to 104 percent in December 1937, or 3 percent less than before the program was started. Incidently, the latest figure for May 1939 shows this index at 90 percent and the end of the decline not yet in sight.

BETWEEN TWO CROSS-FIRES

One factor tending to pull down farm prices in the United States has been the growing amount of low-priced products of the same sort as we raise here being imported under the encouragement of the lowered tariffs of the trade-agreements program.

The unfavorable aspect of these things coming in which we could raise ourselves is not only that so-and-so much of them displaces what we might otherwise raise. In addition we have an economic principle at work that if part of the supply of a product is offered at lower prices, it tends to cause a drop in the rest of the supply which was selling at higher levels.

Meat products offer a good illustration. In 1933, before the agreements were started, for the entire year we imported some 62,000,000 pounds of all kinds of meat products with a value of $9,400,000. For the first 5 months of 1939 we have already imported a greater physical quantity of meat products valued at $12,600,000. At this rate, the total for 1939 of imported meat products will certainly amount to two or three times the pre-reciprocal program amount.

RECIPROCAL-AGREEMENTS PROGRAM BOGGING DOWN

Until 1937 a certain superficial appearance of success could be claimed for the reciprocal program, as we have indicated above. Since then, however, exports from the United States have, on the average, been steadily declining, notwithstanding bigger and allegedly better additional agreements. True, imports in 1938 declined sharply in certain lines, but they are now growing.

Our total exports for the first 5 months of 1938 amounted to $1,360,000,000. For the same months of 1939 these had dropped to $1,180,000,000, a decline of $180,000,000. During these same periods imports into the United States increased from $815,000,000 for 1938's first 5 months to $915,000,000 for those months this year, an increase of $100,000,000 in imports.

THE DISAPPOINTING ANGLO-AMERICAN TRADE TREATY

Great hopes were raised regarding the results of the agreement between Britain and the United States, inasmuch as the British Empire forms the largest market we have for exports. Canada ranks first and the United Kingdom (British Isles proper) ranks second among all the nations of the world in our exporting list.

Have these hopes been realized since January 1, 1939, when the British-American agreement became effective? For the first 5 months of 1938 our exports to Britain were $225,000,000. For these same months this year they were $193,000,000, a drop of $32,000,000 since the agreement became effective.

During the first 5 months of 1938 our imports from Britain were $44,000,000. In these months of 1939 they were $61,000,000, an increase of $17,000,000.

The British are shrewd traders. For many years they have been selling quite a few pieces of used clothing to natives in Africa. A native feels quite important if he can strut around in a "silk-topper" hat, sporting a touch of shiny gold braid from a former military uniform, with a pair of epaulettes to touch it off. Then there is the manufacturer in Seattle to whom the sons of John Bull sell goose feathers, from which he makes badminton shuttles, which he sells in India.

Of the months above quoted, May 1939 showed the largest increase of imports into the United States from Britain, the figure being $15,200,000 for that month, as against $8,600,000 for May 1938. The imports have almost doubled for these periods. Apparently Britain got the best of us on that deal.

DRASTIC DECLINE IN EXPORTS OF FOODSTUFFS

During the first 5 months of this year, as compared with the corresponding months last year, exports of crude materials declined 30 percent. This does not include crude foodstuffs, which in May 1939 were exported from our shores in an amount 68 percent under May 1938.

Imports of crude materials were 55 percent more and those of crude foodstuffs were up 32 percent in this May, as compared to May last year. This is a strange performance for a nation like ours with a large surplus of food products and overproduction problems.

With grain selling substantially lower in Liverpool than in our own country it is small wonder that our total export of all grains dropped from 43,000,000 bushels in May 1938 to 16,000,000 in May this year. These figures include flour and meal. Of the totals the decline in exported corn was the most drastic, the May amount dropping from 25,000,000 bushels to only 1,200,000 bushels this year.

GROWTH OF OUR MEAT IMPORTS

The latest available figures show over 4,000,000 pounds of meats a week being imported into the United States. It is hard to visualize over 200,000 pounds of canned Argentine beef coming in during a single week, or an average of about 30,000 pounds every day. Brazil tops this with sending us 270,000 pounds of canned beef per week, or almost 40,000 pounds a day.

On the average, Denmark sends us 4,000 pounds of hams a day, and little Estonia ships in 15,000 pounds of pork products a day. Holland's shipments of pork and hams to our ports runs over 25,000 pounds every day. The country of Hungary seems to be so well fed that it can ship into our gates some 14,000 pounds a day of hams, pork loins, and canned picnic meat. Italy and Lithuania each send some 5,000 pounds of sausage and hams, respectively, per day.

Poland does not seem to be entirely engrossed in worry over Danzig when it ships us some 24,000 pounds per day of hams, bacon, pork butts, shoulders, pork loins, etc. Rumania sends 10,000 pounds a day of meat products, and even tiny Switzerland, eking out a hard-won existence atop the rugged Alps, is able to ship into our markets some 3,000 pounds per day of bouillon cubes and soup tablets.

Other than a small percentage of these meat imports under special brands for use of foreigners or naturalized citizens living in the United States, there is no good reason apparent why we should not patronize the farmers raising animals for meat who are located in our own United States. We cannot agree with the view of President Franklin D. Roosevelt that certain imported meat is better than similar types marketed by our own producers.

The grain and meat relationship is a commonplace to every farmer. The imports of foreign meats not only backfire on professional raisers of livestock but also keep various farm crops from coming to market "on the hoof."

WHY NOT MORE DOMESTIC WOOL?

During May 1934 we imported 7,500,000 pounds of foreign wool. This was before there were any reciprocal-trade agreements. In May 1938 this had risen to three times as much, or 21,000,000 pounds. Due to our unwise policy of devaluation of the gold dollar, our consumers of wool now have to pay $35 for a quantity of wool which, without devaluation, would have cost only $20.67. Apparently, this is a modern perversion of the ancient Golden Fleece in which foreign producers fleece us with their wool.

The startling thing is that two-thirds of our imports of wool come in free of duty, and all of our imports of sausage casings are duty-free, which, in the case of lamb, sheep, and goat casings amounts so far this year to half a million dollars a month, or, at the rate of $6,000,000 a year. This, added to our present wool imports of about $4,000,000 worth a month, or over $40,000,000 a year, makes a total business of some $50,000,000 a year our own farmers could do if we protected them against these imports. Some who are now not doing so well might fare better if they could turn to sheep-raising and have a market for sheep, lambs, and products therefrom.

PORK AND LARD EXPORTS

During the 1920's our exports of all pork products, including lard, averaged over 100,000,000 pounds a month. During the depression years 1931 and 1932 this held up around 60,000,000 pounds a month. Thus far this year these have averaged not over 34,000,000 pounds a month, barely over half what they were before the reciprocal-trade program was started and but a third of the average of the twenties.

Lard forms an important part of the above exports of pork products. In 1923 exports of lard from the United States averaged 86,000,000 pounds per month. This was exceptional, however, the monthly average for the entire twenties being around 60,000,000 to 65,000,000 pounds a month. During the low point of the 1931–32 years lard exports averaged only about 47,000,000 pounds a month. In the early part of 1934, before scarcity policies plus drought had taken effect, these exports of lard ranged from 37,000,000 pounds in the short month of February to 66,000,000 in that of May.

If the trade-agreements program had succeeded, one would expect that by now exports would be back to the level of the twenties. Figures for May 1939 show lard exports at only 25,000,000 pounds, and the average for the first 5 months of 1939 is only 23,000,000 pounds a month.

WAREHOUSEMEN PROSPER AT EXPENSE OF FARMERS AND TAXPAYERS

That clever humorist of the horse-and-buggy days, Mr. Dooley, once remarked that every lawyer in a bankruptcy case felt he was entitled to "a fair share" of the assets of the bankrupt. Something similar is resulting from the present governmental agricultural policies, which is causing ever-growing surpluses to be stored rather than moving along into the channels of commerce.

This reductio ad absurdum only recently came to light when cotton warehousemen opposed the agreement signed in London June 23, 1939, to barter 600,000 bales of our surplus cotton for 175,000,000 pounds of British rubber. We now reportedly are paying $45,000,000 a year for storage of loan stocks of 11,250,000 bales of cotton, and the warehousemen would lose part of this revenue if the barter transaction is consummated. It would be interesting to know how many more millions of dollars are going for storage of other crops. Obviously this amount paid for warehousing crops that should have been consumed could be used in part for actually helping farmers and in part for easing the load on our taxpayers.

SUGGESTED IMPROVEMENTS

Our survey has shown that agriculture in general has not benefited from the trade-agreements program, although certain manufacturers have been able to increase exports due to the agreements. On the whole, however, the temporary increase in exports of all products from the United States has been reversed, and if the present declines in exports continue, we shall soon be worse off than before the program was started. Agriculture is already less well off than before the agreements, due partly to the price-fixing schemes which keep products off the world market, and partly to the removal of tariffs on imports which compete with our own farmers' products.

Consumers do not usually care where their purchases come from except in the case of certain types of highly processed and manufactured articles. For foods they merely want to avoid excessive prices for satisfactory quality. Consumers would feel badly if they were not permitted to buy a certain amount of French laces or chinaware, Italian olive oil, or Swedish bread. If we were to put prohibitive tariffs on grains, meats, and vegetables that we can readily produce there would be no complaint from consumers at keeping out the foreign products unless the prices of ours became excessive—a development unlikely in view of our present farm capacity.

TRUE ROLE OF THE FOREIGN-TRADE PROGRAM

The original principles of the reciprocal-trade program have broken down with the negotiation of the recent cotton-for-rubber barter deal, as well as the export subsidy announced for cotton. The program has not worked from the standpoint even of its proponents, who claimed it would cause a steady increase in our total export trade each year. It certainly has not worked in the interest of our own producers of foods and raw materials.

A rational foreign-trade policy would, therefore, seem to be one of keeping out foreign products of types which we can produce enough of ourselves, with certain exceptions for highly processed items as above indicated. Tariffs could be adjusted at such a point to normally keep out competitive imports, but still low enough to prevent any monopoly here from rigging the market and collecting extortionate prices.

Our trade-treaty negotiators would then devote their efforts to arranging agreements which would lower foreign nations' tariffs on what we wished to export and grant lower duties here on imports of items we do not produce. Incidentally this policy would aid our national defense and security by rendering us less dependent on foreign sources of supplies and hence less vulnerable to the effects of possible armed conflicts between other nations.

What's Wrong With the "Heavy" Industries?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. BENDER. Mr. Speaker, during the first 3 years of the depression, the Nation's "heavy" industries dropped almost 80 percent. Automobiles, new buildings, construction, utilities, and railroads dropped thousands of employees. Their purchases were reduced to a fraction of their normal extent. Today, with conditions recognized as better than they were at the bottom of our industrial crisis in 1933, our "heavy" industries are still lagging far behind the parade. When we recall that it is in just these branches of our national economy that the rolls of our unemployed continue at

a distressingly high figure, we must recognize the importance of some constructive effort to tackle this problem.

For the last 2 months, stock prices have moved slightly upward. But this normal harbinger of improved business seems almost meaningless in these days. For our factories, our shops, operated at a figure which was somewhat under 75 percent of the 1929 rate. We are still moving along in a depressed curve. In April, the National Industrial Conference Board placed the number of our unemployed at 10,177,000, which is only one-third fewer than the worst figure of the depression years.

Every figure makes it obvious that we have recovered only slightly if at all from the extreme difficulties of 1933. And the heart of the problem lies within the walls of official Washington. In April, employment in the factories manufacturing nondurable goods was only 8½ percent under the 1929 level. In our durable-goods industries, we were almost 25 percent under the '29 figures.

Our Government protests constantly that it is keenly interested in stimulating building. Public-works programs flood the newspapers and projects dot the cities of dozens of States. Yet residential building, private-home construction is proceeding at just about half of the 1925–28 rate. It is better than it was in 1933, but any comparison based upon that year could not escape being favorable. People refuse to build, because they are unable to plan. They are fearful of their futures.

In the two greatest areas of our durable-goods production the Nation's desperate economic plight comes even more strongly home. Our railroads and our utilities not long ago were tremendous purchasers. Virtually all their business added to the demands of our heavy industries. Steel, iron, new and replacement equipment gave employment to thousands of workers.

Today any unbiased observer of the American scene would regard the men who run our railroads and operate our utilities as the most abysmal sort of idiot if they chose to venture upon a program of expansion. For 4 years the Nation's railways have been suppliants at the doors of the White House, asking for some form of legislation which would enable them to meet the growing forms of competition which menace their earnings. To every request the national administration has turned a deaf ear. In effect, our railroads have been politely told, "You got yourselves into this mess back in the days before Roosevelt. Now get yourselves out of it." No one who takes this view can be labeled worthy of high public office. For the economic burdens which fall upon the railroads of our Nation are shared by the several million men and women whose livelihoods are dependent upon the successful operation of our roads. They are directly linked with the investments of additional millions whose incomes are equally dependent upon successful operation. To cut them adrift with a sink-or-swim attitude is treason to our people.

No less distressing is the dilemma which confronts our privately owned utilities. Their purchases have been virtually halted by the growing fear of Government competition. With the expansion of the T. V. A. program and the threat of additional ventures along similar lines throughout the land, the "stop" signal has been permanently turned against them. Their immediate future lies hidden in the obscurity of a collective bureaucratic mind uttering its will from Washington.

Steel, the basis of our "heavy" industries, reflects the pessimistic viewpoint of the railroads and our utilities. Expansion programs are out of the question so long as the uncertainty which pervades the atmosphere continues to darken our outlook.

Meanwhile, the 10,177,000 men and women who are unemployed gain little satisfaction from the fervent assurances of Washington that things are on the upgrade. For them, the answer to the question, "What's wrong with the Nation's heavy industries upon which we so largely depend for our livelihoods?" is ready at hand. Too much government, too much regulation, too many restrictions, too many indications that business is the villain—these are the basic causes of our collapse.

To change these conditions requires only the word of the American people. They must speak that word soon.

Rankin Adopted by Chickasaws

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. CARTWRIGHT. Mr. Speaker, on July 29, 1939, the Chickasaw Indians conferred upon our distinguished colleague, Hon. JOHN E. RANKIN, of Mississippi, the highest honor their nation can bestow upon an individual by adopting him as an honorary member of the Chickasaw Nation.

The Chickasaws, most of whom live in my district, were among the most enlightened Indians found in America upon the discovery of the New World. They have always been the friends of the English-speaking white people, and have served this country patriotically in every war in which we have been engaged, from the Revolution down to the present time.

And even before the Revolution they met and defeated the French at the Battle of Ackia and probably saved the western half of this continent for the English-speaking race.

They conferred this honor upon the gentleman from Mississippi [Mr. RANKIN] because of his great service in securing the rehabilitation of the Ackia Battlefield and dedicating it to the memory of the Chickasaw Nation.

In that connection I desire to say also that Mr. RANKIN is largely responsible for the passage of the bill creating the Natchez Trace Parkway, which is also dedicated to the Chickasaw and Choctaw Nations for their services to the United States in the War of 1812.

Under permission granted to me to extend my remarks in the RECORD, I am inserting a letter to the gentleman from Mississisppi [Mr. RANKIN] notifying him of his adoption as an honorary member of the Chickasaw Nation.

CHICKASAW TRIBAL PROTECTIVE ASSOCIATION,
Oklahoma City, Okla., July 29, 1939.

Hon. JOHN E. RANKIN,
House of Representatives, United States of America,
Washington, D. C.

DEAR MR. RANKIN: Your splendid memorial of Douglas H. Johnston, governor of the Chickasaw Nation, which was delivered in the House of Representatives, United States of America, and published in the CONGRESSIONAL RECORD of July 1, 1939, was read before 500 Chickasaws in convention assembled at Seely Chapel, Okla., July 26, 1939.

It was the voice of the convention that your address be embodied in the minutes of the convention and that a letter be written you by the secretary expressing the sincere appreciation of the Chickasaw Nation for your noble tribute to our beloved old chieftain, especially appreciated because it came from our old homeland in Mississippi. The footprints of our ancestors have been gone for many years from the hills and vales of Mississippi, and we are proud to know that their spirited impress—the impress of the "unconquerable Chickasaws"—can still be found in the hearts of the people.

Governor Johnston has always appreciated the loyal friendship you have always manifested for himself and the Chickasaw Nation, and he has told us of the fine tributes you have paid our Nation in the Halls of Congress. He has also told us of the bill you introduced in Congress, and was instrumental in having passed, which provided for the creation of a national park out of the old Ackia Battleground, and which also provided an appropriation to erect a monument to the Chickasaws on the site. The hearts of the Chickasaws were lifted with pride that Mississippi remembered its ancient ones who were our ancestors and for the high honor that has been paid our old nation by Congress and yourself.

As a token of our appreciation for your noble service in our behalf, the Chickasaws on July 26 in convention assembled adopted you as an honorary member of the Chickasaw Nation. Certificate of this action will be sent to you as soon as it can be prepared. As Congress will soon adjourn, will you kindly let me know where we may send your certificate of membership?

The Chickasaw Nation will always remember with gratitude the friendship you have ever manifested for our people, and we are honored to call you brother. May the Great Spirit of our forefathers surround you with His presence always.

The Chickasaws have spoken,

JESSIE B. MOORE,
Secretary-Treasurer, Chickasaw Tribal Protective Association, Official Organ of the Chickasaw Nation.

Invisible Government

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 1, 1939

Mr. THORKELSON. Mr. Speaker, the United States Congress will have much to answer for in its failure to recognize that business must be operated differently in a republican form of government than in an imperialistic form of government.

Congress will have much to answer for in its failure to adhere strictly to the fundamental principles upon which the Government must rely in order to be preserved as a republic; in failure to realize that we are gradually drifting away from sound regulated management, into an uncontrolled mass management, which will be directed by theoretical planning; in failure to understand that the present directing power is socialistic and that the guiding influence is communistic; in failure to understand that this movement is directed by a group that is not interested in our people but is instead set to secure a safe place for storage of its gold; in failure to understand that the movement of gold to the United States is deliberate and under the same management, and may be moved out faster than it came in; in failure to understand that the gold now in the United States is here because the invisible government does not control Germany, Italy, and Japan, and is therefore fearful that this gold may fall into the hands of those powers that have divorced themselves from the international money changers in the invisible government; in failure to realize that the present agitation for war is directed by the money changers to force these rebellious powers in line so that they and their own tribe may control the world by the power of gold.

In failure to realize that the President may be the instrument of the invisible government, as Kerensky was in Russia, only to be superseded by another Lenin when the invisible government's organized army, composed of the Communists and anarchists, attempts to take control of the Nation; in failure to recognize that the now popular appeal to the masses, in which the communistic proponents advocate Government ownership, unreasonable interracial relations, license and immorality, dissension and strikes, are for no other purpose than to fool the American people, to keep them unorganized and weak so that they may be overpowered by the organized Communists led by privately employed stooges of the internationalists; in failure to recognize that the attack upon our Government will come from within, and that it is already well organized, subtly, to be sure, but for that very reason a greater menace.

In failure to understand that the so-called liberals among the teaching staffs of the colleges and in the employ of the Federal Government are deluded victims or real employees placed in those positions by the invisible government by stealth to promote their diabolical schemes of destruction and conversion of the United States into a proletarian state; in failure to understand that this movement is general, and conducted through the subterfuge of radical labor organizations whose memberships may not be actually aware of the real situation, and for that reason fail to recognize that the leadership in their own groups is in the hands of those who are intimately associated with communism and anarchism, that the attack will come from within the United States like an evil cloud which at first appears threatening and then develops into a devastating storm, and that the base from which this evil force is operating and upon which it may rely for reserves is in Mexico, a country which is now in the nearly complete control of the Communists.

In order to clarify the issue, I shall publish a list of organizations which are led by radicals and which will be employed in attempted conversion of the Government as now contemplated by the Communists and so published in their own papers. This is not a secret, for no one is bolder than the Communist, and no one is blinder to this danger than the present Executive.

The organizations, their chairman and leaders, are:

American League for Peace and Democracy, 268 Fourth Avenue; Dr. Harry F. Ward (chairman), R. M. Lovett, Earl Browder, Clarence Hathaway.

Amalgamated Clothing Workers (C. I. O.), 15 Union Square, New York City; Sidney Hillman (president), Jacob S. Potofsky.

American Association for Social Security, 41 Union Square, New York City; Abraham Epstein (secretary), Bishop F. J. McConnell.

American Civil Liberties Union, 31 Union Square, New York City; Dr. H. F. Ward, Roger N. Baldwin, Arthur Garfield Hays, Robert W. Dunn.

American Federation of Teachers, Local No. 5, 114 East Sixteenth Street, New York City; C. J. Hendley (president), Rev. Jerome Davis (national president), Dr. Bernhard Stern.

American Committee for Protection of Foreign Born, 100 Fifth Avenue, New York City; Rev. Herman F. Reissig (chairman), Charles Recht, Carol Weiss King.

American Friends of the Chinese People, 168 West Twenty-third Street, New York City; M. S. Stewart (chairman), M. Forsyth, Prof. R. M. Lovett, George S. Counts.

American Friends of the Soviet Union, 461 Fourth Avenue, New York City; Corliss Lamont, A. A. Heller (treasurer).

American Student Union, 112 East Nineteenth Street; Joseph P. Lash (secretary), Celeste Strack (units in 300 colleges).

American Youth Congress, 55 West Forty-second Street, New York City (set up by Y. C. L., 634 Sixth Avenue, New York City); W. Hinckley (chairman), Joseph P. Lash.

Young Communist League, 464 Sixth Avenue, New York City; Carl Ross, Celeste Strack, Angelo Herndon.

Communist Workers School, 31 East Twelfth Street, New York City; A. Markoff (director), J. R. Brodsky, Dr. H. Selsan, L. Boudin, H. Sacker, Irving Schwab.

Co-Operative League of the United States of America, 167 West Twelfth Street, New York City (Moscow affiliate); Dr. J. P. Warbusse, president.

Communist Party, United States of America, 35 East Twelfth Street, New York City; W. Z. Foster (chairman), Earl Browder (general secretary), H. Benjamin, W. Weiner, J. W. Ford, A. W. Berry, A. Markoff.

Congress of Industrial Organizations, New York State Council, 1133 Broadway, New York City; John L. Lewis, national president; New York State, A. S. Haywood, president.

China Aid Council, 268 Fourth Avenue, New York City; M. Forsyth, J. Waterman Wise, Rabbi S. S. Wise, M. Stewart, J. P. Lash, J. P. Davis.

Communist Workers Bookshop, 50 East Thirteenth Street, New York City.

Daily Worker, 50 East Thirteenth Street, New York City; Clarence Hathaway, editor; 120,000 Sunday circulation.

Federated Press, 30 Irving Place, New York City; Frank L. Palmer, president. Serves 104 newspapers.

Federation of Architects, Engineers, Chemists, and Technicians (C. I. O.); M. E. Scherer, vice president; L. A. Berne, president.

Descendants of the American Revolution (born). 126 East Nineteenth Street, New York City; M. Hatfield, national chairman; Arthur Garfield Hays, attorney. Headquarters, 112 Park Avenue.

Garland Fund (American Fund for Public Service), 2 West Thirteenth Street, New York City; R. Baldwin, Morris L. Ernst.

International Labor Defense, 112 East Nineteenth Street, New York City (Moscow affiliate); V. Marcantonio (president), J. Brodsky.

International Ladies Garment Workers Union, 3 West Sixteenth Street, New York City; D. Dubinsky, president.

International Publishers, 381 Fourth Avenue, New York City, A. Trachtenberg.

Jewish Daily Freiheit, 50 East Thirteenth Street; M. J. Olgin, editor.

Jewish People's Committee versus Fascism and Anti-Semitism, 1133 Broadway, New York City; W. Weiner, president.

Labor Research Association, 80 East Eleventh Street, New York City; R. W. Dunn, director, Garland Fund aided.

International Workers Order, 80 Fifth Avenue, New York City; W. Weiner (president), J. Brodsky (attorney).

League for Mutual Aid, 104 Fifth Avenue, New York City; J. Davis, A. Schulkind (executive secretary), J. Baker.

League of American Writers, 381 Fourth Avenue, New York City; D. C. Stewart (president), M. Gold, G. Hicks, F. Fulsom (executive secretary).

League of Women Shoppers, 220 Fifth Avenue, New York City; E. Preston (Mrs. R. N. Baldwin), M. Forsyth.

Methodist Federation for Social Service, 150 Fifth Avenue, New York City; Bishop F. J. McConnell.

National Committee for People's Rights, 150 Fifth Avenue, New York City; R. Kent (chairman), M. Gold.

National Lawyers Guild, 31 Union Square, New York City; national headquarters, Washington, D. C.

National Maritime Union (C. I. O.), 126 Eleventh Avenue; J. Curran, president.

National Mooney-Billings Committee, 112 East Nineteenth Street; Rabbi S. S. Wise.

National Negro Congress, 35 East Twelfth Street; A. P. Randolph, president, J. W. Ford, A. Herndon, J. P. Davis.

National Urban League, 1133 Broadway, New York City; Rev. L. Hollingsworth Wood, W. C. Poletti.

National Women's Trade Union League, 247 Lexington Avenue, New York City; R. Schneiderman, A. Nestor, M. Schwartz.

Negro Youth Congress, 35 East Twelfth Street, New York City; W. F. Richardson, chairman, E. E. Strong, secretary.

New School for Social Research, 66 West Twelfth Street, New York City; A. Johnson, president; B. Bass, attorney, Heywood Broun.

North American Committee to Aid Spanish Democracy, 381 Fourth Avenue, New York City; Bishop F. J. McConnell.

Peoples Press, 1133 Broadway, New York City; Corliss Lamont (owners), J. Waterman Wise, R. S. Childs.

Progressive Women's Council, 80 East Eleventh Street, New York City; C. Shavelson, president; Rose Nelson, secretary, R. Chaikin.

Rand School of Social Science (socialist), 7 East Fifteenth Street, New York City; D. Alexander, Norman Thomas.

Social Economic Foundation, Inc.; C. Lamont, A. A. Heller, C. Recht, M. Van Kleek, directors.

Social Work Today (magazine), 112 East Nineteenth Street; B. Goldman, S. M. Isaacs, L. Merrill, M. Van Kleek.

Scottsboro Defense Committee, 112 East Nineteenth Street, New York City; Rev. A. K. Chalmers, chairman.

I have here named a number of pink, red, and scarlet organizations which are directly or indirectly engaged in destructive activities against the Government of the United States. It is the President's duty to see that the law is faithfully obeyed, and I here and now call his attention to the fact that there is a definite plan on foot by the Communists to undermine and destroy our Government.

In such event, armed forces may be used to bring those who are guilty to the bar of justice:

(3) Whenever insurrection, domestic violence, unlawful combinations, or conspiracies in any State so obstruct or hinder the execution of the laws thereof, and of the United States, as to deprive any portion or class of the people of such State of any of the rights, privileges, or immunities, or protection, named in the Constitution and secured by laws for the protection of such rights, privileges, or immunities, and the constituted authorities of such State are unable to protect, or, from any cause, fail in or refuse protection of the people in such rights, such facts shall be deemed a denial by such State of the equal protection of the laws to which they are entitled under the Constitution of the United States; and in all such cases, or whenever any such insurrection, violence, unlawful combination, or conspiracy, opposes or obstructs the laws of the United States, or the due execution thereof, or impedes or obstructs the due course of justice under the same, it shall be lawful for the President, and it shall be his duty, to take such measures by the employment of the militia or the land and naval forces of the United States, or of either, or by other means, as he may deem necessary, for the suppression of such insurrection, domestic violence, or combinations, R. S. 5299, U. S. C. 50: 203; secs. 504, 1298, M. L., 1929.

Congress failed in its duty to the people in designating the present power to the President of the United States. There is no provision for the delegation of such power in the Constitution, and responsibility cannot in any sense be expected to rest upon those the President appoints, but must instead be assumed by Congress itself, to which the people entrust their safety. Congress failed to recognize the danger of Federal ownership of private industry, when it delegated power by special acts of Congress for the corporations now operated by the Federal Government in direct competition with business. Congress failed to recognize the power and rights which the people reserved to themselves in the tenth amendment of the Constitution when they allowed invasion of the States, not only in federally owned enterprises, but also in destructive taxing power. Congress failed to recognize that it has no power to delegate reorganization and shifting of personnel within the Federal Government except under supervision of Congress, that in the end is responsible for all departments.

We are now at the end of the session, and I sincerely hope when the next session comes around that Congress will in united effort repeal all this unconstitutional power and resume its rightful relation to the people, as provided for in the Constitution of the United States. When the Federal Government is allowed to usurp one business and industry after the other, when the last one is transferred under Federal control, we are no longer a republic, ruled by the people and represented by Congress, but we are instead either a monarchy or a dictatorial government, ruled by a despot. We can be right only if we rely upon the fundamental basic principles of our Government. In departing from these, we cannot escape chaos and destruction.

This danger is not far off, for it is recognized by Members within the Government itself. I quote.

STANFORD UNIVERSITY, CALIF., July 18.—Inflation and repudiation of the public debt are ahead of the United States, W. L. Crum,

professor of economics and consulting expert of the United States Treasury, told the Stanford business conference today.

"Inflation is already here; rise in the public debt is inflation," Crum said. "But it has not yet taken hold enough to send commodity prices soaring.

"Some set of circumstances will set it off—don't ask me when."

Crum addressed the research section of the conference, which concluded the second day of its week-long discussion, with an off-the-record after-dinner talk by former President Herbert Hoover.

The factor tending to conceal inflation is surplus of commodities, keeping prices down. Should a sudden flare-up of public anxiety touch off inflation fire, resulting increase of production might supply enough goods to stop or turn the rise of prices, Crum said.

He said bondholders would be nicked, and stockholders might offset part of effects of price rise by higher dividends, but corporate profits probably would be taxed away.

"I know no protection against inflation any of us can use to take advantage of it in a big way. The best we can do is buy a small homestead," he said.

Debt will probably keep rising, he forecast. It may reach eighty billion and the service cost rise from one billion to three. Then the public outcry against paying so much to bondholders will bring repudiation, he declared.

This is the outlook of the Treasury Department, which I daresay every Member of Congress recognizes to be the final outcome of the maddening spending and waste that has been in vogue for the past 10 years. Disaster may be averted, providing measures are taken now or in the next Congress. Failure to take steps to restore economy and soundness in the Government can only end in uncontrolled inflation.

The Government and the People

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 1, 1939

ADDRESS BY HON. LISTER HILL, OF ALABAMA, AT SILVER ANNIVERSARY OF NATIONAL POPULAR GOVERNMENT LEAGUE

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very eloquent and able address delivered by the junior Senator from Alabama [Mr. HILL] at the silver anniversary of the American Popular Government League at Washington, D. C., on April 29, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Long ago Mme. Roland exclaimed, "Oh, liberty, what crimes are committed in thy name!" Tonight we might exclaim, "Oh, States' rights, what crimes are attempted in thy name!"

Vermont under its present control went out of the Union in 1936 and under that control she thinks she is still out. She talks about States' rights and seeks to frighten the people with such bugaboos as "Federal invasion," "the growth of bureaucracy in Washington," and "the Federal Government seizing State lands and State property for its own benefit." She grants private utility companies the power of eminent domain to build dams for private benefit and for the exploitation of the people's heritage but she would deny that power to the Federal Government when as a servant of the people it would build dams to protect them from the ravages, the death and destruction of floods. I would stand to the last for the rights of my State. It is my homeland and I love it, but there is a State sovereignty and there is a Federal sovereignty. The State sovereignty cannot control floods for the very good reason that a flood does not stop at a State line. It knows nothing of such a line and has no respect for it.

The Federal Government, and the Federal Government alone, can control floods, and it necessarily has the power to do the job. Localities in which flood-control reservoirs must be constructed will not pay the cost of rights-of-way, because most of the benefits from the reservoirs go to other localities. The State itself will not furnish the rights-of-way if the protection is for another State. Unless the Federal Government can condemn rights-of-way for the construction of reservoirs, there can be no check to the fury of the flood. The issue is not State rights—the issue is whether States prefer floods to reservoirs.

It was all right to build irrigation dams in the West as there was no power generated at them. It was all right for the Federal Government to spend over $300,000,000 building low dams on the Ohio River as there was no power generated at them. It was all right for the Federal Government to build low dams on many rivers, but it is all wrong and all unconstitutional for the Federal Government to build multipurpose high dams because these dams generate hydroelectric power. When we hear the cry of State rights coming from those who would deny the people's rights, we are reminded that old Dr. Johnson told us that patriotism was the last refuge of a scoundrel. Professor Webb, of Texas, in his fascinating story, Divided We Stand, reminds us that the power companies take their toll from those who use heat in winter, ice in summer, or light in darkness.

They fight the cities where the people want to manufacture their own light; they get out injunctions to stop the construction of dams for the conservation of national resources; they fight the Government when it tries to set up a measuring stick to learn what it really costs to generate electricity; they seek to control State legislatures through lobbies and lucrative retainerships; they inspire investigations designed to oust university professors who have the intelligence to understand them and the courage to teach young men and women the truths they have discovered; they throw about them the panoply of patriotism and cry "States rights" when the Government seeks to protect the people, their lives and their property from devastating floods. If they had had their way and their cry had been heeded there could have been and would have been no Boulder Dam, no Bonneville, no Grand Coulee, no Fort Peck, no Tennessee Valley Authority.

Tonight we celebrate the silver anniversary of the National Popular Government League founded to fight for the people's rights and the Nation's resources. All honor to the brave men and splendid women who brought the association into being—all honor to Judson King, who, as its director, has given the best years of his life to the league and held aloft its flag in the teeth of the wild storm; all honor to Senator Robert L. Owen, the league's first president, indomitable warrior who, though denied the light of day, still sees the better day and fights that common men may own the land; all honor to GEORGE W. NORRIS, whose stout heart has never grown faint, whose mighty arm has never been lowered in battle, and whose white plume, like that of Henry of Navarre, is still in the thick of the fight leading us on to immortal and inevitable victory. The people's rights, the Nation's resources must and shall be preserved.

Mother's Day

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, August 2, 1939

ARTICLE BY DAN MCCONNELL

Mr. BARKLEY. Mr. President, some weeks ago I had inserted in the CONGRESSIONAL RECORD an article written by Mr. Earle W. Gage, of the State of New York, concerning the origin of Mother's Day. I did not vouch for the accuracy of the statements contained in the article, but, at his request, I had the article inserted in the RECORD. That article attributed original sponsorship of Mother's Day to a Kentucky lady. I have received protests from another lady, Miss Anna Jarvis, of New Jersey, who had some part, evidently, in the idea of originating Mother's Day, and, at her request, I ask unanimous consent to insert in the CONGRESSIONAL RECORD an article by Dan McConnell, which she has sent to me with respect to it. I repeat that I do not vouch for the statements in either article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Camden (N. J.) Courier-Post]

MOTHER'S DAY

(By Dan McConnell)

Mother's Day, now a nationally observed occasion when we all pay tribute to the grandest and most-loved lady in our lives—mother—was honored in Camden.

This reporter vividly recalls when and how the observance of Mother's Day had its New Jersey beginning.

The first Mother's Day association in New Jersey was organized in our town and the former Camden Daily Courier played a most important part, sponsoring the movement to set aside the second Sunday in May to pay tribute to living mothers and to revere the memories of those dead.

Miss Anna Jarvis, the founder, requested newspaper officials to organize our first New Jersey association.

The late George A. Fry, former city treasurer, and publisher, was elected president, and Walter L. Tushingham, now vice president and business manager of the Courier-Post newspapers, was named secretary.

This was the first New Jersey organization to conduct a city-wide observance of Mother's Day.

On Sunday, May 12, Camden citizens, church members, and pastors, as well as civic and fraternal organizations, joined in the movement.

In a news story in the Daily Courier, Miss Jarvis said: "I hope Camden will take the lead in the State of New Jersey in having permanent Mother's Day organizations formed throughout the State," etc. The wishes of this grand lady were more than fulfilled.

FIRST OBSERVANCE WAS GALA OCCASION

The first Mother's Day observance in Camden was staged on Sunday. It was one of the most colorful and reverential occasions seen here in many years.

More than 110 fraternal and civic organizations turned out and attended church services on that epochal day.

Fifty volunteer bands furnished music for a massed street parade that formed at Fifth and Mickle Streets. Those who participated were assigned to attend church services at 37 churches.

A committee of citizens, members of the association, and city officials met Miss Jarvis and her party at Federal Street Ferry.

There were few "smart" automobiles in Camden in those days, but the aggressive and more youthful Walter Tushingham borrowed a limousine owned by the late Charles A. Reynolds, a respected philanthropist and charity worker.

In the flag-bedecked car, Miss Jarvis and committee members began a triumphant tour through city streets, as thousands lined the sidewalks on Federal Street and Haddon Avenue.

As the car containing the founder rolled along, men, women, and children ran out to greet her, waving handkerchiefs and small American flags. It was, we believe, the happiest day of Miss Jarvis' life.

FOUNDER MADE TOUR OF CAMDEN CHURCHES

On her eventful trip to Camden Miss Jarvis was escorted on a "flying squadron" tour of the churches. By arrangement with the pastors, the founder was escorted to and she spoke briefly in every one of the 37 churches where these special services were held.

In little more than 2 hours, approximately from 7 to 9:30 p. m., Miss Jarvis covered the route of churches, starting with the First Methodist Episcopal Church and ending with Broadway Methodist Episcopal Church.

At the conclusion of an exhausting, eventful day, Miss Jarvis happily told members of the association's committee that it "was the greatest day of my life."

During her stay in Camden the founder of Mother's Day was an honored guest of the Y. M. C. A. and friends.

Annually for years the parade of fraternities to churches on Mother's Day was continued under direction of Daily Courier.

Miss Jarvis formed similar associations in other cities and countries.

The movement spread rapidly.

The first association was formed in Philadelphia headquarters.

However Camden was the first city to hold a massed observance of Mother's Day.

In 1938 a great historical Catholic field mass had celebrants from New Jersey and Pennsylvania.

CONGRESS RECOGNIZED FOUNDER'S REQUEST

Miss Jarvis continued her efforts over years to have the second Sunday in May annually an American flag day, so the flag would be displayed yearly on Mother's Day in honor of American homes, mothers, and other patriotic women and home folks.

Finally, May 8, 1914, historical recognition was given to her Mother's Day flag resolution, through its passage by the Congress.

Already she had Mother's Day celebrated around the world, or the resolution would not have been passed. At the time of the passage of the Mother's Day flag resolution, Miss Jarvis was a guest in the House of Representatives gallery.

Later she was given the signature pen used by the President in signing the resolution, and also was given a facsimile official copy of the resolution.

It is alleged Anna Jarvis, founder of Mother's Day, is the first woman to have established a national flag day in honor of homes and patriot women.

Miss Jarvis' work for the American flag has been active, specific, unceasing, and constructive on original lines.

The Camden Y. M. C. A. presented her with a large American silk flag following the first Camden pageant, and other presentation flags have been given her.

GUEST OF CITY OF BOSTON

Anna Jarvis was the first woman to be the guest of Boston for her personal achievement.

She was entertained over the week end in an honored, official way.

She was escorted to the mayor's offices and presented with a golden, encased key to the city of Boston; also was given official portrait of the mayor and bound volume of history of Boston.

On Sunday an official reception by the city was given to her, followed by a large parade to the common.

There a mass meeting of thousands of men, women, and children was held under leading State, city, and patriotic officials.

Those of us who have been so blessed by having our mother with us should remember her on Mother's Day.

Visit your mother with token of your love and respect—no matter how small the gift.

God bless you, Anna Jarvis, for your work in establishing one of the happiest periods of the year—Mother's Day.

It must be a source of joy and satisfaction for Miss Jarvis to know that through her pioneering efforts the Mother's Day movement has spread to all parts of the world, even into Asia and Africa.

Once in paying tribute to the founder, Miss Jarvis, the late John Wanamaker, United States Postmaster General, said:

"I would rather be the accepted author of Mother's Day than to be the King of England."

Shipment of Munitions to Japan

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 2, 1939

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR OF JUNE 27, 1939

Mr. NYE. Mr. President, the Christian Science Monitor of June 27, 1939, carried a very interesting story, accompanied by a tabulation, under the heading "Where Japan Gets Its Guns—United States Found Leading Provider." I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of June 27, 1939]

WHERE JAPAN GETS ITS GUNS: UNITED STATES FOUND LEADING PROVIDER

(By Saville R. Davis)

WASHINGTON, June 27.—The United States is far and away the most important supplier of war materials to Japan, according to a broad and painstaking survey of world trade with that country, made public by the Chinese Council for Economic Research here.

Figures were obtained by Hu Tun-yuan from official Government sources and show that the United States supplied 56 percent of all Japan's imports of the most strategic war materials in 1938—a slight increase over the year previous—as compared with only 20.7 percent supplied by the British Empire in second place, and the 8.6 percent from Netherland India in third place.

The three nations, all interested in curbing Japanese aggression in China, controlled between them approximately 85 percent of Japan's foreign supply of these materials—a fact of prime importance in the event that economic restraining action should be attempted in the future. While there are undoubtedly other sources for many of these materials, should these major suppliers adopt an embargo, the cost would be far greater and most of the commodities could not be found elsewhere in anything like the quantities needed by Japan.

FIGURES TELL STORY

The accompanying table speaks eloquently of the extent to which the United States has underwritten Japan's war on China—supplying in the past year 90 percent of the vital scrap or old iron and steel, 91 percent of the copper, 66 percent of oil and its products, 45 percent of the lead, 67 percent of the metal working machinery, and so on.

Aircraft and parts come in a special category. In 1938, according to Dr. Hu's figures, the United States provided $17,454,000, or 77 percent of the world supply to Japan. This trade has since almost dried up as a result of the voluntary boycott requested by Cordell Hull, Secretary of State, in May of last year. Substantial contracts in force previous to that time were supplied during the remainder of the year, but no new licenses for export have been issued by the State Department since November 1, 1938, and in 1939, the amounts actually shipped under old contracts amounted only to $250,000 during the 5 months up to June 1. Parenthetically, these are the State Department's figures and include only aircraft and parts considered to be for war purpose; today airplane exports to Japan as reported by the Department of Commerce were approximately $1,000,000 in May of this year and may include materials convertible to war purposes.

Another table prepared by Dr. Hu and too lengthy to reproduce here shows what amounts of all war supplies are furnished to Japan by the democratic powers, on the one hand, and by the axis powers on the other. Even a quick glance shows the overwhelming extent of control of the situation by the democratic

powers. Their column shows one high percent after another, looking down the list of commodities in the 1937 and 1938 trade with Japan; while the column of percentages supplied by the axis contains one zero after another.

HOW TRADE ROSE

Only in the case of manufactured materials has the axis any significant share and even this is greatly outweighed by the supplies from the democratic powers which dominate these categories also. Only mercury should be mentioned as an exception, being entirely supplied from the axis side.

Another table shows the extent to which the war-materials trade from the United States to Japan has increased between 1937 and 1938. In terms of quantity shipments gasoline and related fuels in containers more than doubled. Lead more than tripled. Aluminum went up 172 percent. Crude petroleum went up 35 percent. Significantly, also, a great many other items fell off, the most drastic of which was iron and steel scrap, which fell from 1,912,000 tons in 1937 to 1,382,000 tons last year. This was a decline of 29 percent in quantity and 44 percent in value. This was in line with a general curtailment of scrap from all sources which partly reflected the tightening foreign exchange resources of Japan and partly reflected the taking over of the Lungyen iron-ore deposits in Chahar, China, which were opened up at the end of 1937.

Following are the salient figures with respect to the trade of Japan with the world as a whole:

The proportion of war-material imports to all other imports rose from 29 percent in 1937 to 40 percent in 1938. War-material trade fell off only 3.4 percent, whereas total trade of all sorts fell off by 30 percent between these 2 years. "This reflects," says Dr. Hu, "Japan's policy of curtailing ordinary imports in favor of commodities that are necessary to the prosecution of war." In the case of cotton and wool for Japan's greatest nonmilitary export industry, the decline of imports was great, amounting to 49 percent for cotton and 69 percent for wool.

The total of world sales of essential war materials and articles to Japan amounted to $306,000,000 in 1938, while sales of all commodities (including war materials) amounted to $757,700,000.

HOW UNITED STATES AIDS JAPAN SHOWN

United States' share in world exports to Japan essential for war purposes in 1938 as compiled from Government sources by the Chinese Council for Economic Research:

[Value in United States dollars]

Commodity	World exports, value	United States share, value	Percent
Total	$306,393,950	$171,574,167	56.00
Hides and skins	7,916,835	2,652,482	33.50
Leather	523,369	44,676	8.46
Scrap rubber	14,854,039	249,792	1.68
Petroleum and products [1]	81,034,885	53,135,672	65.57
Scrap or old iron and steel	24,407,089	22,061,212	90.39
Ferro-alloys	2,819,420	2,331,979	82.71
Other iron and steel semimanufactures	20,973,343	11,251,804	53.65
Copper	24,385,546	22,163,778	90.89
Aluminum	13,095,231	476,345	3.63
Nickel	6,624,449	157,317	2.38
Lead	4,613,888	2,100,054	45.52
Zinc	2,794,622	26,768	.96
Metals and alloys, not eslewhere specified	321,711	319,566	99.33
Automobiles, parts, etc.[1]	18,635,299	12,050,536	64.67
Metal-working machinery [1]	36,448,527	24,454,707	67.09
Internal combustion engines [1]	1,658,875	542,637	32.71
Aircraft and parts [2]	22,692,655	17,454,477	76.92
Arms and ammunition	696,186	100,365	14.42
All others [3]	21,832,960		

[1] Including shipments to Manchuria.
[2] Including shipments to Manchuria. United States figure for 1938 includes shipments to Shanghai.
[3] Includes ores, tin, antimony, mercury, mica, and asbestos.

Program for Financing Recoverable Expenditures

EXTENSION OF REMARKS
OF
HON. JOSEPH F. GUFFEY
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 2, 1939

EDITORIAL FROM THE PHILADELPHIA RECORD

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an editorial from the Philadelphia Record of this date which appears under the heading Murder, and has reference to the action of the House of Representatives in connection with Senate bill 2864, to provide for the financing of a program of recoverable expenditures, and for other purposes.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record of August 2, 1939]

MURDER

No milder term is adequate to describe the wanton destructiveness of the House of Representatives in killing yesterday the $2,000,000,000 Roosevelt bill for loans to stimulate business.

Suppose President Roosevelt were to veto an act of Congress without so much as reading it?

Can you imagine the roar which would go up in the camp of reaction? We would hear about Presidential contempt for the Congress, about the irresponsibility, etc., etc., of the Nation's leadership.

The vote in the House yesterday was not a vote against the lending bill; it was a vote to kill that bill without even considering it on the floor of the House.

It was, first, a heedless blow at recovery, and, second, a monstrous piece of discourtesy to the President.

These loans were not for relief; they were for recovery. They were not to go to the jobless; they were to go directly into the channels of private industry.

Loans for bridges, for highways, for railroad equipment, for rural electrification, and other purposes would have meant a vital stimulus to our basic industries, and especially to the capital-goods industries, which, the conservatives have been telling us, are in the doldrums.

Improvement in those industries, in turn, would mean improvement in business generally and a rise in private employment.

The Record has regarded this bill as one of the most important in the whole New Deal program because it is the one bill which offered the greatest prospect of taking men off W. P. A. and relief and putting them back in private jobs.

Yet so anxious were the Republican and Democratic reactionaries to vent their hatred upon Roosevelt that they never stopped to consider that the chief effects would fall not upon Mr. Roosevelt but on the business of the entire country.

The President made that clear at his press conference last evening.

Feeblest of all excuses being put forward for the slaughter of the lending bill is the "desire for early adjournment."

Who are these Congressmen who put their desire for adjournment before the needs of the people?

Private business isn't going to adjourn. The people who sent those Congressmen to Washington are not going to be able to adjourn their daily tasks and either squat on their hams in Texas or take a trip to Europe.

The rest of the Nation is going to work—right on through the summer, be it hot as blazes. The rest of the Government personnel in Washington is going to work right through, and most of them will not work in the air-conditioned chambers which are afforded the Members of Congress. Not even those "shovel-leaners" on the W. P. A. will adjourn.

Why, then, this emphasis upon the special prerogative of Congressmen to leave important national business unfinished while they adjourn?

Are the Members of Congress weaker—or merely lazier—than the rest of American humankind?

We hope the President, in the name of the people, will take up this challenge reaction has flung.

We hope he will carry this issue to the people.

The folk back home will not be long in catching on.

True, the Congressmen who knifed the President yesterday have been sending bales of unmade speeches to their constituents. But when jobs fail to materialize; when more and more are fired from W. P. A. and private industry; when business, now on the upgrade, starts to skid—

Then the folk back home are going to ask a lot of embarrassing questions.

They are going to demand to know why the Members of this Congress killed a bill to aid private industry.

They are going to demand to know why the Members of this Congress violated their campaign pledges.

They are going to demand to know, above all, why the Members of this Congress plainly lay down on the job.

American Bar Association Meeting

EXTENSION OF REMARKS
OF
HON. EDWARD R. BURKE
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 2, 1939

ADDRESS BY STEPHEN F. CHADWICK

Mr. BURKE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very able

address delivered by Stephen F. Chadwick, of Seattle, Wash., national commander of the American Legion. The address was delivered before the American Bar Association at its recent meeting in San Francisco.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President and gentlemen of the American Bar Association, it was with great pleasure that I accepted the invitation of your president to be here today not alone as national commander of the organization which I this year have the honor to represent, the American Legion, but also as an individual member of this body, for, after all, the Legion, for this year, is but my avocation, and the law will ever be my profession.

I have found a real joy in this year of service to the American Legion, and so in what I consider a year of service to my country, nor is the year one in which my basic training in the law has been forgotten, for it has afforded me an opportunity to discuss publicly with lay audiences some of the fundamentals on which this great Government of ours is based. We as members of the profession, know the contribution of the lawyer to the declaration, establishment, and preservation of our liberty.

Too often in recent years has the demagogue assailed the lawyer. Too often has the lawyer been charged with obstructing progress, or what the demagogue calls progress, for not all change is progress. Too often has the bar as a whole been pilloried and assailed as reactionary. Too often has the liberal arrogated to himself all knowledge and branded as conservative and reactionary any and everyone who wishes to predicate his forward movement upon a knowledge of the mistakes of the past. I sometimes think that a liberal is one who wants to leap before he looks, while the conservative is one who at least wants to know where he may light if he leaps.

This year has afforded me the opportunity to tell the American public in every State in this Union that in the opinion of a million men organized in the American Legion there is nothing reactionary in the Bill of Rights, the Declaration of Independence, or the Constitution of the United States of America. These are our charters of freedom, charters which the lawyer has taken an oath to defend and perpetuate. We know that these declarations of the rights of man and institutions erected by the wisdom of man to preserve them were won after centuries of struggle. They constitute for man the basic hope of his security, his fundamental liberties, his inalienable rights, and it is these that the bar should be militant to defend.

The spirit of our mutual covenants was freedom and liberty for the individual. The individual was vested with dignity, his rights made him a man free to enjoy life, liberty, and to pursue his happiness. There is nothing reactionary in that conception, nothing reactionary in the defense of the rights of the individual against the dictatorship from any source, whether one man or a class or even from a government. But eternal vigilance is ever necessary, vigilance of the mind and vigilance of the heart tempered and made strong with reason and knowledge.

Today as in times past the words of the siren with false doctrine attempt to propose philosophies incompatible with the spirit of freedom. It has been said "that everything that grows holds in perfection but a little moment and this huge state presenteth not but shows whereon the stars in silent influence comment." The life of a man, like the life of a nation, may be prolonged into the fullness of years, or it may perish from external violence or from internal decay The excise of a diseased condition in the human body may prolong life, and the same is true of those conditions in the body politic, which, if unattended to, may ripen into cancerous growths. To save the people and their liberties from the dangers of internal decay is our everlasting duty as members of the bar.

An essential element of our conception of ordered progress is the preservation of the spirit of individual initiative and enterprise. To venture to build and to create was an energizing factor released in the mind of man. This spirit of enterprise brought to us as a people material riches greater than the world had ever seen before. The spiritual background was that of a free people, all benefited. But today there are those among us who do not believe sufficiently in man's liberties and rights. There are those who assume the rostrum to tell us that we must blue print our collective economy.

To my mind that proposal has the familiar ring of the Communist 5-year plan or the Nazi 4-year program. It is another form of the age-old and many-times tried compulsion which our forefathers rejected. It is the philosophy of defeat and despair. This country did not grow strong and great from a blue print; it prospered because its people were free. There was no compulsion in our growth, although the siren voice mouths resort to the catch phrases of liberty in urging a regimented society. We have only to turn the pages of history to see the results of surrendering individual freedom to compulsion. It has been written many times on the pages of history but probably nowhere is so startling a parallel as in the history of the third century when Diocletian, after depriving the Roman Senate of its power, loading the state with a back-breaking bureaucracy, and after driving taxation to the point of ruin, enacted his famous laws for the control and regulation of the one-time free citizens of Rome. Dr. J. H. Breasted, in his recent work The Conquest of Civilization, summarizes it well. I quote:

"The financial burden of this vast organization, begun under Diocletian and completed under his successors, was enormous, for this multitude of Government officials and the clamorous army had all to be paid and supported. It was a great expense also to maintain the luxurious oriental court of the emperor, surrounded by his innumerable palace officials and servants. But now there were four such imperial courts instead of one. At the same time it was still necessary to supply 'bread and circuses' for the populace of the towns. In regard to taxation, the situation had grown steadily worse since the reign of Marcus Aurelius. The amount of a citizen's taxes therefore continued to increase, and finally little that he possessed was free from taxation.

"When the scarcity of coin forced the Government to accept grain and produce from the delinquent taxpayer, taxes had become a mere share in the yield of the lands. The Roman Empire thus sank to a primitive system of taxation already thousands of years old in the Orient. It was now customary to oblige a group of wealthy men in each city to become responsible for the payment of the entire taxes of the district each year; and if there was a deficit, these men were forced to make up the lacking balance out of their own wealth. The penalty of wealth seemed ruin, and there was no motive for success in business when such prosperity meant ruinous overtaxation.

"Many a worthy man secretly fled from his lands to become a wandering beggar, or even to take up a life of robbery and violence. The Roman Empire had already lost, and had never been able to restore, its prosperous farming class. It now lost likewise the enterprising and successful businessmen of the middle class. Diocletian therefore endeavored to force these classes to continue their occupations. He enacted laws for societies, guilds, and unions in which the men of various occupations had long been organized. These were now gradually made obligatory, so that no one could follow any calling or occupation without belonging to such a society. Once a member, he must always remain in the occupation it implied.

"Thus under this oriental despotism there disappeared in Europe the liberty for which men had striven so long, and the once free Roman citizen had no independent life of his own. For the will of the Emperor had now become law, and as such his decrees were dispatched throughout the length and breadth of the Roman dominions. Even the citizen's wages and the prices of the goods he bought or sold were as far as possible fixed for him by the state. The Emperor's innumerable officials kept an eye upon even the humblest citizen. They watched the grain dealers, butchers, and bakers and saw to it that they properly supplied the public and never deserted their occupation. In some cases the state even forced the son to follow the profession of his father. In a word, the Roman Government now attempted to regulate almost every interest in life, and wherever the citizen turned he felt the control and oppression of the state.

"Staggering under this crushing burden of taxes, in a state which was practically bankrupt, the citizen of every class had now become a mere cog in the vast machinery of the government. He had no other function than to toil for the state, which exacted so much of the fruit of his labor that he was fortunate if it proved barely possible for him to survive on what was left. As a mere toiler for the state he was finally where the peasant on the Nile had been for thousands of years. The Emperor had become a pharaoh, and the Roman Empire a colossal Egypt of ancient days.

"The century of revolution which ended in the despotic reorganization by Diocletian completely destroyed the creative ability of ancient men in art and literature, as it likewise crushed all progress in business and affairs. Insofar as the ancient world was one of progress in civilization, its history was ended with the accession of Diocletian."

We know that this is not an isolated page in the world's history, but unfortunately a characteristic one in man's successive loss of liberty. Witness the dispatch from Moscow in the New York Times of May 28, where the Russian Soviet issued new decrees to punish the farmers because they had been guilty of working small plots of land in response to the age-old instinct for profit and the expression of individual initiative. Under no construction of language can such treatment be called democracy. It is dictatorship, no matter what the motivating force. Our forefathers opposed compulsion and our record through the years has indicated our attitude. We showed it on the historic occasion we now call the Boston Tea Party and in a recent decade we showed our attitude in the questionable attempt to enforce the Prohibition Act. Opposition to compulsion has characterized the every step of the Anglo-Saxon peoples as they, through the long course of history, have on this continent created the greatest government of free men. The cardinal principle of our course has been our antipathy to personal government. In the words of the great charter, it is written, "No free man shall be taken or imprisoned, or disseized, or outlawed, or assailed, or in any way destroyed, nor will we go upon him, nor will we send upon him, except by the legal judgment of his peer and by the law of the land."

To avoid the dangers inherent in personal government, we divided the functions of government into their well-recognized classifications, and we provided certain checks and balances. As members of the bar these are familiar to us. They are basic for the protection of our rights, but today we witness a tendency to delegate functions of government to boards, bureaus, and commissions. Some are permitted to combine the powers of prosecutor, fact finder, and judge; some given the power of issuing rules that have the force and effect of law.

This tendency is reactionary. It is contrary to our conception of liberty. They have been styled new instruments of power, but in

improper hands, in hands that are not imbued with the spirit of liberty, these powers are the tools of autocracy. The abnegation, the abandonment of duty by one branch of government to another, and the usurpation of power by one branch from another can only lead to one thing—despotism. The promise of efficiency is too great a price to pay if man's freedom hangs in the balance.

There are functions that all men agree are the functions of the Federal Government, but the control of the daily lives of honest citizens in a nation whose borders are as far-flung as those of the United States is not a function of government. The butcher, the baker, the agrarian, the manufacturer, or the laboring man should not be under the necessity of going to the Nation's Capital to secure a determination of his right to earn his daily bread and to eat it in the sweat of his brow.

An agency properly established and accountable for its actions as it concerns itself with the dishonest citizen, the criminal, is the popular Federal Bureau of Investigation. It has won acclaim for its fine performance. It has not asked for lawmaking powers. It has not pretried individuals charged with crime nor has it deprived the citizen of the processes of the law, guaranteed to every individual. But while this agency has been winning popular respect, while confining itself to a proper Federal sphere, we see other agencies operate so capriciously that one of man's hardest-won rights is currently lost in the arbitrary suspension of the fundamental rules of evidence, rules which have been born of the experience of centuries. Regardless of the good intention and represented beneficence involved in the recent action of the National Labor Relations Board in granting employers, or employees for that matter, the right of petition, such grant is inherently repugnant to the spirit of freedom. The law should be so clear that no agency can win commendation by making a gift of what should be a right.

These are problems that we as lawyers must be concerned with. We should not wait to discuss the rights of men in courts after their liberties have been legislated away. We must assert our influence and give to the Congress the benefit of our intelligence that they may preserve our liberties at the place of first danger, the place where the substance of statutory law is being made. A tendency against which we must be on guard is the tendency to the abuse of the liberties of man evidenced in class legislation.

The Declaration of Independence and our Constitution recognize no class except the one and single class of free men, but today we see attempts to remedy alleged problems which some can see only from the standpoint of what we call capital or labor, and so they forget the problems of the Nation as a whole. They forget the individual and they forget the rights of man. Such attempted legislation is an application of the Diocletian conception, another step along the road which led to the loss of the liberties of the Roman people.

In this country no individual is or should be classified. I am a laborer when I toil. When I save from the fruits of my work and invest, say, in an insurance policy, or make a deposit in a savings bank, I have assumed a function of the capitalist. When I work I suppose to some I am of the proletariat, and when I fish I suppose I am to them an economic parasite, but as a citizen of the United States of America I am at all times a free man, possessed of the classless rights of a free man, and recently these have been reexpressed for me in the significant report of the Dies committee as rendered to the Congress in January of this year.

They are my freedom of worship, of speech, of press, and of assemblage; my freedom to work in such occupation as my experience, training, and qualifications may enable me to secure and hold; my freedom to enjoy the fruits of my work, which means the protection of my property rights; my freedom to pursue my happiness, with the necessary implication that I do not harm or injure others in the pursuit of that happiness.

These my rights are not abstractions. They are the fruits of the toil and the blood of our Anglo-Saxon progenitors, of men who were unwilling to be serfs, men who were willing to stand their ground and fight, unwilling to become refugees in flight from the danger about them. Where, then, does our responsibility as lawyers lie? Our first responsibility is to be vigilant where laws are being passed, to know that there is a school of thought which today embraces the art of semantics and through that art seeks to sell new controls toward the goal of regimentation.

The wiley Talleyrand boasted of the use of semantics as he deliberately confused the public mind to accomplish his own ends, but no trick of semantics can take away from the vigilant the substance of freedom, and as members of the bar, as lawyers who should know the use of words, we should read carefully each and every word and each and every implication that is contained in all proposed legislation. For we realize that if we compromise we start backward down the road of human progress and in but a few short steps we may be passing the tombstones of those who died for us that we might live in freedom.

To put it in a military vein, we cannot wait in the trenches to apply the ammunition of Blackstone, of Coke, or of Story. The law is not and never will be static. It is a dynamic moving force, and if we as a profession, protectors and defenders of the liberties of freemen, take a leaf from the book of military experience we will observe that the best defense is a good offense. Vigilance implies not only strategy but tactics. We should not, if we believe the liberties of the people to be in peril, resign ourselves to a rear-guard action. The ex-service man of the World War is organized to safeguard and perpetuate the principles of justice, freedom, and democracy.

It is our plan to safeguard and transmit to posterity these priceless privileges of freemen. To that end we invite the considered support of all lawyers who truly appreciate their oath of office, men who know the background of the laws they administer. There is danger to a self-governing people when clients, because of the decadence of public virtue, employ lawyers not upon the basis of their professional knowledge or ability but because they "know their way around." The almost unchartable ramifications of present-day bureaucracy are creating this situation. It is everybody's business and yet nobody's business, but to the legal profession of America it should be a matter of their deepest concern, for in it is involved the substitution of a government of men for a government of laws and as that substitution is made there is no place for the legal profession.

I am an optimist. The minds of men in increasing number are rejecting the false doctrine and impossible performance of the philosophy of regimentation. Men are becoming restless to build anew, to venture, and to prosper. The lawyer must be prepared to be in the vanguard of this movement, for with the return of this spirit the future of America is bright.

Cosmopolitan Shipping Co., Inc.—Cosmopolitan Line Gives up Operation of France Service

REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. O'BRIEN. Mr. Speaker, as a member of the Merchant Marine and Fisheries Committee of the House, I am vitally concerned about an article I read in the New York Journal of Commerce of July 27, which imparted the information that another valuable and highly efficient shipping organization has been lost to the American merchant marine. I refer to the Cosmopolitan Shipping Co. of New York.

In view of extensive hearings which were held before the Marine and Fisheries Committee of the House earlier this year, I am somewhat familiar with the reasons that brought about this situation. I think that something must be radically wrong, either with the 1936 act, or the administration of that act by the Maritime Commission, if such a highly skilled and valuable American shipping organization, as the Cosmopolitan Shipping Co., which has been operating for a period of 25 years in American shipping, is forced out of American shipping and compelled to take on foreign ships in order to save its organization and to provide a livelihood for its personnel in the business to which they have devoted their entire lives. Within the past year a similar situation arose when C. H. Sprague & Co., of Boston, was driven out of American shipping and compelled to take on foreign bottoms. On the one hand we preach building up an American Merchant Marine and on the other, we tear it down by driving away valuable American shipping organizations. Is it sound governmental policy to put all the emphasis on new ships and so little on the organizations that are to operate them? Is it wisdom to expend such large sums of money to train seagoing personnel and completely ignore the importance of maintaining and building up the organizations that are charged with the job of obtaining and handling the cargo that fills the ships?

On March 20, at the time the House considered H. R. 2382, which bill the House unanimously passed, I extended my remarks in the RECORD concerning the very chaotic situation with which the Cosmopolitan Shipping Co. and other American companies were then faced. It is unfortunate that the relief which this bill provided could not have been granted and that this very valuable American organization was consequently forced out of American shipping. I have today written requesting copies of the letter in which the Cosmopolitan Shipping Co. informed the Maritime Commission of its reasons why it could no longer remain in American shipping.

I now ask unanimous consent to extend my remarks in the RECORD so as to include a copy of this letter as soon as

it has been received. I trust and hope that this very unhealthy situation may be straightened out and that we may sometime again, in the very near future, include the Cosmopolitan Shipping Co., this fine American organization, back in the field of American shipping.

The American Lumber Industry Has Been Sold Down the River by the Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. ANGELL. Mr. Speaker, lumbering is the major industry of the Pacific Northwest. It is estimated that over 50 percent of our pay rolls are due to this one industry. The reciprocal-trade agreements have disrupted this industry to such an extent that we in the Pacific Northwest are not only suffering the handicaps of the depression which has brought our whole country to its knees, but we are also struggling under the additional weight of our chief industry being strangled by these trade agreements.

The West Coast Lumbermen's Association reports that during the year 1938, in the Northwest, 16 percent of the sawmills were working full time, 32 percent part time, and 52 percent idle, and that of the men employed in mills and logging camps, 15 percent worked full time, 29 percent part time, and 53 percent were unemployed. When we remember that half of the saw timber in the United States is situated in the Northwest, we can appreciate the importance to this great area of preserving this, its major industry.

Evidence submitted to the Department of State in 1938 shows that:

Nearly half the production cost of west coast lumber is wages.

The average wage in the Douglas fir logging camps and sawmills of Oregon and Washington is 76.7 cents per hour, while the average wage in the competitive Douglas fir industry of British Columbia is not over 57 cents per hour.

The lower wages in British Columbia mean an average lower cost of production of more than $3 per thousand board feet.

The universal workweek of 40 hours in the American industry as compared with a minimum of 48 hours per week in British Columbia entails a higher cost on American lumber not less than 40 cents per thousand board feet.

The unemployment and social security under American laws are costing the operator in Oregon and Washington 39 cents per thousand feet of lumber produced today, and will progressively increase to 59 cents in 1949. There is no counterpart to these costs in the lumber industry of British Columbia.

Our lumber duty, reduced by trade agreement to $2 per thousand feet, is scarcely one-half the average difference in costs of production arising from fundamental differences in labor legislation and working conditions in the two countries.

We formerly supplied 75 percent of the North Pacific coast lumber used by the British nation. Our trade was reduced to 6 percent in 1936, and under 10 percent in 1937. The Canadian agreement of 1935 lowered the American tariff wall one-half, but left the British Empire tariffs intact. American duties on Canadian lumber were cut 50 percent—all the law allowed. It is true in the case of Douglas fir and west-coast hemlock importation at the lower duty was restricted to 250,000,000 feet annually. Under the favored-nation clause this reduced lumber duty was automatically extended to every other country in the world shipping lumber to the United States, including Soviet Russia. Lumber imports to the United States increased at once. Douglas fir and west-coast hemlock from British Columbia were practically doubled. In the first 11 months of 1938 Canada shipped 155,000,000 feet of Douglas fir and west-coast lumber into the United States, while west-coast shipments to the entire British Empire, Canada included, totalled only 59,000,000 board feet—a ratio of 3 to 1. In other words, American lumber exporters have been cut off from the British market, but the home market has been opened to Canadian shipments.

Mr. Speaker, I ask leave to extend, as a part of my remarks, a letter received from Mr. C. E. Dant, of Portland, Oreg., who has been a dealer in lumber products for many years, showing the results of this trade-agreement policy:

DANT & RUSSELL, INC.,
Portland, Oreg., May 9, 1939.

HOMER D. ANGELL,
Congressman, Washington, D. C.

MY DEAR CONGRESSMAN: Answering your letter of May 1, I give you the following figures:

Total exports of lumber from Oregon, Washington, and British Columbia for the years 1926 to 1938, inclusive

Year	Canada's percentage of total	British Columbia	Total
		Feet	*Feet*
1926	+17	312,000,000	1,793,000,000
1927	−18	346,000,000	1,942,000,000
1928	−19	381,000,000	2,010,000,000
1929	−20	399,000,000	2,012,000,000
1930	−25	380,000,000	1,491,000,000
1931	−28	358,000,000	1,275,000,000
1932	+40	367,000,000	903,000,000
1933	−50	633,000,000	1,278,000,000
1934	−54	831,000,000	1,550,000,000
1935	+58	792,000,000	1,356,000,000
1936	−68	1,043,000,000	1,541,000,000
1937	+62	999,000,000	1,609,000,000
1938	+78	1,036,378,000	1,320,958,000

The reasons for this are as follows:

1. Empire preferential tariffs.
2. Higher wages in Oregon and Washington.
3. Better transportation facilities from Canada than from Oregon and Washington.

I will give you more information later.

With kindest regards, I am,

Yours very truly,

C. E. DANT.

It will be noted from this communication that whereas in 1932 of the total exports of lumber from Oregon, Washington, and British Columbia, Canada's percentage was only 40 percent, in 1938 it was 78 percent—practically double—the reasons being, as stated by Mr. Dant, the unfavorable preferential tariffs, high wages in Oregon and Washington under American standards of living, and the low wages paid in Canada, and also cheaper transportation enjoyed by Canadian shippers.

Col. W. B. Greeley, an outstanding authority on the lumber industry, in a discussion of this important subject, recently said:

A NATIONAL-FOREST POLICY THAT GOES ALL THE WAY THROUGH

I do not believe that the United States should "buy out" the forest problem through wholesale nationalization of forest lands. As a forester, I hope that the Federal program may leave the maximum opportunity for the free play of private capital and private initiative in timber cropping. But I ask for a national-forest policy that goes all the way through. I ask for a policy which recognizes that forest crops must be harvested and marketed at a living profit for those who grow them.

We realize the limitations upon the power of government to create markets for industry. We do not expect Congress to pass a law establishing a minimum per capita consumption of lumber in the United States. But if the years of laissez faire are behind us and national planning for a forest-growing country is the order of the day, let's deal with realities. Let's see the job through—in lumber use and marketing research; in our tariffs, if you please, and our foreign-trade agreements; in the overseas shipping facilities necessary to meet foreign subsidized competition.

It is all right for forestry to occupy the pulpit on Sunday. But it should also be at work during the week in the daily sweat and grime of American business.

TARIFFS AND FOREIGN TRADE

Take the matter of tariffs and foreign trade. The United States used to be the foremost lumber-exporting country of the world. Now it has dropped to fifth place, behind Finland, Russia, Sweden, and Canada. The Pacific Northwest has suffered far more from loss of exports than any other lumber-producing region in this

country. In former years, foreign markets took from 15 to 18 percent of our lumber cut, with a yearly trade volume of $30,000,000 to $35,000,000. These shipments overseas furnished employment for ten to twelve thousand forest and mill workers. But by 1938, our lumber had lost four-fifths of its former offshore business; and the most severe unemployment in the region was found in our tidewater sawmill communities.

This staggering loss of export markets is due partly to high labor costs; partly to war in the Orient; partly to the diversion of our former trade with British Empire countries to Canada—through the barriers of preferential tariffs. The reciprocal-trade policy of the State Department has been unable to restore export markets for the timber crops of the Pacific Northwest.

It may have been too much to expect that our Government could break down the preferential tariffs of Great Britain which have progressively closed that country to American lumber since the Ottawa Pact of 1932. But it was not too much to expect that a government which takes the forest problem of the United States seriously would at least protect our home market for timber crops until an equal volume could be sold abroad.

Nor was it too much to expect that a government devoted to the labor policy expressed in the National Labor Relations Act and the National Labor Standards Act would protect the wages and working conditions in the major industry of the Pacific Northwest from the competition of low-cost foreign labor, employed under a totally different conception of industrial relations than our own.

Both of these things the State Department has failed to do. Each of the reciprocal-trade agreements with Canada, in 1935 and 1938, progressively let down the bars to the importation of lumber and shingles from British Columbia to the injury of Pacific coast forestry and Pacific coast forest labor.

REVERSED THE BALANCE

What are the practical results?

In 3 years preceding the first Canadian trade agreement, when the protection of domestic industry and labor was the policy of our Government, American exports of Pacific coast woods to British Empire countries were double our imports of similar lumber from Canada.

In the 3 years of the first Canadian agreement, from 1936 to 1938, this trade ratio was reversed. Imports of Douglas fir and west-coast hemlock from Canada were more than double our exports to the entire British Empire. Since the second Canadian agreement took effect last January, lumber imports from western Canada have been over three and a half times the volume of our trade with the British Empire countries.

The last agreement also abolished the import quota on Canadian cedar shingles, which had formerly been fixed at 25 percent of the American consumption. Thirty percent of all the shingles we use may now be imported from Canada duty free; and the very meager tariff on the remaining 70 percent, which the agreement stipulated might be imposed by Congress if it chose, far from offsets the lower wages and longer working hours in the shingle industry of Canada.

The State Department even pursued its theory of encouraging lumber imports to the point of abolishing the requirement that foreign lumber be marked to show its country of origin. And thereby it largely destroyed the effectiveness of the law which stipulates that American-made materials be used in public construction.

It is not my purpose to attack the reciprocal foreign trade policy. It may be the appointed lot of the forest industries and forest lands and forest labor of the Pacific Northwest to be the sacrificial lamb, offered on the altar of appeasement to a foreign neighbor in return for trade benefits to other regions and other industries.

But it is my purpose to point out that these concessions are not the acts of a forest-minded government—of a government that takes its forestry seriously and gives timber culture the essential support of markets. It is beyond imagination that Sweden or Finland would so jeopardize their forest economy.

WOOD PULP AND PAPER

Let me cite another situation—one not to be laid at the door of the State Department. Put it rather on the doorstep of American newspapers, many of whom write stirring editorials on forest conservation and not infrequently condemn the forest owner for failure to reforest his cuttings.

The unwillingness of the United States to provide tariff protection for the use of our forests represented by the pulp and paper industries is a striking illustration of failure to carry a forest policy all the way through. Over two-thirds of the vast markets for wood pulps and paper in the United States are supplied by foreign imports free of duty.

This is the paramount handicap upon the promising wood-pulp industry of the Pacific Northwest—a handicap often accentuated by competitive prices of depreciated foreign currencies. Millions of feet of pulping wood are burned up in the slash fires because they cannot be utilized; and the same lack of markets holds back the pulp industry from taking its logical and needed place as a user of our timber crops.

The United States imported $230,000,000 worth of paper and paper base stocks in 1938. And thereby arises this anomaly. The United States, one-third of whose soil is suited only for forest growth, with an alert public opinion demanding reforestation, with national planning putting more millions of acres into trees, with insistent propaganda for sustained timber culture, and with a critical problem of what to do with its timber crops when they are grown—this country imports two and one-half times the dollar volume of forest products that it sells abroad.

PUBLIC POLICY MUST AID

It is not my purpose to defend indifference by forest owners in the Pacific Northwest toward the public interest in reforestation. Our industry is moving forward in the essentials of fire prevention and timber cropping. It will do its part.

I do want to put the forest problem before you as a whole and to point out its phases wherein public policy must aid the forest owner. The outstanding weakness in our forest program thus far is that it has been focused upon the growing of trees and has too largely ignored the use and marketing of trees. The one must complement the other. We need a national forestry policy that goes all the way through it. It should not be limited to the Department of Agriculture. If it is to be progressively built up to meet the needs of land use, stable industry, and permanent employment, it must be a thoroughgoing policy, accepted and supported by all branches of government. We must learn to view our forest problem as we have long viewed the problem of agriculture. We must recognize that forest crops require the same kind of economic support which we have long accorded to farm crops.

Mr. Speaker, I have received during this session of Congress approximately 765 communications from constituents in Oregon as well as from residents of Washington engaged in the shingle industry. These communications were written on shingles produced in the area in the industry which has been practically put out of business by importations from Canada under the favorable treatment Canada is receiving through the reciprocal-trade agreements. Unless some relief is forthcoming for this great shingle industry, of these two Northwest States, Canada will absorb practically the entire American market for this vital product.

The Northwest is also losing much of its plywood trade. I quote from the Oregon Voter of July 29, 1939:

JAPANESE PLYWOOD

Japan rapidly is shunting the United States out of the plywood-veneer markets in British countries and even in South America, reported George Ulett, of Coquille, to Coos Bay Times, Marshfield. Operation of modern machinery with very cheap labor enables the Nipponese to take about all of the plywood-veneer business away from American manufacturers in most of the important world markets. Skilled workmen running the plywood machines receive 25 to 40 cents a day for 12 hours' work. In this country the daily wage is $8. In some Japanese plants boys do practically all of the work. They are employed on the contract basis, being housed, fed, and clothed, and receiving a few cents a day for spending money. Logs are peeled down to much smaller size than here, the cheap labor making this feasible. Mr. Ulett, in charge of the Coquille plant of Smith Wood Products Co., recently returned from inspection of Japanese wood-processing plants in the course of an oriental tour. He did not mention the extent to which imports of peeler logs from this country is a factor in Japan's intrusion into the plywood-veneer field. The machines he saw commonly were made in Japan, patterned after the best in this country.

For the first 6 months of 1939 the United States shipped abroad 508,850,000 feet of lumber. Monthly shipments were less than one-third of the average monthly rate in 1929, while the total shipments were 6.7 percent above those for the same period in 1938. The 1938 lumber exports were the lowest in 40 years. During this 6-month period, timber imports increased 40 percent, to an aggregate of 318,043,000 feet. British Columbia lumber was allowed to enter American ports in tramp ships at tramp rates that are substantially lower than rates the United States established for West coast intercoastal lumber shipments, which places American lumber shippers in a great disadvantage. In an endeavor to give some relief to this situation I have introduced in the House H. R. 7463, which is the companion measure to that introduced by Senators McNARY and HOLMAN in the Senate. The purport of this measure is to give relief to the exporters of lumber and other commodities by equalizing the handicaps of low rates obtained by their foreign competitors through governmental subsidies. Hearings have not been set for this legislation, but it is hoped that it will receive early consideration at the next session of Congress.

The Secretaries of the Interior, Agriculture, and Commerce have formally approved the setting up of a conference group representing those Departments and forest industry's organizations for periodic discussion of forest industry's problems. The representatives named are F. A. Silcox for Agriculture, Lee Muck for Interior, E. A. Tupper for Commerce. Phillips Hayward is secretary. Industry representatives so far named are Wilson Compton for the National Lumber Manufacturers Association, C. W. Boyce for the American

Paper and Pulp Association, H. E. Brickerhoff for American Pulpwood Association. It is expected that representations of both industry and the administration will be added.

It is patent that the State Department, in maintaining this unfair trade differential with respect to lumber products between our country and Canada, has abandoned completely our well-recognized principle of tariff making in this country. As shown by the statistics I have quoted, costs of production in Canada and our own country are so divergent that the differences must be equalized—otherwise our local lumbermen are placed at such a disadvantage that they cannot compete with foreign importations. Such a policy completely ignores the labor policy established and maintained in this country of maintaining decent wages and proper working conditions according to American standards. We have not only lost our offshore market but we have turned over our American market to foreigners. As a result, American mills lie idle and American workmen go on relief. The American lumber industry has been sold down the river by the reciprocal-trade agreements.

Judicial Appointments

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 2, 1939

EDITORIAL FROM THE PITTSBURG (KANS.) SUN

Mr. REED. Mr. President, I ask unanimous consent to insert in the RECORD an editorial from the Pittsburg (Kans.) Sun concerning judicial appointments in the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pittsburg (Kans.) Sun of July 28, 1939]

FEW AGAINST THE MANY

There was a hot debate in the Senate Monday over the proposal for the creation of additional judges. Senator REED, of Kansas, took a part in the rough-and-tumble fighting. The debate disclosed that an effort was made again to get an additional Federal judge for Kansas when the committee was preparing the bill which creates new judgeships. Senator ASHURST, chairman of the Judiciary Committee, said in a speech that the judicial conference and the Attorney General had recommended the creation of a second district judge in the State. But both of the Kansas Senators—CAPPER and REED—had appeared before the committee to say that there is no need of another judge; and he—ASHURST—had decided quickly that the two Senators knew more about the conditions in the State than the judicial group and the Attorney General and the additional judge for Kansas had been eliminated. The Kansas Senators had shown that the Kansas Federal court with one judge is attending to its business quite satisfactorily.

Senator REED called attention to the recommendation of the conference and Attorney General and the action of the committee in eliminating the Kansas judge and attacked the proposal for the creation of a fifth judgeship in Oklahoma. Kansas has a population of 1,800,000 and Oklahoma 2,600,000. Senator REED pointed out that Oklahoma, with less than half again the population of Kansas, now has four Federal district judges and is demanding a fifth one, as against one in Kansas.

Senator KING, Democrat, of Utah, a Senate veteran, held the floor with a vigorous speech against the creation of new judgeships. As to Senator REED's comment, Senator KING said:

"I know the difficulty that the Judiciary Committee has encountered in meeting the demands of politicians and others from the State of Kansas and elsewhere who insisted upon providing another judge when the best interests of the State and the best citizens of the State opposed it."

Senator REED then said that he feared "there are Members of this body who are urging Federal judges not because they can be justified from the standpoint of the volume of litigation in their States, but because they mean an additional appointment on the Federal bench in their States."

Senator KING added: "As well as additional district attorneys, marshals, and increased personnel, and possibly additional courthouses, involving, not hundreds of thousands of dollars, but ultimately millions of dollars, at the expense of the Federal Government, the cost of which must be passed on to the taxpayers of the country."

A little later in the debate, Senator BARKLEY, the Democratic leader, sought to end the debate and get the bill to a vote. He was told by the Kansas Senator that no more important legislation than the bill to increase the number of judges is pending before the Senate and that the measure goes "beyond the personal desires of men to be appointed to the Federal bench or of Senators who may hope to enjoy additional patronage." Senator BARKLEY retorted that it was just as legitimate to say that Senators were opposing the bill because they did not want someone appointed as to say that others favor the bill because they want to have somebody appointed.

Senator KING made answer to that crack by the Democratic leader. "I do not agree with the Senator in that respect," the Utah Democrat said. "There are more persons who want offices than there are persons who have the courage to oppose the creation of additional offices."

And there the Utah Senator said something that it is well for us here in this great Republic to ponder as the number of persons on the public pay roll continues to grow. Many want good public jobs created and are vigorously active. By comparison, few fight the increase in the number of such jobs. The taxpayers who must pay the bill owe a great deal to the few who have the courage to stand up and fight.

Time and Tide

EXTENSION OF REMARKS
OF
HON. GERALD P. NYE
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 2, 1939

EDITORIAL FROM THE LOUISVILLE COURIER-JOURNAL OF MARCH 29, 1939

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial by Herbert Agar appearing in the Louisville Courier-Journal of March 29, 1939, entitled "Time and Tide."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Louisville Courier-Journal of March 29, 1939]

TIME AND TIDE

(By Herbert Agar)

The following seem to me to be two important facts which are seldom mentioned: First, there is no possibility of a "democratic front." Before we have a democratic front we have got to find some democracies.

France would like to be a democracy, but she has failed.

England would not even like to be a democracy. She is an aristocracy half transformed into a plutocracy. The fact that she provides her citizens with more freedom (in the sense of civil liberties) than any other great power does not make her democratic.

Russia is a tyranny, and has never even tipped her hat to the democratic ideal. Rumania is a semidictatorship. Poland has about as much democracy as Mayor Hague's Jersey City. So there remains Turkey. Would we like to form a "democratic front" with Turkey?

And for that matter, there are some jobs to do here at home before we are too handsome a democracy ourselves.

The second fact is this: Though the "democratic front" is rubbish, there is nothing rubbishy about the statement that Fascist aggression menaces Europe. It might be possible to make Hitler and Mussolini proposals which offer Europe a chance for peace, disarmament, and true appeasement.

Such proposals would have to be underwritten by all the non-Fascist powers of Europe. They would have to include real concessions in regard to trade agreements, access to raw materials, colonies. They would have to be combined with absolute (not Versailleslike) guaranties of disarmament.

No such proposals are being made. There is merely a vast jockeying for position between that part of Europe representing the old triple alliance and the part representing the old triple entente. If they fight, is there any reason to think they are fighting for democracy? For peace? For civilization?

Might not we in America withhold our aid and encouragement until one side in Europe commits itself thoroughly to a policy that might bring some hope into the world?

Slum-Clearance and Low-Rent Housing Program

EXTENSION OF REMARKS

OF

HON. ARTHUR D. HEALEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

LIST OF ORGANIZATIONS AND INDIVIDUALS WHO HAVE ENDORSED S. 591, AUTHORIZING THE EXPANSION OF THE SLUM-CLEARANCE AND LOW-RENT HOUSING PROGRAM UNDER THE UNITED STATES HOUSING ACT

Mr. HEALEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following list of individuals and organizations endorsing the housing program:

NATIONAL ORGANIZATIONS

Amalgamated Association of Iron, Steel, and Tin Workers' Union; Amalgamated Clothing Workers of America; American Association for Social Security; American Association of Social Workers; American Federation of Hosiery Workers; American Federation of Housing Authorities, Inc.; American Federation of Labor; American Federation of Musicians; American Federation of State, County, and Municipal Employees; American Federation of Teachers; American Home Economics Association; American Institute of Architects; American Planning and Civic Association; American Society of Planning Officials; Bricklayers, Masons, and Plasterers; Cigar Makers' International Union of America; Catholic Rural Life Conference; Congress of Industrial Organizations; Construction League of the United States; Farmers' Educational and Cooperative Union; Federal Council of the Churches of Christ in America; Federation of Architects, Engineers, Chemists, and Technicians; Federation of Flat Glass Workers; Glass Blowers' Association; Hotel and Restaurant Employees' International Alliance; International Alliance of Theatrical Stage Employees and Moving Picture Operators; International Association of Bridge, Structural, and Ornamental Iron Workers; International Association of Machinists; International Association of Marble, Stone, and Slate Polishers and Sawyers, Tile and Marble Setters, Helpers, and Terrazzo Helpers; International Broom and Whisk Makers' Union; International Brotherhood of Blacksmiths, Drop Forgers, and Helpers; International Brotherhood of Boilermakers and Iron Shop Builders and Helpers; International Brotherhood of Electrical Workers; International Federation of Technical Engineers, Architects, and Draftsmen's Unions; International Fur Workers' Union; International Hod Carriers, Building, and Common Laborers' Union; International Ladies Garment Workers; International Union of Elevator Constructors; International Union Federation of Architects, Engineers, Chemists, and Technicians; International Union of Operating Engineers; Joint Board of the Cloak, Suit, Skirt, and Reefer Makers' Union; Knights of Columbus, educational bureau; Labor Housing Conference; Labor's Nonpartisan League; Municipal Law Officers' Institute; National Association of Letter Carriers; National Chapter, Society of Designing Engineers; National Council of Catholic Men; National Council of Catholic Women; National Women's Trade Union League of America; National Federation of Post Office Clerks; National Federation of Settlements; National Lawyers Guild; National Organization Masters, Mates, and Pilots of America; National Public Housing Conference; National Women's Trade Union League of America; Operative Plasterers and Cement Finishers' International Association; Presbyterian Church in the United States, Board of Christian Education; Public Ownership League of America; Social Service Employees' Union; Transport Workers' Union of America; United Association of Journeymen Plumbers and Steam Fitters; United Hatters, Cap, and Millinery Workers; United Rubber Workers of America; United Wall Paper Craftsmen and Workers of North America; United Mine Workers of America; Women's International League for Peace and Freedom; Y. W. C. A. National Board.

LOCAL ORGANIZATIONS, AGENCIES, AND INDIVIDUALS

Alabama: Anniston Housing Authority; Birmingham Pastors' Union; Central Trades Council, Mobile; Housing Authority of the Birmingham District; Mobile Housing Board; Muscle Shoals Building Trades Council; Tri-Cities Central Labor Union.

Arizona: City of Phoenix; Phoenix Housing Authority.

Arkansas: Pine Bluff Central Trades and Labor Council.

California: Alameda County Industrial Union Council; Brotherhood of Railway Carmen of America, Pacific Lodge, No. 1381, Los Angeles; Building and Construction Trades Council of Santa Clara County; Building and Construction Trades Council, San Mateo; Central Labor Union of Monterey County; Chemical Workers, Local No. 266; City council, Santa Barbara, Calif; Central Trades Council; Consolidated Building and Metal Trades Central Labor Council; Contra Costa County, Industrial Union Council; Council of Social Agencies of Los Angeles; Federation of Architects, Engineers, Chemists, and Technicians, Chapter 25; Federation of Architects, Engineers, Chemists, and Technicians, Chapter 28; Fresno Central Labor Council; Housing Authority of the City of Los Angeles; Housing Authority of the City of Oakland; Housing Authority of the City and County of San Francisco; Los Angeles Building Trades Council; Marine Cooks and Stewards' Association, of San Pedro, Calif.; Oil Workers' Union, Local No. 326; Rodeo Ladies' Auxiliary, Local 326A; San Francisco District Industrial Union Council; San Francisco-Oakland Newspaper Guild; San Mateo Central Labor Council; San Mateo Painters' Local Union, No. 913; Steel Workers, No. 1440; Textile Workers' Organizing Committee, No. 146; U. C. A. P. A. W. A., No. 15, C. I. O.; United Auto Workers, Local No. 76; United Electrical, Radio, and Machine Workers, Local No. 1412; United Fishermen's Union of the Pacific; Warehousemen's Union, Local 1-6, I. L. W. U.; United Rubber Workers of America, Local No. 60; Vallejo Carpenters, Local No. 180; Walter A. Gordon, attorney at law, Berkeley.

Colorado: Colorado State Federation of Labor.

Connecticut: Connecticut Federation of Labor; Central Labor Union of New Britain; Danbury Central Labor Union; Hartford Central Labor Union; Meriden Central Labor Union; Slovak Alliance of Bridgeport; Stamford Painters' Union; Sts. Cyril and Methodius Roman Catholic Church, Bridgeport; St. Mary's Roman Catholic Church, Bridgeport.

District of Columbia: United Association of Journeyman Plumbers and Steam Fitters Local Union, No. 255.

Florida: Miami Housing Authority; Housing Authority of the city of Orlando; Housing Authority of the city of St. Petersburg.

Georgia: Atlanta Housing Authority; Augusta Housing Authority; Brunswick Housing Authority; Columbus Housing Authority; Executive Committee of Techwood Homes; Georgia Federation of Labor; Housing Authority of the City of Rome; Housing Authority of Savannah; Macon Federation of Trades; Mr. C. F. Palmer, Atlanta; Savannah Building and Construction Council; Trades and Labor Assembly.

Illinois: Belleville Trades and Labor Assembly; Belleville Building Trades Council; Child and Family Service of Peoria; Central Trades and Labor Council of Joliet; Cervin & Stuhr, architects, Rock Island; Chicago Federation of Settlement; City Council of the City of Chicago; City Council of the City of Peoria; Department of Public Health and Safety; Distillery Workers' Union, No. 19538, Pekin; Illinois State Federation of Labor; International Ladies Garment Workers' Union, Local 39, Chicago; International Metal Engravers' Union, Local No. 1; International Union of Operating Engineers, Locals Nos. 965 and 965A; Peoria Housing Authority; United Cement Workers' Union, No. 20066; Progress Club of Peoria; Social Service Employees' Union, Local 39, Chicago; Springfield Federation of Labor; Mr. R. Clyde White, Chicago.

Indiana: Bloomington Central Labor Union; Conference Continuations Conference; Fort Wayne Federation of Labor; Housing Authority of the City of Vincennes; Indiana State Federation of Labor; Kokomo Trades and Labor Council; Richmond Housing Authority; United Brotherhood of Carpenters and Joiners of America, Local Union No. 90; Vigo County Workers Alliance; Workers Alliance, Local G-279; Workers Alliance of Indiana; Carpenters' Local No. 565; International Ladies Garment Workers' Union, No. 116, Fort Wayne; Cedar Rapids Federation of Labor; Central Labor Union; Tri-City Labor Congress.

Kansas: Coffeyville Central Labor Union; Hutchinson Central Trades and Labor Council; Pittsburg United Trades and Labor Council; Wichita Trade and Labor Assembly.

Kentucky: City of Covington Municipal Housing Commission; City of Frankfort Municipal Housing Commission; city of Lexington; City of Lexington Municipal Housing Commission; Louisville Central Labor Union; Paducah Municipal Housing Commission; State Federation of Labor.

Louisiana: Rev. Roger W. Coleman, First African Baptist Church, New Orleans; Housing Authority of New Orleans; New Orleans Association of Commerce; Eva Smill, Family Service Society, New Orleans.

Maryland: Housing Authority of Baltimore City.

Massachusetts: Boston Housing Authority; Cambridge Central Labor Union; Central Labor Union; Cambridge Housing Authority; Chicopee Housing Authority; Federation of Architects, Engineers, Chemists, and Technicians, Boston chapter; Federal Labor Union, 18518; Rev. Charles G. Girelius, Wayland; Holyoke Housing Authority; Lowell Housing Authority; Massachusetts Department of Public Welfare; Massachusetts State Board of Housing; mayor and council of the city of Lowell, Mass.; Norwood Central Labor Union.

Michigan: Dearborn Housing Commission; Detroit Housing Commission; City Council of the City of Detroit; City Council of the City of Lansing; Council of Social Agencies of Kalamazoo; Mr. Barton P. Jenks, Jr., Walled Lake; M. & M. Trades Council, Menominee; Society of Designing Engineers; United Brotherhood of Carpenters and Joiners of America, Local No. 297.

Minnesota: Minneapolis Building Trades Council; Minnesota State Employees Local Union, No. 10.

Mississippi: Housing Authority of Hattiesburg; Housing Authority of Laurel; McComb Housing Authority.

Missouri: Building and Construction Trades Council, Kansas City; Building Trades Council, Springfield; Central Labor Body, Carthage; city of St. Louis; Moberly Central Labor Union, Moberly.

Montana: Billings Housing Authority; Cascade County Trades and Labor Assembly, Great Falls; Great Falls Housing Authority; Miles City Trades and Labor Council.

Nebraska: Housing Authority of the City of Omaha; Miss Edith Carse, head of housing-equipment division, University of Nebraska; Urban League of Lincoln.

New Hampshire: Manchester Building Trades Council.

New Jersey: Board of Commissioners of the City of Camden; Catholic Daughters of America, South Orange; City Council of East Orange; city of Camden; Housing Authority of Atlantic City; Housing Authority of the City of Elizabeth; Housing Authority of the City of Long Branch; Housing Authority of Perth Amboy; Housing Authority of the City of Trenton; International Brotherhood of Electrical Workers, No. 102; International Ladies' Garment Workers' Union, No. 149; Newark Housing Authority; Newark Newspaper Guild; New Jersey Housing League, Inc.; New Jersey State Housing Authority; Public Service Corporation of New Jersey; Trenton Chamber of Commerce; Union County Central Labor Union, Elizabeth.

New York: Aluminum Workers Union, No. 19256; Amalgamated Ladies' Garment Cutters' Union, Local 10, International Ladies' Garment Workers' Union; American Committee for the Protection of Foreign Born; American Federation of Musicians, Local No. 802; American Society of Sanitary Engineering; Benjamin Andrews, Columbia University, New York; Mrs. James Russell Bourne, Rhinebeck; Bricklayers' Union, No. 1, Brooklyn; Bricklayers' Union, No. 34; Brooklyn Committee for Better Housing; Building Trades Council; Central Labor Council of Buffalo; Central Labor Union; Central Trades and Labor Council; Citizens' Housing Committee; Citizens' Housing Council of New York, Inc.; city of New Rochelle; Community Service Society; Consolidated Tenants' League, Inc., New York City; Consumers' Union of United States, Inc.; Dental Technicians Equity; Dressmakers' Union, Local 22, International Ladies' Garment Workers' Union; Federation of Architects, Engineers, Chemists, and Technicians, Chapter 14; Federation of Architects, Engineers, Chemists, and Technicians, Chapter 23; Federation of Jewish Women's Organizations, Inc.; Federation of Labor; Furriers' Joint Council of New York; First Presbyterian Church, Rev. Howard B. Haines; Greenwich House Settlement, New York City; International Union of Operating Engineers, Locals 138 and 138A, Hempstead, Long Island; International Union of Operating Engineers, Rochester, Local 71; Jewish Social Service Association, Inc.; Lewis Street Center, Rochester; Lower East Side Public Housing Conference, New York City; Manhasset Health Association; Municipal Housing Authority for the City of Yonkers; New York City Division of Housing; New York City Housing Authority; New York State Housing Board; New York State Industrial Union Council, Congress of Industrial Organizations; New York Typographical Union, Local No. 6; Plumbers' Local, No. 36; Heber Smith, New York City; Rev. H. Otheman Smith, Baptist Church of the Redeemer; J. J. Sturgh, Buffalo; Tuckahoe Housing Authority; Union of Marine Draftsmen and Technicians, Chapter 24; United Brotherhood of Carpenters and Joiners of America, Bronx; United Electrical, Radio, and Machine Workers, Local No. 1237; United Scenic Artists of America, Local No. 829; Utica Trades Assembly; Washable Clothing, Sportswear, and Novelty Workers, Local 169, Amalgamated Clothing Workers of America; Welfare Council of the City of New York; Westminster Community House; Women's City Club of New York; Yorkville Tenants' League; Yoruba Literary and Debating Club, New York City.

North Carolina: City of Wilmington, Department of Public Safety; Durham Central Labor Union; Housing Authority of the City of Charlotte; Housing Authority of the City of Wilmington.

Ohio: Amalgamated Clothing Workers of America, Coat, Suit, and Dressmakers Union, No. 63; Barberton Central Labor Union; C. J. Bushnell, University of Toledo, Toledo; Rabbi Barnett R. Brickner; Cincinnati Metropolitan Housing Authority; Citizens' Committee on Slum Clearance and Low Rent Housing, Cincinnati; Cleveland Metropolitan Housing Authority; Council of the City of Cleveland; Council of the City of Toledo; Prof. Abraham Cronbach; First Presbyterian Church on Walnut Hills; Central Labor Council, Cincinnati; Marion Central Labor Union; Bleecker Marquette, Cincinnati; Operative Plasterers and Cement Finishers' International Association, Middletown, Ohio; L. A. Pechstein, president of the University of Cincinnati; Portsmouth Metropolitan Housing Authority; W. W. Ryall, commissioner of health; Toledo Central Labor Union; Toledo, Ohio, Chapter of the National Association of Social Workers; Toledo Metropolitan Housing Authority; Trades and Labor Assembly of Tuscarawas County; United Labor Congress of Mahoning County; Youngstown Metropolitan Housing Authority; Young Women's Christian Association, Cincinnati; Clifford R. Wright, Cincinnati; Zanesville Metropolitan Housing Authority.

Oklahoma: Enid City Planning and Zoning Commission; Oklahoma City Building and Construction Trades Department.

Oregon: Building and Construction Trades Council; Oregon State Federation of Labor; Portland District Council of Lumber and Sawmill Workers, Local Union No. 2532.

Pennsylvania: American Federation of Hosiery Workers, Branch No. 10; American Federation of Teachers, Local 474; Association of Philadelphia Settlements; Carbondale Central Labor Union; Central Labor Union, Philadelphia; city of Bethlehem; City Council of the City of Bethlehem; Civic Club of South Philadelphia; Council of Social Agencies; Erie Central Labor Union; L. G. Heinle, city clerk, New Kensington; Lancaster Central Labor Union; McKeesport Housing Authority; Northern Cambria Central Labor Union; Pennsylvania Federation of Labor; Pennsylvania Industrial Union Council; Pennsylvania State Board of Housing; Philadelphia Housing Association; Philadelphia Housing Authority; Philadelphia Industrial Union Council; Pittsburgh, Housing Authority of the City of; Society for Ethical Culture, housing study and discussion group; Steel City Industrial Union Council.

South Carolina: Spartanburg Central Labor Union.

Tennessee: Chattanooga Housing Authority; Kingsport Housing Authority; Knoxville Central Labor Union; Knoxville Housing Authority; Memphis Housing Authority; Nashville Housing Authority; S. L. Smith, director of public relations, George Peabody College for Teachers, Nashville.

Texas: Bricklayers, Masons, Plasterers International Union of America, Local No. 23, of Texas; Brotherhood of Painters, Decorators, and Paperhangers of America, Union No. 585; Brotherhood Railway Carmen of America, Local 89; Rabbi Ephraim Frisch; Housing Authority of the City of Brownsville; Housing Authority of the City of Dallas; Housing Authority of the City of El Paso; Housing Authority of the City of Houston; Housing Authority of the City of San Antonio; Houston Labor and Trades Council; International Hod Carriers' Building and Common Laborers' Union of America, Local No. 93; Pecan Workers Union of San Antonio, Local No. 172; Texas Federation of Labor.

Utah: Building Trades Council, Utah Federation of Labor.

Vermont: Burlington Housing Authority.

Washington: Bellingham Building and Construction Trades Council; Board of County Commissoners, King County, Seattle; King County Housing Authority; Seattle Housing Authority; Shelton Central Trades and Labor Council; Yakima Central Labor Council.

West Virginia: American Federation of Hosiery Workers, Branch 92; Building and Construction Trades Council; Housing Authority of the City of Charleston; Housing Authority of the City of Williamson; Martinsburg Industrial Union Council; Wheeling Housing Authority.

Wisconsin: Aluminum Workers' Union, 19649; American Federation of State, County, and Municipal Employees, Local 58, A. F. S. C. M. E.; Brass and Copper Workers' Federal Labor Union, Local No. 19322; Central Cooperative Wholesale; Cooperative Consumers of Milwaukee, Inc.; department of outdoor relief; Federal Labor Union, No. 18545; Federated Trades Council of Milwaukee; Green Bay Federated Trades Council; Mayor Daniel W. Hoan, Milwaukee; Office Workers' Union, No. 16453; Waukesha Trades and Labor Council.

Puerto Rico: Ponce Housing Authority; Puerto Rico Housing Authority.

Indiana Threatened With Invasion by Cheap Electric Rates

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

Mr. RANKIN. Mr. Speaker, one of the most frantic appeals ever heard in this House came from the gentleman from Indiana [Mr. HARNESS] on last Friday.

Listen to this. Just listen to this.

Crying out for protection for the people of his State, among other things, the gentleman from Indiana [Mr. HARNESS] said:

> I do not want this monster, T. V. A., to enter the fair State of Indiana and wreak the havoc that has followed in its wake in the South.

Ah, Mr. Speaker, that is one of the most fervent appeals for protection against an invading foe that has been heard in this country since Patrick Henry's famous address before the Viriginia Assembly, in which he asked for liberty or death.

Why should we sit idly by and see the people of the great State of Indiana threatened with the great "havoc that has followed in the wake" of the T. V. A. in the South? When we contemplate the horrible destruction which this hideous "monster" has wrought, we can understand the terror with which the gentleman from Indiana [Mr. HARNESS] contemplates its probable invasion of that great Commonwealth.

When we see what the T. V. A. has done by its "ruthless" activities in the South, then we can sympathize with the gentleman from Indiana in expressing a horror that has hardly been witnessed in this country since Mars invaded the State of New Jersey.

Mr. Speaker, let me point out some of the "havoc that has followed in its wake in the South," and which stirs in the mind of the gentleman from Indiana such images of horror.

It has almost wrecked the graft structure of private utilities by reducing light and power rates to the people in those

States directly affected by more than $25,000,000 a year. Its baneful influence has already been felt in Indiana where, with the assistance of the McNutt administration, it has reduced light and power rates more than $10,000,000 a year and caused the electrification of thousands of farm homes throughout the State.

Think of that, Mr. Speaker! The very threat of this hideous "monster," aided and abetted by the administration of Gov. Paul McNutt, along with the other power policies of this administration, has forced reduction of light and power rates sufficient to cut the overcharges to the electric consumers in the State of Indiana more than $10,000,000 a year, as well as the construction of thousands of miles of rural power lines to serve the farmers of that State. Of course, the people of Indiana are still overcharged from $20,000,000 to $25,000,000 a year; and this horrible "monster" known as the T. V. A., with its powerful yardstick, is threatening to further invade the Hoosier State, at least with its influence, and relieve the people of that additional burden.

What "havoc" has it wrought in the South? Why, this "monster" has invaded the homes of the people, and especially of the farmers, in the dark and witching hours of the night, and wrought a destruction of personal property the like of which this country has never seen. It has destroyed hundreds of thousands of kerosene lamps, tallow candles, and pine torches in the homes of the farmers throughout that area and replaced them with electric-light bulbs served with T. V. A. power at T. V. A. rates—which is a little less than half the rates paid to the power company by the people in Kokomo, the home town of the gentleman from Indiana.

It has wrecked thousands of the old scrubboards over which the women of that country broke their backs doing the family washing. It has destroyed them and replaced them with washing machines that absolutely deprive the farm women of that time-honored luxury of bowing down over a washtub in the hot sun and scrubbing the family clothes.

It has ruined thousands of deep wells throughout that country. The old oaken buckets are no more. This hideous "monster" has thrown them in the discard, torn away the windlasses with which men and women cranked water from those 100-foot wells—this "monster" has destroyed all that and put in its place electric pumps that actually take the water into the farmer's house—even into his kitchen.

Not satisfied with that, this ruthless "monster" has driven many ice wagons from the road, actually invaded the farmer's kitchen and placed therein electric refrigerators that manufacture ice for the family and furnish a cold-storage reservoir for the meats, eggs, vegetables, milk, butter, and fruits for the farmer's table.

It has actually gone to the barns, hen houses, and garages of these farmers and lighted them up, as light as day, and now it has thrown out of the window the old-style smoothing irons from which the housewife used to absorb the heat, and replaced them with electric irons that make the family ironing almost a luxury instead of a drudgery.

No wonder the gentleman from Indiana is disturbed.

How are they going to control the women of Indiana if we keep relieving them of these drudgeries and supplying their homes with luxuries such as ice, fans, washing machines, vacuum cleaners, and radios? Yes, radios. Think of it, Mr. Speaker, this hideous "monster" which the gentleman from Indiana [Mr. HARNESS] dreads so much has actually placed radios in the farmers' houses to bring to them musical entertainments, the news of the world, the weather report, the great speeches delivered by the great men of the world—including the gentleman from Indiana.

All of these outrages have been perpetrated by this hideous "monster," the T. V. A., which the gentleman from Indiana now fears may invade the sacred soil of the Hoosier State and commit the same offenses.

Mr. Speaker, I think Congress ought to adjourn. I am afraid the people of Indiana are not fully conscious of the great dangers with which they are threatened. I think we should at least release the distinguished gentleman from Indiana and let him go home and warn the people of that proud Commonwealth of these dangers.

The only fear I have is that they may misunderstand him. I am afraid that when he goes back to Indiana to warn the people of the impending disaster, they are going to be by him like the old colored preacher was who got lost in a thunderstorm one night and was trying to run the path by the flash of the lightning, when he prayed to the Lord to give him "less racket and more light."

How Milton, Oreg., Did It—The Story of Its Municipally Owned Utilities

REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. PIERCE of Oregon. Mr. Speaker, a little more than half a century ago I was for 3 years the school teacher in Milton, Oreg. Way back in those days I was teaching the value and benefits of public cooperative enterprises. I hope I helped to implant in that community some of the ideas which later brought forth practical cooperation in municipal ownership of the power and water systems, long before the idea of public ownership of power had been practically applied elsewhere in Oregon. At any rate, I rejoice in their progressive action.

Shortly after I moved from the community, electric power and water systems were organized in that village, and have been in successful operation since. The rates have been low and profits have been applied to other municipal enterprises and needs. For 500-kilowatt hours, which is the amount required by the fully electrified home to give all light and power necessary for domestic appliances, the charge is $7.62. In the town in which I now live the charge is $11.98. At Pendleton, Oreg., about 40 miles distant, the charge is $9.74. In the town that joins Milton—Freewater—the charge is $10.05. These figures are taken from the Federal Power Commission rate sheet for Oregon, January 1, 1939. Even with these low and reasonable rates, the municipally owned plant at Milton has been an outstanding financial success. It has never repudiated its debts or obligations or been obliged to reorganize or go into bankruptcy as have the Wall Street companies in so many cities of the Pacific Northwest. One in Portland having the cream of the market has taken two bankruptcies within 10 years. I am proud of Milton, Oregon.

I now ask unanimous consent to revise and extend my remarks, and to publish a short summary and financial report made by the city manager of Milton, Oreg. He says:

The modern electric power and water systems operated by Milton City are the outcome of many years of pioneering in the field of municipal utility ownership.

Back in 1891 a small privately owned plant was established here and in 1893, more than 46 years ago, before any power company was operating in this district, Milton City established a small municipally owned electric power plant in the Miller Bros. mill, located near the present city park, to furnish electric lights to a few of the business houses.

Since that time the plant has been enlarged a number of times and later, the city built its own plant and established an extensive electric-power system. The last major addition to the system was the hydro-power plant located about a mile and a half above Milton near the intersection of the Walla Walla River and the Couse Creek Roads. This plant, installed in 1928, is one of the most modern units of its kind in the Northwest with a capacity of 1,000 kilowatts. Added to this, the capacity of the lower power plant, located at the southeast corner of the city, gives the city a total of 1,800 kilowatts, or approximately 2,700 horsepower. The lower plant is used largely for emergency and stand-by service.

While the power systems were being developed, the water system was improved and enlarged to keep pace with the growing demand for service. Modern filters and settling basins have been installed, the wood stave pipes replaced until now the city has an all-metal water system.

In 1937 a 652-foot city well was drilled and a 100-horsepower pump installed, giving a maximum capacity of 75,000 gallons of water per hour. This well is used for emergency and stand-by uses to supplement the gravity system whenever necessary.

The same pipe line which supplies water to the hydro power plant furnished the source of supply for the city water system.

A total of approximately $570,558.32 has been invested in the electric and water utilities to December 31, 1938. Of this amount $396,378.38 is invested in the electric system and $174,179.94 in the water system. After taking depreciation, the net fixed assets of the electric system amounted to $242,748.98 and the net fixed assets of the water system amounted to $136,167.60—the total net value of the two utilities being $378,916.58. Other assets of the electric and water systems amounting to $66,286.22 or total assets of $445,202.80 as of December 31, 1938. The total bonded debt of the utilities as of December 31, 1938, amounted to $234,000. Of this amount $18,000 will be retired in 1939.

A recent refunding issue of water bonds sold at a premium of $1.40 per thousand with interest rate of 2½ percent. All outstanding bonds are serial, the last payment being due in 1953.

A condensed profit-and-loss statement for the year 1938 follows. This statement indicates the healthy condition of this system.

Statement for 1938

Earnings	$89,872.76	
Expenditures	37,087.52	
Profit before interest and depreciation		$52,785.24
Interest	$11,715.00	
Depreciation	18,648.13	
Total depreciation and interest		30,363.13
Net operating profit		22,422.11

In addition to the above-indicated earnings, the electric and water systems contribute $2,000 cash as an annual franchise tax, and contribute street lighting, service to public buildings, parks, fire-hydrant rental, etc., to the value of approximately $8,000, or a total annual contribution of $10,000.

There are no outstanding warrants against either the utilities or general fund of the city. During the years the utilities have operated, thousands of dollars have been saved to the rate payer and large contributions of cash have been made to the general fund by the utility fund. The city tax rate has averaged about 12 mills for the past 12 years, and has rarely ever exceeded this amount.

In 1938 the city installed the same system of accounting as that used by private companies.

Milton rates are now and always have been among the lowest in the State.

The electric system serves approximately 1,000 customers and the water system gives service to about 600 customers and includes service to domestic, industrial, and commercial users in both Milton, Freewater, and adjacent rural areas.

Approximately 42 miles of distribution lines both urban and interurban are required to serve patrons of the electric power system. Our population is 1,576.

GEORGE HIBBERT, *City Manager.*

Roosevelt's Foreign-Trade Policy Works Injury for American Producers—Argentine Beef Is Not Superior to American Product

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. AUGUST H. ANDRESEN. Mr. Speaker, on Friday afternoon, May 12, 1939, President Roosevelt electrified the entire world in his new role as an international advertiser for Argentine canned beef. His prejudicial and grossly unfair utterance "that the Argentine product is of greatly superior quality as compared with the American product" drew the front-page headlines in the newspapers of the world. In fact, the statement of the President of the United States boosting Argentine beef as being better than the domestic product was translated into 57 or more languages for the peoples of the world within 24 hours after he made it.

I believe in advertising, and that advertising pays, but why, in the name of common sense, should the Chief Executive of our great country go out of his way to "throw stones" at American producers of beef when he well knows that we produce the best beef in the world? Business concerns in this country annually pay out millions of dollars to prominent people in the news for their favorable mention of nationally advertised products. Such statements are generally for consumption within our own borders, and not for international digestion, as was the clear-cut utterance of President Roosevelt in regard to the superior quality and cheapness of Argentine beef.

The cattle producers and business interests of Argentina rejoiced over President Roosevelt's voluntary statement on the superior qualities and lower cost of Argentine canned beef, and his order requiring the purchase of this foreign beef for the United States Navy. Heralded to the world, this action became the biggest advertising scoop in all history.

DIPLOMATIC NEGOTIATIONS PRECEDED THE PRESIDENT'S STATEMENT

According to a conspicuous news story which appeared under large headlines in the Buenos Aires Herald on May 13, 1939, which I now quote as published, it would appear that the President's statement advertising Argentine beef, and his order to purchase it for the United States Navy, was made only after lengthy diplomatic negotiations between the United States Department of State and the Ambassador to this country from Argentina.

[From the Buenos Aires Herald of May 13, 1939]

SUPERIOR TINNED BEEF FROM RIVER PLATE—MR. ROOSEVELT'S TRIBUTE—CONTRACTS FOR UNITED STATES NAVY—FRANK COMPARISON BY THE PRESIDENT

WASHINGTON, May 12.—Mr. Roosevelt opened a press conference with a voluntary statement on the superior qualities and lower cost of both Argentine and Uruguayan tinned beef.

He said that if the provision in the Navy bill forbidding the Navy to buy South American tinned beef remained unchanged, the Government would be required to offer inferior food to the 110,000 men of the Navy at a price of 8 cents a pound higher. The Navy, he said, had informed him that the Argentine product was superior. Domestic tinned beef costs 23 cents a pound—8 cents more than the total cost of the imported product.

Mr. Roosevelt said that earlier he had directed the Navy to accept the low bid of the Argentine Meat Producers' Cooperative. It is learned that the order followed repeated energetic representations to the Department of State by the Argentine Ambassador, Dr. Felipe A. Espil, when it became apparent that the Navy was hesitating whether to accept the bid.

Dr. Espil last saw Mr. Sumner Welles, the Under Secretary of State, about the matter during Mr. Roosevelt's spring vacation in Warm Springs, Ga., and Mr. Welles communicated with Mr. Roosevelt. The international nature of the negotiations was revealed today when the text of a letter from the President on tinned beef was issued, with an introductory line saying that the letter had been written "to the Secretary of State under date April 13." Evidently the President also gave instructions direct to the Secretary of the Navy, Mr. Claude Swanson.

Diplomatic observers generally feel that Mr. Roosevelt's action was courageous, because it will probably be criticized by domestic cattlemen.

Yesterday one of the Navy's representatives asked the Senate subcommittee which is studying the Navy bill to eliminate the restrictive provision against Argentine beef, and there are some indications that the request will be granted.

Following President Roosevelt's statement on May 12, daily stories appeared in the newspapers of Argentina in which it is noted that full advantage was taken of our Chief Executive's generosity. Space will not permit the inclusion of the numerous editorials and headline news stories written in both Spanish and English. I do, however, quote herewith two additional items which appeared in the Buenos Aires Herald on the 14th and 15th of May 1939.

[From the Buenos Aires Herald of May 14, 1939]

[From editorial on Argentine meat]

It is sincerely to be hoped that President Roosevelt will be able to persuade the United States Congress to eliminate the clause in a bill recently presented to that body which provides that only American canned meat shall be eaten by the United States Navy and Army. This means, of course, that the Navy and Army will have to pay a much higher price for their requirements and the quality is not so high.

[From the Buenos Aires Herald of May 15, 1939]

WILL BEEF RUIN ROOSEVELT—ARGENTINE PURCHASE RAISES MIDDLE WEST STORM

WASHINGTON, May 14.—The Argentine beef purchase, besides threatening to become a major political issue, is also expected to clarify the commercial aspects of the "good neighbor policy" and to test the congressional willingness to yield minor trade concessions on behalf of pan-Americanism.

AMERICAN FARMERS ANGRILY PROTEST

The President's unfortunate advocacy of Argentine canned beef became an overnight topic for household discussion in

every American home. Farmers and cattle producers angrily protested the President's action requiring our Navy to purchase Argentine canned beef, because he said that it was superior and cheaper than our domestic product. Scores of letters and telegrams from farmers and farm organizations were received by Representatives and Senators in Congress, demanding the passage of a law to prohibit the President from buying Argentine beef for the Navy, and requiring the purchase of farm products produced by American farmers. This suggestion from American producers was speedily enacted into law as a part of the naval appropriation bill.

COMMENT IN THE HALLS OF CONGRESS

The President's statement on Argentine beef caused a furor in both bodies of Congress. Senators and Representatives from agricultural sections, irrespective of political affiliations, expressed themselves in no uncertain terms in behalf of American producers. I quote briefly from some of the congressional comment:

Senator ADAMS, of Colorado, suggested that "if we are to have the American Navy fighting on foreign beef, we might as well go a step further and have our battleships built in England or get our armor plate from Belgium." "We're trying to maintain a higher standard of living in this country, but we can't do it without paying for it," he said. "If we want to compete on the level of the people on the plains of Argentina, we'll have to cut out our shorter hours and higher wages."

Senator O'MAHONEY, of Wyoming, said his understanding was that the Argentine Meat Producers Cooperative was actually a Government institution and that its products had what amounted to a subsidy. "United States producers," he said, "cannot be expected to compete with products of foreign government corporations."

Congressman CARLSON, of Kansas, made the following significant statement: "The farmers and livestock producers have suffered from large importations of farm products and competitive commodities during recent years, and now the President infers that he does not believe the American farmer is entitled to the American market."

Congressman RICH, of Pennsylvania, who is not a farmer, caustically said: "Where is there any incentive to have the slogan 'Buy American' if our trusted officers betray us? How will we put our men back to work if we give foreign countries our business, our money, and our goodwill?"

Congressman SPRINGER, of Indiana, in a speech on the floor stated: "Our President can materially aid the people of our Nation by observing the existing laws and by permitting our Navy to consume American food—and not the food produced in some foreign land."

Senator CAPPER, of Kansas, was thoroughly aroused over the President's statement and said in the Senate: "Mr. President, the entire middle and far West and Southwest were shocked Friday night to learn that President Roosevelt is insisting that the United States Navy buy Argentine canned beef in preference to beef produced and processed in the United States."

PROTESTS FROM LIVESTOCK ASSOCIATIONS

D. M. Hildebrand, of Seeward, Nebr., president of the United States Livestock Association, issued the following statement:

The fact that the present administration has seen fit to buy beef from Argentina when our own livestock producers have been working under a heavy handicap for the last 4 or 5 years indicates that it is not in sympathy with making a market for our feed grains, as the only market the farmer has for corn and byproducts of the farm is livestock.

With taxes mounting, certainly the livestock producers in the United States should have the first opportunity in the American market.

The best aid that agriculture and livestock producers can have is to provide a market for what we produce in the United States. When the United States Government buys Argentine beef, and when the President of the United States makes a public statement that Argentine beef is superior, other consumers of beef are encouraged to do the same thing.

We question the statement that Argentine beef is better than American corn-fed beef.

I think Congress should pass a law prohibiting our Government from supplying its needs for livestock products from abroad so long as they can be produced in this country.

The following telegram was received from President Ljungdahl and Secretary Miller, of the Kansas State Livestock Association:

Members of the Kansas Livestock Association and beef producers throughout the State are shocked by press reports to the effect that our President has approved the purchase of canned corned beef from Argentina for use in feeding the Navy. Not only are livestock producers shocked, but indignant, at the inference that canned corned beef processed in this country is inferior to the Argentine product. We urge immediate cancelation of the Argentine purchase order.

Producers of meat animals throughout our country need every possible help in obtaining the very best market for their products. Recent years of severe drought and unfavorable markets have brought serious losses to livestock producers, and, if they survive these losses, must have every advantage possible in marketing meat animals.

Our beef producers naturally object to being sacrificed upon the altar of so-called good-neighbor policy and no good neighbor would expect it.

An editorial which appeared in the Washington Post on May 15, 1939, and which I quote in part, gives an insight into the motives of the President with reference to the Argentine beef incident. I quote from the editorial:

In approving the purchase of a relatively small order of corned beef from the Argentine, Mr. Roosevelt apparently had in mind two objectives. One was to throw a sop to Buenos Aires, where the exclusion of Argentine beef from this country is bitterly resented. The other was doubtless to chide the Senate for its failure to ratify the Argentine Sanitary Convention. That agreement would permit our Latin-American neighbor to send us beef from those parts of its area which are entirely free of the hoof-and-mouth disease.

ARGENTINE SANITARY CONVENTION

President Roosevelt is trying desperately to secure a change in the Sanitary Convention with Argentina, which now prohibits the shipment of cattle and fresh beef into this country, so as to allow by treaty the flooding of our markets with beef and cattle produced in Argentina and other South American countries. If Mr. Roosevelt succeeds in this attempt, it plainly means complete destruction for American livestock producers. They cannot compete with the cheaply produced products from South America.

In connection with the Argentine sanitary agreement, I wish to point out that the hoof-and-mouth disease is very prevalent in Argentina and other South American countries. This dreaded disease has been eradicated in the United States at great expense to American producers of livestock. Stringent laws have been enacted by both State and Federal Governments to clean up hoof-and-mouth disease in the United States. If the existing agreement with Argentina is broken down, as demanded by the President, in order to carry out his good-neighbor policy, opportunity will be given for a recurrence of this dreaded disease in this country. The existing treaty should not be changed, and all foreigners who ship beef or other products to the United States should be required to comply with sanitary laws now imposed against American producers.

NEW DEAL FOREIGN-TRADE POLICY WILL RUIN AMERICAN PRODUCERS

The good neighbor reciprocal trade policies of President Roosevelt have brought about large importations into this country of cheaply produced farm and manufactured products. As a result of this strange philosophy the American market has been glutted, prices depressed, and millions of people have been forced to continue on relief. The Federal Government pays out hundreds of millions of dollars to farmers so that they will produce less, and during the same period our Chief Executive, through the power vested in him by a rubber-stamp Congress of the past, reduces tariff duties and literally invites foreign producers to ship more competitive products into the American market. In other words, the American market is being given away to cheap foreign production. This policy should be discontinued and our domestic market preserved for American producers.

Import figures from the Department of Commerce plainly disclose that the reciprocal-trade policy of the New Deal is working to the disadvantage of American farmers. The latest figures from the Department, covering the first 6 months of 1939, disclose the following facts: Imports of cattle, 6 months 1939, 486,497 head, as against 242,584 head for the same period in 1938. Imports of other meat products, which include beef, pork, and poultry, amounted to 79,472,315 pounds for the first 6 months of 1939, as against 75,884,822 pounds for the first 6 months of 1938. The total value of imports of merchandise for consumption for the first 6 months of 1939 amounts to $1,071,731,563, as against $943,315,226 for the same period in 1938.

American farmers engaged in the production of hogs will be interested to learn that despite falling prices for their pork products, the importations of pork still continue on a large scale. For the first 6 months of 1939, the imports of cheaply produced pork, hams, shoulders, bacon, and pickled pork amounted to 25,827,000 pounds, as against 25,661,000 pounds for the same period for 1938. Our domestic market is also being flooded with cheaply-produced foreign fats and oils, which also works to the detriment of all of the farmers in America. It is the opinion of experts in the Department of Agriculture that American farmers will be receiving less than $5 a hundred for their hogs this fall.

A large percentage of American farmers are fully convinced that the reciprocal-trade program, as well as the present A. A. A. farm program, is working to their detriment. When Congress reconvenes in January, the first order of business should be the repeal of undesirable policies and programs, and the enactment of sound farm legislation which will have for its main objective the protection of the American market for domestic producers and a restoration of an American price level.

Business Improvement

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, August 2, 1939

NEWSPAPER COMMENT

Mr. RADCLIFFE. Mr. President, I ask unanimous consent to have printed in the RECORD three articles in reference to the very eloquent and brilliant speech delivered a few days ago by the Senator from Wyoming [Mr. O'MAHONEY]. First I ask to have printed in the RECORD extracts from an article by Arthur Krock entitled "The First Harbinger of Good Business News"; next an editorial from Labor entitled "Nature Mocks Intelligence of Men," and third an article by David Lawrence entitled "Senate Gives 'Go' Signal to Business."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times]

THE FIRST HARBINGER OF GOOD BUSINESS NEWS

(By Arthur Krock)

WASHINGTON, July 18.—Hardy and hopeful is the prophet who will predict a real and substantial boom in the United States during the remainder of the incumbency of the New Deal in Washington. Risk investors are too wary of the President, and the President is too suspicious of risk investors to generate a boom era, 1920's style. But this does not preclude the arrival of better business such as now is indicated by rising Wall Street prices and reports from the industrial field.

How long the current hopeful statistics will continue is dependent to a great extent on Washington, which means largely the President. He can, as often in the past, act or speak in such a way as to chill the mounting blood of capital and production and somewhat contract the expanding thread in the business thermometer. If Congress continues to show enough resistance to the Executive to give added assurance that the rubber-stamp period is ended, however—and especially if Congress adjourns without passing any alarming items of legislation—some economic observers believe that rather better times will persist for the reminder of the year.

BITS OF BUSINESS CHEER

Another solvent of business worry has been the management by Senator O'MAHONEY of the antimonopoly inquiry and the calm nature of its preliminary report.

In part to these reasons the improved industrial indexes could be assigned. But as early as last April the head of the economics department of one of the largest manufacturing corporations in the world made a report which anticipated better business. His report was made privately to his associates, but its outlines were sketched by this correspondent in the New York Times on May 6. The economist, who was the first harbinger of this optimism, gave seven reasons for his conclusion that "business * * * is not so bad; in fact, it is pretty good, although this will be news in the gloomy East." These were his reasons:

Labor costs per unit of output are near the lowest record point. Output per man per hour is near the highest record point. The Federal Reserve Board's index of industrial production for the first quarter of 1939 was almost as high as for the last quarter of 1938; and manufacturers, having diminished their inventories, must buy to keep going. Fall consumers' goods hold up well, mail-order houses are making new-high records, and chain stores show very good trade. Farm income is about the same as in 1938; though prices are down, the loss is made up by volume. Residential building has shot up amazingly, largely because of the successful work of Administrator McDonald of the F. H. A. And general prices have not advanced.

NEW DEALERS SURPRISED

In reporting the economist's summary this correspondent wrote that it did not forecast a boom, "merely the picture of a possible status quo under which business and labor can live modestly." Perhaps that status quo now, if only temporarily, has come to exist.

The summary was greeted with surprise, some incredulity and much scoffing. Particularly surprised seemed to be various agencies of the New Deal, including the Democratic National Committee, all of which wanted to be assured that the economist really existed and that his employers were truly large and important. They were so assured, with the additional information that these employers are prominent critics of the New Deal.

If there has been a business turn it was called outside Washington. This note is set down in memory of the many occasions when Leon Henderson and others have asserted an administration monopoly on economic foresight.

[From Labor, Washington, D. C., of July 25, 1939]

"NATURE MOCKS INTELLIGENCE OF MEN"—SENATOR O'MAHONEY PRESENTS A STINGING INDICTMENT OF THE CRUEL ABSURDITIES OF AMERICA'S ECONOMIC "SET-UP"

Before he was a lawyer and a legislator, Senator Joseph C. O'Mahoney was a newspaper man, and a good one. In those far-off days he wrote many editorials, but never did he present a great issue more clearly and impressively than in his statement of America's economic condition in the preliminary report of his Monopoly Committee, made public this week. The Senator wrote:

"People who are able and willing to work cannot find employment.

"People who are hungry cannot provide themselves with food.

"People who produce what the idle and the hungry need, cannot sell it and, indeed, can find a market for only a small portion of what they are capable of producing.

"Owners of money and owners of machines cannot put their property to sure and certain use.

"The abundance of nature mocks the intelligence of men, who seem incapable of distributing it among their own kind, either equitably or profitably."

What answer can our statesmen make to that indictment? "The abundance of nature mocks the intelligence of men!" There's a line which will not be soon forgotten. As a matter of fact, it tells the whole story. Nature and Nature's God have been more than generous to us, but nevertheless, in the midst of this superabundance, we condemn to slow starvation millions of our fellow Americans, able and anxious to work.

[From the Washington Evening Star of August 1, 1939]

SENATE GIVES "GO" SIGNAL TO BUSINESS—PUTS CHECK ON UNITED STATES LOANS FOR COMPETING POWER

(By David Lawrence)

Free private enterprise in the United States has been given a significant assurance by the United States Senate—an assurance against abuse of lending power by the Federal Government. The vote is interesting in that conservative Democrats and Republicans as well as a number of administration Democrats joined in approving a declaration of policy written by Senator O'MAHONEY, of Wyoming.

The particular amendment to the lending bill which was adopted concerned a prohibition of the possible use of Federal funds to encourage municipalities to borrow money to build competing electric light and power plants without taking into account whether adequate service existed, or whether the existing facilities could be purchased on a reasonable basis. It went further than a prohibition against electric light competition and struck out also against the possible invasion of all private enterprises by Government operations.

Perhaps the most challenging speech in many weeks—at least several Senators characterized it as such—came from Senator O'MAHONEY when he commented on an attempt by Senator NORRIS, of Nebraska, public-owned advocate, to defeat his amendment on the ground it might give power companies a loophole for delay and litigation. Said Mr. O'MAHONEY in part:

"So I say to the Senate, stop all this quibbling about what is going to happen with a $350,000,000 loan fund, stop all quibbling about the right of some municipality to obtain a loan to build a utility in competition with an existing utility. The fight against abuses by corporate power has been practically won. I believe it

has been completely won. I believe that one of the great reasons why the fight has been won is because Senators like the distinguished and able Senator from Nebraska [Mr. NORRIS] have been willing to stand upon the floor of this body and out on the stump to wage a fight for free private enterprise.

BUSINESS WANTS SIGNAL

"Free private enterprise is endangered not only by monopoly. It is also endangered by Government. My experience during the past 12 months with the Temporary National Economic Committee has convinced me that 90 percent of all the businessmen in the United States want only the opportunity to go forward. I say give them the signal by adopting this amendment."

The Senate followed Mr. O'MAHONEY's advice, but it was interesting to observe that the conservative or independent Democrats earlier had voted down a more extreme proposal which would have prevented any public funds from being borrowed by municipalities seeking to have their own electric power and light plants.

This is a plain indication that the Democrats who are called "conservatives" are not at all taking an extreme or ultra-conservative position, and that the administration might well have had in other votes a substantial number of supporters from the ranks of these Democrats. The so-called rebellion in Congress, whereby in recent days a coalition of Democrats and Republicans has been whittling away the administration's measures, is by no means a well-oiled affair. It is a spur of the moment division based on distrust to a certain extent of bureaucratic power hitherto voted in blanket form, and largely on the failure of the administration to consult Democratic Members of the Senate irrespective of faction.

KILLED MORE CONSERVATIVE PLAN

Had the conservative Democrats been merely seeking to embarrass the administration they would have voted for the extra amendment proposed by Senator DANAHER, of Connecticut, which endeavored to put the Senate on record against any Government aid for all possible competing enterprises. Mr. O'MAHONEY's proposal with a provision for a public hearing by the Federal Works Administrator and with other restrictions seemed to embody a policy fair, on the one hand, to private enterprise and, on the other, to the municipalities desiring to avail themselves of public borrowings. It was by no means what might be called a retrogressive step, for it puts into law what the President and his associates in the executive branch of the Government have pledged informally, but which could not serve as effectively as a legal guaranty until Congress embodied it in a formal statute.

The vote of 45 to 25 does not by any means reflect the pro and anti sentiment on public ownership. Among the votes cast against the Danaher amendment were some Republicans and Democrats who would have preferred the more extreme proposals and did not wish even by indirection to seem to favor Federal funds for competing plants to be constructed by municipalities. On the whole, the votes in the Senate last Saturday show clearly that the Senate believes the sentiment of the country is drifting rapidly away from allowing public funds to be used to break down the system of free private enterprise.

The Difference Between English Housing Acts and the United States Housing Act

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. SMITH of Ohio. Mr. Speaker, Mr. Nathan Straus told the Banking and Currency Committee he is a student of housing. Whether he is or not, his position should require him to know at least something about it. He refers constantly to England's experience in public housing. He says we are following the English plan.

In brief, then—

Said Mr. Straus—

the American plan simply represents an adaptation of the English one to the particular conditions of the country. (Hearings, p. 139.)

To which Mr. Leon Keyserling, head attorney for U. S. H. A., chimed:

I am fairly certain that there is no material difference between them.

That is, between the English and ours.

There is actually very little similarity between the English housing acts and their operation and the United States Housing Act and its operation.

We have a U. S. H. A. England has no B. H. A.—British Housing Authority. The British Exchequer, or Treasury, takes care of all grants and subsidies made by the central government with respect to public housing.

We have local housing authorities, set up as independent bodies, "corporate and politic," with absolutely no resources of their own, set up specifically within the last 2 years to do but one thing, namely, serve as agencies or simple dummies of the United States Housing Authority to carry on its financial transactions. In England there is nothing even remotely like this. There duly constituted local governmental bodies, county borough councils, borough councils, and urban and rural district councils, which have been in existence for many years, and correspond to our counties and municipalities, carry on the local work of constructing and operating the houses.

United States Housing Authority projects are exempt from real-estate taxes. English public-housing projects are not so exempted.

The U. S. H. A. makes an enormous fabricated-housing profit.

The English Government permits no such gross deception of its people.

The United States Government is now obligating itself to pay annual rent subsidies per family of from $100 to $234, or an average of $184, each year over the next 60 years.

The British Exchequer obligates itself to pay annually to each family a subsidy of $26.60, or in exceptional cases $31.44, or an average not exceeding $29, for 40 years.

(In the case of flats of more than three stories, the subsidies in England are higher, but the report for April of this year shows these to be only 5 percent of the total houses built.)

The full amount for which our Federal Government obligates itself to pay rent subsidies to each family is between $6,000 and $14,000, the average being $10,000.

This compares with $1,084 and $1,257 for England, or an average of $1,160.

The local political subdivisions in England contribute $13.28 annually per dwelling unit, and in exceptional cases $18.

Our municipalities, in granting tax exemptions, contribute an average annual rent subsidy to each family of $83.

Our total annual subsidies over the 60 years, per family, Federal and local, run up as high as $20,000 (Syracuse, N. Y.), and average $16,000.

English total subsidies, over the 40-year period, per family, exchequer and local, except multistory flats, run from $1,595 to $1,982, or an average of less than $1,800.

I understand, up to now, England has constructed about 1,280,000 public houses, that the exchequer has paid out $870,000,000 in subsidies thus far; that existing contracts call for payment of some $2,000,000,000 more by the exchequer during the years to come in annual subsidies on houses already erected or under construction.

Thus the total amount of subsidies paid and to be paid by the Exchequer is about two and three-fourths billion dollars. At present building costs and with the present United States Housing Authority financial arrangement, together with the gigantic housing bureaucracy and its criminal waste, the same number of houses would involve our Federal Government in subsidies in the amount of more than $14,000,000,000 and our municipalities $6,500,000,000, or a total of more than $20,000,000,000.

And, bear in mind, the English subsidies cited cover the original English housing plan, which was abandoned because it was seen that it would wreck the British Exchequer.

The English housing acts are forthright laws which can readily be understood by the average person.

The United States Housing Act is certainly not a forthright piece of legislation. It is equivocal and ambiguous in the extreme. I know of no other statute that is so difficult to disentangle and understand as this act. Certainly it cannot be understood by the average person.

Republican Attempts to Mislead American Farmers Fail

EXTENSION OF REMARKS

OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. MILLS of Arkansas. Mr. Speaker, there appeared in the CONGRESSIONAL RECORD of July 22 and July 26 tables showing increases of agricultural imports, allegedly resulting from trade agreements. Five months of 1938 were compared with the corresponding period of 1939. Following is the list of products which was given: Cattle; cheese; wheat for milling and export; wheat byproduct feeds; flaxseed; wool and mohair; hides and skins; tobacco, unmanufactured; cotton, unmanufactured; molasses (inedible); eggs in shell; potatoes, white or Irish; cottonseed oil; cottonseed cake and meal; peanut oil; oats; maple sugar and sirup; tapioca; hay; canned beef, hams, bacon, and so forth; silver-fox fur skins; tomatoes, canned; pineapples (preserved or prepared); apples, fresh; cashew nuts; potato starch.

THEY CANNOT GET BY WITH PADDING

One would naturally expect to find, after a condemnation of trade agreements as they relate to imports of agricultural products, that reductions in duty or some other positive concession had been granted on each of the items listed. Such is not the case. The following items in the list appearing in the RECORD have not been subject to lower rates of duty or even included as a qualified concession to foreign countries in trade agreements: (1) wheat for milling and export; (2) flaxseed; (3) wool and mohair; (4) hides and skins; (5) cotton, unmanufactured; (6) cottonseed oil; (7) cottonseed cake and meal; (8) canned beef; (9) canned tomatoes; (10) peanuts; (11) cashew nuts; (12) peanut oil.

In order that a superficial case against trade agreements might be indicated, the list is thus diluted by nearly one-half. Twelve out of twenty-seven items are clear outside of trade agreements. This necessity for padding indicates the difficulty the opposition has in making a case against trade agreements, even assuming that the increased imports are bad in themselves and solely resulted from trade agreements. Not satisfied with this misrepresentation they duplicate a number of items. For example total meat products are given, then the figures for various meat items which represent the same thing are shown.

Additional items in the list have been included in agreements only in a qualified manner; that is, the imports are limited by quota or some other arrangement so that the figures given in the table referred to usually represent much more than the imports of the item involved in the concession granted in trade agreements. The purpose of the trade-agreements program is to expand foreign trade and in order to expand exports we have to expand imports, and when reductions are made in duties it is expected that there will be expanded trade, but this is not always the case. The import figures on the following items listed as agreement items by opponents represent more than the imports of the products on which concessions were granted:

(1) Cattle: Imports under reduced duty are limited by quota and the rates of duty on more than half of the number shown were not reduced by trade agreements. Furthermore, the imports permitted under lower rates of duty constitute a small fraction of the domestic consumption.

(2) Cheese: Not all kinds and types of cheese have been subject to lower rates of duty. Reductions were made on specialty types of cheese, some of which are not produced in the United States; the import figures represent total imports into the United States.

(3) Tobacco: The figures represent total imports while concessions were granted on two particular types and grades not produced in the United States in large quantities. A concession was granted on wrapper tobacco primarily for the benefit of the domestic producers of filler tobacco; a concession was granted on oriental tobacco, a type not produced in the United States, for making cigarettes. The exports of tobacco are several times as great as the imports.

(4) Molasses: Import figures given represent inedible molasses. The reduction in duty on molasses was limited to 1,500,000 gallons; the import figures for the first 5 months of 1939, as given in the RECORD, was 82,407,000 gallons. Obviously, the reduced duty could not apply to any significant quantity of the imports shown.

(5) Hams, shoulders, bacon, etc.: Import figures largely represent canned ham from Poland and Danzig on which no reductions in duty have been made. Exports of pork and pork products greatly exceeded the imports.

(6) Potatoes: Seasonal reductions were made in duty and there are quota limitations on imports. Exports of potatoes are usually greater than imports. The imports for the first 5 months of 1939 were 36,000,000 pounds less than the first 5 months of 1929.

(7) Tapioca, sago, and so forth: There, of course, could be no reduction in the duty on tapioca, sago, and so forth, because these products have long entered free of duty, being left there by both the Tariffs Acts of 1922 and 1930. The free status was bound in the agreement with the Netherlands. This concession has not permitted a single additional pound to enter the United States. Furthermore, only a small part of the imports are actually competitive with domestic products.

Thus it is seen that not only is the list of items "padded" by a large percentage but the figures which should represent the items on which concessions were granted are also exaggerated in order to make an unfavorable case against trade agreements. This sort of misrepresentation is not accidental. Opponents of the program are hard-pressed when they have to go to such extremes. Those preparing these tables have every necessary facility for obtaining the correct information in Washington. They may get by with these statements for a while, but eventually the facts will come out.

UNSOUND CONCLUSIONS FROM INCOMPLETE DATA

Before any hasty conclusions are drawn regarding a few months' imports or exports in any product, it should be understood that such trade reflects short-time demand and supply conditions which depend upon industrial activity, prices, and many other factors in the United States and abroad. The trade in many products is seasonal and even 6 months' figures may not be indicative of the extent of it for a full year. Even a year's figures may not properly reflect the effects of trade agreements.

Frequently, there are other special factors which determine the extent of increased imports outside of concessions granted. An example of other factors influencing imports during the present year was the destruction of maple trees in New England last fall by the hurricane. This destruction resulted in the lowest domestic production for many years and the highest prices for maple sugar and sirup since 1930. Naturally imports of maple sugar and sirup increased. It would be unfortunate if the consumers did not have some protection. It would not help our producers if a large part of the consuming public in this country got out of the habit of using this fine and fast-diminishing product. Furthermore a mere list of increases in imports without relating them to prices, production, exports, and other factors, means very little. For the most part, the imports listed are small in comparison with domestic production and have little effect on prices.

NECESSITY FOR EXPORTS

All informed people recognize that markets must be obtained for several of the items included in the agricultural

import list appearing in the CONGRESSIONAL RECORD if we are to have decent domestic prices for them. Imports of a number of the items are small and insignificant in comparison with the exports. The following figures indicate the relationship of imports and exports of a few of the items listed:

	1938	
	Exports	Imports
Wheat	$78,141,208	$2,534,965
Cotton (raw)	228,669,387	9,614,961
Apples	14,700,890	44,063
Tobacco (unmanufactured)	155,670,521	36,028,056

The more than $9,000,000 of imports of cotton was largely of a special grade or type not produced in the United States. The same is true of relatively large import figures of tobacco. The imports fill a demand which cannot be supplied from domestic tobacco.

REDUCTIONS IN DUTY FOR BENEFIT OF FARMERS

A fact worth mentioning is that a number of the tariff reductions on these products actually included in agreements were made primarily for the benefit of certain groups of farmers themselves. The reductions in duty made primarily for the benefit of farmers in the list in the RECORD are wheat byproducts, hay, inedible molasses, seed potatoes, wrapper tobacco, and feeder cattle. Who else are such products imported for, if not primarily farmers?

AGRICULTURAL EXPORTS WHICH HAVE INCREASED AND IMPORTS WHICH HAVE DECREASED

A few days ago the gentleman from California [Mr. BUCK] had placed in the RECORD a list of of exports of agricultural products which had increased in the first 5 months of 1939 over the corresponding period of 1938. As stated he had these inserted because opponents of trade agreements had doctored the RECORD so that as unfavorable situation as possible was shown. Opponents say, "But there were figures from the Department of Commerce." They do not give all the figures from that Department. I am reproducing Congressman BUCK'S list to complete the record which our Republican friends insist on avoiding. Also I am including a list of agricultural imports which have decreased during the same period so that the record may not stand as the opponents would have it. It will be recalled that their list only showed increases, excepting cotton.

Agricultural import decreases

Product	Unit	5 months—	
		1938	1939
Butter	Pound	923,000	458,000
Swiss cheese	Pound	5,664,000	5,141,000
Eggs and egg products	Pound	903,000	383,000
Pork, fresh	Pound	2,169,000	843,000
Tallow	Pound	632,000	452,000
Corn	Bushel	227,000	164,000
Barley malt	Pound	45,746,000	43,988,000
Sugar	Ton	1,331,000	888,000
Molasses	Gallon	89,624,000	86,231,000
Tung oil	Pound	43,183,000	32,838,000

Agricultural export increases

Product	Unit	1938	1939
Bacon	Pound	3,237,000	3,543,000
Hams and shoulders	Pound	21,322,000	27,951,000
Lard	Pound	88,633,000	117,996,000
Milled rice	Pound	104,721,000	139,399,000
Wheat	Bushel	43,268,000	44,034,000
Flour of United States wheat	Barrel	1,595,000	2,464,000
Apples	Bushel	5,472,000	5,849,000
Oranges	Box	3,786,000	4,131,000
Grapefruit	Box	483,000	689,000
Apples, dried	Pound	5,483,000	12,542,000
Raisins	Pound	38,164,000	39,581,000

MAKING A CASE ON ANCIENT HISTORY

If the opposition desires to go back to 1933 and 1937, as one of their tables indicates and which is largely ancient history, it may be pointed out that agricultural imports in 1929 amounted to $2,218,000,000 in comparison with $995,637,000 in 1938. I submit as a part of my remarks a table showing the imports of the list of agricultural products for the first 6 months of 1929 in comparison with the first 6 months of 1939. For the most part of the imports of the first 6 months of 1939 are considerably below those for a corresponding period of 1929. For example, imports of cheese were down 13,000,000 pounds; hides and skins, 59,000,000 pounds; cotton, unmanufactured, 94,000,000 pounds; and potatoes, 36,000,000 pounds.

Imports of specified agricultural products, first 6 months, 1929 and 1939

Import items	Unit	6 months 1929	6 months 1939	Increase (+) decrease (−)
Cattle	Head	263,000	486,000	+223,000
Cheese	Pound	38,702,000	25,282,000	−13,420,000
Wheat for milling and exports	Bushel	10,416,000	5,430,000	−4,986,000
Wheat byproduct feeds	Ton	187,000	192,000	+5,000
Flaxseed	Bushel	15,472,000	10,763,000	−4,709,000
Wool and mohair	Pound	167,100,000	116,806,000	−50,294,000
Hides and skins	Pound	224,519,000	165,189,000	−59,330,000
Tobacco, unmanufactured	Pound	41,910,000	37,317,000	−4,593,000
Cotton, unmanufactured	Pound	142,454,000	48,297,000	−94,157,000
Molasses (inedible)	Gallon	(1)	95,604,000	(1)
Eggs in shell	Dozen	138,000	169,000	+31,000
Potatoes, white or Irish	Pound	80,727,000	44,482,000	−36,245,000
Cottonseed oil	Pound	(1)	24,670,000	(1)
Cottonseed cake and meal	Pound	19,759,000	6,596,000	−13,163,000
Maple sugar and sirup	Pound	8,122,000	10,563,000	+2,441,000
Tapioca	Pound	(1)	184,227,000	(1)
Hay	Ton	19,000	23,000,000	+4,000
Canned beef	Pound	[2] 48,739,000	40,996,000	−7,734,000
Hams, bacon, etc	Pound	1,114,000	24,273,000	+23,159,000
Silver fox fur skins	Number	[3] 1,000	40,000	+39,000
Tomatoes, canned	Pound	57,548,000	34,311,000	−23,237,000
Pineapples (preserved or prepared)	Pound	2,271,000	[4] 27,595,000	[4] +25,324,000
Apples, fresh	Bushel	25,000	21,000	−4,000
Cashew nuts	Pound	(1)	14,534,000	(1)
Potato starch	Pound	(1)	5,802,000	(1)
Peanut oil	Pound	2,200,000	2,927,000	+727,000
Oats	Bushel	69,000	1,007,000	+938,000

[1] Not available.
[2] Figure is for canned meats, probably 99 percent beef.
[3] Includes silver- and black-fox furs.
[4] Includes 18,210,000 pounds from Philippine Islands, free.

Philippine Sugar and the American Beet and Cane Farmer

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

ARTICLE BY STUART O. LANDRY

Mr. CRAWFORD. Mr. Speaker, despite the eloquent words spoken on this floor in behalf of the American farmer, we will return to our districts and find him still in an extremely sorry plight, and on this particular occasion I want to call attention again to the situation of Philippine sugar and the American beet and cane farmer.

We have just passed a bill beneficial to the Philippine people and during the discussion the term "cushion" was frequently used in alleging that the bill was intended to "cushion" the transition of the Philippine people into an independent nation.

Legislation of this type can also keep the cushion out from under the American beet and sugarcane farmer. There is no reason why Congress should not take steps to let American citizen farmers raise and supply all the sugar needed in this country or all that they care to grow toward supplying the market, and then give the overage to the Philippines and to Cuba, if then necessary.

A very fine analysis of this situation has been made by Mr. Stuart O. Landry and under the consent unanimously granted me by the House, I present his study for your consideration. It appeared in the June issue of the Sugar Journal, and follows:

[From the Sugar Journal for June 1939]

CONDITIONING THE PHILIPPINES AND CUBA FOR SMALLER SUGAR EXPORTS TO THE UNITED STATES

(By Stuart O. Landry)

On May 31 the United States Senate passed S. 2390. This act is an amendment to the original Philippine Independence Act of March 24, 1934. The purpose of the act is to cushion the effect on Philippine economic life by preparing them for total independence in 1946 when their preferential trading status with the United States will end.

The original act of 1934 provided that beginning with 1940 the Philippine Government should levy on shipments to the United States an export tax of 5 percent, with an additional increase of 5 percent every year until it reaches 25 percent of the regular duty collected by the United States on its imports. The Tydings-McDuffy Act—that is, the Independence Act of 1934—included sugar in the items that would have to pay a gradually increasing tax, although it limited the amount of sugar, which would be privileged to enter the United States before the full tariff on sugar would apply, to 800,000 tons of raw sugar and 50,000 long tons of refined sugar.

The amendment just passed by the Senate does not change the arrangement insofar as sugar is concerned, but changes it with regard to cigars, scrap tobacco, coconut oil, and pearl buttons. The amendment does away with the 5 percent annual increase of tax (which export tax was to have been collected by the Philippine Government, placed in a sinking fund and used solely for the payment of principal interest on the bonded indebtedness of the Philippine Islands, its provinces, municipalities, and so forth) and institutes in place of it a quota system. Every year until 1946 there shall be allowed to be imported into the United States without any duty at all 5 percent less than the former year's quota. These quotas are set by the act:

Cigars	200,000,000
Scrap tobacco, pounds	400,500,000
Coconut oil, long tons	200,000
Pearl buttons, gross	850,000

In other words, beginning with 1940, 200,000,000 cigars can be imported that year from the Philippines without paying any duty. In 1941, 5 percent or 10,000,000 less can be taken or 190,000,000. In 1942, 180,000,000 cigars and so on. Instead of making the Filipino producers pay a larger tax every year, the amount they can send into the United States is reduced. That is they are placed on a quota basis. Over the next 5 years, the producers know that their market in the United States is getting smaller and they can plan their production accordingly. They can either seek new markets or reduce production and get into other businesses.

This is not a bad idea. In fact it is a very good one, and undoubtedly is a better economic cushion than the method of charging a higher rate of entry tax every year.

In fact the method is so good that the sugar producer in the United States is wondering why sugar was left out. Look at the value of imports into the United States from the Philippines in 1938.

Imports From the Philippines Into the United States, 1938

Animal products and animals, edible:	
Lard compounds and lard substitutes	$119,000
Tuna fish in oil	122,000
Oleomargarine and other butter substitutes	199,000
Total	440,000
Vegetable food products and beverages:	
Rice, cleaned or milled	20,000
Coconut or copra oil cake and oil-cake meal	997,000
Pineapples, prepared or preserved	948,000
Peanuts	202,000
Coconut meat, shredded, desiccated, etc	3,708,000
Sugar, cane	50,588,000
Other vegetable food products and beverages	421,000
Total	56,463,000
Vegetable products, inedible:	
Rubber, crude	180,000
Copal gums	70,000
Copra	8,848,000
Coconut oil	11,400,000
Mangrove tanning extract	389,000
Scrap tobacco	482,000
Cigars and cheroots	2,698,000
Other vegetable products, inedible	48,000
Total	24,096,000
Textile fibers and manufactures:	
Cotton wearing apparel, embroidered, appliqued, etc	5,651,000
Cotton laces, embroideries, etc	367,000
Manila fiber	3,085,000
Kapok	57,000
Cordage of manila hemp or other hard fibers	371,000
Silk wearing apparel, embroidered, appliqued, etc	49,000
Hats, bonnets, and hoods of straw, manila, and other fibers	285,000
Other textile fibers and manufactures	30,000
Total	9,893,000
Wood and paper:	
Cabinet woods in the log	58,000
Cabinet wood, sawed	826,000
Furniture of rattan, reed, grass, etc	135,000
Other wood and paper products	13,000
Total	1,032,000
Metals and manufactures:	
Chrome ore or chromite	915,000
Copper concentrates, regulus, etc	179,000
Total	1,212,000
Glycerin, crude	105,000
Miscellaneous articles:	
Buttons, pearl or shell	$196,000
Household and personal effects	135,000
Total	1,026,000
Total imports, all commodities	94,162,000

The following tables show the total exports and imports between the United States and the Philippines during the past 8 years. In that time we imported approximately $770,000,000 and exported $470,000,000, a difference of $300,000,000 in favor of the Philippines, or nearly 64 percent.

Exports to the Philippines

Year	Value	Percent of total United States exports
1931	$48,883,000	2.0
1932	44,968,000	2.3
1933	44,782,000	2.7
1934	47,129,000	2.2
1935	52,640,000	2.3
1936	60,350,000	2.5
1937	85,028,000	2.5
1938	86,464,000	2.8

General imports from the Philippines

Year	Value	Percent of total United States imports
1931	$87,153,000	4.2
1932	80,877,000	6.1
1933	93,048,000	6.4
1934	87,811,000	5.3
1935	96,999,000	4.7
1936	101,679,000	4.2
1937	126,061,000	4.1
1938	94,244,000	4.8

It will be seen that while cigars and coconut oil are important, sugar is by far the greater part of the total value of the exports of the Philippines to this country.

I wonder just how pearl buttons got to be on the exclusive list. In 1938 we imported from the Philippines 522,000 gross of pearl or shell buttons valued at $196,000. A limit has been placed of 850,000 gross according to the amending act. I find that in 1936 there were 133 manufacturers of pearl buttons in the United States. Evidently this small group had enough influence to have their interests looked after, but 80,000 beet sugar and sugarcane growers cannot get on the preferred list. Maybe they didn't try.

The cushion has not been made to work for the sugar growers of the Philippines, and incidentally for the benefit of the sugar growers of the United States.

Why shouldn't the Philippines learn to "condition" themselves to a lower sugar production or rather for a lower volume of sales of sugar to the United States? Why not say to both Cuba and the Philippines: "We are going to cut down the amount of sugar that you can sell to the United States gradually. Every year it will be a little bit less." Then, like the man who is being cured of the liquor habit by gradually reducing his allotment, there will come a time when he can do without it altogether.

Now we are not trying to hurt either the Philippines or Cuba. We are not trying to keep them from growing sugar. In fact, we are glad to see them grow sugar and sell it to the rest of the world. We would be glad to have them sell it to us in exchange for the products we export to them as long as it does not dispossess the products we could grow in this country. After we have raised and supplied all the sugar that is needed in this country or that we care to raise or grow, then we are perfectly willing to give the overage to the Philippines and Cuba.

The fault to be found with the so-called cushion bill, or the amendment of the Philippine Independence Act that just passed the Senate and has now been referred to the Committee on Insular Affairs in the House, is that it does not look forward to cushioning the Philippine sugar growers against the inevitable decline of the use of Philippine sugar in the United States—provided our local growers of both cane and beet sugar are allowed to grow all they want to grow or that they can grow. It is beside the point, but the same situation applies to Cuba. The quota should be greatly reduced on both the Philippine sugar importations and the Cuba sugar importations and the restrictions on planting beet sugar and cane sugar in the United States taken off.

When such a procedure is suggested we hear a storm of protest. Some of this is well meant. Some of it is a fanfare raised by a few large business interests who might be affected by such a policy. Other objections are made by those who sell merchandise or products to the Philippines and Cuba who think that their business would be affected. Some of these might lose immediate sales but they will probably find out that they will increase their sales in this country and in the end be better off.

We hear on all sides that any indiscrimination against Cuba and the Philippines would put these poor dependents out of business. We hear that Cuba is in terrible shape and that the Philippines are suffering and that the ignorant natives will be grabbed by Japan and become virtual peons again. We are told that if the United States leaves the Philippines and does not look out for Cuba by giving it preferential tariff agreements and other help, that these countries will be the scene of revolution, starvation, and of chaos. We are told it is our duty to help these peoples; one right under our wing and the other many thousands of miles away.

Now, let us give some of the other side to this argument. In the first place, we are told by these same people, when they are waxing enthusiastic over our island proteges, that they are the richest countries in the world.

In the issue of Collier's for July 1, there is an article entitled "Can we hold the richest land on earth?" Reading this article one would think that all we have to do is hold on to the Philippines and every material want of every person in the United States would be supplied. Just keep the Japanese off and a fleet of steamships and airplanes will bring us food, rare metals, lumber, gold, and everything needed to make us happy and contented. This article is a most naive exposition of the philosophy of the Spanish Conquistadors.

After Columbus discovered America, the nations of Europe believed that all they had to do was send their explorers and soldiers of fortune over to the New World, and these licensed land privateers, taking away from the natives gold, furs, and products that those countries beyond the seas produced, would bring them back to the old countries to make everybody rich and happy. Undoubtedly, many explorers and adventurers did bring home gold, furs, and other products. And Spain and other countries of Europe for 100 years attained great prosperity principally because of the influx of precious metals. It might be interesting to know, moreover, that this influx of gold made prices rise throughout Europe and was the cause of economic disturbances that had far-reaching effects.

In any event, Spain grabbed many of the richest countries of the world and held them for 400 years, and instead of making her rich they made her so poor that she fell from her position of the proudest and greatest Christian nation to that of the weakest and most poverty-stricken nation of the earth. Spain was one of the first to grab this rich country of the Philippines. She owned Cuba, the "pearl of the Antilles." She owned Mexico, which is even now fabulously rich in natural resources. The truth of the matter is that just owning a country does not make it make money for you. No matter how rich a country is, it must be developed by sweat, by intelligence, by persistence, by character.

The Spaniards from their experience coined a proverb, "To bring back the wealth of the Indies you must send out the wealth of the Indies."

Now, the Philippines may have all this great wealth that Collier's tells about and it may be easy to make money there. It may be easy for a few shrewd Americans to impose on the natives and get the jump on an ignorant or unprogressive people. But it will still require hard work, sacrifice, intelligence, and other qualities that make for success. Let us not forget that money can still be made in the United States. We have millions of acres of land that can be cultivated. We have all sorts of minerals that can be mined. We have forests that can be grown and regrown and it is not necessary to go to the Philippines to make money.

Just a word about Cuba. This island is also rich in natural resources. Pineapples, coconuts, vegetables, and agricultural products can be raised easily there. Mineral deposits in Cuba are still undeveloped. There are tropical forests. In fact, it is a rich land and has great potentialities.

But, as I said before, we also have a rich country in the United States. Look at our great South and the Gulf States—fine agricultural lands, many mineral deposits, and millions of workers willing and ready to develop this land and to make it produce wealth. If we are not doing it, it is because of several wrong philosophies now being preached. One of them is that people do not have to work too hard and that they should take it easy. They are demanding that the Government take care of them.

I will not try to go into the causes of the South's being our No. 1 economic problem. One of the reasons, however, is that there are fields that could be worked and crops that could be raised and workers that could be given employment if it were permitted by law and regulations. Louisiana and Florida could both at once put thousands of acres into cultivation, and in 2 or 3 years double or triple their sugarcane production, and thus give employment to hundreds of thousands of people. A few people going to the Philippines to make individual fortunes are not going to help very much hundreds of thousands of southern people. There are hundreds of thousands of acres of land in the many States where beets could be planted. This would produce wealth and give employment to another great body of people. These people are not going to be benefited much by the American businessmen that go over to Manila and, by exploiting the natives, make fortunes. Or even if the natives over there make money, it is not doing much for us.

In a previous article I have shown that the Philippines have been an enormous burden to the United States. In 40 years they have cost us nearly $2,000,000,000. They still are then a source of trouble and may get us into a war. Instead of freeing the Philippines in 1946, I agree with Mr. Nicholas Roosevelt, former United States Ambassador to Hungary, that we ought to free the Philippines right now and get out of there at once. This probably will not be done.

But let us start cutting down on the sugar quota of the Philippines as well as Cuba, and in this way we will give these people a chance to get other customers or develop other natural resources.

It is to be hoped that when S. 2390 goes before the House they will put sugar in the same category as cigars, pearl buttons, coconut oil, etc.

Wanted for American Agriculture—A Fair Chance for a Free People

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. MUNDT. Mr. Speaker, the American farmer is entitled to a fair chance. He is the most indispensable unit in our entire economic system and he is the backbone of the best traditions and impulses of both of our major political parties. He is the best purchaser of the products of industry and labor and the primary producer of the new wealth of

America, without which this country would soon sink into obscurity and bankruptcy. Down through the years of history the American farmer has been the stronghold of liberty and freedom on this continent. He is more free from political intrigue, economic chicanery, subversive "isms," unethical practices, destructive alliances, and selfish promotion agencies than any other class of citizenship in America. I insist, Mr. Speaker, it is time that this country provides a fair chance for a free people as they till American soil and make their all-important contributions to the American way of life.

While farming has at times past been a productive and profitable enterprise and offered attractive opportunities for the young people of this Nation, no one can successfully deny that at least for the past 8 or 10 years the American farmer has been fighting against hopeless odds and has been steadily and surely slipping backward. My colleagues, the purpose of this talk is to present some authentic figures and point out a few present-day fallacies in our attitude toward the farmer, with no desire to inject partisanship into the picture except as it is necessary to consider the relationship of certain party policies in connection with certain economic conditions.

TOO MUCH HEAT—TOO LITTLE LIGHT

There has been too much heat and too little real light on our present farm program, its results, and its relationship with the reciprocal-trade pacts engineered by President Roosevelt and the New Deal. We have been a twilight zone of claims and counterclaims, with each side presenting selected sets of statistics and attempting to draw conclusions by considering comparisons made between most artfully and craftily chosen individual years of one administration or another. Such devices are designed to fool the unwary and to deceive the unknowing, but a boy in the eighth grade of school could put his finger on the trickery involved in such comparisons, and fully ninety-five farmers out of a hundred see through such sham once it is gotten out into the open. A fair and impartial comparison of farm conditions both before and after the New Deal is the necessary basis for prying beneath the veneer of propaganda and misinformation and for reaching a basis upon which all of us can start in a renewed effort to provide this long overdue fair chance for a free people.

GOOD GOVERNMENT SOCIETY STUDIES FARM PROBLEM

It is consequently very helpful to note the conclusions drawn in the confidential supplement dated August 1, 1939, to the American Good Government Review, a magazine published by the American Good Government Society, whose headquarters are at Tilden Hall, Washington, D. C., with branches in the National Press Building and elsewhere.

This study has been made available to me through the courtesy of its senior author, Richard A. Staderman, president and editor of this society. As a student years ago with such men as Prof. F. W. Taussig, of Harvard, former chairman, United States Tariff Commission, and the dean of American economists; with E. F. Gay, first dean of the Harvard Business School; with Prof. J. D. Black, of Harvard, author of works on farm economics; and with Prof. Davis R. Dewey, of the Massachusetts Institute of Technology, author of the dozen editions of the standard text Financial History of the United States, Mr. Staderman served an excellent apprenticeship. Subsequently serving as an assistant to Prof. W. Z. Ripley, of Harvard, author of Main Street and Wall Street; later as an assistant to the eminent Prof. Irving Fisher, of Yale, and as a teacher of business and statistics in Ohio, he obtained a broad background both for his present position and for compiling data such as the following, Seven Fat Years Against Seven Lean Years.

The coauthors of this compilation include A. P. Weeks, cousin of the late United States Senator and Secretary of War John W. Weeks; Grant Wells, descendant of both President Grant's family and that of Confederate President Jeff Davis; and Matilda A. Richter, specialist on consumers' problems.

The data herein is based upon authentic ultimate sources such as the reports of United States Government departments; in all cases the specific sources are listed for each compilation of figures.

Where data is incomplete as in the case of the last few months of 1939, careful estimates were made on the basis of existing trends. This study does not purport to show every item down to the last penny or the final ounce but it does demonstrate with startling clarity certain broad trends which, I believe, are indisputable and should be in the possession of every farmer in the country.

A FAIR BASIS FOR VALID COMPARISONS

The time periods taken by the Good Government studies, which under leave granted to me I shall include as a part of this talk in the permanent record, are fair ones and take the years as they come without any effort to distort the evidence or twist the findings by the customary trickery of picking selected years as isolated examples for drawing prejudicial conclusions. The years 1926 through 1932 are the last 7 years of Republican administrations and included both prosperity and depression. The years 1933 through 1939 include the 7 years of the New Deal. Thus over a 14-year period of consecutive time, we find the years divided evenly with 7 under each political administration and common sense requires that we base any valid comparisons upon an examination of the facts as they appear from such a complete record.

SEVEN FAT YEARS VERSUS SEVEN LEAN YEARS

The most significant conclusion to be drawn is that in spite of some of the Republican years being less prosperous than we should have preferred although candor demands the observation that out of 12 consecutive Republican years, 1921–32 over 80 percent of them brought comparative good times to the farmer—the total 7-year Republican period was one of far greater income and prosperity for the farmer by some $12,000,000,000, even after allowing for over $2,000,000,000 of Government payments to farmers during the New Deal. If one were to exclude these Government parity payments, subsidies, and bounties from the calculations, one would be compelled to say that the earned income of all farmers in the United States was almost $15,000,000,000 more during the 7 Republican fat years than during the 7 New Deal lean years. This conclusion is a matter of simple arithmetic based upon the figures supplied by the Department of Agriculture itself.

THE FINDINGS OF AMERICAN GOOD GOVERNMENT SOCIETY

Mr. Speaker, I now quote the findings and statements of the American Good Government Society in its study entitled "Seven Fat Years Versus Seven Lean Years," prepared by President Richard A. Staderman of this nonpartisan society:

[From a special supplement to the American Good Government Review, Washington, D. C., August 1, 1939]

SEVEN FAT YEARS VERSUS SEVEN LEAN YEARS: OR, HOW OUR FARMERS HAVE LOST $12,000,000,000 SINCE 1933

(By Richard A. Staderman, president, the American Good Government Society, Washington, D. C.; and A. Page Weeks, Grant Wells, and M. A. Richter, vice presidents of said society)

Considerable public confusion exists on the question of whether our present Federal policies affecting agriculture are sound or not. Proponents of administration policies of reciprocal-trade agreements, restriction of production, and price fixing take figures for certain items purporting to show justification for their program. Their opponents equally assiduously compile data on other commodities and draw opposite conclusions. A frequent type of invalid and unscientific reasoning engaged in by careless thinkers among both the proponents and opponents of the New Deal farm policies is the fallacy of comparing nontypical Republican years with individual New Deal years rather than utilizing the scientific and accurate process of comparing the entire period of the present administration with a period of similar length immediately preceding 1933. It is no more rational nor reasonable, for example, to compare the Republican 1932 with the New Deal 1937 than it would be to compare the Republican 1929 with the New Deal 1933. When the object of a comparison is to reveal facts rather than to confuse the issue, it is obvious that all comparisons must be made over substantial periods of time.

As a national organization interested only in a nonpartisan and logical course of action in public affairs, the American Good Government Society has made a study of how agriculture has fared over a number of years past.

The farm is the backbone of the United States. Not only does it supply the essential raw materials for our food and shelter, but likewise the crude products without which our industries could not exist. The farm even is the provider of a new, vigorous

increment to the population of the cities with their emaciated millions, without which cities would gradually decay and die out.

It is, therefore, a matter of vital national importance to note what is happening to the farmers' incomes as shown in the following table:

TABLE I

Total gross farm income, 7 fat years, 1926–1932, inclusive	$73,718,000,000
Total gross farm income, 7 lean years, 1933–1939, inclusive, and taking the maximum possible estimate for 1939	[1] 61,000,000,000
Total loss to American farmers during 1933–1939, at least	12,718,000,000
Average loss to farmers per year since 1933, about	2,000,000,000

[1] This total included over $2,000,000,000 of Government payments to farmers during 1933–39.

Source of statistics: The American Good Government Society, compiled from June 5, 1939, release of United States Bureau of Agricultural Economics.

This is a most astonishing result; over $12,000,000,000 loss to farmers during the last 7 years. Had it not been for payments by the Government to farmers this loss would have been almost $15,000,000,000 since 1933. While the conditions necessitated some Government aid for farmers, this was obviously at the expense of the general taxpayer. The interesting point is that, in spite of Government payments larger than ever before, farm income declined. The results do not show up auspiciously for the combination of trade agreements, restriction of production, and commodity loans. It would seem far better to revise our policies so as to restore the higher farm incomes of the years 1926 to 1932, which included both prosperity and depression, and hence a normal average income. If we could restore the 1926 to 1932 farm incomes, the farmer would have more income without asking for Government payments. Farmers are upright, independent citizens, who prefer asking no favors of anyone, but they do insist upon their right to supply the American market with American-raised farm products.

Suppose we break down the above figures into the totals for various classifications of crops in the following table:

TABLE II

Crops (cash)	Income to farmers in United States		Loss to farmers during 1933–39 (at least)[1]
	1926–32 (actual)	1933–39 (maximum)[1]	
Grains	$7,800,000,000	$5,300,000,000	$2,500,000,000
Cotton and cottonseed	7,500,000,000	5,300,000,000	2,200,000,000
Meat animals	17,100,000,000	13,500,000,000	3,600,000,000
Dairy products	10,900,000,000	9,200,000,000	1,700,000,000
Chickens and eggs	6,300,000,000	4,500,000,000	1,800,000,000
Vegetables	4,700,000,000	3,600,000,000	1,100,000,000

[1] This table gives only cash income received from crops sold; it does not include Government payments to farmers nor the crops retained for consumption on the farm. This would make some reduction in above loss figures, but not enough to alter the broad conclusions; for example, the loss to farmers on grains is certainly still "about $2,000,000,000," etc.

Source of statistics: The American Good Government Society. Compiled from same source as table I.

Only the larger categories of crops are listed above; for this reason and those in (1), table II is not directly comparable to table I. The 1939 data are carefully calculated estimates.

Even the above figures do not indicate the rapid deterioration of the results of present governmental farm policies. One might facetiously liken these policies to an egg laid early in 1933 and hatched shortly after into a chicken now coming home to roost. Let us look into further details in table III, as follows:

TABLE III.—*Prices received by farmers of United States*

1 Crops	2 Average from August 1909 to July 1914[1]	3 Top price from 1921 to 1932[1]	4 7 fat years: Total of 1926 through 1932 (prices are average ones received by farmers) (other data are totals of the 7 years)	5 7 lean years: Total of 1933 through 1939 (prices are average ones received by farmers) (other data are totals of the 7 years)	6 Cost of production in 1937[2]	7 Parity, June 15, 1939	8 Price June 15, 1939, received by farmers	9 Price today ? ? ? (for farmer to fill in for his own comparisons)
Wheat:								
Average price	88¢	144¢ (H)	84 cents per bushel	81 cents per bushel	103¢	112¢	63¢	
Production			6,000,000,000 bushels	5,100,000,000 bushels				
Farm value			$5,000,000,000[3]	$4,100,000,000[3]				
Corn:								
Average price	64¢	106¢ (K)	64 cents per bushel	64 cents per bushel	79¢	82¢	50¢	
Production[4]			17,900,000,000 bushels	15,400,000,000 bushels				
Farm value			$11,500,000,000[3]	$9,900,000,000[3]				
Hogs:								
Average price	$7.22	$11.74 (M)	$8.18 per 100 pounds	$6.87 per 100 pounds		$9.17	$5.96	
Production			111,000,000,000 pounds	93,500,000,000 pounds				
Farm value			$9,000,000,000	$6,500,000,000				
Beef cattle:								
Average price	$5.21	$9.52 (N)	$7.04 per 100 pounds	$5.76 per 100 pounds		6.62	$6.81	
Production			79,200,000,000 pounds	92,900,000,000 pounds				
Farm value			$5,580,000,000	$5,345,000,000				
Cotton:								
Average price	12.4¢	28.7¢ (O)	12.15 cents per pound	10.16 cents per pound	12.4	15.7	8.67	
Production			104,300,000 bales	88,700,000 bales				
Farm value			$6,543,000,000	$4,500,000,000				
Milk (whole) wholesale:								
Average price	$1.60	$2.54 (P)	$2.23 per 100 pounds	$1.67 per 100 pounds			$1.42	
Production			684,000,000,000 pounds	726,000,000,000 pounds				
Farm value			$15,000,000,000[3]	$12,000,000,000[3]				
Eggs:								
Average price	21.5¢	30.4¢ (Q)	23.9¢	19.0¢			14.9¢	
Production			22,200,000,000 dozen	20,800,000,000 dozen				
Farm value			$5,280,000,000	$3,900,000,000				

NOTES: Above figures since 1933 do not include allowance for the over $2,000,000,000 Government payments to farmers. These would not alter the general conclusions to be drawn from above results, however.

[1] These and all prices in this table are what farmers received.
[2] Cost of production includes rent and is on average yield of 1927–36.
[3] Only part of production sold.
[4] Corn production in bushels in grain equivalent on entire acreage.

(H) Top price is in 1925; (K) is in 1924; (M) is in 1926; (N) is in 1928; (O) is in 1923 (P) is in 1929; (Q) is in 1925. All figures in table III compiled by the American Good Government Society from June 29, 1939, release, U. S. Bureau of Agricultural Economics (data for columns 2, 7, and 8); Crops and Markets, published by U. S. Department of Agriculture, December 1938, p. 298 (data for column 6); Annual Reports on Farm Production and Income and Statistical Abstract of the U. S. Commerce Department (data for columns, 3, 4, and 5).

In compiling the above tables, the American Good Government Society is interested simply in presenting to the farmers of America the full and complete picture of the farm situation when it is examined in the light of all available facts and divorced from political bias and prejudicial contentions. Our society realizes the importance of restoring the farming industry to a paying basis before this country can enjoy a permanent economic recovery and is interested in presenting the true facts of the problem to the end that present fallacies of trying to mix policies of increased farm imports with curtailed domestic production may be abandoned and replaced with a consistent and considered program of firm protection and fair prices for the American farmer.

LET FARMERS DRAW THEIR OWN CONCLUSIONS

It is suggested that the American farmer, to whom this supplement is dedicated, fill in the blanks found in the right-hand column of table III. In the final analysis, each farmer is the best judge of his own status. He knows whether the present policies are helping or hindering him in the business of developing a permanent program of stabilized and profitable farm operations. It is here our province only to furnish indisputable facts. From a study of these reliable and unprejudiced findings, it is felt that all sincere friends of a sound agricultural program can reach conclusions which will help bring order out of the confusion and conflict of our present economic chaos. It is our hope that the individual farmers of America will supply the figures they know to be right for the last column of table III and then make their own comparisons as to whether they are better off because of the New Deal farm policies. We hope that a careful and considered analysis of the official figures of this study will help form the basis for formulating a permanent and consistent farm program which will protect the independence and safeguard the initiative of the American farmer, guarantee him the full advantage of the American market for his own products, provide him with an

annual income which will furnish him a profit above his cost of operations, and give him the benefit of a fair price for a full crop so that America's underfed millions may not be forced to continue undernourished while those who supply the bread baskets of the Nation remain underpaid for their honest toil and their legitimate investments.

Mr. MUNDT. Mr. Speaker and my colleagues, there is little I need to add to the facts I have just presented from the study made by the American Good Government Society. These figures tell their own sad story and provide tangible and irrefutable evidence that the American farmer today, North, South, East, or West, has paid a fearful price for the experiments of the New Deal. His income, including all cash parity payments and benefits, is shamefully less for the 7 New Deal lean years which will end this coming January than it was during the preceding 7 fat years under the protective-tariff policies of the Republican administration. No wonder New Deal apologists try to deceive and delude the public by squirming to escape the necessity of considering average prices and average periods and seek to bamboozle the farmer still further by selecting isolated price figures for the worst 3 or 4 months of a 12-year Republican era and trying to draw conclusions by comparing them with the best 3 or 4 months of the New Deal. In fact, on page 3643 of the Appendix of the RECORD, under the intriguing title of "Keeping the Record Straight About Farm Imports," one of my New Deal colleagues even went so far in trying to justify today's ruinous farm imports as to base his conclusions upon a comparison of farm prices in 1933 with those of 1937, apparently forgetting the significant fact that Roosevelt was elected in November of 1932 and that both of these years were under the New Deal administration.

FARMERS IN WORST PLIGHT IN HISTORY

As the American Good Government Society wisely and fairly points out, any sensible and logical price comparisons must be based on substantial periods of time, and no conclusions can fool anybody but the most gullible and naive when based upon a comparison of 2 carefully selected years. To try to compare 1937 with the low ebb of Republican prices in 1932 is no more honest or convincing than to compare the Republican prices of 1926 or 1928 or 1929 with the New Deal plight of 1934 or 1936 or 1938. Simple honesty and ordinary fairness require that any valid comparisons must take the entire New Deal period as a basis of comparison with the preceding Republican era of like length. If comparisons were drawn so as to include the entire preceding 12-year Republican era, the evidence would even more strongly support the Republican position. In fact, at no time in recent American history can the New Dealers find a 7-year consecutive period of time in which the farmers of this country have fared as badly as they have during the past 7 expensive and deceptive years.

NEW DEAL COSTS FARMERS TWO BILLION PER YEAR

In addition to having to assume their share of the present $45,000,000,000 national debt and today's excessive Government extravagance, the New Deal, according to the Department of Agriculture's own figures, has cost the American farmers $2,000,000,000 per year in cash income in comparison with what they received under a Republican administration; and it should not be forgotten that these figures include all Government parity and benefit payments. Surely our cotton, wheat, and stock farmers have paid dearly for the honeyed phrases and pious promises of the New Deal. In addition to the lost cash income of $2,000,000,000 per year, the American farmer has seen the reciprocal-trade pacts work to develop cotton and wheat and livestock farming in foreign countries to the point where it may be generations before this country will again be the great source for the world's agricultural markets, as was the case before the import from abroad, curtail at home nightmare deprived this country of our world leadership in agriculture.

FAIR-PRICE FULL-CROP VERSUS POOR-PRICE PARTIAL-CROP PHILOSOPHIES

Instead of the Republican objective of a fair price for a free people, the New Deal has given the American farmer a poor price for a partial crop, and at the same time has tied our farmers up with restrictions, regulations, requirements, mimeographed orders, committee mandates, Executive decrees, rubber-tire overlords, inspectors, field men, supervisors, collaborators, and other per diemsters until a reading lamp and an interpreter are almost more important on many farms than a cultivator or a tractor.

HOW DID IT HAPPEN AND WHERE DO WE GO FROM HERE?

Mr. Speaker, my primary purpose in presenting these findings and calling attention to these official figures is simply to provide the working ingredients with which every farmer in the land can draw his own conclusions and make his own comparisons. I speak today as an informant and not as an interpreter. But in conclusion let me briefly suggest the outline of answers to the two questions, How did it happen? and Where do we go from here?

DR. JEKYL AND MR. HYDE LABORATORY COSTS FARMERS $2,000,000,000 PER YEAR

The deplorable plight of our farmers during these seven lean years was not planned that way by the New Deal; no individual and no political party seeks deliberately to stultify and sabotage a great American industry. This result happened because of a failure, first of all, to coordinate various Government policies affecting the farmer into a consistent pattern with a singleness of purpose. Witness, for example, the crop-control and production-restriction policies of Secretary Wallace, working alongside the Secretary Hull and President Roosevelt policies of reciprocal-trade pacts. If one is right, the other must be wrong. Any schoolboy knows in his heart that policies of reducing production at home and increasing importation from abroad cannot work advantageously for the same products in the same country at the same time. And yet this is what we have seen tried under the New Deal with the inevitable result of stimulating foreign production and reducing domestic farm income, while it has cost the American farmers on the average of $2,000,000,000 a year to serve as guinea pigs in this Dr. Jekyl and Mr. Hyde farm laboratory on a national scale for well over 6 years.

Witness further the crop-control policies of Secretary Wallace and the reclamation program of expanding farm acres of Secretary Ickes. Again, if one is right, the other must be wrong. Again, both policies cannot work in the same country at the same time with anything but the most ruinous results for established farmers on currently producing acres. Any schoolboy knows the truth of that reasoning, too.

So much for the question of, How did it happen?—although equally factual cases could be presented to show the fallacies and inconsistencies of export subsidies for farm products which are permitted to compete with domestic price levels; for commodity loans which simply increase visible surplus figures to depress domestic and world prices with no attempt to get the produce out to the consumer where it can be used up to create new markets for new crops; for giving bounties to one group of farmers to raise produce which other farmers receive bounties for curtailing. Without indicting the sincerity of anybody, it becomes apparent to all who will face the facts that such a carnival of inconsistency cannot help but deprive the farmer of all opportunity for a fair chance for a free people in the long view of things. Let me state further, in all fairness, that certain New Deal farm policies are commendable and workable; the soil-conservation and reforestation activities of the New Deal are splendid and sound. As far back as 6 or 7 years before the New Deal came into power in 1933 I advocated by every means at my command the importance of soil conservation, reforestation, water utilization, and conservation, and soil protection, and I commend the New Deal for its work in this direction. But even for such progress, $2,000,000,000 per year is too big a price for our farmers to pay, especially when there is nothing in a sound agricultural program which need in any way interfere with the commendable portions of the New Deal's farm program.

HOW PROVIDE A FAIR CHANCE FOR A FREE PEOPLE?

Where, then, should we go from here? The first and biggest step in any sound and sensible program of restoring

the American farmer to a decent place in our economic system is to repeal the reciprocal-trade pacts which cause him to compete with every peon and peasant in the world and to give him the full benefit of the American market at an American price level. That is not the whole solution but it is the first step which must be taken before our cotton plantations, our wheat farms, our stock ranches, and our other producers of new wealth can escape the blight of the 7 lean years.

What else must we do? We must, in the next place, develop a consistent farm program. If it is to be an economy of scarcity based on crop restriction (which I oppose), let it be consistent and universal; let us not pay one farmer for plowing under what we pay another farmer to produce; let us not add acres in the State of X while we spend millions of dollars paying farmers to let acres lie idle in the State of Z. Let us stop all competitive farm imports and attack agriculture as an American problem rather than trying to provide subsidies for every farmer in the world. My bill, H. R. 6329, known as the Buy American Farm Products in America Act, provides the basis for beginning the important business of guaranteeing the American farmer his own market at American price levels.

But we must go further in our honest zeal to give the American farmer all he has ever asked and that to which he is entitled as a basic minimum—a fair chance for a free people. We must help him develop less expensive systems of marketing, distribution, and transportation so that the spread between what the consumer pays and what the farmer receives will be reduced. We must develop for the farmer some program of price protection and security such as we have already developed for the coal-mine operator, the manufacturer of advertised brands, and the retailer of these products, the laborer who is entitled to an honest day's pay for an honest day's work, the railroads, the communication companies, and a large number of other enterprises which now enjoy price securities which may be necessary but which pyramid their combined costs inevitably upon the farmer who is the ultimate consumer in America as well as the primary producer. Several bills looking toward this goal are now before Congress. It is my pleasure to be joint author of one of these bills which would provide cost of production for the American farmer and this legislation now awaits consideration of Congress after being unanimously reported out by the Senate Committee on Agriculture. I believe this bill offers the basis for an effective and equitable farm program; I am sure it contains enough merit to warrant its study and deliberative consideration by this House.

IT IS TIME TO ADMIT PAST MISTAKES

It is time we admit past mistakes and discard disproved theories; it is time to replace ill-considered and inconsistent farm policies with legislation aimed at the single goal of providing a fair chance for a free people engaging in the basic industry of farming. There are certain obvious corrections which should be made immediately as initial steps in developing a sound American farm policy; there are other corrections and changes which require continued nonpartisan debate and discussion to the end that a well-balanced and continuing farm program can be scientifically evolved which will place American interests first and assure for our farmers their fair share of the national income. We Americans possess intelligence and initiative enough to build a sound farm program within a protective policy which will enable our American producers to supply the American market to the full extent of their ability and to base such a program on an economy of plenty which will pay our producers a fair price and provide our workers and other consumers with foodstuffs and raw materials on a reasonable basis. It has been done before and it can be done again.

TWO BILLION DOLLARS PER YEAR FOR TUITION

If the $2,000,000,000 per year the farmers of this country have been paying, is for what I term "tuition to learn the fearful fallacies and inconsistencies of our present agricultural policies" it may still be money well spent and other taxpayers may also cease to sorrow over the millions of dollars of subsidy payments they have provided to keep our farmers from going completely under. I have voted for these subsidy or parity payments for our farmers and shall continue to vote for them until and unless we adopt a sound and sensible farm program, because without them the New Deal "economy of contradictions" would have reduced the big bulk of our farmers to the status of serfs and peasants. But we must all realize such an ill-founded farm program cannot long endure. Let us all concentrate during the months of our congressional recess, which will begin this week, on the development of a farm program for this country which will restore prosperity to our farmers and in so doing provide the real spark needed to precipitate a permanent prosperity era for the entire country. America can and must go forward and it can only go forward on a farm program which is economically sound and basically acceptable to the tenets of reason and logic.

Reciprocal-Trade Treaties—Pertinent Facts and Figures, Not Fanciful Figments of Imagination

EXTENSION OF REMARKS

OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. KITCHENS. Mr. Speaker, political coloring and smothering of facts must never prevail. Truth crushed to earth will rise again.

Opponents of Secretary Hull's reciprocal trade-agreements program seeking to turn American farmers against it have inserted in the RECORD a series of tables calculated, by studious selection of data to suit their purposes, to deceive the farmers of this country. With palsied fingers they point to the increases in imports of certain carefully chosen farm products for a few months and do not hesitate to claim that all such increases have resulted from trade agreements and have been highly injurious to our farmers and have destroyed their income. They are very careful, however, to refrain from mentioning that imports of agricultural commodities are only slightly more than two-fifths as great as 1929, when they allegedly were protecting the farmers.

These same opponents of the trade-agreements program try to create alarm over the fact that agricultural imports are increasing by showing imports in 1937 compared to 1933. While careful to call particular attention to the increases in imports of agricultural products of the sort grown on American farms, with the same meticulous care they refrain from mentioning the fact that many of the increases in 1937 were due to domestic shortages caused by the severe drought of 1936 and that they came in over the full duties provided for in the Hawley-Smoot Tariff Act.

American farmers who have been exposed to the defenseless propaganda campaign of these opponents should be acquainted with the truth. If it is true that Secretary Hull's program of more liberal reciprocal commercial relations with the countries of the world is injurious to the farmer, then it would follow that under the Hawley-Smoot program of excessively high tariffs—which inspired foreign nations to take retaliatory measures against imports of American products—American farmers should have experienced a high degree of prosperity.

I present herewith the same table used by opponents of the trade-agreements program showing 1933 and 1937 imports, and have added thereto the average annual prices received by farmers for the items listed. If the opponents desire to make their case against trade agreements on more or less ancient history, let them do so, but they ought to

have and give the complete story from official sources, as follows:

[Official data]

Products	Imports			Average annual prices received by farmers		
	Unit	1933	1937	Unit	1933	1937
Cattle	Head	74,658	494,945	Cwt.	$3.75	$7.01
Hogs	Pound	6,470	16,555,218	Cwt.	3.53	9.48
Pork products	do	2,925,517	74,830,480	Pound [1]	.08	.182
Meat products	do	62,474,911	191,906,012	Pound [2]	.095	.211
Butter	do	1,021,806	11,110,762	Pound	.202	.297
Cheese	do	48,396,740	60,650,000	Pound	.131	.183
Corn	Bushel	160,288	86,337,248	Bushel	.522	.551
Wheat	do	10,286,226	17,423,837	Bushel	.744	.994
Barley	do	None	10,384,108	Bushel	.435	.556
Barley malt	Pound	109,485,885	371,243,456	Bushel [3]	.479	.809
Flaxseed	Bushel	13,825,163	28,031,755	Bushel	.881	1.88
Soybeans	Pound	42,630,809	109,418,304	Bushel	.98	.92
Cottonseed	Pound	7,004,025	194,008,241	Ton	12.85	19.50
Wool and mohair	Pound	178,927,605	326,035,700	Pound	.206	.32
Molasses	Gallon	169,936,000	301,449,599	Gallon	.403	.455
Eggs and products	Value	$1,141,739	$5,010,824	Dozen	.138	.213
Vegetables	Value	$15,448,223	$25,175,015		(4)	(4)
Hides and skins	Value	$45,675,000	$71,058,397	Pound	.0628	.1545
Farm income		$5,117,000,000	$8,521,000,000			

[1] Market prices on hams, bellies, picnics, and loins.
[2] Market prices on fresh carcass beef.
[3] Market prices for malting barley.
[4] Not available.

Interest Rates on Farm Mortgages

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. MURRAY. Mr. Speaker, the problems of interest rates of farm mortgages is of deep interest to every farmer and every consumer. Any country in the world's history that has achieved greatness has been one with a large percentage of rich farm lands or they are included in its possessions.

The following letter from the Farm Credit Administration shows the number of borrowers, interest rates on face of mortgage, and the amounts:

In response to your request, I have obtained information relative to the volume of Federal land-bank and commissioner loans outstanding and the interest rates at which the loan contracts are written.

There is shown in the list which follows the volume of Federal land-bank loans outstanding as of December 31, 1938, classified according to the contract rate of interest.

Number of borrowers	Rate	Amount
71,686	4.00	$277,057,544.76
14,504	4.25	57,102,863.64
4,250	4.50	12,870,973.94
487	4.75	1,320,420.91
281,565	5.00	1,007,447,546.01
11,562	5.25	44,275,137.33
210,163	5.50	500,402,175.44
18	5.75	55,569.10
34,398	6.00	74,902,159.56
[1] 148	6.50	789,515.98

[1] Are Puerto Rico loans.

As you know, the rate of interest on all Federal land-bank and commissioner loans has been temporarily reduced by congressional action. For interest due prior to July 1, 1940, on Federal land-bank notes, except on direct loans and loans being made through impaired national farm-loan associations, the rate has been reduced to 3½ percent. The reduced rate for direct loans is 4 percent and for those made through impaired national farm-loan associations is 3¾ percent.

The contract rate of interest on commissioner loans is 5 percent per year; for interest due prior to July 1, 1940, the rate has been reduced to 4 percent. The volume of commissioner loans outstanding on December 31, 1938, was $752,850,796.

There are 628,781 Federal land-bank loans representing loans of $1,982,223,906.67.

In addition to the above loans, the Government has started to make tenant farm loans under the Bankhead-Jones Act. As yet these F. S. A. loans haven't been very extensive, as comparatively speaking, the allocation of funds for tenant loans has been limited. These loans are for 40 years at 3 percent interest.

This question of farm interest rates will be one of the first farm questions to be considered at the second session of the Seventy-sixth Congress after January 1, 1940.

There are two factors that merit every consideration:

First. The farmers are entitled to an interest rate in keeping with the rates charged other interests.

Second. All classes of farmers should pay the same interest rates to the same government, and these rates based on the overhead incurred and other factors incident to the loan.

I am sure, Mr. Speaker, everyone interested in farm-loan interest rates should give serious thought to this important problem.

Stream-Pollution Bill—Every Public-Health Body in America Worthy of the Name Is for the Barkley-Spence Bill

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. CULKIN. Mr. Speaker, abatement of stream pollution is a matter in which the whole country is interested.

Members of the House who have not closely followed the stream-pollution hearings and debate in Congress for the past 4 years are interested in knowing who is supporting the Barkley bill, S. 685, that is opposed by certain wildlife groups who insist upon having a bill of their own writing or none. Believing that a brief summary of the supporting data for the Barkley bill would be of service to Members of the House, I have compiled some of this material which I submit for the RECORD. The Barkley bill first made its appearance in 1936 and it has gone through a splendid refining process in Congress. Changed many times it is now a strong piece of constructive legislation. During these years it has commanded the thoughtful consideration and support of many differing types of organizations and public officials from all over the country. The following references from the public record indicate who is supporting the bill and why.

Alabama Department of Health (1937 hearings, House of Representatives, p. 170):

The approach contemplated by this bill (H. R. 2711) is entirely correct in that it sets up within an already existing branch of the Government the machinery necessary for its managerial control by a properly trained technical personnel.

American Public Health Association (A. P. H. A. Yearbook, 1937–38, February 1939, p. 35):

Resolved, * * * that the Vinson bill * * * represents the best procedure and organization for lessening the danger of public health from stream pollution.

American Society of Civil Engineers (Civil Engineering, March 1936, p. 211):

It is the judgment of the board of directors that for the present no further extension of Federal control over streams is desirable; that the Federal Government should restrict its activities in this field to the functions of fact finding and coordination and stimulation of State and interstate programs.

American Water Works Association (statement of policy re stream pollution adopted January 18, 1939):

No further extension of basic Federal control over streams is desirable at this time.

The Federal Government should restrict its activities in pollution abatement to fact finding on, coordination and stimulation of, and financial assistance to State and interstate programs.

Arizona State Department of Health (1937 hearings, House of Representatives, p. 171):

This office approves and highly recommends this bill, H. R. 2711.

Arkansas State Board of Health (1937 hearings, House of Representatives, p. 171):

It is our feeling that the bill designated as H. R. 2711 provides the most practical and rational approach.

Brewers' Association of Greater Cincinnati (1936 hearings, House of Representatives, p. 16):

At the regular meeting * * * it was—
Resolved, That this association endorse the movement of the Cincinnati Chamber of Commerce to prevent the pollution of rivers and streams of the Ohio Valley.

Camp Fire Club of America (1937 hearings, House of Representatives, p. 303):

Our committee has voted to favor the Vinson bill.

Chamber of Commerce of the United States (1936 hearings, Senate, p. 430; 1936 hearings, House of Representatives, p. 57):

By cooperating with States and State compact agencies the Federal Government should assist in assembling information on control and use of water resources and in carrying on scientific investigation.

Colorado Division of Public Health (1937 hearings, House of Representatives, pp. 171–172):

The assistance of the Federal Government, as outlined in this bill (H. R. 2711), in eliminating the pollution and contamination of Colorado streams, would be very helpful to this State. * * * This department is anxious to have this bill passed.

Conference of State and Provincial Health Authorities of North America (1937 hearings, House of Representatives, p. 179):

Strongly endorsed previous bill (H. R. 12764), which carried essentially the provisions of H. R. 2711, and "urged the enlistment of every effort of the members of the conference to secure the enactment of this most important measure."

Conference of State and Territorial Health Officers (1937 hearings, House of Representatives, p. 288):

Respectfully petition the Congress of the United States to enact the Vinson (H. R. 2711)-Barkley (S. 702) bill, which provides for joint study and control of stream pollution by the United States Public Health Service and the State and Territorial Health Officers under recognized procedures which involve a joint study of each project.

Construction League of the United States (1937 hearings, House of Representatives, p. 70):

No extension of Federal regulatory power, but extension of Federal interest and stimulation. * * * There is sufficient State regulatory power now available * * * with the additional stimulation which the bill (H. R. 2711) proposes.

Dayton Business and Civic Association, (1937 hearings, House of Representatives, p. 119):

Heartily in favor of Representative bill No. 2711 * * * and recommend to Congress its passage.

Delaware State Board of Health (1937 hearings, House of Representatives, p. 172):

Stream pollution is primarily a public-health program. * * * The principles outlined in Senate bill 702 and House bill 2711 adequately express such a program.

District of Columbia Health Department (1937 hearings, House of Representatives, p. 173):

A very admirable feature of the bill (H. R. 2711) is the wise legislative approach which makes the Federal service advisory to State and municipal health services so that the everlasting fear of Federal invasion of State rights is thereby very happily met.

Evansville (Ind.) Chamber of Commerce (1937 hearings, House of Representatives, p. 120):

In favor of the Vinson bill, known as H. R. 2711. * * * We believe it is imperative that a Division of Water Pollution Control be created in the United States Public Health Service. * * * We earnestly urge 2711 be enacted into Federal legislation.

Florida Section, American Public Health Association (1937 hearings, House of Representatives, p. 173):

Endorses and approves the provision of Senate bill 4627 and House bill 12764 in the last Congress, known as the Barkley-Vinson bill * * * or some similar legislation.

General Health Council of Allegheny County, Pa. (1937 hearings, House of Representatives, p. 114):

Urges favorable action on the Barkley-Vinson bill, S. 702, H. R. 2711, promoting stream-pollution control.

Great Lakes Board of Engineers (1937 hearings, House of Representatives, p. 203):

Go on record as approving in principle the provisions of such bill (S. 702).

Great Lakes Board of Engineers and Upper Mississippi River Board of Engineers resolution regarding the proposed water pollution act (H. R. 2711, amended):

Believed that enactment of aforesaid bill substantially in the form as amended will aid State and interstate pollution abatement activities. * * * Approve the aforesaid bill in its amended form.

Great Miami Valley Taxpayers' Association (1937 hearings, House of Representatives, p. 115):

Organization has, by resolution, favored the passage of H. R. 2711. * * * We are very strong for this bill. We believe it will achieve that which we have been fighting for for these many years.

Greenup (Ky.) Chamber of Commerce (1937 hearings, House of Representatives, p. 302):

In favor of the Vinson bill, H. R. 2711, and in the Senate the Barkley bill, S. 702.

Idaho Department of Public Welfare (1937 hearings, House of Representatives, p. 174):

We are giving endorsement to H. R. 2711.

Indiana State Board of Health (1937 hearings, House of Representatives, p. 175):

We would like to go on record as supporting House bill 2711.

Interstate Commission on Delaware River Basin (their) News Letter, January 1938:

That the Interstate Commission * * * opposes the establishment of a Federal authority for the control of pollution in navigable waters and tributaries thereto. That the Interstate Commission * * * recommends the adoption of the Barkley-Vinson bill, without the Lonergan amendments.

Jefferson County (Ky.) Fiscal Court (1937 hearings, House of Representatives, p. 177):

Approved bill H. R. 2711, pertaining to the creation of the Division of Water Pollution Control in the United States Public Health Service.

Kansas State Board of Health (1937 hearings, House of Representatives, p. 176):

Believe this bill (H. R. 2711) to be very constructive legislation and wish to endorse it heartily. * * * Any legislation which does not take cognizance of the fact that careful research work in waste-disposal methods must precede compulsory abatement of stream pollution is bound to fail.

Louisiana State Department of Health (1937 hearings, House of Representatives, p. 177):

In favor of this bill (H. R. 2711). It offers a workable and practicable program of the control of stream pollution. * * * Particularly interested in the provision that the United States Public Health Service direct the activities provided for in the bill.

Louisville (Ky.) Board of Trade (1936 hearings, Senate, p. 473):

Municipal government of Louisville approves the purposes of the Barkley-Hollister stream-pollution bill, and will cordially cooperate with city, State, and Federal agencies in the accomplishment of the purposes. * * * The Barkley-Hollister bill has the wholehearted approval of the Louisville Board of Trade.

Ludlow (Ky.) Businessmen's Association (1937 hearings, House of Representatives, p. 115):

Heartily in favor of the Vinson bill.

Maryland State Department of Health (1937 hearings, House of Representatives, p. 178):

Convinced that the Public Health Service, by reason of its familiarity with sanitation and stream-pollution problems in the country, is the logical Federal agency for fact finding, coordinating, and stimulating State and interstate programs, promoting interstate compacts, and recommending necessary financial assistance.

Mason County (Ky.) Health Department (1937 hearings, House of Representatives, p. 177):

H. R. 2711 * * * is the legislation that we of the Ohio Valley are in dire need of.

Massachusetts Department of Public Health (1937 hearings, House of Representatives, p. 178):

A comprehensive plan to prevent and remove pollution of our waters can be best accomplished by the adoption of uniform legislation in the various States, by compact agreements, and by the appropriation of sufficient sums of money to permit adequate investigation, and loans and credits, if practicable, for the construction of remedial works. H. R. 2711 appears to make such provisions.

Minnesota Department of Health (1937 hearings, House of Representatives, p. 178):

Unanimously endorsed the Vinson-Barkley bills, H. R. 2711, S. 702.

Missouri State Board of Health (1937 hearings, House of Representatives, p. 181):

Bill H. R. 2711 gives full recognition to the interests and rights of the various States concerning stream pollution and * * * sets up a practical and effective means of solving the problem * * * in accord with accepted views of State autonomy. * * * The bill seems, after due consideration of other measures, the most logical and intelligent approach that has, to date, been presented for the control of stream pollution on a Nation-wide basis.

New England State health officers (1936 hearings, Senate, p. 273):

It is the opinion of these State health officers that no extension of Federal control over streams is desirable, that the activities of the Federal Government should be restricted in the field of stream pollution to fact finding and coordination and stimulation of State and interstate programs.

New England Water Works Association (1936 hearings, Senate, p. 273):

The association goes on record as being opposed to any legislation placing the regulation of stream pollution under Federal control and * * * advises * * * that Federal activities in matters of stream pollution be limited entirely to fact finding and cooperation with the State authorities.

New York State Board of Health (1937 hearings, House of Representatives, p. 182):

We have considered the provisions of this bill, H. R. 2711, very carefully and believe that its passage would be the most important and constructive action ever taken in the interests of water-pollution abatement.

Norfolk, Va., Association of Commerce (1937 hearings, House of Representatives, p. 302):

We are most anxious to see the enactment of comprehensive legislation to relieve * * * this growing menace. It appears that the Vinson legislation is designed to take care of the matter generally * * *.

Ohio Chamber of Commerce (1937 hearings, House of Representatives, p. 113; 1936 hearings, Senate, p. 431):

We heartily approve S. 4350 and S. 4351, * * * which are designed to give authority and force to an Ohio River compact between States.

Ohio Conference on Sewage Treatment (eleventh annual report, p. 9):

Resolved that the Ohio Conference on Sewage Treatment * * * reaffirms its approval of the principles of the original Barkley-Vinson bill, H. R. 2711.

Ohio State Medical Association (1937 hearings, House of Representatives, p. 119 (6,000 members)):

Our association by unanimous action * * * went on record as being heartily in favor of Representative bill No. 2711.

Ohio Valley Improvement Association (1937 hearings, House of Representatives, p. 116):

We have given study to the provisions of H. R. 2711 and believe that this bill is a step in the right direction.

Ohio Valley Water Sanitation Conference, second conference of delegates appointed to draft an Ohio River Valley Water Sanitation Compact (January 17, 1930):

We regard H. R. 2711 * * * to abate stream pollution, as well considered legislation and urge its adoption * * *. We do not favor amendment now proposed * * * for Federal control. * * *

Oklahoma Department of Public Health (1937 hearings, House of Representatives, p. 183):

Fully in accord with * * * recommendation to place the responsibility for operation of this act under * * * the Public Health Service, with authority to cooperate with the respective State health agencies.

Public Health Federation (1937 hearings, House of Representatives, p. 117):

Federation * * * urge(s) that H. R. 2711 be reported * * * for passage.

Sanitary Engineering Division, American Society of Civil Engineers (minutes of meetings, January 20, 1938):

Be it resolved, That the 1938 annual meeting * * * go on record as in favor of the policy expressed in H. R. 12764 of the Seventy-fourth Congress. * * *

South Dakota State Board of Health (1937 hearings, House of Representatives, p. 184):

Would like very much to see this bill (H. R. 2711) passed in preference to any others which are now pending. * * *

Southwestern Ohio Sportsmen's Club (1937 hearings, p. 208):

Vigorously supports Vinson stream-purification bill as most practical approach to this problem. * * *

Tennessee Department of Public Health, 1937 hearings, page 185:

After a rather careful study of this bill (H. R. 2711) we are fully convinced that its enactment would be of inestimable value to the State of Tennessee * * *.

Texas State Board of Health, 1937 hearings, page 185:

We are heartily in favor of setting up a Division of Water Pollution Control in the United States Public Health Service * * *. The need for some central authority to supervise * * * to coordinate * * * and to carry on research * * * is very essential * * *. The feature which provides that supervision of stream-pollution control shall remain with the respective States is in line with good Government policy.

Texas State Legislature, House Journal, May 21, 1937:

Whereas the House of Representatives at Washington has already acted favorably on the Vinson bill (H. R. 2711) * * * be it

Resolved, That the Legislature of Texas go on record as approving the action of the National House of Representatives and earnestly solicit immediate action on the part of the Senate of the United States in approval of Senate bill No. 702, a companion bill * * *.

Texas Water and Sewage Conference, Water Works Engineering, March 17, 1937, page 355:

Resolved, That we go on record as favoring the passage of this bill (S. 702), and that our Representatives in Congress be urged to support the measure in securing its passage.

Upper Mississippi River Board of Engineers (1937 hearings, p. 302):

Whereas * * * the enactment of * * * Senate bill 702 will aid State and interstate * * * activities, be it resolved that the members * * * (Iowa, Minnesota, Missouri, Wisconsin, Illinois) hereby go on record as approving in principle the provisions of such bill.

West Virginia State Board of Health (1937 hearings, p. 187):

The State department of health feels that this is an admirable bill. (H. R. 2711).

Wisconsin State committee on water pollution (hearings, Committee on Rivers and Harbors, House of Representatives, March 17, 18, 19, 24, 1937, pp. 187–188):

Our committee * * * has gone on record as being in accord with the type of Federal legislation proposed * * * calling for the establishment of a Division of Water Pollution Control in the United States Public Health Service to cooperate with the States and to provide grants and loans for financing improvements in abatement of pollution.

Thirty-fourth Annual Conference, State and Territorial Health Officers (April 13–14, 1936, excerpts from transactions, pp. 178–179):

Any bill to effectively remedy stream pollution should coordinate existing Federal and State health agencies, should provide for compacts between States and, above all, provide for Federal financial assistance in the construction of remedial works.

State Water Commission of Connecticut (hearings, Committee on Rivers and Harbors, House of Representatives, March 17, 18, 19, 24, 1937, pp. 301–302):

* * * we consider the bill (H. R. 2711) to be constructive legislation, and therefore desirable. * * *

American Institute of Park Executives and American Park Society (resolution relating to abatement of stream pollution, adopted April 22, 1939):

The American Institute of Park Executives feels that the principles contained in the bills now before Congress (known as the Barkley bill in the Senate and the Mansfield-Spence bill in the House) afford the best methods for correcting the evils caused by the pollution of our streams, * * * endorses the proposed legislation. * * *

Youngstown Chamber of Commerce (opinions and recommendations with respect to stream pollution):

It is most essential for any legislative body, National or State, to keep in mind the practical aspects of regulatory pollution, and not be misled into the enactment of drastic and impossible laws with which industry cannot possibly comply. The United States Public Health Service should act as a consulting and research agency. * * * Definite and specific regulatory measures should be instituted by the various State and local health bureaus.

Statement of J. Spencer Smith, president of State Board of Commerce and Navigation of New Jersey (hearing, Committee on Commerce, U. S. Senate, on S. 1691, March 22, 23, 27, 1939, pp. 90–93):

The only objection we are raising to this bill is the mandatory feature and the fact that the Federal Government * * * can step in and compel us to do something that we may not have the financial power to do. There are other ways of accomplishing it, I think.

Boards of health commissioners, Great Lakes and upper Mississippi River drainage basin sanitation agreements, March 1, 1939:

At a meeting * * * of representatives of the State health departments signatory to the * * * agreements, namely, the States of New York, Pennsylvania, Ohio, Michigan, Indiana, Illinois, Wisconsin, Minnesota, Iowa, and Missouri, all of the bills relating to control of water pollution, introduced in the first session of the Seventy-sixth Congress, have been carefully reviewed. Of these bills, H. R. 4314 was unanimously approved as most nearly coinciding with principles considered most satisfactory for accomplishing desired results in water-pollution control.

American Forestry Association, resolution adopted by directors, May 17, 1939:

That the American Forestry Association favors * * * State control of the pollution of waters with the aid of Federal studies and Federal contributions rendered through the agency of the United States Public Health Service * * * control of pollution is constitutionally a State function * * *. The United States Public Health Service is the logical agency of the Federal Government to cooperate with the States * * * control of pollution should be by civil agencies and not by the military branch of the Government.

Engineering News Record (editorial, March 30, 1939, p. 45):

The soundness of the Barkley bill justifies its support by all who favor pollution abatement.

Indiana Department of Commerce and Industries (Statement of W. H. Frazer, hearings, Committee on Rivers and Harbors, May 20, 1936):

The United States Public Health Service is in the best position to carry on the necessary work. * * * It should assist existing agencies * * * by direct financial aid, and with its own technical organization. * * *

Statement of Harrison P. Eddy, consulting engineer, (hearings, Committee on Rivers and Harbors, March 17, 18, 19, and 24, 1937, pp. 95–101):

A cooperative arrangement such as that embodied in H. R. 2711 * * * will, in my judgment, secure more rapid progress in interstate water-pollution control than is practicable under State compacts or other agreements. This is because the bill provides for organizing existing agencies which now and for many years past have been working in this field.

American Paper and Pulp Association, Association of Newsprint Manufacturers, National Paperboard Association (hearings, Committee on Rivers and Harbors, March 17, 18, 19, and 24, 1937, pp. 101–102):

In the present state of limited knowledge of remedies for the existing problem, it (the industry) is opposed to the passage of any drastic control bill * * * it favors the enactment of a study plan of bill, such as House bill 2711.

Kentucky State Medical Association (1937 hearings, House of Representatives, p. 115):

After a study of the House bill 2711 * * * I would like to give you my hearty endorsement of this bill, and urge its passage as soon as possible.

Virginia State Board of Health (1937 hearings, House of Representatives, p. 148):

We believe that the bill (H. R. 2711) will be helpful in improving stream conditions in Virginia. * * * Under this bill, the rights of States for exercising control of streams within their own boundaries is amply safeguarded. * * *

Illinois State Sanitary Water Board, Frank J. Jenkins, chairman (1937 hearings, House of Representatives, p. 174):

I am in sympathy with the bill, H. R. 2711, and it has my support for the main reason that it is not creating a Federal agency which has authority over the powers of the various State agencies now controlling pollution but has for its purpose the power of assisting the various States in promoting * * * prevention and abatement of pollution.

Iowa State Department of Health, Walter L. Bierring, M. D., commissioner (1937 hearings, House of Representatives, p. 175):

I should like to take this opportunity to heartily endorse this measure (H. R. 2711) * * *.

El Paso-Hudspeth County Health Unit, El Paso, Tex. (1937 hearings, House of Representatives, page 186):

We wish to express our hearty endorsement of the proposed Water Pollution Act (H. R. 2711).

San Antonio, Tex., C. K. Quin, mayor (1937 hearings, House of Representatives, p. 187):

I have studied your House bill 2711, creating a Division of Water Pollution Control within the United States Public Health Service and fully endorse this measure.

Illinois State Sanitary Water Board (C. W. Klassen, technical secretary (1937 hearings, House of Representatives, p. 202)):

The provisions of this bill (H. R. 2711) meets with our approval in principle, mainly for the fact that it will undoubtedly accomplish considerable toward the purification of our streams but leaving the so-called police powers in the hands of the States.

Alfred LeFeber, consulting sanitary engineer, representing Hamilton County, Ohio, Portsmouth, Ohio, and Ashland, Ky. (1937 hearings, House of Representatives, p. 208):

Speaking entirely from a standpoint of design, construction, and operation of water-supply works, I cannot urge too strongly the adoption of this legislation (H. R. 2711).

Ohio State Department of Health (Walter H. Hartung, M. D., director (1937 hearings, House of Representatives, p. 226):

In my opinion H. R. 2711, a bill to create a division of water pollution control in the United States Public Health Service is the type of legislation that will further the cooperation between all the governmental agencies that are interested in the correction of stream pollution condition.

Dr. Fred O'Flaherty, professor of leather research, University of Cincinnati (representing tanning industry) (1937 hearings, House of Representatives, 241):

I respectfully urge to this committee the approval and recommendation of the Vinson stream-pollution bill (H. R. 2711). It is the opinion of the tanning industry that this legislation is sound, logical, and practical.

Independent Petroleum Association of America (1937 hearings, House of Representatives, p. 261):

The Independent Petroleum Association of America is therefore in favor of the passage of a bill of the type of the Vinson bill, H. R. 2711.

Mississippi Valley Association (Cleveland A. Newton, general counsel (1937 hearings, House of Representatives, p. 284)):

The Vinson-Barkley bill seems well designed to deal with the problem of pollution of our navigable waters, without unnecessary injury to commerce and industry and without undue hardship upon our cities * * * we feel that we should cooperate in the enactment of the necessary legislation.

American Mining Congress (1937 hearings, House of Representatives, 296):

We believe that a bill along the lines of the Vinson bill, H. R. 2711, represents a far more practical and workable approach to the problems of water pollution.

National Association of Manufacturers (1937 hearings, House of Representatives, p. 296):

The pending bill (H. R. 2711) promises a sane and practical approach to a vitally important subject.

Manufacturing Chemists' Association of the United States (representing 87 corporations) (1937 hearings, House of Representatives, p. 300):

Our support of the Vinson bill (H. R. 2711) is based upon the belief that this approach is the most practicable and workable for the solution of stream-pollution problems in the United States.

Anthracite Institute (1937 hearings, House of Representatives, p. 301):

Of all the proposed legislation, the provisions as set forth in the Vinson bill (H. R. 2711) are the most constructive and give real hope of reaching the objectives.

CONCLUSION

The support of the Barkley-Spence bill by the organizations hereinbefore quoted indicates that there is a strong national demand for the enactment of this legislation in its present form. The greater number of these organizations have made the subject of pollution a continuing study for many years. They are not polluters but approach the whole subject in realistic fashion, and effectually give the retort courteous to the small group of sincere but misguided zealots who would defeat this excellent measure if they are not permitted to dictate its form. I commend the reading of these extracts to every Member of the House who is concerned with this important question.

False Economy

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. BURDICK. Mr. Speaker, in and out of Congress there is a belief that further appropriations for relief and Government work must be stopped promptly. We saw that spirit prevail in Congress yesterday when, by a vote of 193 to 166, the House refused to consider H. R. 7120.

The full amount of the appropriation approved by the Banking and Currency Committee of the House was $1,950,000,000.

This appropriation was allocated to the following Government agencies for the purpose of supplying self-liquidating loans and $400,000,000 of it was especially designed to prevent further unnecessary farm foreclosures: Public Roads Administration, Public Works Administration, Rural Electrification Administration, and Department of Agriculture.

Congress, in its eagerness to put a stop to a spending plan, voted to refuse to consider the matter at all. This was a most unusual vote. To refuse to consider a bill that has been reported out is a very rare thing. Nothing can be lost in having a bill debated, but to refuse even to debate a measure that has been reported to the House is a novel procedure. It is a complete confession of weakness. Those who voted to refuse consideration must have been afraid that debate would have convinced them that the bill was good.

In my judgment, the defeat of this measure was a blunder, and the lapse of time will only prove this statement.

What is the situation today? Unemployment ranging around 13,000,000, every third farm in the United States either foreclosed on or in the process of it, merchants broke and borrowing money at 30 percent. I could list and list the various phases of a depleted business structure, but this was all known to the Members of Congress.

The bill proposed the following places to start business activity:

The Public Roads Administration was allotted $500,000,000 to loan to States, municipalities, and other public bodies to build roads, bridges, and other necessary elements of good roads. This was voted down in the interest of economy. We shall see what economy there is in not assisting local communities to help themselves and lighten the load of Federal relief appropriations.

To the Public Works Administration—$350,000,000 to carry on its present work program. We shall see what economy there is in stopping this Works program in the interest of national economy when the millions cannot find work in any other way. We refuse to let unemployed people take care of themselves. This means more appropriations for relief grants because people seem to want to eat.

Rural Electrification was allotted $350,000,000 to provide funds for the building of power lines through the rural areas and permit farmers to obtain the use of electricity at cost. This was defeated under the guise of national economy, but actually because the Power Trust let its lobby loose here in Washington to defeat the bill.

The Department of Agriculture was allotted $400,000,000 for the purpose of making available to farmers, renters, farm laborers, and sharecroppers loans with which they might save what property they have, or start over if they had lost their property.

No better proposal has been before Congress since I have been a Member, and I could hardly believe that the committee had recommended such a plan. They actually did, but when the House looked the plan over it was defeated with a whoop, and those who are responsible for its defeat have their pictures in the newspapers this morning. I wonder how the farmers like this and how they will respond to it in the next election. If you will examine these pictures in the papers you will observe that all of these gentlemen who lead the fight to defeat this farmers' measure wear a broad, insinuating smile. I am pretty tough myself, having lived in the cow country all my life, but I am sure I could not wear a smile after having crushed the life out of thousands of farmers.

This bill was defeated in the interest of the saving of Federal funds, so the executioners say. Now, let us see what a false position they have taken. In the first place, refusing to aid unemployed and destitute people to help themselves, only lets the burden of their whole existance fall upon the Government. In the second place, if we want to save, let's start in at a place where it can be done. The men who defeated the lending bill yesterday are the very same men who insist that our present banker-controlled money system be perpetuated.

In financing Government operations it is not necessary at all to issue bonds. The right thing to do in the interest of all the people is to issue currency instead of bonds. This currency does not draw interest, and if in circulation 75 years it can be retired without a single charge for interest during that period. The Lincoln greenbacks to the extent of $343,000,000 are still circulating and no one questions their validity or sound monetary value. If we were to pay interest on this Lincoln currency ever since it was issued at the customary rate the farmers pay, the Lincoln debt would now amount to $30,000,000,000. Do you want any more proof of what it means to issue bonds, sell them, and permit the same buyer to return them to us as security for the same amount of currency? There is nothing behind a bond which is not behind a piece of currency. The only difference is that we allow a few private people to reap an interest reward through this system of issuing, selling, and receiving back the bonds.

There are two kinds of people who are in favor of bonds—those who reap the interest reward and those who want us to issue so many bonds that there will soon be a general repudiation. The conservatives lead the first class and those who have communistic leanings constitute the second class. The

philosophy of both is detrimental and dangerous, and it is altogether unnecessary for us to follow either course.

No Member of this Congress can defend the proposition of issuing bonds and in turn issue currency to those to whom we have sold the bonds. It is just one more unnecessary and costly step for this Government to take. If the rock-ribbed conservatives or reactionaries really want to save money as they say they do, here is the place to start. The issuance of currency in the first instance, instead of issuing bonds to be sold and returned again as security for the same currency, will save the people of the United States $1,300,000,000 annually, a wholly unnecessary gift to those who are powerful enough in Congress to keep up this interest system. How many times have we heard the conservative preachers in Congress say: "We must stop spending; we must save money; where are we going—the people are struggling under a load of debt?" How many times have we heard the conservatives says: "Where are we going to get the money?"

Well, gentlemen, here is a chance to show your good faith. If you are honest in your preachments, you will not object to putting a stop to the further issuance of bonds which will relieve us from this unbearable interest load. No one of you can defend this interest system. You have not defended it—you cannot defend it, yet you maintain the system. I agree with you that if we keep up this bond-issuing, interest-taking racket, there will eventually be a collapse of the entire Government. By your action you are making that calamity as certain as the coming of night and day.

I think I know the conservative mind in this Congress. It assumes that its philosophy is right, all other ideas are wrong, and those who have them are undesirable members of society. Their philosophy is bolstered up by a sort of false patriotism. Not one of them can be made to believe that he is not the most outstanding and most fearless patriot in the House. They assert they are and they deem the mere assertion of it enough proof. Yet, no class of people, good or bad, is doing more to ruin this Government and supplant it by utter chaos than they are. The greatest and most severe indictment that can be brought against them is that they do not know what they are doing.

The liberal-minded Members of Congress have the interest of the mass of the people in this country at heart. They do not parade their patriotism and assert that they are the only he-patriots in America. They try to act in the defense of this country; they try to save where saving means something; they vote for an extra $75,000,000 for relief purposes, but want to save one billion three hundred million on this national-interest racket.

There are no Members of this Congress who wish this Government to fail—not one—but there are too many in this Congress, who, by their support of the interest racket, are fast bringing about a total collapse of the Government. There are too many men in this Congress who love their country some, but love the interest racket more.

The issue is at hand now. We are soon to go into another campaign and the conservative-interest racket supporter believes that there will be a landslide behind his philosphy. He believes the people are sick of the New Deal, and because of it "in goes the conservative"—no chance for anyone else.

The New Deal has not struck at the interest racket—they have supported it the same as the simon-pure Republicans. I think the people are getting sick of the New Deal "money policy," but every intelligent voter knows that there is absolutely no difference in principle between the two parties on this subject. But the issue is here, and I assert that among 100 voters in the United States, picked from any State, that the percentage of those who look upon our distress as a blunder in our money policy, is greater than the percentage among the same number of Congressmen. Whether you know it or not, the people out in the sticks are fast coming to on this "money question." They look upon this question of money control and money circulation as the one vital thing that must be corrected if this country is to endure.

What will a Democrat say, in most States, Virginia and Georgia excepted, when a candidate for Congress in 1940 comes asking for his vote? The first question will be: "How do you stand on the 'money question' "? If he stands where he is now—in most cases—the voters will let him stand there regardless of whether he is a Democrat or not.

What will the Republican voters say to a Republican candidate in most States outside of New York and Massachusetts? They will say: "How do you stand on the 'money question' "? "Are you in favor of continuing the interest racket that today takes one-third of the Nation's income?" If he says he is willing to leave matters right where they are—let well enough alone—the chances are the voters will decide to make the change themselves, by first changing their Congressman. Make no mistake, that will be the issue.

I would like to see the Republican Party come right out in the open and advocate the wiping out of this bond-interest racket. So far as the Republican Party in North Dakota is concerned, they have already taken that position. I am not acting alone in my advocacy of this change of monetary policy. I am not acting alone on any other issue. I am carrying out the pledges of the Republican Party in North Dakota. When I advocated the passage of the Townsend recovery program, I was not acting alone, but was backed by the Republican Party in North Dakota.

The people of the United States are going to make a fight on this issue, and I propose to give them what help I can. I am convinced, and have been for several years, that the private control of the Nation's credit and the purposeful withdrawal of circulation is the proximate cause of all our financial troubles.

Under the bill before us yesterday we could well have appropriated money enough to loan our businessmen and eliminate unconscionable interest rates, and if financed by greenbacks, it would cost the people of the United States not one cent. We could well afford to loan our businessmen, farmers, and home owners money at 1 percent. It would cost the Government nothing—the middleman, the interest shark—would be out of the picture. One percent would pay any losses that might occur and one percent would permit a farmer, a laborer, a merchant, a manufacturer, a distributor, or a retailer to live. Let us get down to business one time. Let us think for ourselves and not permit the press, maintained by ads of the money sharks, to do our thinking for us. It seems to me we are about ready—let us go. I suggest this slogan to the voters when this issue comes up for a real fight. I take it from Shakespeare's Macbeth:

Lay on, Macduff;
And damn'd be him that first cries, "Hold, enough!"

The Fair Labor Standards Act

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. LANDIS. Mr. Speaker, the Fair Labor Standards Act has been in effect less than a year. It became effective October 24, 1938. Attempts are being made to exempt more than a million of the lowest paid workers from the minimum-wage standards and more than a million and a half from the maximum-hour provisions. These figures represent human beings who stoop and sweat to earn a living for themselves, their wives, and their families.

The American worker should receive his share of the profits of production and distribution. He wants an honest job in private industry which will give him and his family the American standard of living. In the United States we have the highest standard of living in the world and yet

on some items we are forced to compete with cheap foreign labor. Some of our factories have closed down due to the importation of cheap foreign-made goods. That is one reason we have 12,000,000 Americans unemployed. If I had my way, I would raise the tariff high enough to protect the wage rate of the American worker.

The Fair Labor Standards Act does not propose to fix all wages but only a minimum-wage floor, slightly above a starvation level. There is no use in having a minimum-wage law unless it is made to apply to low-paid industrial workers; that is, the workers who need protection. This act would become a mere sham or a fraud if it covered only those employees who already received more than the wage rates prescribed by the act, such as is true in many industries.

The minimum-wage rates prescribed by the Fair Labor Standards Act are extremely low—25 cents an hour for the first year and 30 cents thereafter unless an industry committee finds that it can pay a higher rate, but in no case can the higher rate be more than 40 cents an hour. The 25- and 30-cent wage rate is a very meager wage for a country such as the United States, which boasts the highest level of living in the world. To admit that there are numerous industries in this country that cannot pay this meager wage is a sad commentary upon our standard of living.

All employees involved in the proposed exemptions to the Wage-Hour Act are engaged in industrial labor. In no sense can they be called agricultural workers. The act already contains the broadest definition which can be drawn exempting agricultural workers. Every employee on a farm or working off the farm, if employed by a farmer, is exempt.

The theory of these exemptions is that the cost involved in the processing and distribution of commodities coming from the farm should not be increased because it is alleged that it will decrease the price of the farmer's products. If this theory is sound; however, then the processing of textiles and the manufacture of wearing apparel should be exempt, such as clothing and shoes, which are made from cotton, wool, and hides. Furthermore, a minimum-wage rate should not be set in industries manufacturing anything which the farmer buys, such as automobiles, lumber, motor fuel, and farm machinery. The logical result of this contention would be that no minimum-wage standards should be established, but rather that all wage rates should be decreased as an aid to the farmer who buys and sells.

The farmer is primarily a producer. He cannot sell his produce unless there is a market, and his market is dependent upon purchasing power, and purchasing power is largely dependent upon the wages which the employee receives. To reduce wages is to reduce purchasing power and destroy the market for the farmers' produce.

It would be impossible to solve the farm problem even if we repealed the Wage-Hour Act. If we really want to do something for the farmer, we should repeal the Hull trade treaties. Preserve the American market for the American farmer and let him run his own business. He has seen his foreign market disappear and his home market gradually surrendered to the foreign producer. Our farmers do not believe in trading the best market in the world to increase the standard of living abroad. We have been exporting jobs and creating prosperity in other countries. What we need is the development of some buying power and prosperity in the United States. We must insist on a consistent agricultural policy that will enable us to grow in America the things we need and to guarantee for the American farmers the right price for his products and the fullest advantage of the American markets.

The wage standards of the Federal wage and hour law are comparatively low when compared with the rates fixed for women by State minimum-wage laws. Many of the wage rates fixed by State acts are in excess of 30 cents an hour and the employers who are required to pay such rates in those States, in canneries for example, should be protected from their low-wage paying competitors, because all such employers are competing for a national market. Competition in industry tends to drive wage rates down to the level of the lowest-paid workers.

Minimum-wage and maximum-hour legislation is not new in industry. It has existed in Great Britain since 1916 and in many other countries and has operated successfully to the satisfaction of both employer and employee. Such legislation has become absolutely essential in modern industrial society. As two eminent judges have stated that what the employer fails to pay in wages necessary to the cost of living, must be made up by the community in terms of relief or in paying for the cost of the social evils which flow from substandard living.

What the Fair Labor Standards Act needs is a chance to prove itself. It has been hamstrung from the beginning because of inadequate funds for enforcement in administration. It should be given a chance so that the hundreds of thousands of underpaid workers in this country will have their chance to secure a decent living.

At this point, I would like to quote from an editorial of the Richmond News-Leader, dated July 20, 1939. I quote:

> In spite of the personnel troubles of the tobacco firms, particularly the small independents, the Federal wage standards have had a gratifying effect in Richmond. The incomes of more than 2,000 families here have been substantially increased. Scores of slum tenements have been abandoned for better living quarters. If reports are to be credited, the quality of work of the average stemmer has improved to a point that largely has compensated for the boost in wages. Further trial of the act among Southern low-wage industries may mean the same happy experience for other communities that Richmond has enjoyed for the past year.

It is not my desire to stir up class hatred nor foment unrest between the worker and his employer. We have all witnessed too much of this in the past. The average employer is not a Tory, and his employee is not a radical. Both are entitled to prosper. The wage-hour law will work no hardships, with but few exceptions, to the employer. In this connection, may I say that I am ready to make some concessions as to hours and wages to those industries that have thoroughly demonstrated that they cannot immediately comply with the provisions of the law. The small telephone exchange is the most outstanding example, and it may be necessary to give them some immediate relief in order for them to carry on.

All labor organizations are united in preserving the Wage-Hour Act. Most of the employers have complied willingly and in good faith with its provisions. They believe that it would be a step backward to destroy it. Very few desire to return to sweatshops and low wages. How can a man with a family live on less than 25 cents an hour and maintain the American standard of living? I certainly do not want the laborers in my State of Indiana to receive less than 25 cents an hour, nor do I want them to compete with such low-paid workers.

As a Republican Member of Congress and a member of the House Labor Committee, I do not believe that 25 and 30 cents an hour is too much for an American worker. This law should be preserved and strengthened, but I wish to say to the workers of America that this is your act, and if you would save it from destruction, you should notify your Congressman to defeat any attempt on the part of any individual or groups of individuals who desire to emasculate the act.

There is no time to be lost. This bill will come before the House for final action within the next few days. You should express yourselves immediately and tell your Congressman that you do not approve of any bill which would permit selfish employers to pay wage rates less than 25 cents an hour.

The idea, the principle that labor should be assured at least a minimum wage and that national prosperity depends upon labor receiving a fair share of the value of everything we produce, should no longer be a matter for debate. I thought it was settled way back in 1936, when both major political parties and candidates accepted and endorsed that idea, that principle which must be applied and enforced if our great complex industrial democracy is to be a blessing, not a curse, to mankind.

Back in 1936, before Gov. Alfred M. Landon, of Kansas, would accept the Republican nomination for the Presidency

of the United States, he sent a message to the Cleveland convention spelling out what he understood the Republican platform to mean. Here is what he said—I quote:

Under the title of labor, the platform commits the Republican Party as follows:

He quoted—

"Support the adoption of State laws and interstate compacts to abolish sweatshops and child labor, and to protect women and children with respect to maximum hours, minimum wages, and working conditions. We believe that this can be done within the Constitution as it now stands. This obligation we cannot escape."

Nor can we escape it now. The Congress is committed to it. The people, the wage-earning people of this country, and, I believe, the majority of established stable employers, are committed to the principle of minimum-wage and maximum-hour legislation. The wage-hour law carries out the principle of the 1936 Republican platform and the statement of the 1936 Republican candidate for President. The method is Federal rather than State legislation, but that is no novelty to the party of Hamilton, Lincoln, and Theodore Roosevelt. It includes men as well as women and children, on the sound argument that a starving man with a wife and babies facing hunger, nakedness, and eviction will sell his labor as cheaply as women or children would sell theirs. As a member of the Republican Party, I do not propose to renege on promises made in 1936 in my party platform, promises for which we will be held to account in the great reckoning of 1940. I believe that many other Representatives of my party will think and vote likewise if and when we are confronted with amendments, which propose to kick out from the protection of the act, one and one-half millions of the lowest paid, the most sweated, the most exploited, the most insecure, the least organized, the economically weakest of our entire wage-earning population.

Never let it be said that the Party which rose to power on the slogan of the "full dinner pail" advocated or voted for amendments that would permit American wage earners to be paid less than a living wage.

The leaders of the Republican Party have been building up labor legislation for many years and have spoken fearlessly, frankly, on the subject of decent wages for the workers of this country.

The Florida Canal and the National Defense

EXTENSION OF REMARKS

OF

HON. LEX GREEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 29, 1939

Mr. GREEN. Mr. Speaker, the relation of the proposed ship canal across Florida to our national defense is one of the most important aspects of this great enterprise. I think it will be helpful if I set forth for the RECORD the views of the numerous distinguished military and naval authorities and the national associations who have made a study of this project. In chronological order, these are:

February 23, 1938: Gen. Charles P. Summerall, United States Army, retired, former Chief of Staff of the American Army, and commander of the First Division during the World War, stated in an address:

In case of war in the Pacific the great bulk of supplies and munitions as well as troops would of necessity move by the Panama Canal. The transcontinental railroads were never planned to meet such a demand and no consideration can be given to their doing so.

The country now knows from the hearings on the naval appropriations bill before Congress that our war plans must provide for the defense of both the Atlantic and Pacific coasts at the same time and that the United States must fight alone. All shipping moving from eastern or western ports to and from the Panama Canal either by the Windward Passage or by the Straits of Florida, would be subject to destruction from foreign territory.

Again it is evident that the Florida canal would offer a protected route, easily defended from American bases for destroyers and airplanes in Florida, Cuba, and to the south. These conclusions are borne out by the fact that the Straits of Dover could not be protected from enemy submarines during the World War while the Kiel Canal was never menaced.

The Florida canal possesses advantages comparable to those of the Kiel Canal which demonstrated its value to Germany as being many times its cost. It is not too much to say that the military value of the Florida canal alone would justify its construction, and any other first-class power facing a similar situation would long ago have built it for that reason alone.

November 1938: The Mississippi Valley Association, in convention at St. Louis, adopted the following resolution:

We commend to the attention of the President and the Congress the value to national defense of our system of inland waterways and coastal canals. The security in time of war of the water-borne commerce of the Mississippi Valley via the Gulf of Mexico with the Atlantic seaboard is of deepest concern to the Nation. We therefore urge the completion of all canals for this commerce, which are recommended by the Chief of Engineers and defined by the Secretary of War as being important for their strategic value.

January 1939: The Committee on Defense Preparation of Pan America, in a published statement with reference to the Florida and Panama Canals, termed them "life lines," and said:

The Gulf of Mexico and the Caribbean Sea are the keys to the Americas. The protection of the lines of communication and supply afforded by these waters is of pivotal importance. The chief agencies in this protection would be the Florida and Panama Canals.

January 16, 1939: The President of the United States wrote to the chairman of the House Committee on Rivers and Harbors:

It has long been my belief that a Florida ship canal will be built one of these days, and that the building of it is justified today by commercial and military needs.

March 9, 1939: The Secretary of the Navy, in a letter to the chairman of the Senate Committee on Commerce, wrote:

It is the opinion of the Navy Department that by shortening the distance and by providing an additional route for sea-going vessels between the Atlantic Ocean and the Gulf of Mexico, the Atlantic-Gulf Ship Canal would be of definite value during war in the shipment of necessary matériel for both military and commercial use, as well as for the passage of naval vessels if sufficient draft is provided.

March 31, 1939: General Summerall made the following statement before the Senate Committee on Commerce:

Shipments by water could pass through the Florida canal, protected, as I have described, by the barrier islands, with the principal passages closed by mines, to the Panama Canal, and they could then proceed to their destinations on the west coast or to our island possessions. The hazards would be reduced to a minimum and this route from the Florida canal to the Panama Canal would become a veritable life-line.

Recent events serve as a lesson and a warning. Rational plans for our defense must contemplate a situation where a coalition of enemies would require us to defend alone both the Atlantic and Pacific areas simultaneously. Such a potential coalition is now a fact. It would compel us to divide our fleet and be weaker in each area, or to contain one force until the other was defeated. If we assume a weak defense by sea in the Atlantic area, the hazards of shipping to the Pacific area would be immeasurably increased. Indeed the exposed routes by the Straits of Florida and the Windward Passage might become disastrous. With a weak force, the passages through the Antilles could be controlled, and the life-line route by the Florida canal would save the situation.

* * * only ships could handle the traffic. Our shortage in vessels requires that not only the cargoes but the ships should be given the maximum safety in route. However great may be the commercial advantages of the Florida canal, it is my belief that the military value alone would justify its cost.

March 31, 1931: Rear Admiral Frederic B. Bassett, United States Navy, retired, former head of the Hydrographic Office of the Navy, testified before the Senate Committee on Commerce:

I want to emphasize how much easier it is to protect vessels coming into the Florida canal than it is to protect them going through the Straits of Florida. These straits are not as clear of navigational dangers as they look.

If we had the Florida canal, in my opinion, most of the ships coming into or going out of the Gulf of Mexico will use it either to our own Atlantic seaboard or to Europe. My belief is that the Florida canal is necessary for the national defense and for commercial use to and from the Panama Canal from either the Gulf ports or the eastern Atlantic ports.

My idea is to close the Gulf of Mexico at the Florida Straits and the Yucatan Channel by submarines, or by mines, or by both. Mining did not seem to be impossible in the World War, when

the North Sea was mined. By closing the Straits of Florida and the Yucatan Channel, you make the Gulf of Mexico a closed sea. Few, if any, enemy vessels could possibly get into the Gulf of Mexico if we had it blockaded at these two entrances.

Now, you will have the Gulf of Mexico a closed sea, approximately 900 miles east and west, and an average mean north and south extent of about 600 miles. In other words, you have made about 500,000 or 600,000 square miles of practically safe water for your shipping to use during a war. That is a decided advantage, because, as I say, if you have 91,000,000 tons of freight coming out of the Gulf of Mexico during peacetime, how many more thousand tons will you have during war?

I am firmly convinced that the construction of the Florida canal will fill a long-felt want. I agree with General Summerall when he said some time ago in an article of his that I read, that any other nation would have built this canal long ago for national defense only.

I cannot see how anybody can fail to see the advantages of closing this great Gulf of Mexico and keeping it safe for our shipping, our men, our officers, and our cargoes. You cannot pass the shipping through the Straits of Florida safely. You can take a chance if you like, but when we are spending so much money to prepare for war, this canal is one of the most important projects you can undertake.

Mr. Speaker, these are the patriotic, disinterested utterances of the greatest military and naval authorities in the land. I think that they are worthy of the most careful consideration in determining our policy with regard to this project.

The Making of American Citizens

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. BENDER. Mr. Speaker, almost a million aliens are seeking American citizenship today. As old-age-pension plans and relief-assistance legislation tend more and more to emphasize the requirement of American citizenship, we may expect ever-increasing numbers of strangers resident within our borders to apply for the privilege of American allegiance. In every large city within the Nation, classes designed to educate foreigners in the fundamentals of our governmental and political outlook are attracting huge numbers of would-be citizens. For the most part, conscientious and thoroughly qualified instructors convey the meaning of the American experiment to diligent and zealous students. Men and women, many of them rapidly approaching middle and old age, work desperately hard to master what they are taught. Boards of inquiry representing every racial group within the community have been constrained to dig into records of ship arrivals going back to the early years of the century. Citizens' bureaus have been set up to facilitate the efforts of our hosts of aliens. Altogether, the Nation has done a splendid job of encouraging the foreign born to make the United States their home in the best sense of the word.

But in two most important tasks the efforts of our people to stimulate enthusiasm and warmth into the acquisition of citizenship has been a signal failure. Our preparation may be most adequate; our instruction may be commendable, but our ceremonies of admission are almost without exception miserable, and our efforts to teach democracy are laughable. They become perfunctory, routine, machinelike performances, utterly devoid of color or warmth. They are often utterly absurd performances. Here we have gathered a group of adults from every corner of the globe, trained them carefully, forced them to wait from 2 to 7 years before admitting them to the fellowship of American citizens—and then, as the culmination of this intensive training, we thrust them into an ice-cold shower, calculated to damper whatever ardor they may have felt.

Today we in America feel that our Nation stands for something unique in the community of nations. Our democracy is something of which we are far more proud in the twentieth century than we were in the nineteenth. We have learned through the spectacle of European adversity that our democratic process is no longer to be taken for granted. It has become suddenly valuable, a system to be cherished and fought for with every weapon in the American arsenal. Thousands of the men and women who come to our Government asking admission to our citizenship have entered our land by way of nations which despise democracy. They have been impregnated for years with the writings of foreign newspapers, whose every message is a challenge to American idealism. These people need a process of retraining before they can understand and accept the program of our United States. They require a new understanding of American tolerance, American freedom, American sympathy for the unfortunate before they can grasp the underlying ideals of the American spirit.

On this score we have not been thorough. We have taught the superficial externals of our Government structure. Our citizens may recite with glib fluency the "names and numbers" of all the players in our national drama; but the more subtle overtones of "democracy" versus "dictatorship" remain deeply obscure. Perhaps the teaching of these distinctions poses difficult problems of personnel and preparation. It must be undertaken, nevertheless, if the goal of our citizenship is to be meaningful, productive living in the American way.

We cannot produce Americans by machine-like production. There are no mills capable of grinding out citizens like so many streamlined sausages. Individual training for citizenship is more than a luxury for the nation of tomorrow; it is a necessity. And while we go about the task of reconstructing the naturalization process, by which our future democracy is assured, it would do us good to stop for a moment to analyze the processes by which our native-born arrive at the miraculous age of 21, ready and eager to assume the burdens of citizenship. The requirements of our public schools, with their well-meaning courses on civics, are ripe for reexamination. There is far too little of inspirational value in the curriculum of our classes on American history; and the plague of "debunking" which struck American literature in the late twenties has seeped down into the high schools all too forcefully. Today an attitude of cynicism has replaced one of patriotic loyalty to our American heroes and our American institutions.

These are perils to our democracy which cannot be ignored. Every citizen admitted to the fraternity of Americans without a true sympathy with the ideals of our Nation is a liability rather than an asset. Every new citizen who feels an inward tie with Fascist, Nazi, or Communist theories constitutes an "enemy within our gates," no matter how fervently he may proclaim his citizenship. Every young American educated in our schools who comes to manhood without an attachment for the principles of democracy which he is willing to defend, if need be, to the last full measure of his devotion has not been given his birthright. His automatic citizenship is not a safeguard of this Republic.

Thinking Americans, mindful of the events which have taken place in Europe in recent years, are beginning to question the process by which our people become citizens.

Mere wishful thinking is not enough to achieve our objective. A specific program is demanded, and to this end we propose the following technique as a partial solution to our problem of building a well-trained American citizenship:

FOR NATURALIZATION OF ALIENS

First. Seek to retrain aliens by a carefully planned program of instruction which will develop a sound conception of the true meaning of the American tradition and which will create attitudes favorable to democracy and hostile to dictatorships of every color.

Second. Adopt a uniform civic ceremony which will be a fitting culmination for the training of our citizens, and which will be marked by warmth and friendliness. Civic groups headed by our district judges, mayors, councils, American Legion councils, and foreign group organizations should unite to give meaning and pageantry to the induction of our citizens.

FOR THE NATIVE-BORN AMERICAN

Third. Introduce each native-born American citizen to the responsibilities of government by publicly conducted ceremonies once each year for those reaching their twenty-first birthday during the year.

Fourth. Redraft our school curricula during high-school years to train truly American attitudes through the teaching of civics and history with enthusiasm and fervor. In this way we may rekindle the glowing Americanism of a generation ago.

Will Rogers

EXTENSION OF REMARKS
OF
HON. WESLEY E. DISNEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 2, 1939

Mr. DISNEY. Mr. Speaker, I speak of Will Rogers, whose life and experience contributed so appealingly to the fixed spiritual values with which this generation in America has been endowed. I speak of him as a man of the common people who, by virtue of his powers of entertainment and his keen sense of human nature, rose to a position of contact with the great of the earth and at the same time kept his confidence and interest in the masses and retained their virtues. Will Rogers is the finest example that I know of the recognition of homely basic virtues in all of the people. His life and activity demonstrated that these virtues are still popular in America and are deeply embedded in the nature of our people. His own confidence in an ultimate goodness in human nature and his ability to make that basic everyday goodness attractive and interesting had something of the effect of a breath of fresh air in a crowded room. America was cleaner, more honest, more dependable because of the manner in which Will Rogers entertained America. He is the finest example of the educational capacity of the theater, for he showed how it is possible to make the common virtues interesting without preaching. His ability to withstand the seductive influence of greatness, of social prominence and wealth was phenomenal and inspiring. The great native common sense which actuated him was revealed in his ability to see through the surface and the sham which accompanied high positions. He apparently never was deceived by it for a moment.

It is a regrettable fact that it is impossible to make such a life permanent. By virtue of its character it is discernible only in the effect upon the character of the individuals with whom he came in contact. He built no buildings and painted no great pictures; he composed no poems and wrote no books. He did nothing to stay the hand of relentless time, which ultimately dissolves us all into the dust of complete forgetfulness. His life was merged into the changing flow of the day as he lived it; no one is able to pick it out and hold it for posterity, any more than we can stabilize the perfume of a rose. But he was a great figure in his generation and his life is the finest example in recent years of that type of life which merges itself completely into the daily experience of its own time, where it was a continuous influence for the very soundest elements in our American social order.

The Hatch Bill

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 2, 1939

ARTICLE BY RAYMOND CLAPPER

Mr. VOORHIS of California. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following column by Raymond Clapper appearing in the San Francisco News:

[From the San Francisco News]
HATCH BILL BOON TO CIVIL SERVICE
(By Raymond Clapper)

WASHINGTON, July 22.—The Hatch bill to abolish political activity by rank and file Federal employees opens the way now to bring thousands of these jobs into permanent civil-service status, where they should be.

Why should internal-revenue collectors and others handling taxes, or deputy marshals and other routine employees around the Federal courts, be in politics? There is every reason why they should not be. An internal-revenue collector who rakes over your tax returns has no business raising party funds, or even attending a national political convention as a delegate. The Hatch bill undertakes to remove this type of employee from political machine activity.

If this measure is supported by public opinion, as it evidently is and should be, and if political managers are not permitted to bring about a violation of its spirit, one of the most significant strides toward divorcing politics and routine governmental administration will have occurred.

CLEARS WAY TO NEXT STEP

The Hatch bill clears the way toward the next step, which is the extension of civil-service standards to these jobs. It tends to make that step easier because it takes away much of the political usefulness of this class of job holders.

Remember this—patronage cuts both ways. When a Senator or a Representative places one of his heelers in a job he leaves a dozen other aspirants disappointed and disgruntled.

Not long ago a Senator obtained a Federal judgeship for one of his political supporters. Unfortunately, the appointee died almost immediately. It was doubly unfortunate for the Senator because he had told a dozen others that they were second on his list, and they were all on his neck the following day, each expecting to inherit the vacancy.

If political appointees are to be barred from political activity as soon as they take Federal jobs, then their usefulness to the Senator or Representative or the party management ends. Under such circumstances, this kind of patronage becomes largely a liability instead of a machine-building asset. The headache might as well be eliminated completely by putting the appointments under civil service.

JOB HOLDERS WANT SECURITY

Something is to be said also for the job holders themselves. They want security the same as employees in private life. The only way a political job holder can get security now is to get out at every election and hustle for his party, or for the man who obtained his appointment. The Hatch bill is intended to stop that. It therefore deprives the purely political appointee of the only means he has of trying to keep his job. Merit doesn't count. His faction or his party must be reelected or out he goes.

So, in all fairness, and for the improvement of the public service, it seems highly desirable to follow through with the second step of extending the civil service to give these posts security of tenure based on merit. Then we would begin to approach the nonpolitical administrative standard which has been so highly developed in England.

WANTS 'EM UNDER CIVIL SERVICE

In advocating the Hatch bill during House debate, Representative RAMSPECK, of Georgia, one of the most active and intelligent champions of civil service, said that the reason he was supporting the bill was that he would like to put all of these people under civil service.

"When you fellows who have been exempting them for the last 6 years get the handcuffs on them so that you cannot use them in politics, then I think you will be willing to vote to have them all put in civil service," Representative RAMSPECK said.

The two Democrats who have pushed this legislation, Senator HATCH, of New Mexico, who is a strong defender of President Roosevelt and who began the fight with his effort a year ago to take W. P. A. out of politics, and Representative DEMPSEY, of New Mexico, who has for many years been a personal friend of the President and who led the successful fight for an effective bill in the House, may have in this campaign laid the foundation for establishment of a real civil service in the Federal Government.

H. R. 5749—The Superhighway Bill

EXTENSION OF REMARKS

OF

HON. WALTER S. JEFFRIES

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

LETTER FROM THE PRESIDENT OF THE NATIONAL SUPER-HIGHWAY ASSOCIATION

Mr. JEFFRIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Mr. U. G. Robinson, president of the National Super-Highway Association.

NATIONAL SUPER-HIGHWAY ASSOCIATION,
Atlantic City, N. J., July 24, 1939.

Hon. WALTER S. JEFFRIES,
Representative, Second Congressional District of New Jersey, House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: It is with sincere gratitude that I thank you for introducing in Congress your superhighway bill H. R. 5749, which is wholly omnipartisan.

The superhighway proposal is a purely humanitarian and patriotic measure, therefore good representatives of this democratic Government should not let partisan politics interfere with their duty to the public.

Your bill, H. R. 5749, is the acme of perfection in legislation for the Nation. The construction of this superhighway system is a military necessity as well as a peacetime blessing. It should be under the control of the Federal Government, without State or private interference, just as is the post-office system.

Allow me to give you a brief outline of the history and development of the proposal to build a national superhighway system. Back in 1922, while driving on the mud roads of Georgia, the 9-foot-wide brick roads through the swamps of Florida, and especially on the ever-winding Boston Post Road, I saw the need of a better and safer system than the public roads could possibly provide for long-distance transportation. In fact, I saw that the development and improvement of the public highways had not kept pace with the development and improvement of the automobile I was driving. For over a quarter of a century I had observed that when the railroads built more powerful engines to haul heavier loads, they strengthened and enlarged the rails commensurate with the loads they were required to carry. The intelligent and business-like administration of railroad development always maintained a true equilibrium between the safety of the rails on the roadbed and the train on the tracks. The reverse is true in the development of the automobile by private industry and the development of adequate roads by the Government.

The facts are undeniable. The swift speed of the automobile took the place of the slow horse-and-buggy gait, but it used the same road which the horse had inherited from the ox. As a general rule there has been only one improvement on the crooked trails blazed in pioneer days leading from village to village. The one improvement on the twisting, winding, angling ox-cart road is hard surfacing. The public roads today, for the automobile traffic, are mostly located where they were 100 years ago. The speedy through traffic is yet required to travel on the principal streets of villages, towns, and cities, which pedestrians use as sidewalks and children utilize as playgrounds. A forceful illustration is the automobile highway from Philadelphia to Washington, leading the traffic for several miles through the crowded streets of the city of Baltimore. Trees, telephone poles, bridge abutments, drainage ditches are exposed on every highway. Dangerous grade crossings are in great number. Two-way traffic lanes have become a menace to human life and valuable property. The "horse sense" of the motor power drawing the buggy, turned aside when meeting coming traffic. The modern mechanical motor power in the automobile has no "horse sense" to guide it, and too often the human driver exercises less judgment than the horse. The appalling result is death at grade crossings, death in head-on collisions, death to busy pedestrians, death to children playing in the street, and death to occupants of cars.

In 1922, I had before me the startling record of 13,956 murders by automobile. The Travelers Insurance Co. estimates the economic loss to be $60,000 for each automobile death. To my mind, the answer to these perilous conditions and fatal results was not more warning to drive very carefully on these inefficient and antiquated roads. It was not more caution to avoid the innumerable death traps. Warnings and cautions are necessary and valuable and should be heeded and appreciated by all motorists, but my thoughts turned toward the building of safe roads for automobiles just as the railroad engineers constructed better and safer tracks for larger trains. Therefore, I organized the National Super-Highway Association, a nonprofit corporation with the single object of advocating that the Federal Government build the greatest superhighway system on earth.

In my mental vision, I constructed the first superhighway. I coined the term and copyrighted the same. The definition of superhighway, as I then defined it, has not been changed except in the popularity of its use. Then, I was laughed at and scorned as "visionary." I persisted because I knew I was right. Since writing the superhighway proposal in 1922, I have personally spent over $15,000 for literature, postage, and public addresses. For 17 years I have sent letters to Members of Congress, State legislatures, State highway officials, and newspapers throughout the Nation until now the word "superhighway" is almost a household expression and the intelligent desire of every thinking motorist.

"Imitation is the sincerest flattery," said Charles Caleb Colton. I do not know how sincere it is, but now the superhighway plans originated by me are frequently being imitated, though, oftimes, in an inferior manner and offered to the public as genuine. Many such imitations have been advocated in radio addresses, newspaper and magazine articles, where the authors have had free access, and scores of bills have been introduced in Congress and State legislatures, proposing to build superhighways. However, as much as I deplore the inefficient imitations, I do appreciate the "flattery," as Colton defined it.

Naturally I am proud of the fact that you have introduced this bill in Congress (H. R. 5749), based authoritatively on my original definition of a superhighway, and that you are earnestly working for its enactment. The bill itself is a complete and accurate exemplification of the definition I wrote many years ago and which so many have tried to imitate.

Mr. JEFFRIES, I am yet seeking that "serious hearing" suggested in an editorial published in the Atlantic City Press, June 13, 1932. To comprehend the full force of the editorial, one must read it all; therefore it is quoted in full under its caption:

"ADMIRABLE ENTHUSIASM

"The 'man with a plan' is so very numerous in times of stress that bewildered citizens and bored officials cannot be expected to enthuse over him, even if they do not regard his proposals with downright skepticism on general principles. We share their cynicism.

"Nevertheless we take out hat off to Mr. U. G. Robinson, fellow Atlantic Cityite, who has suggested to everybody from President Hoover down a plan for unemployment relief and economic revival so stupendous in magnitude that it stands out in bold relief among all others—those of Owen Young, the Goldsboroughs, La Follettes, Hoovers, Mills, Garners, and all the rest. He would build 25,000 miles of unobstructed, uncrossed motor highway from coast to coast, border to border, giving work to the 10,000,000 unemployed, amortizing a bond issue of $10,000,000,000 with the receipts from tolls; in a word, public works unemployment relief and economic recovery with no increase in bonded debt or taxes.

"While not pretending to pass upon whether the plan is practicable, we do say that the initiative and enthusiasm of Mr. Robinson justify high tribute. Unable to obtain a hearing at the White House or in Congress, Mr. Robinson has published the plan in book form with the purpose of circularizing it all over the country. If all citizens were of the caliber to take the same enthusiastic interest in public affairs we might get somewhere with this depression quickly.

"Moreover, if hard times continue, who knows but what we may reach the stage where such walloping blows at the depression shall receive a respectful, serious hearing? Everybody remembers the time when such emergency measures as a general sales tax, 55-percent surtaxes in big incomes, Reconstruction Finance Corporations, and liberalization of the Federal Reserve to safeguard the gold supply would have been laughed out of Washington, and we were calmly assured that the business slump was only psychological and could not last but a few months after the stock market break of 1929."

The fact that the depression is yet here, 7 years after the publication of that prophetic editorial, seems to be positive proof that we have "reached the stage where such walloping blows at the depression" should "receive a respectful, serious hearing" before the President, the Congress, and the unselfish business and economic interests of America.

Billion after billion of public debt has been bonded on innocent generations yet unborn, as a result of the failure of those in high authority to strike real "walloping blows at the depression," one that is "so stupendous in magnitude that it stands out in bold relief among all others." I challenge an honest debate and demand a "serious hearing" before those in authority and on whose conscience should rest the awful responsibility of ending the deplorable economic conditions which enthrall the masses of American citizens today after so many expensive experimentations have been "weighed in the balance and found wanting." The steady increase of human suffering for the necessities of life in this land of abundance is appalling. The needless sacrifice of sacred human life on the inefficient public highways, the Government-

constructed bloody shambles—is astounding. The death roll, now exceeding 35,000 annually on the present-day public roads, is horrifying.

If one-half of $20,000,000,000 spent on various forms of temporary relief in recent years, with no possibility of reimbursement, had been spent in building this permanent Nation-defending and life-saving superhighway system, the Nation would have a tangible worth-while asset to leave to future generations rather than the overwhelming public debt which this generation is binding on its children and their children, leaving them no valuable legacy in return therefor. Occasionally some opponent asserts that the superhighway will not be used enough to make it self-sustaining. The Gallup survey proves this assumption is wrong. Of course, there is prejudice against toll roads but that is, like all prejudices, because of lack of understanding of what is proposed in your bill.

Good people sometimes express an erroneous opinion before they have studied all the facts and thoroughly understand just what your bill proposes to do. They do not have a clear picture before them. Their vision being blurred, their conclusions are equally indistinct and unreliable. The patrons of this superhighway will make a profit on every dollar invested in tolls to pay for the superservice rendered. They can drive twice the distance, in greater safety, in the same length of time and consume half the energy required on the present-day roads. They will save more in other cash outlays than the amount paid for this superservice in fuel costs, in wasted depreciation, in valuable time consumed and in unnecessary travel expenses. In addition to the cash profit made by paying the toll-service charge on the superhighway, is the invaluable assurance of lifesaving protection from fatal head-on collisions, disastrous grade crossings, horrors of pedestrian murders, and the dangerous death traps in the guise of bridge abutments, trees, poles, ditches, and other innumerable sudden-death obstacles on our public roads.

What if it requires 50 years to self-liquidate the cost of construction of this incalculable benefit to the Nation and every patron of the superhighway? What if it should require 100 years to liquidate this cost? What of it? No one is burdened by any taxation. Every citizen in this and the following generations will be blessed, made happier and more prosperous by the construction, use, and maintenance of this permanent life-saving and self-liquidating superhighway system.

There are two proposals, which, when enacted into law and put in operation, would administer a complete knockout walloping blow at the depression and remedy the existing ills. The one would humanely and permanently relieve the sufferings of the indigent needy, and the other would supply profitable jobs for the twelve to thirteen million unemployed for several years to come, and thereby build this safe superhighway system for the protection of human life while engaged in the commerce of the Nation.

Without fear of logical contradiction, I make the two following declarations:

First, an adequate Federal pension to all needy citizens 60 years old, to all needy blind, to all needy deaf and mute, to all needy permanently and totally disabled, to all needy widows with dependent minor children along with all widows and minor children of deceased soldiers, is vitally essential to the welfare of the Nation. This pension would eliminate all other taxes and charity for the relief of their suffering and insecurity. Such a pension system, regardless of whose "plan" is adopted, properly financed and administered on a pay-as-you-go basis by a just taxation system devised by the wisdom of Congress, will restore happiness and contentment to all our handicapped citizens. While such a pension system will bring reasonable prosperity to the recipients, to the small merchant, benefit the farmer, stimulate limited manufacturing, and supply possibly a million jobs for the now unemployed, it will not bring complete recovery to the business of the Nation.

Second, the building of the great lifesaving, self-liquidating, and Nation-defending superhighway system which your bill, H. R. 5749, defines, will, without doubt, give profitable and self-supporting jobs to each and every one of the twelve to thirteen million now unemployed for from 6 to 8 years to come.

Private industry cannot absorb all this surplus labor which has been ousted from its professional job by modern automatic machinery. Every sane thinking citizen knows positively that the thousands of men who learned glass blowing cannot possibly go back to their hand furnaces, which do not now exist. The automatic glass-blowing machine has permanently taken their jobs. The tens of thousands of professional and experienced Morse-code operators cannot go back to their one-time lucrative positions. The automatic teletype machine has abolished their jobs. The cigar and cigarette maker, the cement mixer, the professional corn husker, the humble cotton picker, and literally thousands of other skilled-labor jobs have been ruthlessly obliterated by the invention of precise automatic machines, which have taken the place of less accurate skilled hand labor, and they are now producing a larger volume of manufactured goods at less cost.

It is irony and the most subtle sarcasm to argue that the steadily increasing number of millions of able-bodied patriotic, unemployed citizens should go back to their former jobs in industry. Such advice is like offering vinegar and gall to thirsty and famishing men and women who are in desperate need of pure water and wholesome food. Such brutal satire will sooner or later be effectively resented by the manhood and womanhood of the unemployed citizenry of this great democratic Nation. We are riding on the rim of a crater of a mighty volcano of dissatisfaction. Red-blooded Americans cannot always be deprived of their birthright in this God-given land of abundance.

New jobs must be created by the Government for all unemployed citizens that the automatic machines have permanently eliminated from industry. No lover of justice can consider W. P. A. work as a satisfactory living job. Some complain that the workers lean on their shovels too much. Shame on such arguments. If they were paid wages to supply them a decent living for their families, it would inspire them to do more work. As a rule they probably earn more than the $57 a month they are paid, especially when we consider their mental anguish and humiliating political servitude. Then why expect them to do more work than they get paid for? As law-abiding citizens they are entitled to a better standard of living. The founders of our great democracy declared: "All men are created equal," and I am wondering if any Member of Congress, elected by the votes of these "equal" citizens would do more work for the money paid if they were on the other end of the equation.

Your bill wisely and honestly calls for the payment of "the prevailing wage" everywhere and to all workers. H. R. 5749, proposing to build this national lifesaving superhighway system, is the most gigantic, the most beneficial, self-liquidating, Nation-defending, and employment-creating public-works project ever offered to the Congress in behalf of the millions of unemployed throughout the country.

To be self-liquidating, this superhighway system must charge a toll for the special service rendered, just the same as the Postal System charges a toll for the service it renders in delivering the mails. Why should the Government build post offices, buy and operate equipment, and deliver free the great volume of profitable business mail of the Nation, and by hidden taxes collect from the public the expense therefor? Is there any sane reason why each individual beneficiary of the Government mail service should not be required to pay a just toll for the transportation of his mail?

It is not logical, or true to fact, to assert we must have free, and not toll, public roads. The truth is, the public roads today are not free but are paid for by hidden tolls extracted from the taxpayers and supplied to the users without direct charge. Someone always pays the toll. Shakespeare said: "Consistency, thou art a jewel." Why not be consistent? The people who use the superhighway system will protect their lives, save money on operating expense, and make a profit by paying toll therefore they should pay for the service rendered. Why lay the burden of construction and upkeep on the general taxpayer by innumerable unseen levies for so-called free roads?

Your bill proposes to construct entirely new roadbeds and not interfere in the least with the present public-road system which should be maintained for the use of local traffic. Anyone who prefers to risk the danger of death and destruction on the inefficient and unprotected public roads and also pay more expense in time and upkeep can yet have the privilege of going the most expensive and dangerous way where only 205 were killed over Memorial Day week-end. Of course, any person can walk to Philadelphia and deliver his letter, if he prefers to do so, rather than pay a direct cash toll of 3 cents to the Government post-office system for that service. To be a self-liquidating and lifesaving superhighway system, as your bill proposes, it must ever maintain a just, direct toll charge.

In closing let me repeat: My bold assertion, without fear of successful contradiction, is that there are two vitally important nonpartisan measures that must be enacted into law by the Congress before complete recovery, permanent prosperity, and happy tranquillity will return to the American people.

First. The granting of adequate pensions for all needy old people, who have helped to make this country the richest on earth, and for all unfortunate, worthy, needy, handicapped citizens, which is humanitarian and national righteousness.

Second. The building of the national superhighway system, as defined in your bill, H. R. 5749.

Thus, by bestowing honest, just, and humanitarian pensions on all the deserving needy and by creating fair, remunerative American standard-of-living jobs for all unemployed by this self-liquidating public-works project, Congress will bring about abundant prosperity and complete and happy recovery as an accomplished fact.

Respectfully submitted.

U. G. ROBINSON,
President, National Super-Highway Association.

Be it enacted, etc., That a system of durable, concrete-surfaced, safety automobile highways and airplane emergency landing fields, and their appurtenances, be constructed within and by the United States following as near as practicable the routes hereinafter described, said highways to be known as the national superhighway system.

(a) Beginning at or near Portland, Maine, thence running in a westerly direction to near Boston, Mass., New York City, N. Y.; Trenton, N. J.; Philadelphia, Pa.; Pittsburgh, Pa.; through West Virginia, Ohio, Indiana, Illinois, Missouri, Colorado, Utah, and Nevada to San Francisco, herein designated as the central route.

(b) Beginning at a point on the central route near Philadelphia, Pa., thence running in a southwesterly direction to near Baltimore, Md.; Washington, D. C.; Richmond, Va.; and through North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Texas, New Mexico, and Arizona to near San Diego, Calif.; thence in a northerly direction to near Los Angeles and San Francisco, Calif., herein designated as the southern route.

(c) Beginning at the intersection of the central and southern routes in California, thence running to near Portland, Oreg., and Seattle, Wash.; east through Idaho, Montana, North Dakota, to near Minneapolis and St. Paul, Minn.; thence in a southeasterly direction to near Milwaukee, Wis.; south of Chicago, Ill.; Detroit, Mich.; Cleveland, Ohio; Erie, Pa.; and near Buffalo, Rochester, Syracuse, Utica, and Albany, N. Y.; thence easterly to the central route near Boston, Mass., herein designated as the northern route.

(d) Beginning at a point on the southern route near Washington, D. C.; thence running southwesterly through Tennessee and Arkansas; and joining the southern route in Texas, herein designated as the Washington-Southwest route.

(e) Beginning at a point on the northern route near Buffalo, N. Y.; thence running southeasterly to near Harrisburg and Philadelphia, Pa.; thence to Atlantic City, N. J.

(f) Beginning at a point on the northern route near Cleveland, Ohio; thence running in a southerly direction to the southern route.

(g) Beginning at a point on the northern route near Chicago, Ill.; thence running in a southeasterly direction to near Indianapolis, Ind; Louisville, Ky.; Knoxville, Tenn.; Atlanta, Ga.; and Miami, Fla.; herein designated as the Chicago-Miami route.

(h) Beginning at a point on the northern route near Detroit, Mich., thence running southerly to the intersection of the Chicago-Miami route with the Washington-Southwest route.

(i) Beginning at a point on the northern route near Chicago, Ill., where the Chicago-Miami route begins, thence running southwest intersecting the central route near St. Louis, Mo.; to near Springfield, Mo.; Oklahoma City, Okla.; and intersecting the southern route near El Paso, Tex.

(j) Beginning at the intersection point near Chicago, Ill., on the northern route, thence running southwesterly to near Des Moines, Iowa; Omaha, Nebr.; and intersecting the central route near Denver, Colo.

(k) Beginning at a point on the northern route near Minneapolis, Minn., thence running in a southeasterly direction to near St. Louis, Mo.; Memphis, Tenn.; and New Orleans, La.

(l) Beginning at a point on the northern route in North Dakota, thence running in a southerly direction through South Dakota, Nebraska, Kansas, Oklahoma, to near Galveston, Tex.

(m) Beginning at a point on the northern route in Montana, thence running in a southerly direction through Wyoming, east of Denver, Colo., New Mexico, and to the southern route near El Paso, Tex.

(n) Branch superhighways shall be extended from main-line superhighways to near every State capital not otherwise connected with the main lines.

(o) Branches shall be extended to all centers of traffic deemed necessary for the completion of a comprehensive system of highways for commercial use and national defense.

SEC. 2. That the building or construction of said national superhighway system, and all work incidental thereto, shall be under the general supervision, direction, and control of a Director of Superhighways (hereinafter called the Director) subject to the approval of a commission composed of seven members. Said Director and Commissioners shall be appointed by the President, by and with the advice and consent of the Senate.

(a) The Director, with the Commission's approval, is hereby authorized, empowered, and directed to take immediately whatever steps may be necessary to construct said national superhighway system, as rapidly as possible, in accordance with the provisions of this act.

(b) The Director shall, with the approval of the Commission, appoint, as First Assistant Director, a qualified engineer, thoroughly experienced in road building, who shall immediately organize all necessary engineers and surveyors available among United States citizens, whose duty shall be to locate said national superhighway along general lines described in this act.

(c) The Director shall appoint, with the approval of the Commission, such other assistants as are required to properly and speedily start construction work, so that employment may be given all unemployed citizens of the United States at the earliest possible day.

(d) That the Director shall organize his office with necessary assistants immediately and without delay shall give orders for the approximate amount of approved fabricated steel that will be required to construct the national superhighway system. These orders shall be given at the standard price paid for such materials in 1938, to be determined by the Director, to all steel mills in the United States that agree to pay to their employees the scale of wages paid in the year 1938, to be determined by the Director.

(e) The Director shall also give immediately to any or all American cement factories orders for all necessary cement in cotton bags, at a price generally paid in 1938, to be determined by the Director, but requiring that all factories accepting these orders shall pay 1938 scale of wages or more to all employees.

(f) The Director, at the earliest possible time, shall let contracts to any or all American factories for approximately enough tractors, dump trucks, automobiles, stone crushers, concrete mixers, steam shovels, and all road-building machinery required in the construction of the said superhighway system.

(g) The Director shall place orders for the wire and all other materials required to build, fence, and light the national superhighway system so as to give employment to the largest number of citizens immediately.

(h) All material contracts shall be given at approximately standard prices paid in 1938, but given only to such manufacturers who actually agree to pay 1938 scale of wages or more to all employees.

(i) That the spirit and purpose of these provisions of price and wage scale in this act is to set all these factories at full-speed production immediately, at a reasonable profit, and pay a comfortable living wage for all citizens employed in the construction of said superhighway system, and for all labor that produces the materials which are used in said construction. In case there is any dispute or difference of opinion as to the rate or scale of wages prevailing in 1938, then the decision of the Director after advice from the United States Department of Labor shall be final.

(j) That no person, partnership, association, corporation, trustee, or receiver shall be awarded any contract for materials who was not producing, manufacturing, or making such materials prior to January 1, 1938, nor shall any person, partnership, association, corporation, trustee, or receiver be awarded a contract for materials in excess of their productive capacity for the year 1938, and in no event shall any subsequent contract or contracts be awarded to any person, partnership, association, corporation, trustee, or receiver until the completion of 80 percent of any previously awarded contract.

(k) That all contracts for materials, and so forth, entered into by the Director with the approval of the Commission shall contain a clause giving priority of delivery to orders received by firms furnishing materials from sources other than the national superhighway system, it being the intent of this act to furnish a sufficient market to take slack between business originating from ordinary sources and 100 percent capacity as of 1938.

SEC. 3. That the President shall appoint a Commission composed of seven Commissioners, but that not more than four of said Commissioners shall be of the same political party.

(a) That the Director is hereby given full authority to make, and said Director shall make, with the approval of the Commission, all decisions affecting the location and construction of the highways authorized in this act.

(b) That the Director, with the approval of the Commission, is authorized to acquire, by purchase, condemnation, or otherwise, such tracts of land necessary to carry out the purpose and intent of this act.

(c) That the Director shall, with the approval of the Commission, formulate all regulations concerning toll charges and the collection thereof: *Provided, however,* That in no case can the charge exceed 1 cent per mile for private passenger vehicles.

(d) That the Director, with the approval of the Commission, shall make all regulations concerning the leasing of automobile-freight or passenger-bus franchises, gasoline-service stations, restaurants, or other commercial structures servicing patrons of the national superhighway system.

(e) That the Director, with the approval of the Commission, is hereby authorized to take such action as may be necessary and proper to regulate and control all said traffic on said national superhighway system, so as to prevent unfair competition among common carriers engaged in any traffic: *Provided, however,* That such control and regulations shall not in any way conflict with the authority and regulations of any other agency of the Government now functioning. Existing railroads paralleling sections of the national superhighway system, and which regularly maintain adequate passenger and freight service, shall be given franchises for both local passenger-bus and freight-truck service along such adjacent and superhighways on a parity with all other franchises for commercial and passenger use of the superhighway system, provided such franchises shall not extend beyond the territory served by the said railroad, and it shall not interfere with the same privilege granted to other railroads along their lines, and these railroad franchises shall not interfere with independent passenger- and freight-service franchises. The purpose of this provision is that no monopoly of the business on any part of the superhighway system can exist. No commercial traffic shall be permitted to interfere with the safety and reasonable speed of private automobiles.

(f) That the national superhighway system provided for in this act shall be open to the public that pay the tolls and observe the rules and regulations under ordinary conditions, but subject to such reasonable priorities as may be given by the Director, with the approval of the Commission, to official business of the United States, and in time of actual or threatened public danger the President may direct the War Department to assume temporary control over said national superhighway system, or any part thereof, and issue such regulations for the use of the highway as may seem necessary under such circumstances, and also in case of actual or threatened serious riot, insurrection, or other public danger within a State, the President may, at the request of the Governor of such a State, direct the War Department to issue orders giving said State such temporary priorities in use of said highway as the Secretary of War may deem necessary.

(g) That convict labor shall not be employed in the construction work provided for in this act. Only free citizens of the United States shall be employed by the Director.

(h) That the Director shall have the free use of the United States mail in conducting the business of the national superhighway system in like manner as any other executive department of the Government. The Director shall have the cooperation of all other departments of the Government, including information, service, officers, engineers, or agents thereof, in aiding the construction of this superhighway.

(i) That the Director shall appoint, assign, and compensate superintendents and police officers to guard and protect the national superhighway system, and agents to collect the tolls, and all needed officials and assistants properly to conduct the business of the

highway in the same efficient manner that other departments of the Government are conducted. The Director shall take appropriate action in court of jurisdiction to properly punish any person who shall violate any of the provisions of said rules of the road, made for the operation of the superhighway system in a safe, fair, and equitable manner, and may bar any violator of the regulations from driving motor vehicles on said superhighway.

(j) That this national superhighway system shall always remain a safely protected toll road, and operated by the United States at rates of toll that will make it self-liquidating and self-sustaining.

SEC. 4. That said national superhighway system shall be constructed in strict accordance with the plans and specifications prepared by the best engineering ability available, under the supervision of the Director.

(a) The materials used in the construction shall be of the best products of American manufacture and workmanship, and of the most durable construction known to modern engineering.

(b) All safety regulations and appliances possible shall be utilized.

(c) There shall be no railroad grade crossings. The superhighway shall be built over or under all other highways.

(d) There shall be an insurmountable safety barrier between traffic lanes for both private and commercial vehicles which are running in different directions.

(e) There shall be no poles, trees, abutments, or obstacles exposed to traffic.

(f) The 13 main lines of the national superhighway system described in this act shall have at least two hard-surfaced protected traffic lanes and one heavy concrete or solid gravel lane, for parking when cars stop, for commercial vehicles, and also two lanes with parking shoulders for private automobiles running in opposite directions, making a total of at least four traffic and two shoulder lanes running in each direction. In thickly populated sections of the country, where traffic will be very heavy, three or more traffic lanes for both private and commercial service shall be built, the number to be determined by the Director, with the approval of the Commission, after the engineers have reported on probable traffic requirements; however, in thinly populated rough mountain country, where in the judgment of the engineers and the Director, with the approval of the Commission, one less lane in each direction for each class of traffic, private and commercial, may be built.

(g) All engineering shall be planned with a view of adding traffic lanes in the future as increased traffic may require.

(h) All branch lines shall be built in accordance with the present needs of traffic and planned for expansion as the future needs may develop.

(i) The national superhighway system shall be located outside of cities, towns, and villages and shall not be used as pedestrian streets, or to interfere with local traffic, or the present free public roads.

(j) The main-line highways shall be located for the purpose of through traffic, then branches constructed, at nearly right angles, to or near the larger cities or centers of traffic, as the Director may determine, with the advice of the engineering department and the approval of the Commission.

(k) Entrances shall be established at convenient locations to traffic requirements.

(l) Proper buildings for tollhouses and also supply stations where supplies needed by patrons of the superhighway can be purchased shall be built. No privately built supply stations or advertising signs shall be allowed on the right-of-way.

(m) All grades and curves shall be reduced to the lowest degree possible in feasible engineering.

(n) The entire road system shall be properly lighted.

(o) Two to five hundred feet of land shall be purchased where available on either side of the right-of-way for future use in superhighway expansion and on which to build, when needed, conduits to contain telephone, telegraph, or high-tension electric wires, or for other purposes.

(p) The entire right-of-way shall be enclosed with substantial fences.

SEC. 5. That sufficient airplane-landing fields shall be constructed along the national superhighway system in order to afford a safe haven close to a means of transportation for passenger-carrying airplanes in case of emergency or bad weather.

(a) That the location, size, and specifications for construction of the landing fields shall be decided by the Department of Commerce and constructed by the Director with the supervision of the Department of Commerce.

(b) That the regulations in the act specifying types and manufacture of materials and labor to be used on the road construction shall apply to the materials and labor used in the construction of the airplane-landing fields.

(c) That the intent of this section of this act is to provide for the construction of a series of modern, lighted, safe landing fields throughout the United States.

(d) That the maintenance and operation of these airplane emergency landing fields shall be under the supervision of the Department of Commerce.

(e) That the airplane emergency landing fields provided for in this act shall be open to the public at all times without service charge, other than for materials and labor furnished, for use as an emergency landing field, except in times of national crisis when upon Executive order of the President of the United States these airplane landing fields shall come under the direction of the Secretary of War.

SEC. 6. That for the purpose of providing means for the payment of the costs of the national superhighway system the Secretary of the Treasury is hereby authorized and instructed to issue and sell bonds of the United States in an amount not to exceed $10,000,000,000.

(a) Such bonds shall be in such form and denominations and shall be subject to such terms and conditions and shall include such provisions for redemption or retirement as may be prescribed by the Secretary of the Treasury.

(b) Such bonds shall bear interest, if any, at the rate to be prescribed by the Secretary of the Treasury, but not to exceed 3 percent per annum, payable semiannually.

(c) These bonds shall be fully and unconditionally guaranteed as to the principal and interest, if any, by the United States.

(d) All moneys received for tolls, rent, franchises, or otherwise from the national superhighway system shall be deposited in the Treasury of the United States in a fund known as the national superhighway fund.

(e) Moneys in the national superhighway fund shall be available for use in the retirement or redemption of bonds issued for construction of the national and airplane emergency landing fields at the discretion of the Secretary of the Treasury.

(f) Payment for materials, labor, salaries, maintenance, and all costs incident to the construction and operation of the public works herein provided for shall be paid by the Treasurer of the United States from moneys received through the sale of the bonds provided for herein or from moneys on deposit in the national superhighway fund.

(g) That the Director and Commission each year shall make a full report to the Congress of all business transacted by said Director in carrying out the provisions of this act.

SEC. 7. That the Director with the approval of the Commission is hereby given plenary powers and authority to take or cause to be taken any action not otherwise provided for herein which may be necessary to carry out the spirit and purpose of this act which is hereby declared to be as follows, to wit:

(a) To create immediately profitable employment for all unemployed citizens of the United States.

(b) To eliminate the need of all dole or charity to able-bodied citizens throughout the Nation by giving them remunerative jobs.

(c) To greatly increase the circulation of money and create greater buying power in every State in the Union.

(d) To build a gigantic system of self-supporting and self-liquidating national superhighways and safe airplane emergency landing fields for the ever-increasing automobile and airplane traffic that will give greater protection to human life and personal property than is now possible on free public roads.

(e) To change this recognized crisis, this appalling period of depression, and stagnation of business into an era of unbounded prosperity and happiness for all labor, business, and professional citizens of the Union and thus reestablish a generally improved financial condition among all the people of the Nation.

SEC. 8. That this act is not intended to repeal any provision of the Federal Highway Act unless such provision is in direct conflict herewith.

(a) That if any provision of this act should be held to be invalid, such invalid provision shall not affect the validity of any other provision of this act which can be given effect.

(c) This act shall take effect immediately on its passage.

Commemorating the Birth of John Ericsson—Statue Erected in His Honor in Potomac Park

---

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. ALEXANDER. Mr. Speaker, John Ericsson, the gifted Swede whose granite statue overlooks the Potomac back of the Lincoln Memorial, yesterday was linked with Lincoln as one of the savers of the Nation.

Many interested persons attended the ceremonies commemorating the one hundred and thirty-sixth anniversary of Ericsson's birth and to recognize the Navy's action in naming the destroyer *dd 439*, now under contract for construction, in honor of the Swedish inventor.

Ericsson's principal contribution to naval progress was his development in 1836 of the screw propeller and his design for the *Monitor*, an ironclad vessel commonly referred to as a cheese box on a raft. The *Monitor* met the Confederate's dreaded *Merrimac* for the first engagement of ironclads during the Civil War.

Ericsson's life was traced by Representative MELVIN J. MAAS, of Minnesota, and Representative MARTIN F. SMITH, of Washington, the latter speaker recalling the traditional friendship between Sweden and the United States and the part the inventor played in the Civil War with the introduction of his ironclad vessel. He placed Ericsson with Lincoln and the others who strove to save the Union.

The ceremonies were held under sponsorship of the John Ericsson Society, with William Nelson Morell, of Washington, presiding. The wreath was laid by Charles Edison, Acting Secretary of the Navy. The Navy Band, Lt. Charles Benter, leader, played patriotic airs and the Swedish national anthem. Sweden was represented by Folke Wennerberg, counselor of the legation.

Ericsson early displayed his inventive genius. He became a draftsman for a Swedish canal company at the age of 12. Leaving the Swedish Army in 1827 he went to London and competed in the design for a locomotive. Later he designed engines used by Sir John Ross for his Arctic expeditions. Although in 1836 he developed the screw propeller he could not establish priority but, nevertheless, received a share of the admiralty prize.

Ericsson came to New York City in 1839, residing there until his death in 1889. In 1854 he offered designs for what was to be the *Monitor* to Louis Napoleon, who declined them. The United States utilized the plans in the *Monitor*, which, in Hampton Roads, Va., upset the Confederates' ironclad hopes.

Congressman MAAS' speech is as follows:

THE NAVY'S DEBT TO JOHN ERICSSON

Those of us who are close to the Navy and American naval history realize just how profound an impression John Ericsson made upon our Navy and American history itself.

At the turn of the last century, a boy was born in Sweden who was destined to play a most important part in American history, as well as to become a great leader in engineering.

John Ericsson was born in 1803 in the Province of Varmland, Sweden. From an early age he was outstanding in engineering. He came to the United States in 1939. Ericsson was one of the leaders in steam locomotion, both for land and sea.

Among his most noted inventions was the screw propeller for ships, which revolutionized steamboats.

In 1844 he built the first screw-driven ship of war, the *Princeton*, a 600-ton frigate. Also, for the first time, the machinery of propulsion was placed below the water line, thereby protecting them from enemy shells. This radical development, along with the screw propeller itself, made practicable the application of steam to vessels of war.

From John Ericsson's frigate *Princeton* has descended the whole line of modern warships. All naval warfare was revolutionized. From this invention of Ericsson grew all modern navies. Probably John Ericsson is most remembered for his invention and construction of the *Monitor*, referred to often as "a cheese box on a raft." In one of the most dramatic moments of all naval history, the *Monitor* was completed and rushed to Hampton Roads just in time to save the Union fleet from total destruction from the guns of the ironclad, the *Merrimac*. The *Monitor* suffering no damage herself, drove off and permanently disabled the *Merrimac*.

This signal naval victory played a heroic part in winning the war and preserving the Union. Many historians believe that it was the decisive battle that made possible the ultimate victory for the North, for had the *Merrimac* successfully completed its attack upon and the annihilation of the Union fleet, the blockade would have been raised, Washington and other important port cities would have been captured, Europe would have recognized the Confederacy.

The Union would have been doomed. All this was prevented by the success of Ericsson's invention, the *Monitor*.

The present superbattleships of 45,000 tons now under construction are a tribute to the man who made their development possible.

Also, the whole organization of the Navy Department was fundamentally changed. As a result of Ericsson's work, the Navy Department was compelled to recognize mechanization in the Navy, and to establish a bureau of engineering.

John Ericsson was not a naval officer—in fact, never in, nor an official part of, our Navy—yet he has contributed tremendously to our Navy and its glorious part in defending the United States ever since.

John Ericsson is typical of the true pioneer Americans, those who came from the Old World to become a part of the New World, bringing their genius, energy, and devotion to help solve the problems of a rising democracy.

Both Sweden and America can well be proud of Ericsson, a true son of his native land, and a loyal patriot of his adopted land.

Ericsson was a true inventor and scientist. He worked for progress for progress' sake, and not for the monetary rewards.

This is demonstrated by his refusal to accept remuneration for his development of the *Monitor*, which he considered his contribution to the great cause of humanitarianism, and to the preservation of the Union to which he was so devoted.

Ericsson brought to America the best traditions of Sweden and translated them into Americanism.

The Navy is showing its gratitude to him by honoring his memory, and thereby also honoring itself in naming one of the new destroyers, now under construction, the *Ericsson*.

We stand here today, to pay honor to John Ericsson, not only as a great inventor, a great factor in our modern Navy, but we are here to honor him as a true pioneer and as a great American.

The address by Hon. MARTIN F. SMITH, was as follows:

Mr. Chairman, Secretary Edison, Admiral Bowen, distinguished guests, ladies, and gentlemen: We are assembled this evening in beautiful Potomac Park, on the banks of the historic Potomac River, south of the Lincoln Memorial, in our Nation's Capital. We are met before the impressive statue of that great and gifted son of Sweden and noble benefactor of America, John Ericsson, to whose memory we esteem it a privilege and an honor to again pay tribute. In the words of the poet:

> His was one of the few, the immortal names,
> That were not born to die.

John Ericsson was one of the greatest inventors of all time. He was born in Varmland, Sweden, on July 31, 1803, and died in New York City at No. 36 Beach Street on March 8, 1889. His career as an engineer commenced in connection with the construction of the Gota Canal from Stockholm to Göteborg in Sweden. He early became interested in steam locomotion by land and sea. He later went to England; as a young man of 26 designed and built a locomotive, the Novelty, which attained a speed of 28 miles per hour in successful competition with Stevenson's Rocket.

While in England he also designed the screw propeller, which was destined to ultimately change all travel and commerce, and proved its efficacy on two vessels named for Americans, the *Francis B. Ogden* and the *Robert F. Stockton*.

Ericsson came to America in 1839 and introduced his new propeller on the canals and inland waters of the United States, and within 4 years after his arrival 24 merchant vessels were thus equipped. In collaboration with Captain Stockton, of the United States Navy, he commenced construction of the first screw-driven ship of war, the *Princeton*, a frigate of 600 tons, in which for the first time the method and means of propulsion, the screw for the propeller and the engines, were concealed below the water line, safe from shot and shell.

He also designed and perfected other important mechanical devices. Among these should be mentioned air compressors, a boiler with artificial draft; a steam fire engine; the caloric engine, which at that time some expected to displace the steam engine; and numerous other valuable devices for use in the pursuits of war and peace. With these alone to his credit he would justly be renowned as one of the outstanding engineers of that period.

However, it is as the designer and inventor of the *Monitor*, and its quick construction in one of the most crucial hours in American history, and hastening its completion just in time to protect and save the Union fleet from destruction by the ironclad *Merrimac* at Hampton Roads, Va., on March 9, 1862, that John Ericsson won undying fame and a high place among the immortals in the age-long struggle of mankind for liberty and freedom. Second only to the savior of the Union, Abraham Lincoln, whose majestic memorial and shrine is nearby, will live forever the name of John Ericsson.

Those of us who are able to trace our ancestry to the sturdy people of the powerful little Kingdom of Sweden are naturally proud of the important and valuable contribution which our forbears have made to the discovery, the growth, the development, and the progress of the United States of America. We take justifiable pride in the fact that it was that heroic champion of religious freedom and also one of the greatest military leaders of the ages, Gustavus Adolphus II, who was responsible for planting on American soil a Swedish colony. It was his great chancellor, Axel Oxenstjerna, who carried to fruition the King's idea when he died on the field of Lutzen in 1632, and thereby gave New Sweden to the New World, which later became known as Delaware. Through the period of the Revolutionary War and in every subsequent crisis and emergency in our country's history down to the present hour, men and women of Swedish birth and ancestry have played a leading role in our national history. Altogether 2,000,000 people of Swedish birth and ancestry now live in the United States and are noted for their industry, their integrity, their culture, their patriotism, and their manifold qualities of good citizenship.

It is fitting and appropriate that this magnificent statue of John Ericsson is located not far from the wonderful memorial which expresses the everlasting gratitude and affection of the American people for Abraham Lincoln and that this modern destroyer of our Navy should be named after Ericsson who nearly 80 years ago said to Lincoln: "Attachment to the Union alone impels me to offer my services." Tradition records the fact that Lincoln gladly and gratefully accepted the proffer and after going over the plans of the *Monitor* with Ericsson, added a little gayety to an otherwise solemn occasion by remarking in his characteristically humorous vein, "Well, like the girl that put her foot in the stocking, it strikes me there's something in it." Events later proved that there was indeed something in the idea of the stolid scientist from the North

and together Lincoln and Ericsson wrote one of the most interesting and glorious chapters in American history.

In a world of storm and strife, it is significant that after 150 years of unbroken friendship the bonds of attachment and mutual regard, which have always existed between the United States and Sweden, are today stronger than ever and it is our fervent hope and prayer that they may always remain so.

Alcatraz Penitentiary

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

ARTICLE BY HON. HOMER CUMMINGS

Mr. PATMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by the Honorable Homer Cummings, former United States Attorney General, entitled "Why Alcatraz Is a Success," which appeared in the July 29, 1939, issue of Collier's:

[From Collier's of July 29, 1939]

WHY ALCATRAZ IS A SUCCESS

(By Homer Cummings, former United States Attorney General)

Much has been written and spoken about Alcatraz Penitentiary. Most of it is nonsense. I know, because I know Alcatraz. I have been over every foot of ground on the 12-acre rock.

Shortly after I became Attorney General I conceived the idea of an institution for the most unmanageable of our Federal prisoners. I lived with that idea. I first discussed the matter with President Roosevelt and after obtaining his approval I made an extensive search for a site. I studied the possibilities of the Aleutian Islands, the islands off the Florida coast, and other places. San Francisco Bay was finally decided upon.

I selected the warden and the guards and followed closely each step in the making of the new prison. For 5 years after that, as Attorney General, I supervised its operation. Under these circumstances I suppose it's only natural that I should have a personal interest in the place and a desire to see that it is not misrepresented to the public.

Virtually every one of the "inside" stories written by former inmates of Alcatraz—and there have been almost a score—has been "juiced up" by fictitious items and loaded with major and minor misstatements of fact. Result: Many people believe Alcatraz to be a place of brutality.

Some people resent it as a throw-back to the Middle Ages. Others think that murderers and kidnapers confined there deserve such "brutal" treatment. To both groups Alcatraz would be a surprise.

It has been said, for example, in these stories that on the Rock prisoners can't talk, that the monotony of the routine drives the men "stir crazy," that there is no opportunity for work or exercise or self-improvement; in short, that we are maintaining an American Devils Island. I think it is high time that the true story be told about this small, rocky island in the choppy waters of San Francisco Bay.

In the Federal prison system Alcatraz represents the ultimate in isolation. And yet, oddly enough, it lies in the very midst of the busy, hurried life of the bay region. San Francisco is but a mile and a half away. Scores of tiny boats bob about on rough water near the island. Each day great ocean liners glide beneath the span of the Golden Gate Bridge and set their courses for oriental ports. The thundering motors of the *China Clipper* draw skyward the gaze of 300 men on the Rock.

These men are hourly conscious of the hum of life about them. Life is so near, but liberty so far. In this setting Uncle Sam has isolated his most dangerous public enemies.

How can we, in this enlightened age, justify an American Devils Island? The answer is: We can't. But Alcatraz has none of the horror of Devils Island and is nothing like the mythical hellhole it is sometimes conceived to be.

On June 19, 1934, the Department of Justice took this island over from the War Department. The Department of Justice has not gone out of its way to give publicity to the individual inmates who are confined there—and for good reasons. As gangsters and racketeers, many of these men feed on publicity. In Alcatraz they are completely separated from the public that too often thrilled at their exploits and fed their ego.

The Department has been anxious also to keep a morbid and sometimes sadistic interest in the individuals confined there from throwing out of focus the constructive and rehabilitative work it is trying to perform in the other Federal institutions.

On the other hand, the Department has always been glad to supply information about the prison and its routine. This is available to the public in considerable detail and in many forms, including an excellent speech by Congressman WRIGHT PATMAN, of Texas, which was printed in the CONGRESSIONAL RECORD on April 1, 1936.

In addition, the warden has always given to the press items of major news interest, such as attempted escapes, sit-down strikes, and injuries to the inmates or guards. In other words, the facts are available. Oddly enough, and despite all this, the stream of misinformation continues unabated.

How did the Department of Justice come to establish the Alcatraz prison? I had long had the idea that we needed in the Federal prison system a particular type of institution that would be devoted to those incorrigible and long-term offenders who impair discipline at the other institutions, and who need what the Bureau of Prisons now calls "supermaximum security."

A REAL NEED FOR ALCATRAZ

We needed some place where the "end products" of our law-enforcement system could be incarcerated. We needed a place for ingenious "escape artists," and for those who are intractable or break down discipline, or seek to maintain contact with the underworld. Half a dozen troublemakers in a large institution can completely disrupt morale. There is always some smart fellow who thinks the way to get chocolate sundaes placed on the prison menu is to start a riot in the mess hall. We needed a place for this type.

By the summer of 1933, the kidnaping law enacted the year before was bringing into the Federal courts a particularly dangerous type of criminal. If convicted, he was destined to serve a life term, or at least a long "stretch." On August 1, 1933, I wrote one of my assistants as follows:

"In the agenda of things to be considered, when we get around to it, would it not be well to think of having a special prison for racketeers, kidnapers, and others guilty of predatory crimes; said prison to be in all respects a proper place of confinement. * * * It would be in a remote place—on an island, or in Alaska, so that the persons incarcerated would not be in constant communication with friends outside. * * * Please think these things over."

The matter was given considerable attention and in the meantime I commenced the search for a site. In the summer of 1933 I learned that the War Department had comparatively little use for the famous little island in San Francisco Bay. It seemed to me exactly the spot for our purposes. Several informal conferences were held with the Secretary of War, the Honorable George H. Dern, and shortly thereafter I requested Sanford Bates, Director of the Federal Bureau of Prisons, to commence serious negotiations for the acquisition of the island.

A GOOD BEGINNING

We were unable to effect a permanent acquisition, the War Department agreeing only to a 5-year revocable permit. This, however, was sufficient for our purposes. It was my feeling that if I could get the prison established its advantages would be so clearly apparent that the final formalities would follow in due course.

In fact, it was not until April 26, 1938, that the permanent transfer of Alcatraz to the Department of Justice was authorized by the Congress and later effected. But in 1933, as suggested, we weren't so much interested in securing title to the property as we were in securing the right to use it, and by the summer of 1934 all arrangements had been made for our actual occupancy, and the Army evacuated.

The original Army prison was erected in 1909 and is situated on the highest part of the island. There were quarters for the officers, barracks for enlisted men, and a number of shops built around one side of the island.

The cell house contained 4 cell blocks of 600 individual cells, measuring 9 by 5 feet, and almost 8 feet high. Each cell was equipped with toilet and lavatory, electric lights, bed, and shelf for personal effects. In 1933 the entire front of the cells was grated.

Most of the 600 old soft steel cell fronts were removed and tool-proof steel replaced them. Of those that weren't replaced—more later. Here at least was a good beginning. But there remained much to be done if it was to be made escape-proof.

Nature helped out. Swift, cold tides race along the island shores, and only an expert swimmer in good training can negotiate the 1½ miles to San Francisco, the nearest shore point.

Not by any stretch of the imagination can Alcatraz be considered a threat to the safety of the citizens of San Francisco. There is no more formidable barrier to an escaping prisoner than the mile and a half of water that separates the island from the shore. That's a barrier we don't have at any other institution, State or Federal. So far as we know, no escaped inmate has ever reached the mainland. We can be glad the water is there.

The Department set about to provide adequate facilities for hospital enlargement and to install proper telephone equipment for communication on the island and for contact with the shore.

Provision was made for tear-gas outlets. There are jetlike arrangements installed in the ceiling of the dining hall from which tear gas can be sprayed in the event of riot.

A zone in the water 300 yards from shore was marked out with buoys. Beyond this line boats were not to approach the island. Automatic gun detectors were placed at the dock, and at the entrance to the cell blocks. Guard towers were erected that enabled the guards to view virtually every spot on the island. Floodlights were installed. The workshops were improved.

Gun galleries were installed controlling every inch of the interior of the cell block; and when the first contingent of prisoners

was shipped to the island it was truly a place of maximum security.

On August 18, 1934, I left my hotel in San Francisco and boarded the launch *McDowell,* which was to take me across the bay for the first official inspection.

As I made the crossing, I was aware that in the dead of the previous night the "elect" had been taken from their cells at Atlanta Penitentiary and hurried to a special chartered train. The curtains were drawn tightly and when the travelers awoke they were, although they didn't know it, on the first leg of their journey to the "Rock." When I arrived at the island the cell block was empty—almost. There were still about 25 military prisoners left. In fact, some are still there.

READY FOR BUSINESS

As I made my way about the island, the conviction grew with me that here surely was a prison from which no man could escape, but as I reached the far end of the island, where are located the industrial shops and the laundry, I was not quite so sure.

If I were to make a break, I decided it would be from the shop area, which is on the crest of a tall cliff. Out the window—into the sea. That would be the plan, I felt sure. At my direction an extra tower was placed on the shop roof. It was also arranged that guards should constantly patrol the shop rooms. I went away satisfied. We were ready. Four days later at Portland, Oreg., a telegram was handed to me. It read:

"Fifty-three crates furniture from Atlanta received in good condition. No breakage. All installed."

I must confess I breathed a sigh of relief. My apprehension at the time was reflected in a memorandum I sent to Sanford Bates after the transfer had been made:

"As you know, I was very deeply concerned as to the manner in which the transfers were to be made to Alcatraz. The arrangements, under your direction, were admirably made and carried out perfectly. I am greatly pleased and congratulate you and those who aided you in this admirable performance. A slip-up or mistake, or even an unfortunate happening of some kind, would have entailed very unpleasant reactions and consequences. It was a difficult job. I do not believe that very many people realized how ticklish a job it was. You are entitled to the thanks and applause of all who know anything about the subject."

I might add that this was only one of many occasions when I was glad that a man of the caliber of Sanford Bates was in direct charge of our Federal prisons. I first came to know him when in 1930 he was called in as an adviser to the Connecticut Prison Commission, of which I was a member. A career penologist of long experience, he is both a scholar and a realist, and in the Department of Justice he proved to be a loyal and able associate.

When Bates left the department to head the Boys' Clubs of America I appointed as his successor a highly qualified man in the person of James V. Bennett, then assistant director of the Bureau of Prisons. Mr. Bennett, likewise, is a career man, well-trained, indefatigable, and a great humanitarian.

There is a popular misconception that a judge can sentence any defendant to Alcatraz. It can't be done. There are no direct commitments from the courts. Inmates are sent only by transfer from other Federal prisons and upon the orders of the Attorney General.

It has been said that Alcatraz is not conducive to the good health of the inmates. The answer is that the prison pallor that is so common in most prisons is nonexistent there. The health record will stand up well in comparison with any other prison.

You may have heard that at Alcatraz the prisoners can have no visitors, no reading matter, and no mail. This again is untrue. Under the policy established at the beginning and maintained ever since, privileges are limited to the minimum. But they aren't abolished entirely.

The privilege of having visitors, for example, is earned; and during the first 3 months no prisoner is allowed visitors. But subsequently he may have one visitor per month. Ex-convicts are not permitted as visitors on the island. Group sightseeing is taboo, but the warden, at his convenience, permits persons in official capacity to inspect the institution.

Lawyers employed by inmates must obtain written permission for visits from the Director of the Bureau of Prisons. Mail privileges are limited, no original letters being delivered. The letters are typed in the warden's office and a copy given to the prisoner. No newspapers are permitted, although the inmates have access to certain magazines, from which are deleted such matters as current stories on crime. There are no radios. A library is provided, as well as facilities for religious worship.

The statement is frequently made that a rule of silence is enforced. The fact is that in the shop prisoners may and do talk freely. Twice a day, once in the morning and once in the afternoon, a rest period is afforded in which the men can gather together, talk, and smoke. Except for the few men who forfeit their privileges, all of the inmates are permitted in the yard Saturday afternoons and on Sunday mornings, and at that time they are free to talk.

There is plenty of opportunity to talk in the right places, but there is no opportunity to talk where it would be confusing and disturbing or threaten discipline. Prisoners are not allowed to ramble or loiter or go from cell tier to cell tier, or from one cell block to another, or from one shop to another, except under orders and with an escort. They are not permitted to talk in line or on the cell tiers, or from cell to cell, or in the mess hall, except for such conversation as may be necessary in connection with the passing of food and the eating of the meal.

For the breakfast meal the prisoners are marched from the cell block to the mess hall. For the noonday and evening meals they are marched from the shops to the yard and from the yard to the cell-block corridor and thence to the mess hall.

All prisoners, except those in the hospital, eat at the same time. Prisoners march into the mess hall in columns of twos, take their trays at the center of the steam table, one column going right, one column left. The yarn that all prisoners are forced to eat whether they like it or not started with a scenario writer who didn't have sufficient ingenuity to check the facts. The truth is simply this: Prisoners stand back of the containers and serve the food in the proportions requested by the prisoner who is being served—that is to say, they "go light" or "heavy." He must eat only what he takes, and he need not eat that if he is actually sick.

The line moves quickly from the steam table, each man carrying his tray to his table. The food is good and wholesome. The prisoners get plenty to eat, but if they attempt to waste food in any manner they are reported. If the offense is a flagrant one or if they persist in minor infractions following advice and warning, they are deprived of the next meal. It is not surprising, therefore, that the platters are so clean at Alcatraz Penitentiary.

All of the prisoners move on schedule, according to routine, from cell house to mess hall, mess hall to cell house, cell house to work area, work area to cell house, cell house to bathhouse, bathhouse back to cell house, cell house to chapel, chapel back to cell house, or whatever movement may be required; always under the supervision of officers.

NO TIME FOR LOAFING

In the fiction inspired by Alcatraz there frequently appears the suggestion that the inmates spend the greater part of their time sitting idly in their cells. As a matter of fact, prisoners on the island are kept busy on maintenance work and in the industries, which include the mat shop, woodworking shop, tailor shop, the laundry, the carpenter shop, and electric shop. Prisoners prepare meals, and work in the bake shop, butcher shop, and vegetable room.

None of the office work is done by prisoners and no prisoners are employed at any place where they have access to records or confidential matters.

On the island there are three sets of metal detectors. These are ingenious devices that detect, and register by a green light, the presence of metal on those who pass by. One is located at the dock, one at the entrance to the administration building and one at the rear gate through which prisoners pass to and from shops to yard and cells.

Armed guards are stationed in towers at the wharf, as well as in towers overlooking the shop area, on the roadway overlooking the recreation yard and the stairways and roadways used by the prisoners going to and from shops, at the power-house, and at the rear of the laundry.

There are built-in tear-gas ducts in the mess hall and at the main entrance from the administration building to the cell block, but not in the individual cells.

All these mechanical devices are necessary, but the greatest protection is in the force of well-organized and disciplined officers and guards who are trained to be vigilant and to adhere strictly to the routine established and to enforce the disciplinary policies.

Every violation of rules, every omission or disturbance or breakdown of routine is noted, and guards are required to report. In some instances there is no punishment, the offender being given advice, caution, or reprimand, according to his needs.

For minor offenses yard privileges are forfeited for 1 week, 2 weeks, or a month as the case may warrant. In other instances more grave, all privileges including yard, correspondence, and visits are forfeited. In cases of insubordination the offender is locked up and placed on a restricted diet. For repetition of offenses the prisoner may be locked up, he may be demoted in grade, and all his privileges may be forfeited.

For still more serious offenses there is the final resort to forfeiture of "good time." "Good time" is a definite "credit" given by law of so many days each month. It can, however, be forfeited for misconduct. "Good time" means more to a prisoner than anything else. It is a "piece of liberty" and is not to be lightly forfeited.

Exciting incidents have occasionally broken the monotony of prison routine during the past 5 years. On June 23, 1936, one of the inmates seized a pair of shears in the tailor shop and stabbed Al Capone. The wounds were superficial.

On February 16, 1938, it became necessary for the Department of Justice to release a newspaper item to the effect that Capone was suffering from intermittent mental disturbances and that it had been necessary to place him under medical care. That's all that was stated. The Department of Justice did not propose to elaborate by sending out up-to-the-minute flashes from the bedside, covering the details of the disorder or the state of the patient's health. The lid of silence was clamped down.

Many persons jumped to the conclusion that conditions at Alcatraz had driven Capone crazy. The truth is that his condition was not in any way due to his confinement there or at Atlanta Penitentiary. It grew out of circumstances arising many years prior to his incarceration.

Then there was the incident of February 15, 1936, when a group of inmates decided that they wouldn't take any food. Two days later the doctor thought they really ought to have some, and resorted to feeding them through a tube. Three days later the prisoners decided they were through hunger striking.

AN ESCAPE FROM ALCATRAZ

The biggest story to come out of Alcatraz concerned the disappearance of Ralph Roe and Theodore Cole. Roe was serving a term of 99 years for robbery of a national bank and had a long criminal record. Cole was serving a sentence of 50 years for kidnaping. He likewise was a habitual criminal.

These two men, who were "working" in the mat shop, managed to slide down the cliff to the water's edge. I use the term "working" advisedly, for with the patience that only Job and prisoners can muster they had, over a period of time, cut through the metal sash of the shop window. No trace has been found of them.

The fog was probably thicker on that particular day than it had ever been since the Department of Justice took over the island. It was so thick that it was impossible for a guard at the top of the tower to see the water's edge, and when the Coast Guard responded to a radio signal from the warden's office, the guards in the tower could not see the Coast Guard boat when it poked its nose up to the island shore.

Did they get away? Frankly, I don't know. At any rate, the bodies haven't been found. Perhaps it was a grandiose way of committing suicide. Perhaps a boat or a raft, hidden by the fog, was waiting for them.

But there were other desperate men in that mat shop at the time of the break, including John Paul Chase, serving a life sentence for killing an agent of the F. B. I. Why didn't he go, too? He probably would have gone if there had been a boat waiting. Perhaps he knew that these two men didn't have a chance to escape and he decided that he would rather stay alive and serve his sentence than scurry down the cliff to certain death.

On May 1, 1936, Joe Bowers "made a try" of it, scaled the wire fence near the workshop, and started his descent to the rocks below. He was repeatedly warned by the guards in the towers, but he wouldn't turn back and two shots ended his life.

The news that gave the Department of Justice the most concern was conveyed in a telephone conversation between the Deputy Warden and James V. Bennett, director of the Bureau of Prisons, on September 24, 1937. One of the prisoners stepped out of line in the mess hall and struck a vicious blow at Warden Johnston. The injuries, fortunately, were not serious and both inmates and guards quickly came to his rescue.

MURDER ON THE ISLAND

On May 23, 1938, Officer R. C. Cline was killed by an inmate who, with 2 other prisoners attempted to make a break. Thomas R. Limerick, one of the prisoners, was killed. The second prisoner was injured, and the third quickly surrendered. This was the first and only death among the custodial force at the island.

There have been other times when the calm of the island routine has been disturbed, as when boats have ventured into the prohibited zone and it has become necessary for the guards in the towers to spray the waters with warning bullets.

There was a day in November 1936 when the river steamer *Delta King*, which plies between San Francisco and Sacramento, went aground on the northeastern end of the island. A cutter immediately came to its assistance and the steamer was towed away after a 20-minute stay. The warden wasn't uneasy. He just made sure that there were no landing parties and that none of his charges embarked.

One morning in January of this year four dangerous men, who had been segregated for some time in the old part of the cell block where the soft steel bars had not been replaced with the tool-proof variety, somehow got through the bars and out of the cell house. They were caught at the water's edge.

One of them—Doc Barker, the kidnaper—resisted and was killed. Another was wounded. The venture cannot be chalked up as an "escape," because you're not "outside the wall' at Alcatraz until you've negotiated a mile and a half of water.

But getting out of the cell house was a feat that called for almost unbelievable ingenuity and patience on the part of that desperate quartet. How did they do it? I don't know. I had left the office of Attorney General only a few days before.

But, remember, you don't need a "saw" to saw through a soft steel bar. Put a little cement dust or other abrasive on a piece of string and work that string patiently across the bar for days and weeks. Eventually you "saw" through. Incredible? Well, it has been done. At any rate, tool-proof steel will soon replace the old soft steel throughout the entire cell block.

Perhaps no prison should ever be dubbed "escape proof." But let's put it this way—Alcatraz is about as near to it as we can get.

It is amazing that there have not been more attempts at escape. The answer lies in the strict discipline on the island, the constant watchfulness of the guards, and the shrewd manner in which the warden administers every phase of the institution. Every guard is qualified as a sharpshooter or as an expert pistolman.

Alcatraz is a success. It is a secure place for desperate men. Discipline has been improved at the other institutions from which we have culled the troublemakers. Alcatraz has likewise served as a distinct deterrent to those who would be troublemakers if confinement on "the rock" were not an ever-present threat.

And Alcatraz is in good hands. Warden James A. Johnston has devoted 25 years to the public service. He served the State of California as head of San Quentin Prison, Folsom Prison, as director of the State department of penology, as a member of the California Crime Commission, and in many other capacities. He has the intelligence, the experience, the ingenuity, and the humanity to see that nothing but the sentences of the court are executed at Alcatraz.

Generally speaking, the men at Alcatraz are not susceptible to ordinary rehabilitation procedure. They must be given specialized treatment because they are, in a sense, extraordinary criminals. Alcatraz was not created on impulse, but after long study. The site was chosen, not by whim, but after long consideration and careful planning. Alcatraz is designed to handle a particular group of prisoners in a particular fashion, and, while it is regrettable that we need an Alcatraz, experience shows its existence to be essential for the protection of the public.

EVENTUAL PAROLE POSSIBLE

It has been found necessary to confine only 300 of the 18,000 Federal prisoners in this institution. The rest are taken care of through the diversified prison system with its 22 institutions, ranging from reformatories, jails, and mountain camps to the larger penitentiaries of Atlanta and Leavenworth. It is in these 22 other institutions that more hopeful material is found for the important task of rehabilitation.

But even some of those in Alcatraz may sometime reform. If men can demonstrate that they don't need the discipline and the close custody that characterizes that prison, they may be retransferred to one of the other institutions—and occasionally this is done. They may even some day be considered for parole.

Discipline is rigorous and routine strict at Alcatraz, but both are tempered as much as circumstances allow by the humaneness that must characterize a civilized penal system.

The Spending-Lending Bill

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

Mr. GILLIE. Mr. Speaker, with reference to the action of the House on yesterday, I wish to state that I have received a great many letters from businessmen of repute in my district urging against the passage of the administration spending-lending bill. This morning I have received a number of letters still urging opposition to the measure. I ask leave of the House to insert in the RECORD two of these letters because they were written by serious-minded men who look to the welfare of the whole country. The letters follow:

FORT WAYNE, IND., *July 31, 1939.*

HON. GEORGE GILLIE,
Washington, D. C.

DEAR MR. GILLIE: The disposition on the part of Congress to reduce spending is one of the most wholesome signs on the horizon and can be the beginning of a new era of prosperity in which our people will be reemployed.

The theory of spending Government funds to promote business has definitely been proven false, dangerous, and unquestionably retards business and employment. Congress should make an end of it. It should give business and normal economics a chance to restore the natural processes of development as they have always been prior to the recent experimental period. We have had our taste of theories. Now let us go back to what we know to be sound, controlled, common-sense practices. Let the country be sure that this is the attitude of the majority in Congress and you will see a restoration of good business, which is already long overdue.

Very truly yours,

WAYNE CANDIES, INC.,
W. C. DICKMEYER.

FORT WAYNE, IND., *July 29 1939.*

Congressman GEORGE W. GILLIE,
Washington, D. C.

Honorable Congressman GILLIE: I ask you to oppose the House spending-lending program. We never can spend ourselves into prosperity. This is one of the impossible things for the Government to continue to tax business beyond its ability to pay.

Handing out money to the farmers is one among the many spendings that is getting nowhere. Many a farmer has told me who has received money that he did not need it, but he was willing to take it while taking was good, and they knew that it would not be kept up, but just laughed about it and thought it was a joke. This will never bring prosperity to our country.

Very truly yours,

SCHLATTER HARDWARE CO.,
B. H. HOLLOPETER,
President, Treasurer, and General Manager.

Son Elliott's Broadcasts

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 31, 1939

EDITORIAL FROM DETROIT (MICH.) FREE PRESS

Mr. SHAFER of Michigan. Mr. Speaker, were it not for the prestige of his father, few people would be aware of the existence of Elliott Roosevelt, and his radio mouthings would attract no more attention than a ham sandwich at a family picnic.

But because his father is President of the United States, son Elliott has suddenly discovered his place in the sun and has blossomed out as No. 2 critic of the Seventy-sixth Congress. His blatherings, which ordinarily would be consigned to the wastebaskets of most radio stations, are broadcast over a self-controlled network of the Southwest, and New Deal press agents, whose salaries are paid by the taxpayers of the United States, are now making his broadcasts big news.

Son Elliott's recent tirade, in which he declared Congress may have "outlived its usefulness," definitely marked him a New Deal propagandist of the first order. The Detroit Free Press, in an editorial headed "Question of Usefulness," expresses the reaction of many to son Elliott's sad attempt to criticize the Seventy-sixth Congress.

The editorial follows:

QUESTION OF USEFULNESS

Son Elliott finding the National Legislature in a rather thoroughgoing state of revolt against the White House and its destructive New Deal delusions, drops an appearance of oratorical impartiality about public affairs to assert heatedly that "Congress may have outlived its usefulness."

A good many people in the country will be inclined to say that on the contrary the body has just begun to show a real capacity for usefulness, and should keep on with a good work.

They will be less impressed with the young man's sudden discovery of "cloak-room deals" and "dubious coalitions" than they will be with the interesting fact that he seems never to have suspected the existence of such things until he found Congress slipping out from under his parent's thumb.

In short, "deals" were not iniquitous or pernicious as long as they were New Deal deals. There was no question of the "usefulness" of Congress as long as it stuck to that sort of deals. Which, of course, is the true New Deal-Roosevelt view.

Son Elliott's remarks might well make Benito and Adolf long to pat him on the back and receive him into the orthodox fold.

Champoeg, Oreg., a National Shrine

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 2, 1939

Mr. ANGELL. Mr. Speaker, Champoeg, on the Willamette River in Oregon, has been approved by the Advisory Board of National Parks, as a historic site. I want briefly to call to the attention of my colleagues this important place, not only as one of local historic interest but one of great significance nationally. We Americans take a special pride in the fact that our continental United States is bounded by two great oceans. This, together with the further fact that our neighbors on the north, throughout our history, have been real neighbors, has made no occasion for any lines of defense separating these two countries. This is significant when we consider the situation existing between the major countries of Europe today, with the billions of money that has been expended in preparation and maintenance of lines of defense separating these warring nations.

Had it not been for that company of brave pioneers who made history at Champoeg in Oregon, it is doubtful whether the boundaries of the United States today would extend to the Pacific Ocean. It was at Champoeg that Joe Meek and 51 settlers held a meeting on May 2, 1843, to consider ways and means of establishing civil government in that far-removed Territory, with the thought in view of preserving it to the United States. On July 5, 1843, another meeting was held at historic Champoeg, and a provisional government was established and assumed jurisdiction over the Territory, and a code of laws was adopted, in the preamble of which it was declared "until such time as the United States of America extends their jurisdiction over us." The Oregon country comprised what is now Oregon, Washington, Idaho, and part of Montana. It was an immense empire, and there was a sharp conflict between settlers from the United States and those from English possessions as well as other foreign countries. It was through the vigor, foresight, and patriotic loyalty of the American settlers that this country was preserved, eventually to become a part of our domain.

As a part of my remarks I desire to set forth a letter recently received from Mr. Leslie Scott, of Portland, Oreg., a native son of the State and a historian of note:

PORTLAND, OREG., *March 27, 1939.*

Mr. HOMER D. ANGELL,
House Office Building, Washington, D. C.

DEAR MR. ANGELL: Responding to your letter of March 21, I am enclosing a pamphlet on Champoeg, which, I am told, was used for reference in the recent recognition of Champoeg by Secretary Ickes.

Champoeg was the place where the provisional government was established at two conventions of settlers in 1843, on May 3 and July 5. Laws were then and there adopted and officers elected and installed. These meetings were the largest and most important that the settlers had held up to that time.

American citizens and British subjects then in Oregon probably were about equal in number. A few French-Canadians were attracted to the American viewpoints by personal friendship and regard for American institutions. In the ensuing 3 years, additional settlers, coming by the Oregon Trail, made the American preponderance 10 to 1.

This American majority, coupled with the "fifty-four-forty-or-fight" national election of 1844, and the Texas-Mexico crisis, hastened the Oregon boundary treaty of 1846.

Some Champoeg enthusiasts have aroused a controversy which has been used against Champoeg; they have said that the May 3, 1843, meeting at Champoeg "saved" Oregon to the United States.

This controversy has had unfortunate consequences in delaying recognition of Champoeg.

The Champoeg meetings had no direct bearing on the boundary question, although they were symptomatic of the international rivalry of the time. Nearest to the settlers' interest was the legalization of land titles to be effected by the provisional government. Such interests supplied the effective motive.

The provisional government was highly important in pioneer Oregon affairs, with declared jurisdiction in 1843 south of Columbia River and with extended jurisdiction in 1845 north of Columbia River.

The provisional government represented:

"An autonomous community in the full sense of the term, engaged in agriculture, trade, commerce, * * * made war and concluded peace by their own authority" (Deady, United States district judge, in 1 Oreg. Repts. 391).

This was the first American government on the Pacific coast; succeeded by the Oregon Territorial government in 1849.

Charles Wilkes and Sir George Simpson, who were in Oregon in 1841, say that there was no government in Oregon at that time. Numerous pioneer settlers have transmitted the same record.

Administration of the perishable estate of Ewing Young, who died in Oregon in 1841, was conducted under laws of New York by common consent, as a matter of necessity, and not as a function of recognized government. Early settlers held several trials and punished culprits, prior to the provisional government, under a sort of common law of personal conduct, just as, when traveling the Oregon Trail, they stopped and held trials for the purpose of meting out justice to offenders.

But there was no code of laws in Oregon, no government, until the Champoeg meeting of July 5, 1843.

The settlers' provisional government was one of the most typical creations in our Nation of representative democratic government. It sprang spontaneously and voluntarily out of the political instincts of westward American pioneers, jumping a gap of 2,000 miles from the Mississippi River in the expansion of the Nation. Oregon in 1843 was the Nation's only land on the Pacific. The provisional government assumed jurisdiction on July 5, 1843, at Champoeg, as the preamble of its laws (then adopted) declared:

"Until such time as the United States of America extend their jurisdiction over us."

The importance of Champoeg seems clear and unmistakable. I hope that you can obtain further support for an American memorial there.

Yours truly,

LESLIE SCOTT.

Those of use who are familiar with the facts with reference to Champoeg, for years have been endeavoring to secure a Federal appropriation for the improvement of the site and the construction of a suitable building as a memorial to those pioneers who made it possible that America is today bounded on one of its frontiers by the Pacific Ocean.

Unfortunately the Director of the Budget has not provided funds for the development of the site, and I trust that when the Congress meets again funds will be made available, so that Champoeg, the birthplace of civil government on our Pacific shores, may be preserved for future generations, to the end that the American people may have an opportunity to visit this historic spot in Oregon pioneer history.

Major Croghan and the Defense of Fort Stephenson

EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

ADDRESS BY JUDGE ARTHUR W. OVERMYER, FORMER MEMBER OF CONGRESS, ON AUGUST 2, 1939

Mr. WHITE of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Judge Arthur W. Overmyer, of Fremont, Ohio, judge of the Ohio Court of Appeals, former Representative in Congress, Thirteenth Ohio District, Sixty-fourth and Sixty-fifth Congresses, on the occasion of the one hundred and twenty-fifth anniversary of the defense of Fort Stephenson, August 2, 1813, by Maj. George Croghan, with 160 Kentucky troops and a single cannon, against about 700 British regulars under General Proctor and a thousand Indians, under Tecumseh:

Mr. Mayor, distinguished guests, and my fellow citizens, it is indeed gratifying to know that in spite of the highly commercialized and selfish age in which we live, there are those who are willing to give of their time, money and energies to commemorate important events in the earlier life of the Republic. I congratulate the mayor and the committees who had the patriotism and the inspiration to conceive and carry forward the plans for the proper observance of the one hundred and twenty-fifth anniversary of a heroic and important event in the history of our country which occurred on this spot. The splendid success attending this celebration should bring to all who have helped a feeling of deep satisfaction.

We are assembled at this moment, my fellow citizens, on hallowed ground. On this spot, 125 years ago a small body of brave and determined young men with a lone cannon and protected only by a rather frail stockade, also said, as did the Spartans at Thermopylae, "They shall not pass," and added a glorious page to the history of our beloved country. In the school histories it is not ranked with Yorktown or Gettysburg, nor in the number of men engaged or machinery of war employed is it ranked with many other battles on American soil. But as an example of sheer patriotic heroism and in the mighty and far-reaching results flowing from it, it ranks with some of the greatest and most important episodes in American history, for we have the word of no less an authority than Gen. William T. Sherman that this battle and Perry's victory at Put in Bay a month later, "saved the whole Northwest to the United States."

On the day that Major Croghan won his victory here, Simon Bolivar, known as the liberator and the George Washington of South America, was marching as a conquerer into the capital of Venezuela, which country was thus freed of Spanish rule and became one of the first republics of South America. In the months of July and August 1813, when the British and Indian attack on this fort was being planned and the battle fought, Napoleon was again thundering across Europe with several hundred thousand men. Six months before had occurred the famous retreat from Moscow wherein a hundred thousand men had died. In the months of July and August 1813, the mighty Napoleon was confronted with rebellion among the European nations he had previously conquered, and though a less courageous man would have accepted the offers of peace tendered by his antagonists, Napoleon, on August 8, 1813, 6 days after the battle of Fort Stephenson was here fought, made the fateful decision which marked the beginning of his downfall. He rejected the offers of peace. The year 1813 was the twentieth year that Europe was tearing itself to pieces by the wars under Napoleon, wars in which millions died and civilization was all but destroyed. Yet out here in the American wilderness, in a little stockade on the banks of the Sandusky River, on the 2d day of August 1813, was fought a battle by 160 American patriots, the results of which added more to the welfare of civilized humanity and did more to advance the cause of human liberty and freedom than all the battles of 20 years under Napoleon. These contests in Europe were between monarchies for supremacy. The war for humanity was not being fought on the banks of the Elbe in Europe but here in the wild woods of the Ohio Valley on the banks of the Sandusky and Maumee Rivers.

The story of the Battle of Fort Stephenson and the Harrison campaign, of which it was a part, has oft been told, yet it is ever new. As each new generation of our citizens comes upon the scene the story should again be recounted in all its details, so that they, too, may be inspired as we have so often been inspired by it. What is it that fires the human heart and thrills it with an aspiration to do noble things? Is it when a hundred thousand men meet another hundred thousand in battle, each armed with all the machinery of war? No; there is nothing noble or inspiring to the human soul in that. That is wholesale murder, and we all so regard it. It is individual and unexpected heroism, inspired by love of country and love of liberty, that thrills the human heart, the exploits of a Paul Revere, a Nathan Hale, a Major Croghan, a Commodore Perry, a Richmond Hobson; yes, and in peacetimes a Lindbergh, a Howard Hughes, a Douglas Corrigan, and, if you please, a Johnny Vander Meer. The exploits of such men are the things that stir men's blood and inspire other men to heroic and noble things.

For more than 30 years I have taken part in every Croghan Day celebration, and I have read everything I could find on the subject of this battle and the campaign in this section of which it was a part; and from all I have been able to learn I have come to one definite conclusion, and that is that the Battle of Fort Stephenson was won because youth was in command. Major Croghan was only 21 when the battle was fought. An older man of equal courage but greater wisdom and experience, in the face of overwhelming odds and vastly superior numbers, would have obeyed his commanding officer's orders, destroyed the fort, and retreated up the river to headquarters. But daring youth said, "We have decided to defend this place, and by Heaven we can!" A month later another youth, Oliver Hazard Perry, with a hand-built fleet of a few ships built on the shores of Lake Erie, completed the victory and ended the campaign in these parts by defeating the British Fleet at Put in Bay and being able to send to General Harrison the famous message, "We have met the enemy, and they are ours." Over at Clyde in this county repose the remains of another youth, Gen. James B. McPherson, who at 36 commanded an army in the Civil War and by reason of youthful personal daring and bravery gave his life in the heat of battle.

The daring individual exploits of youth in battle on land and sea adorn the pages of American history from earliest days, and have furnished to each generation of our citizens the inspiration to patriotic duty in establishing and maintaining our Nation. And we are grateful today that our daring youth were not all of the past but still abide with us in every generation to thrill and inspire with deeds of valor, not only in battle, thank God, but in the fields of peaceful human endeavor, such as we have witnessed within the past month.

The War of 1812 was what might be termed a "mopping up" following the American Revolution. Hostilities between the Colonies and England had ceased with the surrender of Cornwallis at Yorktown. But there were many issues unsettled, and England, though whipped, was not then farsighted enough to sit down across the table with our colonial leaders and adjust these issues. Not only that, but, as I have said, Europe was then involved, as was England, in a death struggle under the heel of Napoleon, and all was being done that was possible to involve other nations in the struggle. One of the issues left unsettled by the Revolution was the question of just how much territory was being given up by the conquered nation to the Colonies and where the territorial lines were to be established. Other issues were involved, including the impressment of American seamen into British service to help fight Napoleon. The military posts of Niagara, Detroit, and Mackinaw were detained by the British under various pretexts for many years in violation of the treaty of peace following the Revolution. The Indian tribes on the frontier were supplied by the British with arms and supplies to irritate and murder the settlers. Many in the British ministry still had hopes that a new war could be fostered and the American Colonies regained. Washington, Adams, Jefferson, and Madison made efforts to secure the full results of the peace treaty without much success. Campaigns were conducted against the Indians northwest of the Ohio River—General Harmar's campaign in 1790; General St. Clair's unfortunate campaign in 1791; Gen. Anthony Wayne's brilliant campaign in 1794, which ended in a victory at Fallen Timbers on the Maumee. Following this, treaties were made with the Indians which had resulted in general peace on the frontiers for a period of 15 years, from 1795 to 1810, and this period was one of rapid growth and development in this northwest section. But England's policies in America continued and war was inevitable.

The question of the boundaries of territory won by the Revolution, and especially the boundaries of the Northwest, was settled

here at Fort Stephenson, the only land victory won on American soil in the War of 1812—the Battle of New Orleans having been fought after peace had been declared but having then no submarine cables or radio the news of peace did not reach Andrew Jackson in time—and by Perry's victory on Lake Erie and by the Battle of the Thames. Had Croghan failed; had Perry failed, this area might today be British with Canada, or a longer war or a later war been necessary to hold it.

Fifty-three years ago, on August 1, 1885, the second of August falling on Sunday, the beautiful granite monument yonder was unveiled in the presence of a vast throng. The cost of the monument was $7,000 and the money was raised by a bond issue approved by the voters of Sandusky County. The chairman of the day was our beloved fellow citizen, ex-President Rutherford B. Hayes; the orator of the occasion was Gen. Ralph P. Buckland, and the historian Capt. John M. Lemmon. Seated on the platform were several score of Civil War generals and other distinguished guests, including the two Ohio Senators, John Sherman and Henry B. Payne. The monument was dedicated to Major Croghan and his little band, and to the 3,000 and more soldiers of the Mexican War and Civil War furnished by Sandusky County.

In 1906 Col. Webb C. Hayes secured permission from members of the Croghan family to remove the remains of Major Croghan from the family burial ground in Kentucky to the sacred soil here which in his youth he had so gallantly defended. As a part of an impressive celebration and ceremony, of which I had the honor to serve as secretary, we committed our hero's mortal remains to their merited eternal resting place at the base of yonder monument. Here may our citizens, young and old, pause through the ages, generations yet unborn, and reflect upon the debt of gratitude we owe this gallant soul, and draw inspiration to lives of patriotic usefulness. Here, guarded by Old Betsy, the lone six-pounder which on that fateful August day a century and a quarter ago served him so well, may he rest in peace and glory until the resurrection morn.

On August 2, 1913, when we celebrated the one hundredth anniversary of Croghan's victory, we had the unusual honor of having on the platform as honorary chairman of the day, for whom I had the honor of serving as active chairman, the last survivor in these parts, and I think in Ohio, of the Mexican War, Capt. Andrew Kline, a citizen of this country then crowding the century mark. And the gratifying incident of Captain Kline's presence on that day was that he had seen Major Croghan in his lifetime. After Croghan's rise to fame on this spot in the War of 1912 he later was an officer in the Mexican War of 1848 and it was there Captain Kline saw him several times. Croghan died of cholera in New Orleans in 1849.

The last survivor, so far as known, of the Battle of Fort Stephenson was a Sgt. William Gaines, who was found by President Hayes to be living at the National Soldiers' Home at Washington, D. C., while Hayes was President. A beautiful story is connected with the discovery of this old veteran by President Hayes. The story is that Sergeant Gaines was at once brought to the White House to pose for his photograph, and when the picture was about to be taken it was discovered that no sergeant's stripes adorned his uniform, whereupon the President's wife, Lucy Webb Hayes, she of sacred memory, hurriedly secured needle and thread and kneeling on the floor sewed the stripes on the length of the veteran's trouser legs, and in the resulting photograph they may be plainly seen. The photograph appears in many historical publications relating to our local history. Sergeant Gaines was living in 1885 when the Soldiers' Monument was erected and unveiled here but was unable to be present.

There is not time today, of course, to recount the full story and details of this battle or the campaign of which it was a part. One thing is certain—no orator or writer need weave into that story the product of fancy or imagination, for the facts are so fanciful and picturesque that they require no embellishment. It is a satisfaction to know that Croghan's great feat and his gallant and patriotic service was duly recognized by a grateful Government. For this exploit he was breveted lieutenant colonel by the President of the United States; Congress awarded him a Medal of Honor, one of nine; and to his officers, six swords of the fifteen ever so given. In 1839, when the first duly organized celebration of his victory here was held, he was on duty at St. Louis and was duly invited by the committee to be present. His duties made it impossible for him to come, but he wrote a letter of acknowledgment which is among the treasured possessions we have locally.

We have not time today to tell of the scores of interesting incidents of great historical significance connected with this battle, and the military events of this section which contributed mightily to the life of our Nation. The story of this battle and the siege of Fort Meigs at Maumee; the story of General Harrison's military road through the forest from Fort Stephenson to Fort Meigs, now practically the route of McPherson Highway, or Route 20, between Fremont and Maumee; the story of Old Betsy, its recovery by Mayor Brice Bartlett in 1852, and its permanent home on the grounds it helped to defend; the story of the acquisition of the site of the fort and battle by the city from private owners in the 1870's, and the part played by General Hayes in finally securing it; the story of General Harrison's orders the night before the battle to abandon this place and retreat up the river to headquarters, and Croghan's reply which nearly cost him his command; the story of the numbers of British troops with many cannon and their host of Indian allies which made up the formidable force against which Croghan and his 160 brave Kentuckians chose to defend—all these incidents have been told and retold and are familiar to those of our citizens who have the slightest interest in things historical. But our youth and those of succeeding generations may do well to familiarize themselves with the whole story in all its interesting details. They will find them in the publications of the Ohio Historical Society; in Howe's Historical Collections of Ohio; in the writings of the late lamented Lucy Elliott Keeler; and especially in a reprint of a book entitled "The Late War in the Western Country," first published in 1816 by Captain McAfee, of the Kentucky troops, who took part in the entire operations in these parts in 1812 and 1813. This book was reprinted some years ago by Mr. C. S. Van Tassel, of Bowling Green.

I close by expressing the hope that the patriotic sentiments of our people may never sink so low, that our love of country may never become so weak, and our selfishness so strong, that we shall forget the heroic sacrifices made by men of earlier days to secure for us and our posterity the blessings of liberty, freedom, and representative government. May we draw inspiration from these ceremonies today and pledge anew our fealty to a country and a form of government which, with all its faults and weaknesses, is still the best government and the best country in all the world. May we remember that happiness, which we all seek, must still be found in individual effort and individual right living and right thinking, and that happiness and prosperity cannot be brought to your door by the Government nor from any source outside of yourself. The function of government is to protect you while you work out your own destiny. Our Government, when properly administered, is still the best form of government in the world to insure to its citizens the happiness, freedom, and prosperity we all seek, and may we ever love and defend it, inspired anew by reflection upon the life and service of gallant Maj. George Croghan, our hero!

Block Booking and Blind Selling

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 3 (legislative day of Wednesday, August 2), 1939

EDITORIAL FROM FILM BULLETIN OF APRIL 8, 1939

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from Film Bulletin of April 8, 1939, by David James Hanna, entitled "Should Actors Favor Block Booking?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Film Bulletin of April 8, 1939]

HOLLYWOOD EDITORIAL—SHOULD ACTORS FAVOR BLOCK BOOKING?

(By David James Hanna)

According to the daily papers, steps are being taken by the Screen Actors' Guild in opposition to the passage of the Neely block-booking bill. A few days ago, acting in his capacity as a director for the organization, Robert Montgomery appeared before a Senate committee and publicly aired the views of the guild on the proposed legislation.

Montgomery frankly stated the association was opposed to the bill, believing its enactment would cut motion-picture production in half and directly threaten the employment of a large number of people, among them the industry's actors.

Such a statement forces us to the conclusion that the guild is either very poorly informed or that it is deliberately betraying the confidence of its members, who depend on the organization to aline itself with those causes which best serve the interests of the motion-picture actor.

Passage of the Neely bill could not possibly create any new hardships for Hollywood's Thespians. Quite the contrary: The abolition of block booking and blind selling would not only make more employment but it would serve to spread work among a larger number of players.

Film Bulletin has commented before on the naïveté of the incredible theory that production would be cut in half if compulsory block booking were outlawed. We quote from the editorial: "If by any chance the present studios could not or would not produce sufficient pictures to keep the theaters of America operating every day in the week, the initiative and capital of other enterprising people would immediately be plunged into this lucrative field. Surely we all comprehend the ancient economic principle of supply and demand!"

Certainly the directors of the Screen Actors' Guild cannot be so stupid that they are ignorant of this fact. The creation of a few more healthy production companies would automatically take place and in their wake would come employment for players, as well as other artists and technicians necessary to picture making.

A point which the guild appears to have overlooked is the fact that such new organizations would be inclined to employ people who may now find it difficult to crash the proverbial "ranks." We are speaking of the rank and file supporting players, those who get $25 to $75 a day (when they work), whose economic problems have been given all too little attention since the guild came into power 2 years ago.

In this division there exists a favored few players well known to casting directors, producers, and directors. They are constantly in demand. And why not? A film production is a huge investment and a production executive would not be worth his salt did he not insist upon utilizing players whose work is familiar to him and whose talents are such that the director is confident of their ability to handle the assignment.

This system gives a great deal of work to a few, but creates hardships for hundreds of other competent players whose careers are constant struggle for the one opportunity to gain recognition.

New, young, alert organizations could and would use such players. The guild would very shortly find a better standard of earnings among all its players, rather than among a small percentage.

If it were true that the number of pictures produced by Hollywood would become fewer than now with the passage of the Neely bill, only the class C to Z pictures would be eliminated. Surely no actor in his right artistic or financial mind can possibly express anxiety over their disappearance from the production scene. Cut salaries are the rule rather than the exception in these pictures. The length of employment for stars, features, and bit players is brief. Extra lists are pared to the core. The careless, sloppy manner in which many of these quickies are produced injures, rather than promotes, careers.

On the other hand, the average A picture employs a large number of players in every division. The actor works a considerable length of time and is better compensated. Extras, naturally, play a large part in bolstering the production values of such a feature. The writing and direction are painstaking and performances are naturally superior.

Everything considered, members of the Screen Actors' Guild stand to gain a great deal from the contemplated reforms.

Opposition to the elimination of a restrictive practice like compulsory block booking surely seems to run directly counter to the actors' best interests. While the top-notch stars may be content with the luxurious salaries they enjoy, the average movie player would advance his art and be better remunerated in a free and competitive production field, which would strive to produce only good pictures—because only good pictures would sell.

With that patent fact, it is most difficult to reconcile Guild Leader Robert Montgomery's speech in Washington.

Confederate Soldiers Buried on Historic Johnsons Island

EXTENSION OF REMARKS
OF
HON. DUDLEY A. WHITE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. WHITE of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert a letter written by me to Hon. Louis Johnson, The Assistant Secretary of War, Washington, D. C., on July 13, 1939:

JULY 13, 1939.

Hon. LOUIS JOHNSON,
The Assistant Secretary of War, Washington, D. C.

MY DEAR MR. SECRETARY: Johnson Island is situated in Sandusky Bay, 3 miles from the city of Sandusky, Ohio. During the Civil War it was used by the Federal Government as a Confederate officers' prison. During the 4 years, from 1861 to 1865, 15,000 officers were confined there, 206 of whom died and are buried in the cemetery, which is now owned and cared for by the United States Government, as you know, under the War Department.

You can see the character and location of this cemetery, with its rare background of military history, makes it a most unusual national shrine. Fortunately, private citizens and patriotic organizations recognized this fact and they assumed the responsibility for its preservation up until the time it became the property of the Government. The officers buried in the historic cemetery were from Virginia, Georgia, North Carolina, Louisiana, Alabama, Mississippi, Arkansas, Tennessee, Missouri, Kentucky, Texas, Florida, and South Carolina, and therefore these States have a vital interest represented here.

After the war ended, Mr. Johnson, owner of the island, built a wire fence around the cemetery. Then the G. A. R. took over the care of the graves and until 1907 memorial services were held on each Decoration Day similar to those for their own dead. Thus its patriotic significance enlarged and it became a symbol of reunion of North and South. When the G. A. R. ranks thinned and their strength diminished, the United Daughters of the Confederacy purchased the hallowed spot. In the meantime, officials of the State of Georgia became interested and replaced the wooden markers on the graves with marble headstones.

The purchase of the cemetery and a strip of land in the front of the cemetery was made by the Robert Patton Chapter, U. D. C., of Cincinnati. On June 7, 1910, a handsome marble monument was unveiled and the dedication address was delivered by Gen. George W. Gordon, of Georgia. The base of the monument was contributed by the Masons of Mississippi; the foundation is of South Carolina marble. The statue represents a southern soldier, his left hand clutching a musket, his right hand raised to his forehead, his gaze directed toward southern skies. The statue of the Confederate soldier was designed and executed in bronze by the noted sculptor, Moses Ezekiel, who was a soldier under General Lee.

Under present conditions, this historical shrine is virtually inaccessible to visitors. Docking facilities are badly needed. The patriotic pilgrimages are continued each year by the Daughters of the Confederacy and other patriotic organizations and individuals, despite the lack of a dock and existing obstacles. They are compelled to make a sometimes hazardous landing at an old quarry dock at the lower end of the island and to walk a great distance across fields and through mud to reach the cemetery. As a result, this great shrine is made inaccessible to thousands who would otherwise be attracted to it.

Inasmuch as the Government has thought enough of Johnson Island Cemetery to take title to the property, does it not seem entirely reasonable that docking facilities should be provided suitable for its purposes? It is my understanding that an appropriation of $15,000 was put through a few years ago but that it expired during the time required for surveys and before the job was undertaken. Under these circumstances, I imagine that the surveys are now available.

I recognize that it is probably too late to accomplish anything during the short time remaining for the present session of Congress, but I wonder if preparation cannot be made to obtain the authority for construction of the dock in the early part of the ensuing session. I hope that you and other officials of the War Department will share my belief that this move is more than justified. With your most valuable cooperation, I feel sure that it can be brought to a successful conclusion. I am deeply indebted to you for your willingness to look into these possibilities.

With many thanks and best regards,

Sincerely yours,

DUDLEY A. WHITE.

The following is a list of Confederate officers buried on Johnsons Island:

Date of death	Name	Rank and company	Regiment	Number of grave
Nov. 8, 1863	J. E. Cruggs (or Scruggs)	Colonel	85th Virginia	1
Nov. 6, 1863	E. M. Tuggle	Captain, Company H	35th Georgia Infantry	2
	Confederate soldier		Unknown	3

Booneville Power Contracts With Private Utilities

REMARKS
OF
HON. WALTER M. PIERCE
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 3, 1939

Mr. PIERCE of Oregon. Mr. Speaker, a full page advertisement, signed by the Portland General Electric Co., has recently appeared in one of the daily papers published in Portland, Oreg. This company is the operating electric company wholely owned by the Portland Electric Power Co., a holding company. In this advertisement there are quotations from the speech made by Franklin D. Roosevelt in Portland in September 1932, and from the few disconnected sentences selected for quotation, the inference is drawn that the President is opposed to the people's utility districts in Oregon, and that he wishes to have the electricity from Bonneville distributed to the users in Portland, Oreg., through the meters and over the wires of the present operating companies in Portland.

I personally heard the President deliver the speech of September 21, 1932, to which the reference was made. The theme

of that speech was that there should be four yardsticks established by the Nation to measure the cost of furnishing electricity—T. V. A. in the Southeast, the St. Lawrence in the Northeast, Boulder Dam in the Southwest; he added that the next development should be made on the Columbia River, affording a yardstick so that people might know the real cost of electricity and the distribution thereof in the Pacific Northwest.

Since the delivery of that speech, the President on several occasions has distinctly endorsed cooperative distribution of the electricity developed at these particular points for which the Government has appropriated money in loans. The T. V. A. in the Southeast tried in every way possible to cooperate with the private utilities. They found it simply impossible. A contract was written with a private utility known as the Arkansas contract—very favorable to the utilities, very unfavorable to the users of electricity and the T. V. A. It has been said that this contract will operate to keep the benefits of T. V. A. from reaching the people of Arkansas. The situation within the last few months has grown so tense in Tennessee that the Government recently authorized a bond issue of $61,500,000 to buy out the private utilities in Tennessee and in certain counties in Mississippi, because it was impossible for the people to get the benefits of T. V. A. through the wires owned by the Wall Street-controlled companies. The President, in signing this bill, affirmed his faith in public-power development. Boulder Dam, in delivering its power to Los Angeles, has been an astonishing success because the citizens of Los Angeles were alive to the situation, and under the leadership of Engineer Scattergood they have acquired the utility lines and given a monopoly to the people's district, so Los Angeles is enjoying the cheap electric rates from Boulder.

PROPAGANDA JUST A SCAREHEAD

I beseech my friends in Portland, Oreg., not to be deceived by this utility Wall Street propaganda. Again I assert, as I have hundreds of times asserted that the citizens of Portland can never enjoy cheap electric rates from the Government-developed plant on the Columbia at Bonneville if they are forced to take that electricity through the meters and over the wires of the private utilities. I am not guessing, I know. I am not prophesying, I am stating facts. The meters and wires of the Wall Street-owned utilities of Portland, Oreg., are mortgaged and bonded for such large amounts that the rates fixed by the utilities must be hign enough to pay interest on this inflated value. The only possible way for Portland to enjoy the full benefits of Bonneville development is to buy out the private utilities as Los Angeles has done, as Tacoma has done, as they are doing now in the State of Tennessee. Pay the private companies what their poles and wires, that can be used, are actually worth. Nothing more. They are not entitled to it. Pay them nothing for the franchise. That belongs to the people and was given to the company by them. Portland should have competent engineers fix values of the utility properties. They should organize the P. U. D. district.

In the advertisement referred to the utilities try to scare the people by talking about increased bonded debt. That debt is there just the same whether it is a public debt or a private debt, and the people who use electricity must pay rates sufficient to pay the interest thereon; with this difference—if the debt is a public debt—it will be amortized and paid off in a few years, the same as Tacoma, Eugene, and Los Angeles have paid off their debts. If it is a private bonded debt put on the utilities in Portland by the Wall Street companies, then the debt is never reduced in total amount but is added to on every occasion.

WHAT KIND OF A RECORD HAS PEPCO MADE?

If this activity is carried on by the people, there will be no necessity for highly paid full-page advertisements appearing in the Portland paper to which I referred. There will be no need of expensive lobbies in Salem and Washington. There will be no need of extremely high salaries such as are today paid to the managers of the utility. Is the Portland Electric Power Co. to be trusted by the people of Portland again? Will they ever have confidence in a company that has gone through two reorganizations or bankruptcies in the last few years, repudiated its debts, defrauded thousands of citizens of Oregon by inducing them to buy stock in a company which soon resorted to bankruptcy or reorganization, rendering that stock valueless? The records show that in one brief period of less than 2 years, the Portland Electric Power Co. increased its capitalization $26,000,000 with no substantial addition to the physical value of the property. Time and again the Portland Journal has published the gas scandal by which the Portland Electric Power Co. was obliged to purchase stock in Seattle gas that was worth $15 per share on the market. The Portland company was obliged to pay $225 per share. The stock manipulators sat on both sides of the table and the electric-light users of Portland were the "goats." They had to pay. Is such a company now to be trusted? Have these bankruptcies and reorganizations been necessary? Compare the company with Tacoma on the north, a field only half as valuable as the Portland field for sale of electricity. The Tacoma plant never went through bankruptcy. The people own the generating and distributing systems, and it is 80 percent paid for. In 5 or 6 years, Tacoma electric distribution system will be owned by the city, free of debt. Compare Portland with Eugene, in our own State, a city less than one-tenth as big as Portland. It never went through bankruptcy. Rates have been lower in both Tacoma and Eugene than in Portland. Eugene is almost out of debt, could be in another year or two, and think of the valuable generating and distributing system owned by the enterprising city, probably worth more than $5,000,000; Tacoma worth $30,000,000. They accumulated capital while Portland accumulated debt.

WHAT PEPCO SAYS ABOUT ITSELF AND WHAT ITS INVESTORS THINK

The Electrical World, an organ of the private-utility interests, had in its issue of July 22, 1939, an article entitled "Offers Utility's Facilities for Bonneville Power." The subtitle is "Griffith tenders lines of Portland General Electric to help make the Government's project a success. Says working combination would preserve private investment and give people abundance of power." The last two paragraphs of this article are so striking that I quote them in entirety:

> A program of cooperation between the private utilities and the Federal Government under State regulation of rates and practices will bring all the sound benefits of Bonneville to the people, Mr. Griffith said. "Such a program will continue the employment of our highly efficient and well-trained employees and will respect the rights and equities of the thousands of investors without whose money in the past 50 years we should never have been able to lead the country in developing the uses of electricity and to perform a widespread public service at one of the lowest costs on record."
>
> Mr. Griffith is opposed to the formation of public-utility districts, for he sees no need for them, inasmuch as the use of present facilities of private utilities will be more economical, preserve present investments, and customers get the benefit of the Government's power.

How does this sound from a man whose company is in bankruptcy with investors organizing to try to salvage at least a small sum from an apparently hopeless situation? Has that company respected the rights and equities of investors?

The State utility regulation to which reference is made should not appeal very strongly to the Oregon investors and rate payers who have, during the past few years, failed to receive any protection through State regulation. With reference to this I desire to quote from a statement recently made in an appeal to Congress by Mr. E. A. Miller, of Salem, Oreg., chairman of the protective stock and bondholders' committee of Portland Electric Power Co. Incidentally, I might suggest that no publicly owned utility has ever yet given reason for setting up a protective organization. I quote from Mr. Miller:

> However since this concern (the Portland Electric Power Co. of Portland, Oreg.) has been a controlling factor in the political destiny of Oregon for so many years last past, it no doubt will be very hard for the poor investing citizen to protest to the extent of protecting their interests.

The people of Oregon have patiently waited for the completion of the Bonneville project, thinking that they were to receive the direct benefits of this great improvement, and we are all entitled to its full benefits. The stockholders and bondholders of the Portland Electric Power Co. are thoroughly convinced of the fraudulent manipulations of Mr. Griffith and his cohorts and see no relief in sight other than the sale of the holdings of the company through a group of public-utility districts, or as a whole in one district, and thus forever eliminating this great octopus that has preyed upon the pocketbooks of the users of its service on one hand, and robbed its security holders on the other for nearly a half century.

We stockholders and bondholders ask that you use every means available to prevent the Secretary of the Interior from entering into any arrangement with the officials of the Portland General Electric Co. or any of its agencies in connection with the output of Bonneville power until a settlement can be reached with the creditors of this company (Portland Electric Power Co.). That such a contract in the hands of the officials of this company would be detrimental to the thousands of citizens of this State as it, no doubt, would be used to justify some little reduction in the electric-current rate, and this amplified beyond reason to show why the value of the assets should not be charged down, justifying the charge down of these securities way beyond any proportionate reason.

THE TAX ARGUMENT

Mr. Griffith is further quoted in the Electrical World article on the matter of taxes. It would interest me to see the result of a computation of taxes paid by Mr. Griffith's company compared with the total of losses sustained by his so-called investors:

The public also understands that the low rate at Bonneville is possible because Bonneville will pay no taxes whatever. A private development of such magnitude would have to earn not less than $2,000,000 annually for taxes alone. Thus the rate at which power will be wholesaled from Bonneville will include nothing for taxes.

The people of Oregon should not be deceived by the old arguments so often made that the utilities pay taxes. The utilities are not taxpayers, they are tax collectors. Wall Street contributes nothing to the upkeep of Portland or to any other section of the country where it owns the utilities. Rates are kept high enough so that a small percentage is taken out of the contribution of the users of electricity and turned over to the public. Publicly owned plants do the same thing except that they turn over a larger percentage while giving lower rates.

UTILITY TRANSMISSION LINES TOO LIGHT

The companies have made public pleas that their transmission lines be used for Bonneville current. The truth is, and they do know, that their lines do not have sufficient capacity to handle Bonneville power. Of course, they have distribution systems which cannot, under the circumstances and conditions created by the companies themselves, be advantageously utilized.

BONNEVILLE CONTRACTS

There is much talk in the Pacific Northwest and in the National Capital about the pending contracts between the Bonneville administration and the private utilities of the Pacific Northwest, especially the Portland Electric Power Co. and the various subsidiaries of the Electric Bond & Share. Those who believe that Bonneville should be used for the public benefit are much disturbed by constant rumors that the officials making the decisions in regard to contracts may not all hold the public interest uppermost. Thousands of eyes are watching every move. Assertions of those in charge that they favor public power and public benefits from publicly developed Bonneville power can be proven only by their actions. Before contracts are signed to deliver to a private utility agency such valuable public assets, there should be public hearings. Continued bankruptcies, increasing debt burdens, and the practice of absorbing investors' funds without return would seem to indicate that most careful consideration should be given to any proposal to make such a company the distributing agency for government power. The public interest should be protected, especially in dealing with a company which is just undergoing a second bankruptcy and repudiating obligations to over 20,000 Oregon citizens. The loss in one rural Oregon county alone through this repudiation is reported to be $1,500,000. Would any county ever have suffered such a loss through a public-utility district?

No one doubts the good intentions of the Secretary of the Interior, who is directly responsible for the administration at Bonneville. The situation is, however, extremely disturbing over this great project which has been for many months without an administrator. Its organization is being perfected and contracts prepared for signatures without the guidance of a permanent administrator who will have the responsibility for carrying out the contracts. All public power proponents throughout the country have awaited for months the assignment to Bonneville of a permanent administrator who can command the respect and confidence of public-power-minded people. The losses incidental to the delays in action have been tremendous, not only financially but in public confidence.

PORTLAND WILL PROTECT ITS INTERESTS

It is said that Portland is conservative—too mild a term for the citizens of Portland if they listen to this propaganda that is now in the air. They are just plumb foolish if they refuse to take advantage of the opportunity that is thrown at their feet by having the tumbling waters of the Columbia River to light and heat their homes, and turn the wheels of industry. If the citizens of Portland will act now like free-born Americans and shake off the clutches of the Wall Street octopus, "the world is theirs and all things in it."

Portland will realize that, from all points of view, "a private monopoly is indefensible and intolerable."

Dispelling the Fog About Trade Agreements

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. COFFEE of Washington. Mr. Speaker, in the past few weeks a series of articles have appeared in the CONGRESSIONAL RECORD designed to stir hostility among American farmers against the trade-agreements program. Emotions have been played upon to create opposition to the Hull policy of entering into agreements with foreign countries to modify reciprocally the multiplicity of barriers which restricted our foreign trade and destroyed our world markets for the products of both agriculture and industry.

Opponents having no real basis on which to establish their indictment of the program have followed the time-worn but not time-honored practice of presenting half truths, ascribing to trade-agreements results arising primarily from other causes. Studiously selected figures showing increases in imports of agricultural commodities have been and still are used by frenzied opponents of the trade-agreements program as a favorite device to confuse American farmers. With no regard to other factors these same opponents endeavor to discredit Secretary Hull's efforts to liberalize trade practices by focusing the farmers' attention on conclusions, hastily drawn, that the increase in imports of a given farm commodity measures the displacement of American farm acreage. It does not require much reflection to realize that such a conclusion is absurd.

With the same labored care used to emphasize the increases in 1937 of carefully selected farm products, these opponents fail to mention that while these imports are considerably larger than they were during the depression years, they are smaller than they were during any year between 1922 and 1930. Moreover, they refrain from mentioning the obvious fact that many of the increases in imports in 1937 of the sort grown on American farms resulted from the necessity of supplementing domestic shortages caused by the severe droughts of 1934 and 1936, and that these imports paid the full duty provided for in the Hawley-Smoot Tariff Act.

Furthermore, if it is sound reasoning to assume that an increase in imports of a given farm-commodity measures the number of American farm acres displaced—in a year when domestic supplies were reduced to a point below adequate to meet home requirements—how many more millions of American farm acres were displaced in 1929 when imports of agricultural products were 30 percent greater than they were in 1937 and allegedly the farmers' welfare was so carefully safeguarded.

On page 3543 of the Appendix of the CONGRESSIONAL RECORD there appeared a table showing imports in 1933 and 1937 of a few carefully selected agricultural products followed by the sentence:

> One has only to read it (referring to the table) to see the reason why the American farmers have had such low income during the New Deal administration.

Since these opponents of the trade-agreements program seek to base their indictment of it by comparing 1933 figures against 1937, the farmers of this country are entitled to have a fuller disclosure of the facts. I have here the same table used by these opponents, having added thereto cash farm income for as many listed items as there are data available. In the light of these facts I do not believe the farmers of this country—whose memories are not so short lived that they have forgotten the hardships and sufferings they experienced prior to 1933—are willing to return to those conditions.

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. FAY. Mr. Speaker, I beg leave to revise and extend my recent remarks on the subject of the W. P. A. in order to answer certain reports that are being maliciously circulated to give the impression that I favored cutting the prevailing rate of wage in W. P. A. projects.

I want this House and the people of my district to know that these reports are deliberate distortions of the truth.

I want it known that I not only voted against but fought against cuts in the prevailing rate of wage, and that I voted for the present Woodrum Act under protest, only because without that bill, there would have been no W. P. A. at all.

I am sure that the people of my district know that I would never willingly give my support to any wage cuts in these difficult times; but to keep the record straight, I will state the facts:

Two W. P. A. bills came before the House, one known as the Casey bill and the other the Woodrum bill. The Casey bill provided for the prevailing rate of wage. The Woodrum bill eliminated it. I voted for the Casey bill on the floor of the House, but it was beaten. When the Woodrum bill came up before the Committee of the Whole, I, together with all right-thinking Democrats, fought hard to defeat the Woodrum bill in its present form and to retain the prevailing wage rate. The committee, however, voted to present it to the House with that provision eliminated on June 30, the last day on which it could be acted upon under the law as it existed at that time. To have voted against the Woodrum bill and to have caused its defeat would not only have abolished the prevailing rate of wage but would have thrown every W. P. A. worker in the United States out on the streets and subjected him and his family to hardship, hunger, and misery. Heaven alone knows what the consequences might have been. We right-thinking Democrats were faced with the alternative of accepting the Woodrum bill as it then stood or of defeating it and abolishing completely the entire W. P. A. set-up. Obviously there was only one course to pursue and I followed it. So did 373 other Congressmen, and it will be recalled that the President finally signed the bill under protest. As a matter of fact, I have been working night and day since this defeat to bring about before this session adjourns, a rider to another bill which would reestablish the prevailing rate of wage.

Those who seek to criticize my vote must necessarily, therefore, find fault with every Congressman from New York County, all of whom voted exactly the same as I. It is clear, therefore, that anyone trying to make the people of my district believe that I deliberately voted against the prevailing rate of wage is engaged in an outright attempt to deceive the people and I am sure this will prove in the very near future to be a boomerang to those who are attempting this flagrant deception on the voters of the Sixteenth Congressional District.

For the life of me I cannot conceive how anyone can say that I would vote against a decent rate of wages which the laboring people of our city have worked to establish for 25 years, especially when I am one of them, being myself a member of an American Federation of Labor unit.

Let these destroyers of my principles and character through their back-alley whisperings be men and come out on any public platform where I will meet them for debate at any time and place to discuss all phases of my life and its association with this district.

I am willing to match my contribution to the general welfare of our district and to its people with any person in the district who so wishes to engage in debate with me.

My paramount thoughts will always be directed for the best interests of the people of my district.

I include herewith a letter from Congressman JOSEPH CASEY, of Massachusetts, the sponsor of the amendment which would have put the prevailing rate of wage into the so-called Woodrum bill.

HOUSE OF REPRESENTATIVES,
Washington, D. C., August 3, 1939.

Hon. JAMES H. FAY,
House of Representatives, Washington, D. C.

DEAR JIM: It has come to my attention that propaganda has been spread in your district to the effect that you voted against the prevailing rate of wages on W. P. A.

It was I who made the fight for the prevailing rate of wages on W. P. A. and other liberal features included in the Casey bill. Therefore, I am in a position to state that this propaganda is unqualifiedly false and has no basis in fact. You worked with me and supported me at every turn in my attempt to pass the Casey bill which would have given the workingmen in your district who are on W. P. A. a square deal.

Let me add that in your first year of office you have proved to me that you are a supporter of liberal and humane legislation in behalf of the people of the United States. You have my permission to use this letter in any way you see fit.

Sincerely yours,

JOSEPH E. CASEY.

Advantages of Denver, Colo., as the Site for an Additional Technical Aeronautical Research Laboratory

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

STATEMENT MADE ON JULY 14, 1939, BEFORE THE SUBCOMMITTEE ON DEFICIENCIES OF THE APPROPRIATIONS COMMITTEE OF THE HOUSE OF REPRESENTATIVES

Mr. LEWIS of Colorado. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me on Friday morning, July 14, 1939, concerning the advantages of Denver, Colo., as the site for an additional technical aeronautical research laboratory:

TECHNICAL AERONAUTICAL LABORATORY AT DENVER, COLO.

Mr. WOODRUM. Mr. LEWIS, the committee will be very glad to hear such statement as you desire to make in reference to a proposed item in the bill we have under consideration.

Mr. LEWIS. Mr. Chairman and gentlemen of the committee, I appreciate your courtesy in allowing me to appear this morning.

I wish to speak about the matter of technical aeronautical laboratories for the investigation of problems in aeronautics, and particularly as to the desirability of having a high-altitude location for such a laboratory.

Mr. JOHNSON of West Virginia. You come, I believe, from a city in a high altitude?

Mr. LEWIS. Yes; I come from the city of Denver, which is a mile above the sea.

The two locations which, as I understand, are now being considered are one at Langley Field and one proposed to be located at Sunnyvale, Calif. They are both, of course, at sea level. I wish to suggest the desirability of having a high-altitude station, and in that connection to refer to the advantages of Denver.

The need for these technical aeronautical laboratories, I believe, has already been drawn to your attention. I understand there are in Germany, a nation comparatively small, geographically speaking, as many as five such laboratories.

Mr. TABER. We have about 15 that are comparable to most of the ones that Germany has.

Mr. LEWIS. That is not my understanding. My understanding is that the United States Government maintains only one at this time.

Mr. TABER. There is Wright Field at Dayton, Ohio, and there is also such a station at Langley Field. There is such technical work going on, comparable with a great deal of the work done in German laboratories, in about 15 different colleges.

Mr. LEWIS. In colleges; yes.

Mr. TABER. They do work in connection with the manufacturers and the Government.

Mr. LEWIS. That really enforces the point I had in mind. All of those, I submit, are at or very near to sea level, and in order at sea level to simulate conditions at high altitudes it is necessary to have apparatus, very expensive to install and to operate, which even then does not perfectly simulate high-altitude conditions and conditions in drier regions. At Denver, a mile above the sea, we have the thin dry air of high altitudes and therefore it is not necessary to install at Denver expensive apparatus to simulate such conditions.

Mr. JOHNSON of West Virginia. How large an amount would you suggest be appropriated for such a station to be established at Denver?

Mr. LEWIS. I am unable to say at this time, but I shall have all the technical information in a very few days. There is an exhaustive study being made by the aeronautics department of the University of Colorado on that very subject, and that data will be here within a week or so. This proposed station, of course, is located well inland and not vulnerable to any air raids. Then, too, we have a climate which is particularly favorable for flying. There were last year 360 days of actual flying weather in Denver, as appears from the records at Lowry Field.

At Lowry Field we have an Air Corps technical school which Congress very generously provided. The citizens of Denver, cooperating with the Federal Government, bought and donated 960 acres of land as a site for the school proper, together with 100 square miles, out on the plains, for a bombing range. There are at the school proper and at the bombing range also, very extensive runways, which are necessary, of course, in that high altitude. Not one of the runways at Lowry Field, with the extensions now being provided by the city, is less than a mile and a half in length, and opportunities are available for still further extensions if desirable.

Denver is already a center of considerable aviation activity. There are many advantages in locating such a technical aeronautical laboratory in a city as large as Denver, which, with its contiguous suburbs, has a population of about 350,000. I may add that Denver is a very friendly and cooperative city. I am happy to be able to say that the War Department and the Army officers have repeatedly stated that they never have had greater cooperation than from our city and our people.

I should like to ask permission, if I may, Mr. Chairman, to insert in the record, at the end of my oral statement, a summary of some of these matters.

Mr. WOODRUM. We will be very glad to have you do so.

Mr. LEWIS. If there are any questions, I shall be very glad to answer them.

Let me add that the school site proper at Lowry Field—with its buildings, hangars, and extensive runways—occupies an area of 1½ square miles. On the plains, a few miles to the east, is a bombing range of 64,000 acres, or 100 square miles. At one corner of this bombing range are magazines for ammunition storage and a large auxiliary landing field. I surmise that there will be no necessity for the acquisition of any additional land for the location of such a technical aeronautical laboratory as I am suggesting, because probably sufficient space may readily be found on this land already acquired. But that, of course, is a technical matter of which I am not able to speak with any authority.

Mr. LUDLOW. How far is this site from Denver?

Mr. LEWIS. Do you mean Lowry Field?

Mr. LUDLOW. Yes.

Mr. LEWIS. One square mile of the school site proper is 6½ miles southeast of the main post office in Denver and is within the corporate limits of the city. The other one-half square mile immediately contiguous to the east is just outside the corporate limits. This school site proper of 1½ square miles and the bombing range of 100 square miles have been donated to the United States by the city of Denver at a cost to our citizens of over a million dollars.

Mr. JOHNSON of West Virginia. How much money are you asking for?

Mr. LEWIS. I am not asking for any specific amount at this time. I think, however, that the project should be started, if such is the pleasure of the committee. I shall have estimates within a day or two.

This bombing range starts several miles to the east of the eastern border of Lowry Field proper. The Denver Municipal Airport, one of the finest and most extensive in the United States, lies due north of Lowry Field proper. I should add that the north-south runway at Lowry Field, perhaps by a coincidence originally, is on a line with the north-south runway at the municipal airport, and there is only about a mile in between these runways as now being extended or as it is now proposed to extend them. So, if at any time it should be desirable to connect them, it could be very readily done, which would then make a runway about 4 miles long.

Mr. WOODRUM. We thank you very much for your statement.

Mr. LEWIS. I greatly appreciate your courtesy in hearing me at this time.

(The following is the summary permission to insert which was given by the chairman:)

"Summarized briefly, Denver's advantages for a technical aeronautics laboratory are as follows:

"1. Denver's cool, dry, mild climate offers many advantages to aviation. This applies to the actual treatment and fabrication of materials used in manufacturing airplanes, to actual flight training and experimentation, and to the general health and welfare of workmen.

"2. Flying conditions are exceptional. There were 360 days open for flying during 1938.

"3. Atmospheric conditions are ideal for observation purposes.

"4. Denver affords the Army an ideal inland location making it relatively safe from invasion by any hostile force.

"5. Denver is the only city of any size in the country having ideal facilities for experimental work on airplanes at an elevation of over 5,000 feet above sea level.

"6. Technical advantages favor location of a laboratory in Denver, as a means of testing and analyzing altitude characteristics of aircraft performance.

"7. Ample space would appear to be available at no further cost to the Government at Lowry Field for the construction of a laboratory. Additional land adjacent to this site is available for future expansion. Other areas in or near Denver can be obtained if location at Lowry Field does not appear desirable.

"8. Ample runways are available or are now under construction at Lowry Field for the taking off and landing of planes under test.

"9. The only large suitable bombing area is already available within 7 miles of Lowry Field for all kinds of theoretical and actual bombing research.

"10. With construction work that is now under way extending the north and south runway at Lowry Field an additional half mile to the north, and the north and south runway at the Municipal Airport which is being extended an additional half mile to the south, the two runways being practically in line, there will be a gap of only 1 mile between the two airports. This area has been surveyed and it is entirely practicable to connect the two runways to provide a 4-mile straightaway runway. Such a runway will cross East Colfax Avenue which is on United States Highway Nos. 38

and 40 entering Denver. But, if and when constructed, it will not be a difficult matter to construct an underpass for this highway.

"11. Denver's public-school system is a model both in the character of instruction and in physical facilities. A variety of recreational facilities in Denver offers opportunity to residents. This tends to maintain a high degree of morale among personnel.

"12. Substantial and dependable utility services of electric light and power, gas, telephone and telegraph, tramway and bus are available at reasonable service rates.

"13. Denver's municipal water supply, noted for its purity, is available at reasonable rates.

"14. Seven railroads serve Denver affording excellent and adequate rail transportation in all directions to all parts of the United States.

"15. Paved highways extend from Denver in all directions and are an integral part in the major highway system of the United States.

"16. Costs of living per family in Denver are lower than the United States average.

"17. In 1935 the Board of Army Officers, named to choose the most satisfactory location for the New United States Army Air Corps Technical School, selected Denver after weighing carefully the advantages of some 87 cities. Many factors were considered, among them the proponderance of excellent flying conditions throughout the year, mild climate, and the city's excellent educational, recreational, and cultural facilities as an influence upon the morale of personnel.

"18. Denver is already the center of considerable aviation activity. It is on the direct east and west transcontinental route and on the through route from Mexico to Canada. The United States Army Air Corps early in 1938 established its Technical School in Denver for training in photography and armament. The school is continuously expanding. The city is headquarters for the One Hundred and Twentieth Observation Squadron of the Colorado National Guard and administration headquarters for Continental Air Lines operating between Denver and El Paso. United Air Lines operates direct transcontinental planes through the city and service between Denver and Cheyenne, Wyo. Denver is located in a naturally protected area and is less vulnerable in case of war than cities in areas not so protected."

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 17, 1939.

The Honorable CLIFTON A. WOODRUM,
Acting Chairman, Deficiency Subcommittee, Appropriations Committee House of Representatives, Washington, D. C.

DEAR MR. WOODRUM: At the hearing last Friday, July 14, when I emphasized to your subcommittee the advantages of establishing a technical aeronautical research laboratory at Denver, Colo., I was asked to suggest how much money should be appropriated for such a station. I was not then sufficiently informed to be able to answer.

After investigation I now suggest an initial appropriation of $2,000,000 for inaugurating this project.

I shall appreciate your communicating this to the other members of the subcommittee.

Sincerely yours,

LAWRENCE LEWIS.

A Practical Peace Proposal—Foreign Policy and War Finance

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 3, 1939

Mr. VOORHIS of California. Mr. Speaker, the American people want peace. They want to stay out of foreign wars. They are not "isolationists" in the sense that they are uninterested in what happens in other parts of the world nor in the sense that, pushed far enough, they would refuse to act in defense of their ideals. Certainly they are determined that no nation shall interfere with the peace and security of the Western Hemisphere. But they are equally determined to prevent, if possible, their Nation being dragged unnecessarily into wars abroad. They still believe that peace is possible and they want to see their Government strive to maintain it. Many polls of public opinion have attested to this general point of view.

Therefore it is no more than natural that the people—who, after all, have always paid the price of war—should seek out every influence, open or concealed, which may drive toward war. And it is equally natural that they should be demanding in ever-increasing numbers that should war ever come to this Nation again, its sacrifice should fall equally upon all groups and classes. This is the drive behind the effort to "take the profit out of war."

In recent years the peoples of the world have begun to believe that the international banker exerts an undue amount of influence upon the foreign policy of every nation. This suspicion may be just or unjust, but that it exists on a wide scale no one can doubt. Rightly or wrongly, many Americans feel uneasy, for example, when Mr. Bernard Baruch or Mr. J. P. Morgan approach Washington. They believe that the influence of the international banker was a great factor in causing us to enter the last Great War.

Probably one of the most important reasons for this is that in time of war more than at any other time money lending becomes a most profitable business. Writing in 1919, the historian Brooks Adams, grandson of President John Quincy Adams, great-grandson of President John Adams, said:

> The bankers, as a class, stayed at home, and the management of all business and, above all, the fixing of prices, fell automatically into the hands of those who were the strongest.

And of the peace conference at Versailles, he said:

> The bankers have apparently found it necessary to take the settlement of a peace out of the hands of the nominal political authorities and come to some agreement among themselves. What that agreement is we do not know, and perhaps may never know, save as events discover it in the future, but of this we may be certain: It will be an agreement which will conduce to the further dominance of the great moneyed interests.

Whether or not Mr. Adams has overstated the case there can be no doubt that the point of view he expresses is one in which the common man has begun to believe.

There is a profound popular fear lest great financial interests attempt to shape the policies of nations in ways which are inimical to the will to peace of every population on this planet.

HOW CAN THE INFLUENCE OF INTERNATIONAL FINANCE BE REMOVED?

Without giving any views now on what our foreign policy should be and without taking any position for or against the popular opinion that "big bankers are war makers," let us ask how any possibility of such influence on our own Government could be removed forever, particularly as far as foreign policy is concerned.

When war comes and national safety is threatened, then the Nation demands the full allegiance of its manpower to fight and to work; it relies upon its factories to accelerate their production. It goes back to these real things—its physical wealth, the skill, courage, and morale of its men and women, its factory equipment and transportation facilities. With these it fights the enemy. It conscripts and mobilizes all these things in a supreme effort. But we also need money to fight wars, and money we have not conscripted. Instead of conscripting the bankers or even their usurped right to create the money of the Nation, the Government goes to them with tragic humility and says: "We need money. We will pledge all the credit which belongs to the Nation and its people to your private banking system if you will monetize that credit and our ability to make war goods for us." And the banks take the credit of the whole people, and they monetize it on their books, and they lend back to the Government huge sums at interest, and we fight the war by borrowing our own credit from the banks who create no arms, breed no men, grow no food supplies, give no blood, do nothing useful in waging war except to manufacture book credits. All this is very profitable to the bankers but it fastens a strangehold of debt upon the community.

But if ever a government should be the source of its own money and not the borrower of it, it is when that government is fighting for its life and conscripting all its wealth, except those factories for making money, commonly called banks.

Some people say not to worry about wartime finance for the astronomical debts then contracted will never be repaid. But if they will never be repaid what is the sense of contracting them? Why not, in the first place, issue national credit, debt free, and cancel it through taxation as we fight the war and destroy the munitions we make? Why not conscript the money-creating power along with everything else and pay for the war as we go?

The principle of setting up a national credit account, which is a correct estimate of a nation's ability to produce and deliver goods, has been known for 20 years and has been discussed in an abundant literature. Is there any reason in financial technique why this principle is not feasible? Cannot the creation of new credits by the Government itself—not by the private banking system—be joined with a second principle—namely, that the tax rate in wartime be adjusted to the consumption rate? If the Government creates new credits at the rate of wartime production and retires the new money through a tax rate adjusted to the destruction of war goods, there will be no danger of inflation. Issue new debt-free money at the rate of production; tax the new money at the rate of consumption. Now add to these two principles the principle of price fixing, always adopted in time of war, and you will have an impregnable monetary economy to match the excellent defenses of the Nation.

It is well to remember that Abraham Lincoln financed a part of the cost of the Civil War with money issued directly by the United States. Why, then, could it not be done again, and made an integral part of what we call national defense? If debt-free credit, based upon the Nation's vital assets and its economic assets, can be provided, as clearly is the case, then let it be understood that should this Nation ever enter a war again the money power of our land will be commandeered and mobilized by the Government to fight that war.

This certainly would be an effective way to quiet the fears of the people about the influence of the international banking class upon foreign policy. For if bankers pushed us into war, they would have to pay a price for it. And the price would be this: That as a measure of national defense the sovereign Government of the Nation would begin to create its own credit instead of suffering the banks to continue their monopoly of the money-creating power. Under these circumstances the nearer the country came to war, the nearer would approach the day when national sovereignty in creating money would be reasserted. It would clearly be to the banker's own interest to persuade the Nation to peace. And everyone would understand that that was so.

The mere announcement that such a policy would be pursued would make it plain that the political power is supreme in America. Every citizen would know that the destiny of this great Nation could never again be influenced by the financier mind bent on preserving at all costs the old international financial game. Perhaps a measure of this sort would be one of the most practical steps toward peace that could be taken, for certainly the peoples of other nations would attempt to bring their governments to a similar policy, once it was understood.

To permit the money-creating power to be exercised by any person or agency except Government is wrong and always will be wrong. But if that be wrong in time of peace, certainly it is the greatest injustice of the ages for it to continue in time of war. For then the Nation takes from its citizens some of their private rights—even their lives. Surely no one can defend the failure of that same Nation to reclaim, then, the public right to create its own money and utilize its own credit.

Proposed Changes in Federal Trade-Mark Law

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

DIGEST OF PROPOSED CHANGES IN FEDERAL TRADE-MARK LAW IN H. R. 6618 BY CHAUNCEY P. CARTER

Mr. LUTHER A. JOHNSON. Mr. Speaker, on July 17, 1939, the House passed, without a dissenting vote, H. R. 6618, to amend the Federal trade-mark law, with reference to the registration of trade-marks used in commerce to carry out the provisions of certain international conventions, and for other purposes.

This bill is now pending in the Senate, before the Senate Committee on Patents, that committee not yet having had hearings thereon. Since Congress will likely adjourn within the next few days, no action will be taken by the Senate on the bill at this session, but it will hold its status for consideration at the next session of Congress which will convene on January 3, 1940.

Since the bill is highly technical and many of its terms are difficult to understand by the laymen, under leave granted to extend my remarks, I submit herewith a statement in the nature of a digest prepared by Mr. Chauncey P. Carter, of 3111 Foxhall Road, Washington, D. C., an attorney who is recognized as an authority upon all laws pertaining to trade-marks, and who has made a careful study and analysis of this bill:

DIGEST OF SOME OF THE MORE IMPORTANT CHANGES IN FEDERAL TRADE-MARK LAW THAT WILL BE EFFECTED BY THE ENACTMENT OF H. R. 6618

(By Chauncey P. Carter)

1. Not only trade-marks used in interstate and foreign commerce, but trade-marks used in any "commerce which may be lawfully regulated by Congress" may be registered. In addition to covering commerce within the District of Columbia and within other territory over which the Federal Government exercises sole jurisdiction, this phrase presumably extends Federal trade-mark jurisdiction into intrastate commerce in basic commodities to the extent that the Supreme Court holds such commerce subject to regulation by the Federal Government. Likewise, the language seems to cover intrastate commerce through the mails. Indeed, the intention of the act is stated therein "to regulate commerce within the control of Congress * * * to protect registered marks used in such commerce from interference by State legislation."

2. Foreign trade-marks used in commerce which may be lawfully regulated by Congress may be registered even if such marks are not registered in the country of origin.

3. Marks which consist of or comprise deceptive matter or matter which tends to disparage persons living or dead, institutions, beliefs, or national symbols or to bring them into contempt are denied registration.

4. A mark will not be denied registration (a) on the ground of descriptiveness unless when applied to the goods of the applicant it is merely descriptive of them; (b) on the ground of being geographical unless when applied to the goods of the applicant it is primarily geographical; (c) as a personal name unless it is primarily a surname.

5. The special provision for registration of ordinarily unregistrable marks that were in exclusive use for 10 years next preceding February 20, 1905, is dropped but in its place there is a provision for registration of descriptive or geographical marks or surnames that have "become distinctive of the applicant's goods in (Federal) commerce." Substantially exclusive use of such a mark in Federal commerce for 2 years may be accepted by the Commissioner as prima facie evidence of such distinctiveness, and presumably the Commissioner will accept an affidavit to that effect.

6. Marks used in Federal commerce to distinguish services are now registrable with the same effect as marks used to distinguish articles of merchandise. Likewise, marks used to show that the applicant certifies the goods as to origin, material, mode of manufacture, quality, or other characteristic.

7. Collective marks are now defined to mean "marks lawfully used by two or more persons" and to include "indications of regional origin."

8. The use of marks by related companies is validated, and the relationship may be "by stock ownership, contractual relationship, or otherwise."

9. The practice of disclaiming unregistrable matter is specifically approved and it is provided that such disclaimer shall not prejudice or affect the applicant's or owner's rights then existing or thereafter arising in the disclaimed matter.

10. Certificate of registration is prima facie evidence of the validity of the mark and of registrant's exclusive right to use the same in Federal commerce. It is also notice of the registrant's claim of ownership.

11. When a registration is transferred, the new owner may secure a new certificate in his own name.

12. Registrations may be amended or disclaimed provided this does not "require republication." It is not clear what amendments or disclaimers would not require republication.

13. Certified copies of Patent Office records and certificates of registration have the same evidentiary value as the original records.

14. Mistakes occurring in registrations through the fault of the applicant may be corrected if the mistake occurred in good faith.

15. Registrations are to be canceled at the end of 5 years unless within the last 3 months the registrant files an affidavit of use or sufficient excuse for nonuse.

16. Renewals may be effected within 3 months after expiration on payment of penalty.

17. Trade-marks may be transferred without the goodwill of the business. "Acknowledgment shall be prima facie evidence of the execution of the assignment, and when recorded in the Patent Office, the record shall be prima facie evidence of execution." An assignment is no longer void as against a subsequent purchaser for a valuable consideration without notice, provided it is recorded prior to such subsequent purchase.

18. For good cause shown, the 30 days provided for filing opposition may be extended by the Commissioner.

19. After 10 years from date of registration (or in the case of marks now registered after 10 years from the effective date of the act) registrations may only be canceled for fraud in obtaining the same or on the ground that the registered mark is deceptive, scandalous, public property, etc., or because it is the name, portrait, or signature of a living individual.

20. After the period for cancelation has expired, the right of the registrant to use his mark in Federal commerce shall be incontestable, and the registration is no longer subject to interference proceedings.

21. The doctrine of laches and acquiescence is made applicable to trade-mark registration proceedings.

22. When there has been honest concurrent use of any given mark in Federal commerce for not less than 5 years without protest the Patent Office or the courts may grant more than one registration subject to such limitations and conditions as to mode or place of use of such marks as may be required to minimize the probability of confusion.

23. The act of 1920 is replaced by a "supplemental register" on which may be placed such marks as a "package, configuration of goods, * * * slogan, or phrase" or other descriptive mark, as well as geographical marks and surnames "capable of distinguishing the applicant's goods" and which have been in bona fide use in Federal commerce for not less than 1 year. Applications for such registration will not be advertised for opposition purposes but the registrations may be canceled. To facilitate foreign protection, the 1 year's use may be waived. The term and renewal privileges for marks on the supplemental register is the same as for marks on the principal register but marks on this register may not be assigned without the goodwill of the business. Registration on the supplemental register is notice of the registrant's claim of ownership. Such registrations are not effective against importation of goods bearing an infringing mark. The certificates of supplemental registration are to be conspicuously different from those for the principal register.

24. The legal notices of registration are expanded to include the letter R within a circle or the letters T. M. R. in an ellipse, and if no prescribed notice is used, no profits or damages may be recovered from an infringer unless he was given actual notice. For foreign marks the notices legally used in the home country are sufficient.

25. The Commissioner is authorized to issue a single certificate of registration to cover goods in several classes.

26. The fee for an appeal is increased to $20; transmitting international applications to $10; and for issuance of new certificate of assignee or for certificate of correction of registrant's mistake the fee is fixed at $10.

27. To falsely indicate that goods or services are the goods or services of a person who shall have registered a mark is now punishable as infringement. In court actions the certificate of registration is admissible in evidence and shall be prima facie evidence of plaintiff's exclusive right to the use of the mark therein described on the goods therein specified and after the period for cancelation has expired such certificate is evidence that can only be rebutted by proof that the registration was obtained fraudulently; that the mark has been abandoned; that it was used prior to plaintiff's use; or that it is a fair use of the defendant's own name or of the rightful name of the goods.

28. A successful plaintiff may have in addition to injunction, defendant's profits, his own damages, and in the discretion of the court the costs of the action. Triple damages may still be awarded. The court is given full power to rectify the register.

29. It is made a criminal offense subject to imprisonment and/or fine to knowingly introduce or deliver for introduction or to receive or to knowingly transport in Federal commerce a mark which is identical with or substantially indistinguishable from a mark on the principal register or to introduce in Federal commerce goods bearing a false notice of registration.

30. The provisions aimed at importation of goods bearing infringing or misleading marks are improved and full effect is given to the international conventions to which the United States is a party, reserving like benefits to our own citizens.

31. It is no longer necessary to affix a mark to the goods; it is sufficient if it is used in the advertisement or sale thereof in Federal commerce.

32. Discontinuance of use for 2 years shall be prima facie abandonment. It is also an abandonment when any conduct of the registrant causes the mark to lose its significance as an indication of origin.

33. The act will not come into force for 60 days after enactment. Registrations under the 1905 law will continue in force and may be renewed under the new act and in the meantime will have the benefits of the new act. Marks registered under the 10-year proviso of the 1905 law will be deemed to have become distinctive of the registrant's goods in Federal commerce and will be renewable accordingly. Registrations granted under the 1920 law will expire in 20 years from date of registration and may not be renewed unless renewal is required to support corresponding foreign registration. In the meantime, they shall have the benefits of marks on the supplementary register.

United States Foreign Trade During the First Six Months of 1939

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. BUCK. Mr. Speaker, inasmuch as I like to keep my colleagues in the House and my constituents at home up to date on foreign-trade figures, I desire to call attention to the following table, which presents certain facts with regard to that foreign trade of the United States. The table concerns the trade for the first 6 months of each year from 1929 through 1939. I am sure that all who read this will find it of great interest and value. It shows that exports during the first half of 1939 were greater than during the same period of 1936, and that 1939 imports for the 6-month period were less than they were during 1936. As compared with the same period of 1933, the low of the depression, exports during the first half of 1939 were larger by 112 percent while imports were 85 percent greater.

Foreign trade of the United States, first half 1929–38

	Exports including reexports	General imports	Export balance
1929	$2,623,000,000	$2,286,000,000	$337,000,000
1930	2,076,000,000	1,736,000,000	340,000,000
1931	1,316,000,000	1,107,000,000	209,000,000
1932	840,000,000	747,000,000	93,000,000
1933	669,000,000	592,000,000	77,000,000
1934	1,036,000,000	864,000,000	172,000,000
1935	1,024,000,000	944,000,000	80,000,000
1936	1,155,000,000	1,165,000,000	[1] —10,000,000
1937	1,537,000,000	1,683,000,000	[1] —146,000,000
1938	1,591,000,000	960,000,000	631,000,000
1939 [2]	1,415,000,000	1,095,000,000	320,000,000

[1] Import balance; for the entire 12 months these years had an export balance.
[2] Preliminary.

One Hundred and Fiftieth Anniversary of the United States Customs Service

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 1, 1939

Mr. COCHRAN. Mr. Speaker, I should like to call the attention of this House and the country to the one hundred and fiftieth anniversary of the United States Customs Service, celebrated August 1, this year. The Customs Service, as the Speaker well knows, is the organization which is charged with the administration of the tariff law and the collection of customs duties. It is one of the oldest organizations of our Government, which in romance and progress has few parallels in the Federal structure. Customs employees, nearly 10,000 in number, are scattered in 48 customs collection districts throughout the United States, Alaska, Hawaii, Puerto Rico, the Virgin Islands, and in certain foreign countries, where they protect the Government's interests, and handle expeditiously the infinite volume of import business which yearly account for millions of dollars in revenue.

Among the most important governmental investigative units, and probably the least known to the general public, is the investigative arm of the Customs Service, known as the Customs Agency Service, which really had its inception at the time of the passage of the first tariff act in 1789. The Customs Agency Service, a mobile force of agents who have been called the "eyes and ears" of the Secretary, is charged with detecting and investigating frauds on the customs revenue, and violations of customs statutes. The duties of the personnel of the Customs Agency Service embrace the entire field of customs procedure, both routine and technical. These customs investigative officers, in addition to original investigations developed by them, investigate and report upon all matters brought to their attention by the Secretary of the Treasury, departmental officials, collectors of customs, and other customs administrative officers, with respect to smuggling, undervaluation, and classification of imported merchandise, customs procedure, and other related and miscellaneous subjects. Moreover, all investigations involving frauds or violations of the customs statutes are required by regulations to be referred to the Customs Agency Service.

All criminal cases incident to seizures effected by the Customs Service are investigated, reported, and followed through the courts by customs agents, who collaborate with the United States attorneys in the actual presentation of testimony during trials, thereby materially assisting in securing a high percentage of convictions.

Civil liabilities in connection with seizures under the tariff act are also investigated by customs agents, such as petitions for remission of fines, penalties and forfeitures, and offers in compromise.

In addition to customs agents, who are highly specialized officers, there is a uniformed force in the Customs Agency Service known as customs patrol inspectors, who police the vast sea and land borders of our country on foot, on horseback, in automobiles, and in boats to detect and prevent the illegal introduction of merchandise and contraband into our country.

Principally for the purpose of ascertaining and verifying foreign market values abroad, to the end that the proper dutiable rates may be assessed on importations, the Customs Agency Service maintains offices in Europe, Canada, the Orient, and Cuba. Each foreign office is in charge of an officer known as a Treasury attaché, who directs the activity of a staff of trained investigators speaking the language of the country where stationed. These customs Foreign Service officers also keep informed of movements of narcotics and report to the Department any contraband destined for shipment to the United States. Many seizures have been due in large measure to advance information furnished of shipments of contraband destined for our shores from foreign countries.

The annals of the Customs Agency Service are replete with countless cases of detection and frustration of well-laid schemes to smuggle both contraband and noncontraband and defraud the customs revenue by various and sundry ingenious methods, the counterpart of which has never been plotted even in fiction. Naturally, the more colorful cases are those pertaining to the ancient crime of smuggling, practiced since the dawn of civilization, and before. The governments of the world may hope only to restrict the scope of this offense against their revenues. Therefore, their principal endeavor is to restrain violators and circumscribe within narrow bounds their nefarious trafficking. This, in brief, is the mission of the Customs Agency Service.

Time will permit me to speak of but a few of the more important and publicized smuggling cases of recent years, which owe their successful detection and prosecution largely to the tireless efforts and relentless investigation of that small group of revenue officers who compose the Customs Agency Service.

The largest seizure of smoking opium ever effected within the territorial limits of the United States was made by customs officers at Honolulu on August 30, 1928. The opium was found concealed in a shipment of 65 cases of assorted merchandise shipped from Hong Kong and consisted of 3,338 5-tael tins, each tin holding 6⅔ ounces of smoking opium, the total net weight of the opium being 22,253⅓ ounces.

At the present time it would appear that narcotic smugglers are afraid to gamble everything on large shipments of illicit drugs, and indications are that they are employing false compartments in trunks and hand-baggage for concealment purposes, and often employ seamen to smuggle smaller quantities of dope concealed on their persons.

Before the effects of the Treasury Department's intensified campaign against narcotic smuggling began to be really felt well-organized international drug rings commonly despatched truly commercial ships of narcotics, which, if seized, would involve the loss of small fortunes and which, if successfully smuggled through, would supply the needs of addicts for many months.

Examples of such large-scale smuggling efforts were the following seizures made by customs officers in 1930:

The seizure of 17,500 ounces of morphine at New York on the steamship *Alesia*, the contraband having been shipped by a fictitious consignor at Istanbul, Turkey, consigned "to order"; the seizures on March 4 and 12, 1930, of two trunks belonging to a well-known drug smuggler, the first trunk containing 51 pounds of heroin and 104½ pounds of morphine, and the second trunk containing 56 pounds of heroin and 66 pounds of morphine. The carrier of this shipment fled to England before he could be apprehended, but was arrested in that country and returned to the United States.

Two very important drug seizures were made at New York in 1931. On April 24 of that year customs officers at New York seized 3,568 ounces of heroin, 7,050 ounces of morphine, and 1,100 bricks of raw opium, each brick weighing 14.25 ounces. These drugs were concealed in 17 cases manifested as cottons shipped from Hamburg on the steamship *Milwaukee*. On January 29, 1931, customs officers at New York seized 529 tins of smoking opium, of a total net weight of 3,306 ounces on the British steamship *Raby Castle*. An interesting feature of this seizure was the fact that the discovery of fresh paint on one of the masts below deck aroused suspicion and revealed that the mast was hollow and the opium concealed therein.

On April 7, 1932, 105 ounces of morphine and 1,760 ounces of heroin fell into the hands of customs at New York when examination of five packing cases manifested as toys and carried from France on the steamship *Ile de France* disclosed the drugs concealed under waterproof paper. Two hundred and seventy-three 18-ounce bricks of raw opium bearing the label of a well-known Greek smuggler from Istanbul were found on the steamship *Sinaia* during 1932.

During 1933, a concerted drive was made by customs agents against smugglers of watch movements, with the result that movements seized represented a value of $130,000. Convictions of the more notorious offenders were obtained.

Earlier in the year, customs officers at San Francisco were successful in discovering and seizing 920 tins of smoking opium of 6⅔ ounces each, 20 tins of smoking opium of 1⅓ ounces each, 84 ounces of morphine, and 6 ounces of heroin. These drugs were concealed in 50 drums of wood oil coming from Shanghai. The seizure resulted from investigations conducted by narcotic agents into the activities of the Ezra brothers, Judah and Isaac. The Ezra brothers received sentences of 12 years each.

When the steamship *President Hoover* docked at Honolulu on November 15, 1935, enroute to San Francisco from Manila, via Hong Kong, Shanghai, and Yokohama, the customs searching squad found 220 6⅔-ounce tins of smoking opium concealed in three leather suitcases in a steerage stateroom occupied by six Chinese. The Chinese were questioned, but succeeded in proving their innocence, and were released. A fingerprint found on one of the tins, corresponded with one of the fingerprint impressions of the Chinese cabin boy who had access to the steerage compartment where the opium was found. In the meantime, the *President Hoover* had departed for San Francisco with the cabin boy on board. However, he was apprehended at San

Francisco and returned to Honolulu, where he was sentenced to 4 years' imprisonment.

In 1936 customs officers at New York broke up one of the most important narcotic smuggling organizations which had operated in recent years. This ring was headed by Morris Schatz, notorious New York gangster, who employed seamen on French and American vessels as drug carriers. In connection with this case, large narcotic seizures were made on the steamships *New York, Ile de France,* and *Manhattan,* and nine persons were arrested. Schatz was sentenced to 25 years' imprisonment and $45,000 fine, while his chief lieutenant, a Corsican, named Serafino Mancuso, received a sentence of 40 years and $40,000 fine. Other sentences ranged from 1 year to 10 years.

Of particular interest and importance in 1936 was the so-called Molly Wendt case, which involved the attempt of a Eurasian girl to smuggle 54 pounds of pure heroin into the port of Los Angeles concealed in a false-bottomed trunk. The customs guard, who examined the trunk, noted that it had unusual rounded edges. When he inserted the blade of a knife in a corner of the trunk the heroin trickled out. Molly Wendt, whose true name was Wen, was immediately arrested. Investigation disclosed that the girl was merely a carrier for international narcotic smuggling operations out of Shanghai. Its leader, a notorious Polish smuggler, was traced to Habana, where he had gone to conclude arrangements for the smuggling of drugs into Mexico and the United States. He was expelled from Cuba and, enroute to New York by sea, committed suicide by hanging himself with the cord of his bathrobe. His principal associate in Shanghai, a French national, disappeared when he learned of the seizure. Shortly thereafter he was found in a dying condition in a vacant lot in an outlying quarter of Shanghai. The cause of his death was poison, but whether this was self-administered is not known. However, since he had apparently been carried to the lot by others and thrown there to die, it would appear that he did not commit suicide but was "taken for a ride" in typical gangster fashion by persons who feared that their own names might be divulged.

The outstanding narcotic case developed in 1937 was the so-called Katzenberg-Lvovsky investigation conducted jointly by narcotic and customs agents. This investigation dated back to the year 1935, when, according to information received, a group of narcotic traffickers in New York conceived a plan of smuggling narcotics into the United States in the baggage of ostensible round-the-world tourists. Indictments were returned on November 30, 1937, at New York, charging some 32 persons with conspiracy to smuggle narcotics and with related offenses. Emissaries of this organization went to Shanghai where they procured heroin and morphine which had been obtained in Tientsin, brought to Shanghai, there packed in steamer trunks, and then transported in bond through France, and from thence to the port of New York, where it was smuggled through the customs by the connivance of several minor customs employees. These employees were also indicted.

From October 1935 to February 22, 1937, members of this group made six trips to Shanghai and succeeded in smuggling into the United States an estimated total of 649 kilograms of pure heroin at a total net profit of $519,220. The man with whom they associated in Shanghai was a well-known Greek trafficker. It is estimated that the quantity of drugs mentioned would supply 10,000 addicts for a year.

Besides uncovering the important drug smuggling ring in the United States, evidence was obtained during the course of the investigation implicating notorious narcotic suppliers in China. This information was called to the attention of the Chinese authorities in Shanghai.

Another highly important investigation in 1937 resulted in seizures of narcotics on the steamships *Manhattan* and *President Harding* and the arrests of 10 persons, all of whom received substantial prison sentences. The leader of this ring, an ex-seaman named Joseph John Aveta, alias "Jo-Jo," who had waxed prosperous through dope smuggling, received a sentence of 17 years.

The second largest seizure of smoking opium effected since the seizure at Honolulu in 1928, referred to above, occurred in New York on August 20, 1938, and consisted of 1,300 tins of smoking opium, weighing 8,293 ounces, net. This opium was recovered from the river bottom attached to a rope and grappling hook tied to the stern of a deserted junk boat, the location being in the vicinity where the British steamship *Glaucus* had been previously docked. The owner of the junk boat was arrested and convicted.

A total of 5,524 ounces of smoking opium was found concealed in the fuel tanks of the steamship *Silveryew* by customs officers at New York on November 16, 1938.

Just when it would appear that raw opium seizures during 1938 would be smaller than in recent years, an Italian and Yugoslav smuggling ring operating out of the ports of Susak, Yugoslavia, and Marseille made two large shipments of this drug on sister ships of an Italian steamship line, the *Arsa* and the *Ida.* The *Ida* shipment was dispatched to the port of New York, as seems to be traditional with European smugglers, but the *Arsa* consignment was sent to a smaller port, Savannah, Ga., in the hope that it would pass through the limited customs personnel. However, through the vigilance of all branches of the Customs Service, 123 pounds of raw opium were seized at the former port and over 63 pounds of opium and 3 pounds of heroin at the latter. Seven persons have been sentenced in connection with the *Ida* seizure, while six Italian crew members of the *Arsa* are now serving prison terms.

Another attempt to smuggle narcotics through the lesser-known ports was frustrated by the ingenuity of customs agents at Norfolk, Va., in May of this year. In this case, an attempt had been made by a local Chinese to bribe a customs officer to permit a shipment of Chinese merchandise to enter the port of Norfolk without examination. On May 29, a shipment of 20 cases of peanut oil and 20 cases of bamboo shoots arrived from Hong Kong, the consignee being the Chinese in question. Fearing that this might be a trial shipment containing no contraband, customs agents did not desire to open the cases, but, instead, borrowed from the United States Marine Hospital a fluoroscope, arrangements having been previously made for the use of this machine should the occasion ever arise. The fluoroscope revealed the presence of a number of opium tins, and an X-ray photograph showed clearly the ends of opium tins in the cases. Accordingly, the cases were opened and examination disclosed 205 tins of smoking opium.

A case in 1938 of peculiar interest was the attempt of a Jewish rabbi to smuggle large quantities of heroin to New York from France, via Palestine, concealed in the bindings of Hebrew prayer books. The rabbi, one Isaac Leifer, was arrested in France, and sentenced to 2 years' imprisonment. Seizures of heroin so packed were made in France, Palestine, and New York. Leifer will be extradited to the United States to stand trial in New York.

Investigation by customs agents at San Francisco led to the seizure on June 24, 1939, of 250 tins containing 2,333 ounces of smoking opium. The officers working on this case kept under surveillance a suspected Chinese baggagemaster and discovered him in the act of pasting on a trunk just arrived on the steamship *President Coolidge* a customs baggage inspection label which he had pilfered from a package which had previously been brought ashore.

Customs officers at New York on June 9 and 12, 1939, seized 19 pounds of raw opium, and 1½ pounds of morphine base. The first seizure, consisting of 12 half-pound slabs of opium, was made from a woman visitor to the Italian steamer *Vulcania,* as she returned ashore. The opium was concealed under her girdle. Search of her apartment and a dress shop operated by her resulted in the discovery of the morphine base and six additional half-pound slabs of raw opium. Investigation by customs agents disclosed the identity of a crew member of the *Vulcania,* who, on different occasions, furnished opium to the woman and certain of her female associates. Further investigation in the United States and Europe revealed the name of the crew member,

and that he was a carpenter on the *Vulcania;* that he was obtaining his supply of opium by pilfering certain cases in legal shipments of opium consigned to certain United States manufacturing chemists, and that he had substituted for the weight of the opium, rocks and clay. He has been arrested in Italy, together with 13 other persons. He has confessed that he stole 75 kilograms of opium last February from two cases of cargo on the *Vulcania.* In the United States his female accomplice has made a full confession. Eight others are under arrest. The splendid results obtained in this case are due to the viligant work on the part of customs agents at the ports of Baltimcre and New York.

On of the most important happenings in the year 1938 was the conviction of Solly Gordon, considered narcotic public enemy No. 1. This conviction was brought about as a result of a joint investigation by customs and narcotic agents. During this investigation, evidence was obtained by customs agents indicating that Gordon, whose true name was Solomon Gelb, had committed perjury concerning his true place of birth when testifying before an immigration board of inquiry. He was indicted and brought to trial, found guilty, and sentenced to 3 years' imprisonment. Gordon has been an important figure in the international narcotic traffic for many years, and has been able to operate with a limited degree of freedom because of the use of fraudulently obtained American and Canadian passports. His conviction is considered a major achievement.

Whenever a seizure of contraband is made, customs agents are invariably summoned to conduct the investigation of the case. In certain instances, when these officers are working on advance information, they participate in searches and seizures. Although through their efforts the supply of smuggled narcotics has been diminished to such an extent that drug prices have risen to fantastic figures, and drug addicts are seeking cures because of the acute shortage of dope, the vigilance of the customs agents is never relaxed. Realizing that the incentive for narcotic smuggling is now greater than ever, due to the enormous profits involved, customs agents are constantly on the alert.

During the prohibition era one of the major liquor seizures was effected at Norfolk, Va., when the steamship *Shooters Island* was seized in 1932 and 28 members of her crew arrested. The appraised value of the ship was approximately $100,000. The vessel left Boston to proceed to St. Pierre, loaded a cargo of 16,000 cases of liquors, and returned to New York Harbor, where the liquor was discharged. The name of the ship was painted out on her voyage from Boston to St. Pierre. The name *Sea Thrush* was painted in its place, and the name "Shepard Line" was painted on the side of the vessel. After discharging her cargo near Newark, the name was changed again to the original one—*Shooters Island*—and she proceeded from New York to Norfolk, where a customs agent, after making a thorough and discreet investigation, was able to ascertain the facts related herein. The steamship *Shooters Island* was forfeited to the United States and sold for $14,000; the purchaser was the United States Shipping Board, which held a mortgage against the vessel.

Other outstanding seizures were made in New Jersey and Delaware by the combined efforts of Coast Guard and customs agents, resulting in the seizures of the vessels *Helena, Allegero, Winnie, Ray Fish No. 2, Baboon, Wm. H. Rawley, Emma, Helene, Imp, Tuna,* and *Celerity,* with large quantities of imported liquors.

The seizure of the British rum-runner steamship *Holmwood,* which entered New York Harbor on October 2, 1933, masquerading under the name of the American steamship *Texas Ranger,* with a cargo of 20,000 cases of assorted liquors, was effected.

Immediately after the repeal of the eighteenth amendment, there was undertaken an investigation by the supervising customs agent of the Seattle district of the extent of the smuggling activities of the Pacific Forwarding Co. and other allied companies, either owned or controlled by Henry Reifel and his sons, George and Harry, all of Vancouver, B. C. Customs agents undertook to establish quantities and brands of the products of the B. C. Distillery, Ltd., which were landed at points along the Pacific coast. They established that from July 1929 until repeal of the eighteenth amendment, there were landed by these various companies on the Pacific coast more than 200,000 cases of liquors. Henry and George Reifel were arrested in Seattle by customs agents and were released by posting surety bonds in the amount of $100,000 each. The bonds were subsequently declared forfeited, and the surety paid the sum of $201,217.75 to the United States in full settlement of its liability. As the result of a civil suit for the recovery of forfeiture value of liquors alleged to have been smuggled into the United States during the 5-year period, approximately a half million dollars was recovered.

The institution of this case against the Reifels led to a general investigation of various eastern Canadian distilleries that were alleged to have flooded this country with illegal shipments of Canadian liquor during the prohibition era. This special investigation conducted by customs agents continued for a period of nearly 2 years, and resulted in a total recovery of approximately $3,500,000, the second largest single recovery in the history of the Customs Service.

In 1936 there were seized from Max Erblick over 2,000 Swiss watch movements. This smuggler, who was dietician on the steamship *Aquitania,* was working in cooperation with Moses Landau and son.

The Goldsmith and Loffler watch movements and diamond smuggling case was an important case in 1936. Five thousand five hundred watch movements, a large quantity of watch parts, and 254 loose cut diamonds, appraised at $52,000, were seized. This contraband was carried in the false compartment trunk and suitcase of Mrs. Loffler, a passenger on the steamship *Lafayette,* arriving at New York from France.

The same year the tanker *Chas. O. Leffler,* together with her cargo of 50,000 gallons of smuggled Belgian alcohol, valued at $81,000, was seized in New York and forfeited to the United States. It was definitely established that the alcohol seized was taken on board offshore from the British steamship *Hillfern.*

A major seizure consisting of 16,683 gallons of alcohol and 260 quarts of foreign liquors was effected in the Philadelphia district on September 7, 1935, by the Coast Guard, and investigated and prosecuted by customs agents. The following-named vessels were apprehended: The British motorship *Popcatapelt,* the American gas screws *Nampanc, Dreadnought,* and *Theresa.*

The cases related above, on the more colorful and human-interest side, while abundantly attesting the usefulness of the Customs Agency Service, reflect to a limited extent only the scope and value of this arm of customs. Time will not permit me to speak of the technical side of the work of the Service, as distinguished from the enforcement side. Suffice it to say, under the circumstances, that the former compose the major portion of the work of the Service. So-called white-collar agents are constantly working with the collectors' and appraisers' forces throughout the United States ferreting out frauds, contemplated and consummated, upon the customs revenue. A favorite method of defrauding is via the undervaluation of imported merchandise route—that is to say, concealing the true value of imports subject to ad valorem duty as given on consular invoices, thus deceiving the appraiser to the end that reduced amounts of duties are assessed. Thousands of dollars in duties are collected yearly through the efforts of customs agents, that would otherwise be lost to the Treasury.

Under the current Tariff Act, the labors of customs agents relating to refund of duties on foreign materials used in the manufacture of articles exported have been increasing yearly. The investigation of the claims of American manufacturers desiring to establish a rate of drawback devolves upon officers of the Customs Agency Service, and is a work requiring a high order of intelligence and accuracy. The agent to whom an application for drawback is referred must personally visit the factory where the article is produced and investigate, scrutinize, and verify the details covered by the application.

He must exercise the utmost care in the examination of the facts as to the proportion of foreign material appearing and the percentage of wastage incurred. What is or is not a manufacture within the meaning of the law is a question which constantly confronts the officer, and which he must investigate closely under the regulations prescribed by the Treasury Department. He must be a specialist in this highly technical procedure, for upon his report depends the rate of drawback, if any, to be allowed. The importance of this work will appear when it is stated that the amount paid as drawbacks during the fiscal year 1938 totaled $11,841,390. Many major fraud cases in drawback have been unearthed in recent years by the vigilance of customs agents.

The present director of the Customs Agency Service, Deputy Commissioner of Customs Thomas J. Gorman, is a veteran customs investigator of 30 years' service. It has been his constant purpose to render his Service an acceptable and useful auxiliary to the local officers of the customs, and the public, in enforcing the revenue and navigation laws. Much credit for the organization's accomplishments and high morale is due to his able leadership and administrative ability.

In conclusion, it affords me pleasure and some pride to be able to inform the Members of the House and the country that this corps of customs investigative officers, small in number but firm in resolve, has always functioned with an unusual degree of intelligence, loyalty, and zeal (in many instances under trying circumstances and conditions), and in keeping with the best traditions of the United States Customs Service—150 years old this year.

Planned Subversion of Youth

REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

ADDRESS BY DR. R. J. C. DORSEY

Mr. THORKELSON. Mr. Speaker, I shall ask my colleagues to allow me to extend in the RECORD an address delivered on April 26, 1939, before the National Convention of Daughters of 1812. The distinguished speaker was Dr. R. J. C. Dorsey, LL. B., LL. M., Georgetown University. This gentleman is a doctor of civil law, master diplomacy, M. P. L., George Washington University, and is professor of jurisprudence and other subjects, at the Washington College of Law. He was past magister, and is present member Concilium Riccobono Seminar Roman Law in America, Catholic University of America, a member of the executive committee, American Coalition, and an associate editor of the National Republic.

Dr. Dorsey's address was on "Planned Subversion of Youth," a subject in which all of us are interested, particularly today, in the confusion and subversion of facts.

I do not believe this address will exceed much over the allotted space in the RECORD, yet if it does, I consider it a good investment, for it will bring facts home to the people throughout the United States. I am sure the parents will be interested in reading this article, for it concerns them and it concerns even more the direction of the youth of America. The remarks I have inserted in the RECORD, in which I have listed many subversive activities—or perhaps I should use the correct designation, communistic activities—will aid those now investigating such subversive activities in locating the sources to be investigated. It is also my desire to call my colleagues' attention to the August 1939 issue of the National Republic, for that magazine contains information that should set every real, honest-to-God American thinking and acting before it is too late. I quote one brief paragraph from this issue:

AT VASSAR—WHY COMMUNISM TAUGHT BY A COMMUNIST?

Last week the Daily Worker—the Comintern's official organ—announced exclusively that its editor, Clarence Hathaway, was speaking that afternoon before the "social-reorganization class" at Vassar College, Poughkeepsie, N. Y.

His subject was announced as the Constructive Program of the Communist Party and the Differences Between It and the Other American Groups.

It seems rather remarkable that college girls should need instruction on that topic.

Virtually everybody knows that the only real "constructive program" of the Communist Party is to "construct" a Soviet America, and that it differs from "other American groups" because and to the extent that the others are loyally opposed to communism.

Vassar College, at which this edifying discourse was heard, is the institution which recently opened its gates to the Second World Youth Congress, one of the "fronts" in which communism works.

It is the institution which gave Hallie Flanagan to the Works Progress Administration as director of the Federal theater project.

Miss Flanagan studied drama in Moscow, and was later a member of the American advisory committee to the Moscow State University, a propaganda training school in communism.

The Federal theater project, under her direction, has more or less specialized in left wing or "proletarian" drama, and lately set a record in theatrical efficiency by rehearsing one play for a year and a half—at Federal expense—before the production was ready for a public performance.

Vassar College is the institution from which in 1935 several hundred girl students invaded Albany to protest against an oath of loyalty bill then pending in the legislature.

Vassar in other years won a wide reputation as a high-grade training school for well-bred girls.

In an institution so flecked with red incidents as Vassar has in recent years been, it is proper to ask—for what are Vassar girls being trained nowadays?

I appreciate the forbearance of the Members toward the position I have taken here in Congress in exposing subversive activities. At times my remarks may have seemed fantastic, but I want to assure you that I have not revealed half of what the American public ought to know. We are in the midst of the most diabolical attempt to destroy the Government of the United States and to enslave our people under a regime which is demoralizing and destructive to our people, and which will wreck the security of this Republic. It is something for us to consider, because the folks back home are going to ask us about it; and do not forget that we have families of our own that may suffer because we have failed to inform ourselves of conditions as they actually exist today. Those who have criticized me have not attacked what I have said. Why? Because I have dealt entirely with fundamental principles based upon constitutional government and the duty of the Government in its relation to the people and for the safety of the Republic. I welcome anyone who questions the soundness or the unsoundness of my remarks, but it is unjust to resort to vilification and ridicule, for that proves nothing except the character of those who use such expressions. They are no different from those who stab you in the back for, like evil shadows, they steal up on you in the night with utter disregard for fairness and justice.

I have criticized the President, the Supreme Court, and Congress, and I shall criticize them again and again until they honor their oath of obligation to preserve, protect, and defend the Constitution of the United States, to safeguard the rights and the liberties of our people, and to protect us from immigration and dissemination among decent American citizens of the rot and filth from the alleys and byways of European countries, that have always been submerged in a mass of damnable intrigue.

On behalf of our own people, and in respect to our own children whose lives are shaped by environment, it is our duty to give them at least healthy surroundings and allow them to breathe God's free air of liberty.

I love this Nation that I serve, and I feel honored at still being connected with the service of the United States Navy, whose duty it is still and will always be to protect the fundamental principles of this Nation, to safeguard the life of the Republic, and to protect our people now and forever.

In these closing hours of the session it is my desire to express my appreciation and gratitude to the Members for the courtesies that you have extended to me.

PLANNED SUBVERSION OF YOUTH

(Dr. R. J. C. Dorsey)

From time to time during the course of human events, dating as early as 1000 B. C. to our present era, abnormal mentalities have injected into the body politic their miasmatic theories applicable to youth. Inspired by the institutions of Minos of Crete, the Spartan Lycurgean doctrine of the ninth century B. C., taught that the child belonged more to the state than to its parents. It was the Spartans who exposed their puny and weak offspring. Plato, the Athenian, suggested that children be held in common. Aristotle, his pupil, ridiculed the obsession. Athens, in the fourth century B. C., directed Socrates to commit suicide because he reputedly corrupted the minds of the youth by his teachings. Karl Marx, in his Communist manifesto of 1848, advised that "we replace home education by social," and ridiculed the "hallowed co-relation of parent and child," and demanded that we "abolish the family." Phases of these depraved and vicious suggestions are now voiced in some of our educational institutions and legislative assemblies in cleverly concealed forms. Lenin wrote: "Give me 4 years to teach the children and the seed I have sown will never be uprooted." Socialists and Communists maintain that youth is for the state, not the state for the youth. We find a practical illustration of this in Soviet Russia. There, the hordes of parentless children speak more eloquently than any words one may utter in condemnation of state control of youth as opposed to parental guidance.

The latest gesture of a long series of attempts on the part of allied groups to control and direct the education of the youth of our country finds expression in Senate bill 1305 and House bill 3517, now before our Federal Congress, both being almost identical. Concealed under the plausible purpose of providing for the public welfare is their true intent, which is to nationalize our educational system and place it under the centralized control of an educational dictator. Through the means of its vast and costly organization, all types of subversive material could be disseminated and placed in every school in our land. American education would become socialized and soon our form of government would be that of a socialist state. Under the provisions of either bill one person is to hold the dominating and strategical dictatorial position.

In accordance with the present socialistic trend of events in our country, that person necessarily would have to be sympathetic with communism-socialism, which now parades as liberalism. In order to gain control of the funds under these Federal-aid-to-education acts, the schools and institutions of learning would have to comply with the dictates of the central power that distributed them. Under the provisions for nursery schools a soviet system of nurseries could be established with all that the term implies. Either bill represents a huge spending vehicle and, once either would be enacted, American youth shall have over a billion dollars added to the already crushing burden that they must repay, which is now over $40,000,000,000 National and $20,000,000,000 State debts. This State-controlled system of education is sponsored by the extreme radical groups in our country. In either of these bills they visualize an opportunity to accomplish the ends they have been long striving for. Their other methods have done considerable damage and have gone far in undermining the loyalty and faith of our youth in our Federal Constitution and American institutions. About 3 years ago, while delivering one of my routine law college lectures, I praised the Supreme Court of the United States and the Federal Constitution. My remarks were met by scornful mirth and a few hisses. Most of the 150 men and women were college trained and with whom my personal relations were cordial. We must not permit these allied groups to destroy completely the remaining spirit of patriotism, morality, and religion of those upon whom our country must rely for its future welfare. All true Americans must concern themselves in reference to the future welfare of our youth and endeavor to protect them from the inimical efforts of subversive groups that subtly seek to effect what ultimately shall prove to be their political, financial, and moral destruction. The youths of today become the adults of tomorrow. Extend to them the equal opportunity of protection from mental defilement you have enjoyed.

After the unpatriotic demonstration in response to my efforts to uphold American institutions the question naturally arose, Why are these students acting this way? Who is behind all of this? I started to investigate and discovered much.

What is craftily designated as a world-youth movement emanates from Communist sources and influence. Its ultimate object is to pervert the minds of its adherents and cause them to become sympathetic to the tenets of communism, socialism, internationalism, liberalism, and pacificism. Its teachings are in direct opposition to that which would tend to generate a love of country, an intensity of patriotism, or any reverence for religion and church. Within the comprehension of the world-youth movement, academic freedom and liberalism in education mean that all types of un-Americanism and atheism are to be taught the youth. Lenin said: "That is moral which helps communism." Deliberate falsehoods and half truths are being presented to American youth in the most alluring terms in order to cause the youthful mind to become unmoral and lose all patriotic standards. All teachers or professors who engage in such teaching should be punished by imprisonment at hard labor and forever debarred from practicing their profession.

The number of colleges and universities in our country continues to decrease where parents may send their sons and daughters without the danger of their being contaminated with phases of the vilest of communistic and allied teachings. The Communists aim to have at least one teacher of their faith in each college or university. The departments of sociology, psychology, and economics in some educational institutions reek with the effluvium of liberal effort. Certain text books are not fit for even hardened adults to read. Nietzsche, Freud, Bertrand Russell, together with their dupes and followers, contribute their aid and inspiration to produce the demoralization of mentality approved by communistic thought. Why send a son or a daughter to any institution of learning to be taught to scoff at the honest modes of existence of their parents, who in many instances have denied themselves to educate their child? Why have any university make Loebs and Leopolds out of youth? At their trial it was alleged that they attended the University of Chicago and had been taught a philosophy which sanctioned crime and murder. Why have your son or daughter encouraged to burn the Stars and Stripes on a college campus and then raise the red flag of anarchy and communism above the American flag? These situations should not be possible. It is far better that youth remain at home. Not all youth attending our educational institutions show such extremes; however, many are being taught a contempt for our American institutions.

In 1905 the Intercollegiate Socialist Society was founded by Jack London. In 1921 its name was changed to the League for Industrial Democracy, whose primary purpose is the distribution of Socialist and Communist propaganda through the means of literature in our schools, colleges, and universities. It guides and controls the Intercollegiate Student Council, which embraces at least 150 institutions of learning and which is composed of representatives from the various subversive college groups possessing sundry designations. Student conferences are conducted on many "red" revolutionary subjects and are led by the most notorious Socialists and Communists. "Guiding the Revolution" was the theme of one conference held in 1931 at the Union Theological Seminary. One meeting held at Barnard College, led by Norman Thomas and others of similar thought, discussed the "Forum of the Revolution." The students at Smith College were insulted by a most questionable list of questions which they were asked to answer. Allegedly, one professor from Smith College addressed the students at Mount Holyoke on the subject "Oust Theology—Help World." "The Student in World Revolution" was the subject at one of the student conferences in the West. Nothing has been left undone in order to turn the student against our form of government and religion.

A student congress against war and fascism was held at Brussels, Belgium, in December 1934. The international student movement had its inception here. It set up a students' world committee. All student organizations were called upon to join in an international student congress.

It was at the sixth world congress of the Young Communist International, which was convened at Moscow, Russia, in September 1935, that it was decided to have a united front composed of Communist youth and those sympathetic. The opinion of the congress was: "The most essential form of organization of the youth leagues are all kinds of clubs and circles satisfying the cultural, economic, professional, and political interests of youth, and also local societies, residential units, as well as groups of rural youth, boy and girl students, and young employed." In accordance with this, hundreds of youth organizations have been formed in this country, particularly in our schools, colleges, and universities. Today in our institutions of learning we have liberal clubs, student forums, round tables, student progressives, free lance, student league, social service, contemporary, polity, social science, international clubs, and political associations—all promoting communism, socialism, and liberalism, and dominated by central groups of master minds perverted by radicalism. It is these student groups that are largely responsible for the dissemination of Communist and allied literature. They are aided in some instances by their professors. On the theory that the hand that rocks the cradle rules the world, special effort has been made to have radical units in Barnard, Bryn Mawr, Mount Holyoke, Smith, Wellesley, Vassar, and other colleges for women. Complete success has attended their efforts and no doubt but the sons and daughters of these proselytes shall sooner or later seriously vex our body politic by gaining high office.

Coeducational institutions—colleges [1] and universities [2]—have responded to liberal attack and most of them contain units of radicalism.

The direct agent of the Communist Party in American educational institutions was known as the National Student League and was the youth section of the American League Against War and Fascism (not communism) that became known in 1932. It called the student congress against war, which was held at the University of Chicago, December 27–29, 1932. The 600 delegates

[1] Allegheny, Amherst, Antioch, Bennett, Brooklyn City, Carnegie Tech, City College of New York, Dartmouth, Grinnell, Hollins, Hood, Hunter, Oberlin, Penn, Ratcliffe, Rockford, St. Stephen, Simmons, Southern Methodist, Swathmore, Temple, Union Theological Seminary, Western, William and Mary.

[2] Harvard, Yale, Columbia, Cornell, Princeton, Chicago, Stanford, Johns Hopkins, New York (law), DePauw, Wayne, Drake, Fisk, St. Lawrence, Miami, Howard, George Washington, Purdue, California, Kansas, Illinois, Minnesota, Washington, Oregon, Virginia, South Carolina, Wisconsin, Ohio State, Colorado, Pennsylvania, Northwestern, Louisville.

listened to addresses by Earl Browder and others of kindred thought. This organization gave the League of Industrial Democracy such drastic competition that it was deemed advisable to merge them, which was done, and thereafter they became known as the American Student Union.

Some professors go "balmy" and lose their positions. There are instances where members of the faculty have been dismissed because they were brave enough to voice their opposition and indignation in reference to unmoral teachings of liberal professors. In political science and constitutional law courses some professors take advantage of their position and openly oppose our general form of government and praise communism and socialism. One may remember a list of about 800 names on a petition to the President of the United States requesting the recognition of the Government of Soviet Russia after it had been established through the means of murder and theft. On this list were the names of about 300 American college professors and presidents representing 268 different colleges and universities situated in 45 States. One may also recall the two score American college professors who went to Soviet Russia to gain ideas from its educational scheme. These gullibles were entertained by Lunacharski, Commissar of Education. The item that impressed them the most was that feature of the red system that permitted the students of the four higher schools to decide each day as to what they should be taught.

The Communists tried to have schools of their own. In 1904 the Work People's College was organized by Duluth radicals and courses were given in class struggle and revolution. In 1906 the Rand School of Social Sciences was organized in New York City and those who desired to receive instructions in socialism were taught. In 1921 Brookwood College was established at Katona, N. Y., by A. J. Muste, and prominent radicals taught what they thought that young Communists should know. At the seventh congress of the Communist International it was decided to make the schools the effective instruments in forming the united-front movement. The Communist schools train the young "reds" to become skilled revolutionists. In 1923 the Workers School was organized in New York City and is the directive force of a Nation-wide system of schools. The International Workers Order has many schools in New York City and at least one in our leading cities. Just why Communist schools should be subsidized by either our National or State Governments is not clear. Why should our people pay for the wrecking of their institutions? Why should they pay to have the house wrecked in which they live?

The Summer Educational Camp has become a source of Communist propaganda, as students are encouraged to take their vacations in them. Each summer students are trained in the principles of radicalism at Camp Tamiment, Pa. Here, government ownership as against individual ownership is advised and other Marxian Communistic principles are inculcated. The American Friends Service Committee conducted a series of camps from June 24 to August 19, 1938—Coal Areas Work Camp (Penn-Craft Community), Delta Work Camp (Delta Cooperative Farm), Tennessee Valley Authority Work Camp, Michigan Work Camp, Highlander Work Camp (Highlander Folk School), Los Angeles-San Pedro Work Camp. The American Friends Service Committee is a Quaker relief organization, reputedly a part of the War Resisters International Council of International Anti-Militarist Organizations. At their first meeting in Holland they announced that they were working for the supersession of capitalism and imperialism through the establishment of a new social and international order.

The fourth annual leadership institute on international problems was held at the camp on the Schiff Reservation, Mendham, N. J., August 26 to September 2, 1938. Young people (16 to 20) from high schools and colleges attended. It allegedly is a training camp on international relations and world peace.

From time to time the World Youth Movement convenes in congress assembled. The First World Youth Congress was held in Geneva, Switzerland, August 31 to September 7, 1936. Delegates from 750 youth organizations in 34 countries were present. The nine from our country apparently were mainly Communists and Socialists. The Soviet Union was represented. The Young Communist League, in its report of this congress, registered its approval of the program, indorsed the formation of international youth committees, and praised the Soviet Union. The Daily Worker, the official publication of the Communist Party in the United States, September 8, 1936, announced that the World Youth Congress had established a permanent organization, that the Soviet Young Communists had joined the movement, and that the female delegate had been widely cheered as she addressed those present.

The second World Youth Congress was held at Vassar College, New York, August 15–24, 1938. It was within the confines of that respected and dignified institution of learning that modern civilization was turned backward for generations in that memorable month of August 1938. In that Gargantuan social jamboree there existed an equality of mind and person that was coeval with the existence of the Neanderthal or Cro-Magnon. It was in that atmosphere, scented with the odor of peace, that the descendants of the pristine inhabitants of the banks of the Congo, Yangtze, and Euphrates mingled with ecstatic exuberance with the progeny whose ancestors knew the shores of the Caspian. Allegedly, over 50 different organizations sent 600 delegates from 47 countries. They and the 400 observers listened to the greetings sent in behalf of the Government of the United States. The delegates reputedly boasted that they represented 40,000,000 youth. At least 35 attending organizations were Communist or sympathetic. In order to gain any idea of the status of the World Youth Congress one must investigate the objectives of some of the groups in attendance. Each national committee was limited to 50 delegates. Sixty-four different groups were allegedly represented.

Among the delegates at the World Youth Congress at Vassar were those from the American Youth Congress. Apparently, the American Youth Congress is now a Communist-social-sympathetic united front movement to aid the foreign policy of the Soviet Union and has permitted itself to pass under Communist Party control. It was host to the World Youth Congress and itself holds regional congresses in various places in the United States since its organization in New York City in August 1934. Several weeks prior to its first convention at the New York University, delegates from five radical groups gained admission, with the result that the young Communists ultimately controlled the congress.

A complimentary article in the New Masses observed: "The Communists and Socialists are together again." The Young Communist Pilot of October 15, 1935, stated: "The American Youth Congress is the greatest accomplishment of our American Young Communist League. It can be the means of unifying and drawing into action the majority of the youth of the United States." The plenum of the executive committee of the Young Communist International approved the initiative and activity shown by the local organizations of the Young Communist League in participating in the American Youth Congress, and they were assured that the Communist Party stands squarely behind the American Youth Congress with its 1,500,000 members.

At the time of the second convention of the American Youth Congress in the Y. M. C. A. in Detroit in July 1935, the police were summoned to preserve order among the 1,200 delegates. Black and white youth intermingled and black males were the escorts of white females. Christians and atheists were requested to unite. Present economic systems were attacked because allegedly they offered no solution to our problems and that some form of cooperative commonwealth with production for use instead of profit is necessary.

Perhaps Congressman CLARE E. HOFFMAN summed the situation in a few words in his speech in the House of Representatives on April 27, 1938, after a mass demonstration and invasion of congressional offices had been made on behalf of the American Youth Act. Congressman HOFFMAN observed: "The so-called American Youth Movement is the Communist united front in action through its quasiauxiliary, the American Youth Congress, which drafted the American Youth Act. In recent years some have been amazed at the seeming ability of our youth to undertake and carry through large programs affecting legislative education and local problems. Behind the scenes we find an explanation of this seeming ability. We find that our youth are simply pawns on the board moving at the dictates of a clique made up of some of the most astute propagandists that history has known. The tragedy of it is too few of these zealous young Americans realize that they are being used as front and shock troops for a vicious world revolutionary movement. The three words 'American Youth Congress' are used as a disguise for the most dastardly attack ever perpetrated on the American form of constitutional form of government." Lenin said: "Communism will never be put across by Communists alone, but by Communist-aid societies." William Z. Foster said: "We Communists know how to get things bought and paid for by others." For any group to corrupt the mind of our youth and to teach them to despise our constitutional form of government, displays a form of fiendishness incompatible with common decency and self-preservation. From our youth must come future Presidents, Supreme Court Justices, State and Federal judges, those who guide our Department of Justice, teachers and professors in our schools, colleges, and universities, and others in various lines of human endeavor. Today we feel the effects of Liberal instruction—the older generation is belittled and there is evidenced a movement to liquidate it from any sphere of activity so that it may be replaced by younger men and women whose minds have been inoculated with the evil virus of communism, socialism, and liberalism.

Among the delegates at the World Youth Congress at Vassar were those from the Young Communist League. The All-Russian Young Communist League was organized in October 1918, after the workers' revolution in Russia of November 1917. Soon thereafter other Communist youth groups developed in various parts of Europe and out of this movement grew the International Youth Conference in Vienna of August 6, 1919, and from which came the International Communist Youth Organization for young Communists between 16–22 years. This conference led to the meeting of the International Youth Congress in Berlin, November 2–26, 1919, attended by 19 delegates from 14 countries, allegedly representing a membership of 229,000. It accepted the program of the third Communist International, its affiliate, which had been set up in 1919. It advocated the overthrow of capitalism, government control by the workers, dictatorship by the proletariat, establishment of preparatory schools to teach communism, creation of drill and defense squads and otherwise training students and youth for the class struggle. Factories are to become Communist fortresses. In all unions youth sections are to be formed. Obedience to and defense of the Soviet Union was pledged. Slogans were: Black and white unite and fight. Do not abandon your friends, even though they still go to church on Sunday. Zinovieff observed: "The youth movement is the best section of

the Communist International." One may secure an idea from this of the nature of the Young Communist League and the political ideas of its delegates at Vassar.

Among the delegates at the World Youth Congress at Vassar were those of the Young People's Socialist League, which is the youth section of the Socialist Party. It is an affiliate of the Socialist Youth International. Allegedly, they have about 100 branches in our country. A long list of activities may be noted: Participation by some of its members in "red" strikes and in Communist antiwar, Mooney, May Day, and other united-front demonstrations. One of its speakers allegedly announced in a meeting in the Chicago Stadium that the League was with the Communist Party, not only in the Mooney and Scottsboro matters, but until the very end, to help to put over the revolution. The Young People's Socialist League participated in the third American Youth Congress, held in Cleveland in 1936. Its youth took an active part in the Communist and Socialist Parties' joint May Day meeting in Chicago of the same year. One group of youth wore blue shirts and red ties and carried great red flags.

Delegates from the Southern Negro Youth Congress attended the World Youth Congress held at Vassar. It cooperates with the Young Communist League and by its means the Communists hope to gain control of such States as Alabama, Mississippi, and South Carolina through the Negro vote. By many southern Negroes the cunningly devised picture of social and political equality is eagerly accepted. The Negroes are told that they shall have social equality with the whites and that the plantations shall be divided among the blacks. Social equality exists at Communist dances and Negro youth have white partners and apparently neither color objects. There are cases where intermarriage occurs, growing out of this comradeship between black and white youth. In one instance the couple went to live in Russia after the birth of their first black child. It is said that this type of social equality is not actually practiced in Soviet Russia. In June 1938 the Communists held an all-southern conference, attended by 133 delegates, most of whom were youth and about one-third Negroes. It was decided to carry the "red" penetration of the South forward. Small groups are formed for what the Communists call "Negro Liberation," e. g. Liberator's Clubs.

Delegates from the American Student Union attended the World Youth Congress at Vassar. The Communists allege that the American Student Union, with membership of over 30,000, is one of their greatest triumphs in America. It is a section of the World Student Union, now known as the World Student Association for Peace, Freedom, and Culture. The American Student Union represents a merger which occurred at a joint meeting of the (Communist) National Student League and the Student League for Industrial Democracy (Socialist), which was held in the Y. W. C. A. at Columbus, Ohio, December 28, 29, 1935. Allegedly 500 delegates from 113 schools and colleges in the United States attended.

In the new group the Trotskyites, who favor war between capital and labor, have a place. The American Student Union advocates the continued struggle against high finance, industry, and politics. They recommend protection of minority races, defense of academic freedom and peace, and maintain the right to education and security. They refuse to defend the United States Government in any war, defensive or aggressive. Their sending some of their members to the red army in Spain somewhat questions the sincerity of their peace proclivities. However, they carry on a systematic fight against national defense. One of the irritating activities of the American Student Union is their annual strike on each April 22. They claim that at least 500,000 students deliberately depart from their classrooms on these strike occasions. The American Student Union allegedly set up the United Student Peace Committee in 1938 and that 17 national youth movements have become affiliated with it.

The Green International, with its green-shirt symbol, also centers its activity among the schools, colleges, and universities of the world. This international is sponsored by the Fellowship of Reconciliation, Women's Peace Society, War Resisters International, Peace Patriots, War Resisters League, and other Marxian and communistic groups. Abolition of the Army and Navy, distribution of wealth, and other radical measures are advocated. Each member takes a personal pledge to refuse to take part in or support any type of war, directly or indirectly. Mount Holyoke College was the scene of 24 green-shirt charter members appearing in that verdant adornment.

Other strictly youth groups sending delegates to the World Youth Congress at Vassar were: Student Peace Service, Student Peace Committee, Christian Youth Conference of North America, Youth section American Jewish Congress, the National Council of Methodist Youth, National Council of Jewish Juniors, Rumanian Junior League Clubs, Junior Hadassah, National Student Federation of America. In order to preserve an appearance of respectability the Communists often include groups in their congresses that, strictly speaking, are not entirely of their faith. However, the Communist groups control every situation.

While the youth in our schools, colleges, and universities receive the special attention of the Communists, they have also organized other youth activities.

In 1907 there was formed the International Federation of Socialist Youth Organizations, composed of youth leagues which came from the working classes of 11 nations. They affiliated with the Second International (Socialist), which comprehended the Socialist parties of different countries. By 1914 the 15 national groups composing this international reported a membership of 170,000. There arose a difference of opinion in reference to the World War, and, as a move to end it, the youth groups called an International Youth Conference at Berne, Switzerland, in April 1915, which was attended by 16 delegates from 10 countries, allegedly representing 33,000 members.

In our country the Communist Party and the Communist Labor Party developed out of the cleavage in the Socialist Party which existed between its revolutionary and reactionary wings and this reflected into the ranks of the Young People's Socialist League. One group formed the Independent Young People's Socialist League, which in 1920 became affiliated with the Young Communist International. The other group of the Young People's Socialist League took the name of the Young Workers League of America, whose first convention was held in May 1922. In 1924 the Young Workers League of America was discontinued and the Young Communist League of the United States of America appeared as the youthful revolutionary party. It is a section of the Young Communist International of Moscow and follows the orders of the international executive committee and international congresses. Its members are pledged to defend the U. S. S. R. Its official publications are The Young Worker and the Young Communist Review. Illustrative of its trend, at its seventh national convention, held June 22–27, 1934, considerable capital was made out of the so-called depression. Delegates alleged that the young generation has no job or future under capitalism (7,000,000 were jobless and 2,000,000 had to leave school annually); that those having jobs are speeded up beyond endurance; that when students graduate they enter into a hell of unemployment; that every worker must be given a job (5-day week, 6-hour day for those over 18, 4-hour day for those under, no reduction in pay, no speed-up); that Negro youth should not be subject to segregation or Jim Crowism; that American children are undernourished and orphan asylums overcrowded; that the R. O. T. C. and National Guard should be abolished; that a Soviet government in America would abolish any slavery of the youth.

The radicals use the word "peace" to attract the youth. The first Youth Peace Conference was held in Holland in 1928. In January 1936, the Reparation Committee of the International Youth Conference for Peace called a second meeting which was held in Brussels, Belgium, in February of the same year. There was formed the World Youth Congress, which held its first meeting in August 1936, and of which the American Youth Congress is a section. In 1930 there had been a conference of the international youth leaders.

The American League for Peace and Democracy has a Youth Section National Committee. This parent organization was once known as the United States Congress Against War and Fascism and for a time as the American League Against War and Fascism, being a section of the World Committee Against War and Fascism, now the World Committee for Peace and Democracy. The United States branch is one of 33 nationals that the radicals have organized in 35 different countries. Communists here occupy the strategic positions, and here controlled the policies in reference to the league among its 4,000,000 members.

Lenin wrote: Frequent change of name bewilders the public. E g., in 1921 the Friends Disarmament Council was formed, subsequently merged into the National Council for Limitation of Armaments, which, in turn, became the National Student Forum, which is conducted by the National Council for Prevention of War. This is a characteristic of radical groups.

In 1921 the International Workers Aid, a Communist organization, was formed. About 1929 it changed its name to the Workers International Relief. It was founded on a suggestion of Lenin and is considered an indispensible portion of the Communist revolutionary labor front. Its American section assisted in financing the Communist hunger march on Washington, D. C., in 1931. Its youth movement is called the Workers International Relief Scouts, who are directed to penetrate the schools of the neighborhood and to enlist the aid of others in demonstrations and strikes. Complex organisms tend to confuse, but this one bewilders: The World Congress of Youth Against War and Fascism was organized by the International and American Committees for the Struggle Against War, being controlled by Moscow's International League Against Imperialism, which organized the World Congress Against War (opposed to imperialist war but not Communist civil war). This interlocking status is not unusual, and constant change of name (but not of purpose) is done to make it difficult to trace their activities.

The designations of radical youth groups are legion. The Southern Tenant Farmers Youth Committee is a branch of the Southern Tenant Farmers Union, which is a branch of the Workers Defense League, which was organized by the Socialist Party. The National Student Federation and the Open Road are both ultraradical student organizations. There exists the Farm-Labor Juniors of Minnesota, the National Student Federation of America, the International Student Service, the International Socialist Student Federation, Christian Youth Building a New World, Youth for a New World Order, Youth Committee Against War, Youth Antiwar Congress, Revolutionary Youth, Lithuanian National Youth Committee, Labor Sports of America, Student Society, Young America, Young Caravan, Young Defenders, Young Labor Poets, Young Sparticus League, Young Workers Dance League, and youth clubs such as the Brighton, Cafeteria, Central, Garibaldi, Lakewood, Partisan, United, etc. What good might be accomplished if all this energy could be directed to the upholding of the Federal Constitution and American institutions.

Not only does the radical seek to ensnare the adolescent, but also the very young. The Young Pioneers of America is one of the most dangerous and aggressive Communist groups. It is for boys and girls between 8 and 15 years. Members graduate into the Young Communist League and at 23 pass into the Communist Party as fully qualified Communists. Though fashioned after the Boy Scout movement, the Pioneers are antagonistic to it. The Pioneer children are taught the tenets of communism, atheism, hatred of God, contempt for our form of government, disrespect for the American flag and all American institutions. In addition to the inculcation of disloyalty and practical treason, these children are imbued with class hate and taught to approve of the world revolution. In lieu of saluting and pledging allegiance to our national emblem, these youth are directed to revere the red flag of communism. Their publication is the New Pioneer. In the summer many of these pioneers are gathered into camps and there instructed in communism. The First International Congress of Proletarian Children was held in Moscow, Russia, August 23–24, 1929. Many of the delegates gathered from a distance, riding for days to reach their destination. They came from America, England, Switzerland, Germany, Norway, Sweden, "red" Russia, China, Siberia, Mongolia, Central Asia, Samarkand, Daghistan, Turcoman Republic, and elsewhere. White, black, yellow, and brown children intermingled, all pledging allegiance to defend the U. S. S. R. An appeal was made to the children of the entire world. Lenin's widow contributed her inspiration. "Lenin shows the way" was the slogan. The attending Young Pioneers, each distinctive with red tie and white blouse, passed in review, saluted the "red" flag, and in the tongues of many nationalities gave their call, "Stand ready." This modern Babel were made to understand that over 700 Negro children had deserted the Boy Scouts for the Young Pioneers. Various allegations were designed to arouse their resentment. They were to be used as cannon material; their labor was to be utilized in the fields, factories, and workshops.

They were told that the Boy Scouts prepared the youth to become factory slaves and soldiers to be used in wars for the defense of capitalism; that Soviet Russia was the real fatherland of all workers and it alone had made its children free. In their struggle they urged that youth must be led by Communists and the Young Communist International. Apparently the aim was to create strife between the children of different classes and advocate one class only. Lenin, the internationalist, had known no difference of nationality in the class struggle—they alleged they must know none. Many radical characters punctuated the vast assembly in Dinamo Stadium: Bela Kun, once head of the Hungarian Soviet Republic; Max Holz, the German revolutionist; Maxim Gorky (Alexei Maximovitch Pyeshkov), the Russian author and active revolutionist; and others were there to inspire the children. The committees submitted their reports. It was deplored that the American Negro worker had to submit to so many hardships, as they recognized in the Negro their class comrade with whom they carry on a common struggle against the exploiters; they regretted that all children of the workers and poor peasants were being exploited and oppressed, and pointed out the horrible example of America, where over 4,000,000 youth had to be errand boys, bootblacks, newsboys, farm and factory workers, etc. Special commendation was given to the Young Pioneers of America for having carried on militant activity among the children of American strikers during the many strikes. They explained how these children organized themselves into clubs and groups, marched on the picket lines, and shamed the strikebreakers.

The Young Pioneers carry on agitation for "collectivization." Their greatest activity is directed against the Christian religion and the church. They allege "religion is the worst heritage of the past." Great international children camps are advocated. They fear that the imperialists are preparing for war against the Soviet Union; hence, they train for "red" defense—girls behind earthworks learn to use guns and boys receive machine-gun instruction—all for the purpose of peace.

The Communists, Socialists, and pacifists now sponsor the Federation of Children's Organizations, which came into existence in 1936.

The Fellowship of Youth for Peace, organized about 1928 by the Fellowship of Reconciliation, an international radical organization designed to spread Communist propaganda, is an affiliate of the Young Pioneers. This fellowship sponsors the Youth Crusade for Disarmament and World Peace—a most deceptive title. It supported the Communist-called and controlled congresses against war, which advocated world revolution to promote communism.

The world youth movement is international and is sponsored by the Socialists, Communists, and their liberal sympathizers. It is using our youth as a pawn in the Communist game and is bringing about a revolt of the youth against family ties, home, moral restraint, religion, and country. The United States has at least 65 international sections of this world revolutionary movement. There are many groups of a local nature. All of these are more or less Marxian, and many actually Communist.

Throughout the world, and especially in our country, the political and often the moral corruption of the minds of the youths are being accomplished through the means of highly organized groups that work at will, unrestrained and unopposed by legal limitation. Most of our difficulties in this respect have been imported and then fostered by persons possessing a destructive complex. Individuals endowed with healthy mental equipment seldom participate in such procedure.

Density of population has produced grave problems. Today most parents endeavor to place their children so that they may have healthy minds to fight successfully the battle of life. Usually parents are unable to give much financial assistance, and this inability often thrusts children of varying ages upon the unsympathetic social organization of the State. This political organism provides a few general laws for the child's protection, taxes certain persons to provide a dole or a poorhouse, and builds larger and stronger prisons. It then leaves the child to work out its destiny. The youth, with its mind poisoned with communism, faces a world where opportunities for employment lessen with the increase of labor-saving devices. Taxation, due to senseless and useless economic experiments of a costly nature, raises the prices of necessities and places an unsupportable burden on the struggling atom of the body politic, with the result that thousands of children are thrown on charity and many into prisons. The seasoned criminal is in the minority. Americans, by permitting radical and unmoral education, are making this situation worse. We have here one of civilization's blunders. Our tacit permission to groups to form in order that they may corrupt the mind of our youth is a blunder that shall affect this and many future generations.

New York's Water Power

EXTENSION OF REMARKS

OF

HON. JAMES H. FAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

RADIO ADDRESSES BY HON. MAURICE P. DAVIDSON AND HON. JAMES H. FAY, OF NEW YORK

Mr. FAY. Mr. Speaker, under leave to revise and extend my remarks in the RECORD concerning cheap electricity for the city of New York, I include an address made by the Honorable Maurice P. Davidson, trustee of the Power Authority of the State of New York, and by myself during interrogation of my constituents on Thursday, July 27, 1939:

SPEECH OF HON. MAURICE P. DAVIDSON, TRUSTEE OF THE POWER AUTHORITY OF THE STATE OF NEW YORK, JULY 27, 1939

Ladies and gentlemen of the radio audience, tonight it is my privilege to speak to you as a trustee of the Power Authority of the State of New York. I am going to tell you very briefly about New York's great water powers in the kind of words that you and I, as laymen, can understand. And then, with the help of Congressman JIM FAY and some of his friends, we hope to give you a more intimate picture of how these important natural resources, today largely wasted, can aid in creating a more pleasant daily existence for us all.

But, first, how many of you know of the New York State Power Authority? It is a State authority created in 1931 with the active support of Gov. Franklin D. Roosevelt. It is empowered to develop the International Rapids section of the St. Lawrence River for navigation and power, cooperating with the Federal Government and the proper Canadian authorities. It can finance its share of the construction cost by selling revenue bonds, completely independent of the taxpayer and in a manner somewhat similar to the successful method by which the port authority has financed the construction of the Holland Tunnel and the George Washington Bridge. It must under the law as it now stands sell its cheap electricity for distribution by existing agencies under such terms as to assure that the 3,500,000 homes and farms throughout the State receive the maximum benefit.

The conduct of the power authority's affairs lies in a board of trustees, of which the other members are Chairman James C. Bonbright, professor of finance at Columbia University and one of the country's leading experts on public-utility matters; Vice-Chairman Fred J. Freestone, executive-committee member of the National Grange and known throughout the length and breadth of rural New York; and George S. Reed, a prominent attorney from northern New York. The late Frank P. Walsh led the trustees courageously until his untimely death. Among its greatest friends the power authority counts President Roosevelt, Governor Lehman, and Lieutenant Governor Poletti. Last summer, with Governor Lehman's aid, Lieutenant Governor Poletti led the fight to write into the constitution of the State an amendment designed to preserve its great water powers from private exploitation, and only last Monday, speaking at Watertown, N. Y., he delivered a magnificent address, praising and advocating the power authority's plan for the utilization of these water-power resources.

After long years of technical study, the power authority recommended to the legislature a comprehensive power plan for the State, including the concurrent development of the St. Lawrence and Niagara water-power resources. This cheap power would flow to New York City and other population centers throughout the State over a high-voltage transmission system, coordinating these public generating plants with the facilities of the private power companies.

Because I have a vivid recollection of my own once nebulous picture of the north country, I suggest that you look at a map of the United States. You will see the vast Great Lakes Basin—the heart of the North American Continent—draining into the Atlantic Ocean through the St. Lawrence River. You will see the western end of New York State, with the great inland port of Buffalo, bordering the shores of Lake Erie, whose waters, including all the upper Lakes, descend the mighty Niagara to Lake Ontario. You will see the shores of Lake Ontario, forming the northern boundary of New York from the outlet of the Niagara River to the Thousand Islands at the mouth of the St. Lawrence, where the outflow of the Great Lakes commences the final lap of its majestic journey to the sea.

This immense flow of water gives New York unparalleled hydroelectric-power resources. At Niagara the drop in elevation between Lakes Erie and Ontario totals 326 feet. About two-thirds of this drop takes place at the Falls, producing one of the most impressive natural spectacles endowed forever upon mankind. The other one-third of the drop takes place through the Niagara Gorge and Whirlpool Rapids, whose white horses and tumbling tons of water have thrilled millions. The present partial head power development on the New York side generates a paltry 500,000 horsepower. The power authority's engineers have recommended control works to enhance and protect the scenic spectacle and make possible the development of 2,000,000 horsepower on each side of the river.

Two hundred miles east and north of Niagara, Lake Ontario narrows to create the International Rapids section of the St. Lawrence. Here, in the short stretch between Ogdensburg and Cornwall, the river drops 86 feet. The development of this vital link in the Great Lakes-Atlantic Seaway will produce 2,000,000 horsepower of cheap electricity to be shared alike by the Province of Ontario and the State of New York.

Eventually the capabilities of these border rivers will be augmented by another 1,000,000 horsepower which can be developed on New York's interior streams. Our inland waters have yet to be tamed. Seething floods, bearing destruction and waste, boil down the Genesee, the Susquehanna, the Allegheny, and the Chenango. Site after site for humming water wheels lies along the upper Hudson, the Black, the Oswegatchie, the Racquette, and the St. Regis.

New York's undeveloped water powers add up to at least 4,000,000 horsepower. We are rich, and we starve for lack of vision and enterprise. Because the dry figures of our engineers have not yet inspired the enthusiasm of the 13,000,000 people within our borders, our lawmakers prefer to delay action until the faint whisper of a few pioneers inspires the mighty voice of all the people.

But this delay is serious. Four million horsepower of water power is running to waste, while millions walk our streets and other sections have proceeded to develop their water resources. The T. V. A.'s program is well on the way to completion. Four of the great dams are now in operation, and soon nearly 2,000,000 horsepower of T. V. A. power will be vitalizing the Southeast. Boulder Dam was completed in 1935, and the people of the Southwest have cheap water power to enhance the attraction of their sunny coast lands. In the great Northwest the development of the Columbia River presents a powerful threat to New York's industrial supremacy. Huge generators now hum at Bonneville Dam, and work proceeds both by day and by night at Grand Coulee.

Industry, construction, employment, cheap power. This is the power age—the electric era. New York must advance or fall by the wayside. As far back as 1931 Governor Roosevelt said: "So long as men used our waterfalls and streams only to grind their neighbors' corn or to turn the wheels of primitive manufacturers the public at large had no particular interest." But, he continued, "with the sudden development of this new giant electricity, however, the situation was entirely changed. It is no longer a case of mills along the river banks but of light and power which can be carried along a slender wire into the homes of every citizen."

Shall the great State and city of New York be handicapped by dependence upon fuel power while other sections advance and become prosperous through the development of their water resources? The trustees of the power authority say, "No." With 4,000,000 horsepower of cheap water power lying undeveloped at its back door, New York can lead instead of trailing in the social and industrial progress that follows the abundant use of cheap electricity. Flowing water belongs to the people. Once constructed, water-power developments will run as long as the sun and rains maintain the flow of the rivers. And the people themselves must undertake these developments.

We intend that every citizen of New York shall know of the high and restrictive rates for electricity in New York; of the low rates and greatly increased use of electricity in other sections; and how the power-authority plan can accomplish for New York what has been accomplished in these other sections. With your support, we will confront the next legislature with a popular demand for action which will drown out the petty self-interests seeking more delay—even as the mighty roar of Niagara subdues the voice of the spectator.

And that purpose, Congressman FAY, is the reason for your presence tonight. We know you to be an unselfish seeker for the best interests of your constituents and all the people of the State. We know you have been studying this power issue from their standpoint, and now we will look to you to tell us whether the people of your district are interested in cheap power.

SPEECH OF THE HONORABLE JAMES H. FAY, OF NEW YORK, JULY 27, 1939

Mr. Davidson and friends, I sincerely welcome this opportunity to tell you how I feel about cheap power in general and about the power authority's St. Lawrence-Niagara program in particular. I don't think the people of New York City realize the potential economic good that will result from your power plan, and I'm happy to contribute some part in making them aware of the facts.

Last month I had the privilege of speaking at the Catholic summer school near Plattsburg. I found that the people up there know what the development of our water powers would mean in their everyday existence. They know that this question isn't something in which they are only remotely interested but is one that vitally affects their welfare.

I resolved right then to make sure that the facts about this St. Lawrence-Niagara power program were made known to the 30,000 families who live in my district on the east side of Manhattan. I know their woes and wants—the political tradition of Manhattan means constant personal contact with the Congressman. And for most of them a dollar contains a hundred pennies. They visualize it in terms of bread and milk and shoes.

I know a good many couples who spent their honeymoon at Niagara Falls, but never one who looked at the great scenic spectacle and connected it with their chances of earning a livelihood. I am pretty well accustomed to surprises, Mr. Davidson, but I must admit it was a new one to me when you told me that the power company serving my people on the East Side was solidly connected by transmission lines to the present power developments at Niagara Falls and along the St. Lawrence River. These engineers have a habit of getting way out ahead of us at times.

Seriously, though, here is the way I feel about New York's water powers. I think they should be developed along the lines of the power authority's program and the quicker the better. In the first place, it is my duty as a Congressman to look at the national significance of projects such as you are proposing. I am a member of the House Naval Affairs Committee. Furthermore, I am a veteran of the last World War and, with God's help, I am resolved to do everything possible to keep us out of another one. But our greatest guaranty of peace lies in adequate defense measures—and I agree with President Roosevelt that the immediate development of these great water powers—essential as they are for the production of war materials—is an important part of any well-rounded program for the support of our armed forces.

I know that I can take your word for it that these developments will provide us with lots of cheap power. In the first place, you have spent years in gathering the technical and economic facts with a fine staff of engineers and experts. In the second place, we see the Niagara Hudson Power Corporation hanging on to their claims to these developments like grim death, and to our minds that checks with your statement as to the value of these water powers.

Then we like your attitude toward the private investors and the taxpayers. When you tell us that your conception of retail rates for power includes fair treatment for all present and future capital invested in the private power systems and that your program will stand or fall on its own financial feet, without burdening the taxpayer, we think you should have a chance to put it over. We know you have a practical, workable plan for doing something about business and employment in the State of New York. If you can convince investors that your plan merits a loan of $287,000,000 for your construction program, we'll fight along shoulder to shoulder with you for the necessary legislative action.

We don't see any reason why New York should lag behind the Tennessee Valley or the Pacific Northwest or any other section. My people want work—they want security and employment. They hear that the people using T. V. A. power are spending $60 a year per family for new appliances—refrigerators, ranges, water heaters, vacuum cleaners, washing machines, good lamps, and all the other comforts made possible by cheap electricity. They know this means increased manufacturing activity. They see the Aluminum Co. expanding its plant in Tennessee, and a big, new metallurgical plant under construction at Muscle Shoals. They hear the whistles blowing in the new chemical fertilizer plants south of Nashville, and read the announcements of other big plants building or planning to build down there. My people are a little sick of the unemployment conditions which have forced so many of them on relief—they want some of that kind of cheap-power medicine which creates business, and we believe you have the prescription.

This program seems to be a constructive attempt to remedy the present unemployment situation. When business is bad and men are out of work they want something done about it—and they look to their Representative in Congress, in the legislature, and in city council for action. I believe the power authority's plan is the type of constructive action the people want. The trouble is you haven't been letting us know how important these developments in the St. Lawrence and Niagara Rivers are to the people right here in New York City. We always thought they were local projects—O. K. for Buffalo and northern New York, but nothing for the Sixteenth Congressional District to get excited about. But that last report of yours completely changed the picture. The idea of these two big hydro plants hooked up to the big steam plants in New York City and cheap power being made available all over the State, that appeals to our sense of reason. That means that these big water powers are intimately associated with conditions in New York City; it means cheap power, more business, and more jobs from Fourteenth to Sixty-third Street, and we like it.

And, finally, we don't see why we should pay twice as much and more for electricity as the people do in other sections. A small apartment can be a pretty comfortable home, with good lighting, a radio, an electric refrigerator, and an electric fan. But this would mean at least 100 kilowatt-hours a month on the meter and a bill of $4.72. And a big slice of the 30,000 families in my district haven't any budget provision for $57 a year for electricity. But they know that something is wrong when, compared with their bill of $4.72, the same family in Knoxville pays only $2.50, in Tacoma only $2.12, and in Ottawa only $1.74.

But when we come to compare notes on electric bills the fellows who have a real bill of complaint are the small-business men—the butcher, the baker, and the candlestick maker. Now, Commissioner Davidson, I showed you some of the bills these people are paying. They are right down in my district—my friends and neighbors—and I just brought them up here tonight to verify these bills and so you could tell them why they should be interested in the St. Lawrence and Niagara River program of the power authority.

TESTIMONY OF MR. HUGH M'DONNELL

Q. What kind of business do you operate?—A. I run a bar and grill.

Q. Where is it located, Mr. McDonnell?—A. 341 East Twenty-third Street.

Q. What do you use electricity for, Mr. McDonnell?—A. For the refrigerator, beer cooler. * * *

Q. Lots of neon lights running around the place?—A. Sure have.

Q. Any air conditioning?—A. Not yet.

Q. I suppose you have lots of good liquor, very good steaks, and French-fried potatoes, have you?—A. You said it.

Q. Well, Mr. McDonnell, did you bring your electric bill along with you?—A. I have.

Q. Let me see it. Well, Mr. Davidson, Mr. McDonnell used 487 kilowatt-hours and paid $25.96 for them. What do you think you can do for him in a case like that?—A. (Mr. Davidson.) Well, now, Congressman, if Mr. McDonnell were living in Knoxville, for instance, he would only be paying $11.24. This would be a saving of $14.22 a month, which would amount to about $170 a year.

Q. (Mr. FAY.) Well, Hugh, do you think that that would make a difference in your business?—A. Well, I certainly could use it.

Q. All right, let's see what Mr. Levine has to say. Mr. Levine has a tailoring establishment, you know. Mr. Levine, where are you located?—A. 377 Second Avenue.

Q. What do you use electricity for, Mr. Levine?—A. Well, I have two power sewing machines and a furrier's machine.

Q. How's business, Mr. Levine?—A. Well, there's always room for improvement, you know.

Q. How much was your bill last month? Did you bring it along with you, Mr. Levine?—A. Yes; I have it here.

Q. $14.05. Well, Mr. Davidson, what do you think you can do for Mr. Levine?—A. (Mr. Davidson.) Well, if Mr. Levine were operating in T. V. A. territory his bill would be $6.80, a saving of $7.25, or about $80 per year.

Q. Well, Mr. Levine, do you think you ought to string along with the power authority's plan?—A. Yes, Congressman; I think so.

Q. (Mr. FAY.) Mr. Davidson, I could have brought a dozen of my constituents along. Their testimony would only serve to emphasize what these two gentlemen have said. There is no question in our minds as to whether or not we will support your proposal. We most enthusiastically will.

More Justice for Veterans

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

LETTERS OF HON. JOHN G. ALEXANDER, OF MINNESOTA, AND FRANK T. HINES, ADMINISTRATOR OF VETERANS' AFFAIRS

Mr. ALEXANDER. Mr. Speaker, under the privilege of extending my remarks in the RECORD, I insert herein a letter which I have just sent to Gen. Frank T. Hines, Director of the Veterans' Administration, in reply to his letter of July 28, in which the Bureau discusses the charges made by me in the House on May 1 regarding injustices perpetrated on War Veterans by the Veterans' Administration, under the guise of legality, as they seek to interpret the present veterans' laws.

AUGUST 3, 1939.

Gen. FRANK T. HINES,
Veterans' Administration, Washington, D. C.

DEAR GENERAL HINES: I wish to acknowledge receipt of your communication of July 28 regarding the cases discussed by me on the floor of the House of Representatives on May 1.

I appreciate your interest in these matters and the length to which you have gone in investigating the same.

I realize that items of this type are matters in which individual opinions differ. Personally, I am not any more convinced now than I was on May 1 that justice is being done to these men, or that it is being done to thousands of other veterans, with the exception of the case of Edward J. Arthur, of Miami, Fla., regarding whom you state in the next to the last paragraph of your letter that his case is going to be reopened and attended to.

I am not blaming you personally for the situation which exists, but I do feel, as do thousands of others, that the Appeal Board should liberalize its ratings and decisions. If, as you say, no appeals are pending in the cases which I discussed in the House on May 1, is it not probable that the reason for that is that these parties, after years and years of attempts to get justice, have been so discouraged and worn out and beaten down by the attitude of the officials in the Veterans' Administration that they have finally given up in despair. That is the conclusion which I have drawn from my study of the cases.

You might be interested to know that since my exposure on May 1 of the situation that I have received hundreds of letters

regarding other similar cases throughout the country. While this evidence and information has been accumulating, I have postponed using it hoping that after the testimony which developed during the hearings of the Veterans Affairs Committee last spring the Veterans' Administration would relax its overzealous conservatism and try to inject a little more of the milk of human kindness into its proceedings and a little less of the mechanical.

If I had not come in contact personally with so many of these cases of flagrant violations of the laws of justice and humanity, I would not, perhaps, feel so strongly in this matter. However, I hope out of it all may come a more fair and revitalized attitude toward the men of America who have borne the brunt of battle and given sacrificially in time of war.

Yours very truly,

JOHN G. ALEXANDER.

The following is the text of General Hines' letter, which is interesting in the light of the disclosures made by me in my remarks in the House of Representatives on May 1, 1939:

VETERANS' ADMINISTRATION,
Washington, July 28, 1939.

Hon. JOHN G. ALEXANDER,
House of Representatives, Washington, D. C.

MY DEAR MR. ALEXANDER: Under date of May 1, 1939, in a speech on the floor of the House of Representatives, you referred to certain cases, six in number, under the heading "flagrant injustices perpetrated on veterans in the name of the law." Three of these cases have been received in this office for review and it is desired to report on the outcome of the review.

In the case of Donald U. Hildreth, C–48 836, whose address is given as 2250 Bryn Mawr Avenue, Philadelphia, Pa., the following excerpt is quoted from letter from Mr. Wade Goble, judge advocate, Department of Pennsylvania, to Mr. Herbert A. Church, chairman, national legislative committee, Military Order of the Purple Heart:

"In addition to the case which I have written up, there is a case of a veteran, Donald Hildreth, C–48836. This man had a leg blown off while serving with the Yankee Division. Simultaneously with the loss of the leg an enormous scar which took 30 stitches to close was inflicted above the hip. Due to laceration of the nerves, this wound caused the man untold agony; but it was not until 15 years after his discharge that he was awarded any compensation by reason of it. Apparently a great injustice has been done the veteran, even though he did receive compensation for the loss of the leg."

This veteran suffered amputation of the right thigh, middle third, as a result of shell wound April 10, 1918, with simultaneous slight penetrating wound of the rim of the pelvis. He was hospitalized until September 8, 1918, and was discharged after a short furlough, prosthesis supplied, physical reconstruction completed, October 25, 1918. He is reported as walking very well on peg leg prior to July 12, 1918.

On current examination the stump is found to be well muscled, though having spines growing out of the bony stump, for which surgical attention is recommended. He uses artificial leg.

The wound on the crest of the ilium, which Mr. Goble states took 30 stitches to close, is 6½ inches in length, not adherent, and without muscle loss or atrophy. The complaint is of constant dull pains and feeling of pressure, over right hip, aggravated by sitting or lying; no other complaints. The neuropsychiatrist finds no nerve injury, and diagnoses traumatic neurosis on the basis of fixation of thoughts on the amputation stump and gunshot wound, and psychoneurotic element in some of his symptoms.

He has received compensation and vocational training pay from date of discharge, in varying amounts, approximately $20,500 in all. An increase of $4 per month was granted December 23, 1935, and a further increase of $10 per month November 18, 1937. His contention, as evidenced by his own letter to Senator JAMES J. DAVIS, quoted in our files, is that inasmuch as these increases are the result of wounds received in action in 1918 he is entitled to these amounts over prior periods, exclusive of vocational training. He states to Senator DAVIS: "These additional disabilities definitely ruined my chances for civil-service appointment." No appeal is pending before the Veterans' Administration, nor has any complaint been filed with the Veterans' Administration since last rating action, February 15, 1938, at which time he withdrew a pending appeal.

Various records indicate employment as a salesman, and there is no indication of unemployment except for 6 months prior to November 18, 1937. It is not indicated that disability caused this unemployment.

Following complete review of the evidence, it is the opinion of this office that the disability, amputation of the right thigh, has been properly rated as permanent partial 63 percent disabling, with entitlement to $63 per month plus $25 per month subsequent to July 3, 1930, in accordance with section 202 (3), World War Veterans Act, 1924, as amended on that date. In relation to the comparatively slight interference with employment since the date of discharge, this rating and award are considered commensurate with the disability shown. Entitlement to additional ratings on account of additional disability from the scar above the hip, or the fixation of his thoughts on the wound and psychogenic nature of his complaints is supported only on the basis of recent opinion liberally resolving any doubt in the veteran's favor.

In the case of Stanley Dombrowski, C–278928, whose address is given as 6109 Reedland Street, Philadelphia, Pa., the disability was incurred as a result of gunshot wound March 23, 1919, in Russia. The veteran was hospitalized about 9 weeks in Russia, and brought to this country on a hospital ship, and sent to a general hospital, discharged August 16, 1919. The metacarpal bone, middle finger, left hand, was fractured, and healed in good position and alinement, without limitation of motion or loss of strength of the middle finger. There are, however, three bony outgrowths alongside of this metacarpal bone which undoubtedly produce pain and tenderness upon strong muscular effort in gripping. The distal phalanx of the index finger of the same hand was also fractured. and has healed with some deformity, limitation of motion of the distal phalanx only, and some loss of tactile sense.

Since he can make a good fist, all fingers except the index closing fully, with a slight failure of the index to close, grasp any object that the normal hand can grasp, and exert muscular force in gripping without hindrance except some probable discomfort due to new bony growths about the injured metacarpal bone, it is believed that the rating 10 percent is an adequate evaluation. The disability does not exceed favorable ankylosis of the two fingers, for which a 10-percent rating is provided, and since nearly all the usefulness of the hand remains, a higher rating would be disproportionate to the value placed on the left hand, viz, 60 percent.

There is no claim, appeal, or evidence pending adjudication before the Veterans' Administration, but the representative of the Order of the Purple Heart has indicated his intention to submit additional evidence. Since the adequacy of the rating schedule, in relation to the evaluation of comparable disabilities and to the value of the hand has been considered by the appropriate agency, and the condition is permanent, it is not thought that any increase can be made available to the veteran under existing laws.

In the case of Edward J. Arthur, C–174842, whose address is given as 2160 NW. First Court, Miami, Fla., the veteran was injured October 12, 1918, gunshot wound left leg and right ankle, through and through, in action, without fracture. He was hospitalized to March 21, 1919, about 5 months in all, though as early as January 12, 1919, he was able to walk around ward.

On examination May 25 to 28, 1936, he walked with a limp on right foot, the right ankle nearly ankylosed, the toes, hammertoe due to contraction of the tendon Achilles, with discolored spots and apparently some involvement of the deep veins, swelling of the right leg on standing. He wore an arch support which gave him comfort. The left leg was not covered on this examination, which was for treatment right ankle, but in 1934 the disability was scarring, depressed, and adherent, very tight over the popliteal space. Fairly severe varicose veins both legs, noted as slight at the time of enlistment.

The current rating is 40 percent, entitling to $40 per month. This is a slight increase over previous ratings. In 1934 he was employed as a spotter, dry cleaning, and in 1936 was working part time. Psychoneurosis, noted on last examination, is not service connected. While separate service connection has not been granted for varicose veins, the rating is adequate to cover any symptoms from service aggravation of this latter condition.

Mr. Arthur requested outpatient treatment November 5, 1935, but after examination in his home community, it was determined that out-patient treatment would not benefit the service-connected disability. The veteran had been furnished out-patient treatment in 1934, and also hospitalized in that year; however, treatment was not recommended after short observation. Again, in May 1936, he was hospitalized for a short time, and no treatment was found necessary.

On November 17, 1937, the veteran requested to have arch supports replaced or repaired, but such supports were not considered necessary. There has been no subsequent request addressed to the Veterans' Administration for such arch supports.

In Mr. Arthur's case, while the rating appears to be adequate on the evidence in file, reexamination has been directed in a Veterans' Administration facility, to be conducted at the veteran's convenience. The matter of furnishing the veteran with arch supports will be considered in connection with this examination.

It is hoped that on the basis of the above you will feel that complaints against the Veterans' Administration in these three cases have been greatly exaggerated. Mr. Hildreth has received what must be conceded to be a very large sum of money in compensation for the loss of his leg. While this is undoubtedly a source of inconvenience and constant annoyance, his complaints to the Veterans' Administration do not support the allegations in the quoted letter. The neuropsychiatric aspect of the disability is found to be very minor, hardly warranting classification as a moderate disability.

In Mr. Dombrowski's case, the injury resulting from gunshot wound is comparatively minor. He can make a good fist and exert considerable muscular force. The rating has been carefully compared with ratings for similar disabilities and is found to be adequate.

In Mr. Arthur's case, there is some justification for the protest against the Veteran' Administration's failure to furnish new arch supports early in 1938. This feature of the case will be attended to as soon as the veteran reports for examination which has been ordered. The matter of out-patient treatment for his varicose veins has been carefully considered. Any question of surgical intervention should be taken up when the veteran reports for examination.

It is thought it should be emphasized that in none of the cases is there any actual pending claim, appeal, or new evidence requiring adjudication on the part of the Veterans' Administration. These veterans have complained to others who have corresponded

with you and they have not taken their complaints up, at least recently, with the Veterans' Administration, so that they may be properly considered.

Very truly yours,

FRANK T. HINES, *Administrator.*

Agricultural Production Is Difficult for Man to Control

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. HAWKS. Mr. Speaker, according to U. S. D. A. in 1935 there were 1,054,518,000 acres of land in farms in the United States. In 1930 there were 966,771,000 acres of land in farms in the United States. This shows an increase of 87,700,000 acres that were added to the farms of this country during these years. As the 10-year average from 1927 to 1936 shows, there were 342,500,000 farm acres harvested, and in 1938 there were 341,848,000 acres harvested, so that the acreage in farms is estimated to be relatively the same.

The significant point is that all this talk of the new dealers and all the enormous expenditures of the new dealers in trying to control agriculture have been of little significance, except as they are reflected in the losses of the farmers' pocketbooks and the depletion of the United States Treasury.

Of what value has all this expenditure been? Let us look at agricultural prices and see what the New Deal schemes have done to them. Eggs were 27 cents per dozen the day Mr. Roosevelt was elected President, but today they are only 15.5 cents per dozen. In other words, eggs were 74 percent higher the day he was elected than they are today, and eggs averaged 17 percent more during the last 6 years of the Republican administration than they have during the first 6 New Deal years.

Over 900,000,000 pounds of lard are in storage with the price of lard the lowest it has been in 72 years. We imported over 210,000,000 pounds of edible fats and oils last year—another part of our New Deal agricultural program with its free-trade advocates in the saddle.

Cheese the last 6 Republican years was 17.2 cents per pound. During the last fiscal year it was 11.7 cents per pound. In other words, the average price of cheese during the last 6 Republican years was 47 percent more than it has been the past year.

Wheat is at the lowest price in the history of the world market.

All agricultural prices are declining, and if the New Deal agricultural program is not changed to one with common sense, every farmer in America will lose his farm.

The farmer wants one thing, and that is a decent price for what he raises, and he is entitled to this price. He has no reason to be continually subjected to the whims, cross purposes, experimentations, and fantastic programs of Harvard visionaries.

Public Housing and Children

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mrs. O'DAY. Mr. Speaker, it is a truism to say that the fate of a nation rests upon the kind of children it raises. And the kind of children it raises rests upon the kind of homes which are provided for those children.

Charles Dickens, whose literary works were the basis for many social reforms in his day and afterward, wrote in 1854:

> It behooves every journalist at this time to warn his readers, whatsoever be their ranks and conditions, that unless they set themselves in earnest to improve the towns in which they live, and to amend the dwellings of the poor, they are guilty, before God, of wholesale murder.
>
> Long before this Journal came into existence, we systematically tried to turn fiction to the good account of showing the preventable wretchedness and misery in which the mass of the people dwell, and of expressing again and again the conviction, founded upon observation, that the reform of their habitations must precede all other reforms; and that without it, all other reforms must fail.

England harkened to Charles Dickens, and to those who came after him and fought the good fight for safe, sanitary, and decent dwellings for the poorer citizens of England. Today, England and Wales have more than 4,500,000 people—over 10 percent of the population—living in government-assisted low-rent dwellings.

Since Dickens' day experience has proven that better housing has a definite beneficial effect on the health and development of young children and their mothers. We, in the United States, are just beginning our public-housing and slum-clearance program, and we have as yet no statistics from our own experience to point up this statement. It will take more time to develop a body of facts which will prove the statement that healthful housing, as exemplified in public housing, benefits the Nation.

But is there any reason why we may not profit from the experience of our sister nation across the Atlantic—England? There it has been found that comparisons of mortality rates in low-rent housing and in slum housing show a difference of about 12 percent, while comparisons of infant mortality rates show a difference as great as 95 percent. It is said with authority that if children born in England and Wales were all born under conditions such as exist in English public-housing developments, probably 20,000 infants would be saved every year, and that these children would have every opportunity to grow into healthy citizens.

Tuberculosis, pneumonia, diphtheria—diseases of every kind which take their toll of the Nation's children and mothers and which arise out of unhealthy living conditions—their conquest will stem from improved housing providing healthy surroundings.

But it is not only the effects of slum surroundings upon children and their mothers which must concern us. The birth rate is of primary importance to the forward march of mankind. Given healthy environment, the birth rate will rise.

Health is a prime need of the individual and of society. A statesmanlike government can lead the people into a wholesome, sane, and healthy life. The future of the race depends upon such leadership. The opportunity is ours to provide that leadership. As a major means of attaining a healthy environment for our children, for our mothers, for our future citizens, gentlemen, I earnestly recommend the proposed appropriation for the United States Housing Authority.

An Analytical Study of the World Sugar Situation

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 2, 1939

ARTICLE FROM THE DES MOINES (IOWA) REGISTER

Mr. TALLE. Mr. Speaker, under leave to extend my remarks I desire to submit for consideration of the Members of the House an enlightening statement on the sugar situa-

tion which appeared in the Des Moines (Iowa) Register under date of July 1, 1939.

It appeared under the title of "An Analytical Study of the World Sugar Situation," and was written by Mr. Earl C. Moore, of Mason City, Iowa. It was printed as a letter to the editor and follows:

TO THE EDITOR:

Your recent editorial, Whom Protection Doesn't Protect, is one which I have read with interest. I realize that you were not "picking on" sugar, and that sugar was used merely to illustrate an argument. Nevertheless, there are a number of other aspects of the sugar problem which merit consideration, and I ask this opportunity to mention them.

First, and most important, it may truly be said that the consumer in the United States pays less for his sugar than in any country in which the inhabitants wear shoes on weekdays. Retail sugar prices in the United States are, by any fair standard of measurement, decidedly low.

LOWER PRICE IN UNITED STATES

The retail price of sugar last reported by the Bureau of Foreign and Domestic Commerce of the Department of Commerce was lower for the United States than for any other large nation, Great Britain alone excepted.

The British price was only a fraction of a cent less than ours, and that small difference results from higher costs of distribution in a country geographically as extensive as ours compared with the distribution cost in the British Isles.

The only other countries (out of a total of 43) for which the Department reported lower prices than in the United States were Brazil, Chile, Costa Rica, Cuba, Ecuador, Guatemala, India, Java, Peru, Switzerland, Uruguay, and the Philippine Islands. These price comparisons of the Department are expressed in terms of dollars and cents. Had the comparison taken into account the superior purchasing power of the American wage earner, an even more favorable picture would have been presented.

STATISTICS QUESTIONED

The editorial refers to the case of a Philadelphia refiner who on the same day quoted one price for the domestic market and a lower price for export, and it then proceeds to calculate an assumed "hidden cost" to the domestic consumer by comparing the difference in these prices.

It seems to me that the statistical method involved in this calculation must be seriously questioned at the very outset.

The price which the refiner quoted for export was a quotation for a sale in the world market. And what is the world market? The world market is an international dumping ground for sugar, and it is so recognized by everyone who professes the slightest knowledge of the sugar industry.

ECONOMIC VALUES LEFT OUT

Prices in the world market have not the faintest relationship to any decent human values or real economic values. No important group of consumers in the world buys sugar at the world price, and no important producing area—not even the "natural cane-sugar production of the Tropics," Cuba included—could survive for long if it were forced to accept the world price for all its production.

Less than 10 percent of the world's production of sugar is sold in the world market, and the greater part of that supply comes from countries which sell some of their production in preferential or protected markets, just as Cuba does in the United States.

WHAT A REPORT SAID

The character of the world market, or "free" market, was well described in a report submitted in 1935 by a special committee appointed by the British Parliament to study the sugar industry, as follows:

"The surpluses which at present form so large a part of the free market supplies are 'dumped' sugar and, since in some cases they represent only a small proportion of the total production of the country concerned, the price which is obtained on the free market may be a matter of comparative indifference. In these conditions the price ruling on the free market has no necessary relation to the true economic price of sugar in the sense of the price which would prevail in conditions of free trade. Nevertheless, it is this dumped sugar in the contracted free market which determines the world price."

The 10 percent of the world production which is dumped into the world market amounts to approximately 3,000,000 tons annually. The consumption requirements of the United States are roughly 6,500,000 tons a year. It follows, therefore, if the United States were to buy all its sugar in the world market, that the demand in that market would be increased to almost 10,000,000 tons a year.

IF DEMAND INCREASED

There is no sound reason for assuming, with such increase in demand, that the world price of sugar would remain at its current low level, or that in the final analysis sugar prices to the American consumer would be any cheaper than they are today.

It is necessary to turn back a decade to find a period in which the demand for sugar in the world market approached 10,000,000 tons. The demand approximated that volume in each of the years 1928 and 1929, but the average price for those years was twice the average for 1938. To make available a supply of 10,000,000 tons in the world market would require a tremendous expansion of production in some sugar-producing areas, and it is folly to imagine that the production would be undertaken at recent price levels, which would guarantee the producers nothing but losses.

NO TAXES OR TARIFFS

The Philadelphia refiner mentioned in your editorial apparently bought sugar at the world price, refined it in bond, and then offered it on the world market at the current fire-sale price without the payment of taxes or tariffs. It is certain that the ultimate consumer paid a great deal more than the price quoted by the refiner.

If the sugar were sold in Germany, it cost the consumer about 13 cents a pound; in France, 8 cents; in Italy, 15 cents; in the Netherlands, 12 cents; in Norway, 7 cents; in Ireland, 7 cents; and in Portugal, 9 cents. In the United States the same sugar would have cost the average consumer 5.1 cents a pound.

Except for a 4-year period in the 1890's, when the Treasury paid a direct bounty on sugar production, there has always been a tariff on sugar, and in most cases the rates have been far higher than now.

IN WASHINGTON'S DAY

The first tariff on sugar was imposed 2 months after George Washington was inaugurated President—long before there was a beet-sugar industry and years before Louisiana and Florida came under the American flag. In the face of that record it is hard to believe that the tariff on sugar would be discarded even if there were no domestic sugar industry.

Moreover, it is to be implied from your editorial that the effect of the tariff system is to be measured in the value of the continental sugar industry. This implication overlooks entirely the fact that sugar producers in Hawaii, Puerto Rico, and the Philippines, which together produce more sugar than the continental industry, partake in and are benefited by full protection in our markets.

BENEFITS TO ALL PRODUCERS

Hawaii and Puerto Rico participate in conditional payments under the Sugar Act of 1937 exactly as the producers of sugar beets in Iowa, and the tax assessed against Philippine sugar has been returned in total to the Philippine government. It is the fact that benefits of tariff protection inure to these other sugar producers for the American market as well as to the continental industry.

The Sugar Act and the Cuban trade agreement give Cuba a position in our market which is unequalled by any other foreign country and which amounts to outright subsidy.

Under the Sugar Act Cuba is guaranteed an annual quota of about 2,000,000 tons in the United States market—roughly one-third our consumption requirements—and for this amount of sugar American consumers pay Cuba almost double what she would be able to obtain in the world market.

From 1934 to 1937 the value of Cuban exports of sugar to the United States increased from $55,000,000 to more than $100,000,000, even though there was no appreciable difference in the volume of her exports.

Last year, because of the unprecedentedly low prices, the value of Cuban sugar exports declined to $75,000,000, but all domestic areas were subjected to a like reduction in income.

WALLACE'S SOLICITUDE

Secretary Wallace has frequently declared solicitude for the maintenance of the Cuban sugar industry as a market for American export crops. It would be interesting if those who first calculated the cost of the domestic industry to the consumer by comparing the so-called world price with the domestic prices were to estimate the certain reduction in Cuban purchasing power for American exports if the Cubans were forced to accept the world price for all their sugar.

EARL C. MOORE,
Manager, American Crystal Sugar Co., Mason City, Iowa.

The Housing Program

EXTENSION OF REMARKS
OF
HON. JOSEPH A. McARDLE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. McARDLE. Mr. Speaker, the Pittsburgh Chamber of Commerce is just what you would expect the chamber of commerce of the industrial heart of the Nation to be—an aggregation representative of the biggest of big business in the Pittsburgh area.

The board of directors of that organization in March wrote me pleading for delay in the housing program that we might

have time to study the results of the projects thus far underway. Let me quote from my reply to the chamber, a reply which seems to me still timely:

Mr. FRANK HARPER,
Pittsburgh Chamber of Commerce.

DEAR MR. HARPER: This will acknowledge your letter of March 31, enclosing a resolution adopted by your board of directors urging that present efforts to provide an American standard of housing for South Side and North Side residents be abandoned.

Taking your resolution at its face value and making no present attempt to ascribe to you the motive of sabotaging our housing program, let me outline my position as briefly as possible.

Slums are costly to the entire community—far more costly than subsidies or tax exonerations. Paying low taxes, because their value is low, slums are responsible for conditions which consume a disproportionate amount of the community's tax funds.

Slums are responsible for tremendous juvenile delinquency. Slums breed crime and disease. Slums breed social unrest and discontent, resulting in a high cost of public safety precautions. Slums provide dangerous fire hazards requiring huge outlays for prevention and fire fighting.

Many members of your board of directors are active in community welfare work. Cultural and civic organizations, the Boy Scouts, the Girl Scouts, the free libraries, the Y. M. C. A., and Y. W. C. A., and countless other agencies are recipients of their generosity.

But all these worthy gifts to improve the bodies and mind or nourish the aesthetic natures of Pittsburghers constantly are being nullified by the discontent, unhappiness, despair, and moral and physical illnesses created by the existence of huge slum areas sprawling over our hills and running down our valleys.

The choice is up to us. We must start somewhere to rehabilitate. Rehabilitation is not to be achieved by crying to the high heavens about the spread of un-American ideas in our underprivileged homes. Rehabilitation is not to be achieved by sending children to school in marble palaces and returning them home to dark, drafty, dank houses, where they live in the shadow of tuberculosis, and where a few starved and faded flowers blooming in a window box are the only things of beauty they can afford.

Relief is no cure. The welfare fund agencies do good work, but their treatment is only a stopgap in fighting the social cancer of un-American housing. We in Washington are doing what we can about both problems.

If we are to teach people Americanism, they must be able to live in an American way. You cannot live in an American way in the back alley of a tenement district.

And we cannot wait. We cannot delay while we "try it out on the Hill district." We must push ahead with a progressive program. England has proved that business benefits, the community benefits, and the nation benefits. Housing is a spur to recovery and employment; housing is a big step toward curing many of our social ills.

I see on the list of your board of directors many names prominent in Pittsburgh financial, industrial, and social life. I should like to take these gentlemen and you on a visit to the poorer South Side districts to which they would deny adequate American housing. I do not mean a tour in the manner of the slumming parties so popular of recent years in some well-meaning social circles. I mean a visit.

I should like to take these gentlemen to live with me for 1 week as guests of some of my friends in the South Side. Let me extend a cordial invitation for them to come with me and stay with me right in these homes for 1 week, eating their normal food, living their normal life, contributing their share to the modest expenses of the household, using their rude cots, rusty sinks, and outdoor toilets.

The cost will not be much. You can estimate it as the weekly relief allowance to one person and I shall be glad to assume this obligation for all of you. The discomfort will be considerable, but I am sure the understanding of the South Side's demand for adequate housing will be worth the discomfort. In the daytime the visitors can go about their regular occupations in the Triangle; after 5 p. m. they can be South Siders—just for 1 week.

Many of my friends on the South Side are sensitive about admitting strangers to their homes. They are sensitive of the pity so often extended to them. They do not want pity. They want a chance to live as Americans. They probably would swallow their pride for a week and extend their meager hospitality to you and your directors if they thought, as I do, that the experience would convince you that proper housing is more important than streamlined governmental efficiency.

This is a sincere invitation. The distress of the badly housed is acute. Their problem is one that concerns all of us. I should take pleasure in joining this party and in introducing you to the life. I am not suggesting you or your directors undergo any experience in which I should not join. I know these people; I have broken bread with them; I know they are earnest, struggling, sincere Americans who ask of life only a chance.

I do not believe the chamber of commerce would deny them that chance if your directors knew the true situation. Here is a chance for some real research, some real understanding.

Faithfully yours,

JOSEPH A. MCARDLE.

Mr. Speaker, that same invitation might be extended to my colleagues of the minority side who today are opposing extension of this great program. I might say to them, as I said to the chamber of commerce in repeating my invitation:

My understanding of the Pittsburgh set-up is, in tabloid:

Costs are under rigid control and supervision not only of the Pittsburgh Housing Authority but of Federal housing officials.

Net costs will be sufficiently low to permit occupancy by members of the lowest-income groups which today live in unfit homes.

Anticipated rentals will be in the vicinity of $4 a room-month, cheaper than many homes in Pittsburgh, which today are fit only to be condemned and razed.

Rents will be so low that many persons on W. P. A. projects or relief will be able to occupy the units.

Every Authority transaction is put through temperately, double-checked, and rigidly scrutinized for waste.

I am glad, indeed, to note your acknowledgment that decent housing is needed and must be provided for our ill-housed minorities.

Apparently, where we split is on your plea for delay.

If we had started housing 20 years ago, or even as recently as did the British, we should have been in position to put up a few sample units and sit back to study the results. Instead, we waited until housing conditions were made many times worse by the depression, with consequent doubling up of families and the mass reversion to the lowest level of shelter.

Today we justly hurry. The people will not be patient much longer. The people need the work created by the projects, industry needs the business, the under-housed multitudes must have the shelter.

But hurry as we do and must, you must remember we do not blaze a trail. Projects elsewhere in the Nation already are in operation. And even these were not pioneering in the field. England has had ample experience to justify her public housing projects and there are ample studies available to help us avoid some of her pitfalls.

More houses on both South Side and North Side become unfit for human habitation yearly. Most of these houses remain occupied by unfortunate Americans who can find nothing better within their means.

The consequences of delaying for a year or two are too severe. A year or two from now we must have all of the present projects complete and must drive ahead with others. The proposed $20,000,000 in Pittsburgh Housing Authority projects is but a start. We must and we will have more.

I think your and your directors' failure to appreciate the need for forging ahead without delay indicates you are out of touch with the people and with their needs.

That is why I suggested you might be willing to be my guests for a week on the South Side, living in some of the type of houses we would rehabilitate or raze.

You may haye thought my suggestion impractical, but I assure you it is my considered opinion that I was placing in the path of the chamber an opportunity for distinguished public service.

Undoubtedly one of the great causes of social maladjustment in America today is the remoteness of our more fortunate citizens from the hum-drum and often sordid daily life of their less fortunate fellow Americans.

All this talk of labor unions and social security and home loans and bad housing, this demand for relief and the W. P. A. and the C. C. C. and the N. Y. A. must indeed seem strange and dangerous to gentlemen who never have known or whom time has allowed to forget the ravages of economic distress.

The leaders of American business and social life could find themselves far better able to understand the needs of the ill fed, the ill clothed, and the ill housed if every once in so often they made a pilgrimage to poverty.

Such a pilgrimage would be wasted if conducted in a spirit of ostentation and condescension. But if the task were approached with proper humility—and I use the word advisedly—in a sincere attempt by our leaders to return to human fundamentals, even if physical comfort were sacrificed to some degree, the pilgrimage would help to establish true contact with the needs of the masses which are, after all, the majority of the American people.

If at any time a majority of your directors feel they would like to accept my invitation, please do not hesitate to call upon me. The South Side is hospitable and I shall not withdraw my offer.

But a pilgrimage to poverty comprises too great a sacrifice for our leading citizens. They would rather sit in their clubs and mansions and condemn than visit the less fortunate and learn about America.

I regret my invitation was never so much as acknowledged.

Mr. Speaker, I yesterday received the following telegram from Councilman Edward J. Leonard, of Pittsburgh, who also is chairman of the Allegheny County Housing Authority:

No funds available for 16 Allegheny County projects if S. 591 is not passed this session. Bad housing in many industrial communities of Allegheny County has been accompanied by a startling increase in juvenile delinquency, cost of police and fire protection, danger of epidemics, and decrease in civic morale.

Decency and Americanism cry out for correction of this unbearable condition, which only can be alleviated by Government aid for housing. All your fine work for housing will be in vain unless additional U. S. H. A. funds are authorized.

Almost simultaneously the Honorable John J. Kane, chairman of the Board of County Commissioners for Allegheny County, which embraces Pittsburgh and surrounding municipalities, and his colleague, the Honorable George Rankin, Jr., telegraphed:

The need for Government aid for housing in Allegheny County is acute. Our worst slums in the industrial areas of the county are overcrowded. Houses ruined by repeated floods are jammed by families unable to find or pay for other accommodations. Rents are rising in some distressed sections. Social problems are on the increase. Housing projects planned for the most-needy sections are threatened if the proposed extension of the United States Housing Authority's loan authorization is not approved by Congress. The county commissioners are eager to help, through the Allegheny County Housing Authority, but are powerless in themselves to aid without Federal money. Please continue your efforts in our behalf and in behalf of all the citizens, rich and poor, of our great county.

Housing is not a class problem; it is an American problem.

The Honorable George E. Evans, Pittsburgh councilman and chairman of the board of the Pittsburgh Housing Authority, writes me:

I am very happy * * * to learn that you are in sympathy with our public housing program. * * *

We have been carefully studying both the South Side and the North Side areas. We have been more successful on the South Side and have an area there which has already been tentatively approved. * * * It is large enough for a project of from 800 to 1,000 units. * * * We are also studying the possibility of rehabilitation of already existing houses in that area. The general plan is to select blocks running from street to street and to vacate and demolish the alley dwellings in the rear, thus creating open spaces for play areas and then to rehabilitate the houses fronting on the streets. * * *

I am entirely familiar with the conditions over there and their lack of sanitary facilities, as well as the crowded condition of these homes. Probably no section is so crowded as the South Side area and I agree with you that they are a good, substantial class of citizens, which should be given the opportunity to maintain themselves and their families in the American fashion. * * *

I can assure you that no other expenditure made under the New Deal will be more effective in restoring prosperity than this, furnishing, as it does, employment for large numbers of men in the building trades and in the manufacture and transportation of building materials.

Councilman Evans is not rash when he cites housing as a business stimulant as well as a social necessity.

The Pittsburgh Housing Authority has now under way in Pittsburgh three projects which will provide approximately 3,000 homes for persons now living in the ramshackle tenements dotting our hillsides and river bottoms.

The authority points out:

All work is done by private contractors. The projects are planned by private architects, surveyed by private engineering firms, and erected by private construction firms. * * * The Pittsburgh Housing Authority is paying $3,000,000 for the purchase of materials and over $7,500,000 for labor. Employees of all contractors engaged by the authority must be paid prevailing wages.

Most business is heartily in support of the program. All labor supports it. President James L. McDevitt, of the Pennsylvania Federation of Labor, recently wrote me in regard to the bill we now are considering:

The officers and members of our federation are deeply appreciative of your efforts, and we are today advising all unions in your district of the cooperation you have rendered.

The Congress of Industrial Organizations has repeatedly expressed its strong stand in favor of the measure. The Pennsylvania Industrial Union Council recently released an able report on the need for better housing in Pennsylvania, saying in part:

In our large cities, such as Philadelphia, Pittsburgh, and Scranton, workers' families are living in "bandboxes," in run-down tenements, and under conditions of extreme overcrowding. In our smaller cities and towns the situation is just as bad. Homes lack decent plumbing, decent heating, and decent ventilation. And in those towns where substandard housing is at a minimum there is an acute shortage, which produces serious overcrowding and skyrockets rents. * * *

In 1934 certain figures were gathered by the State planning board, which still have relevance today. At that time it was estimated that the immediate need in Pennsylvania was for 335,000 low-rent homes. * * * Since 1934 this immediate need has increased to at least 440,000.

Only a $2,200,000,000 housing program could provide the necessary number of homes. * * * All the funds which are now being planned to use throughout the country could easily be used in the State of Pennsylvania alone. * * *

Public housing means jobs. The first $800,000,000 to be spent under the U. S. H. A. program will provide enough jobs to keep more than 330,000 men busily at work 40 hours a week for an entire year. If the U. S. H. A. program is expanded to $1,600,000,000, this number will amount to more than 600,000.

However, this report points out:

Obviously, such a program is hopelessly inadequate to meet the needs of America's ill-housed millions.

Further evidence of the pitiful inadequacy of the present program comes from the Philadelphia Housing Authority, which writes:

The Philadelphia Housing Authority will have accomplished less than 12 percent of the low-rent housing and slum clearance needed in this city through the present funds available.

Director Joseph P. Tufts, of the Pittsburgh Housing Association, a private survey group, writes:

It is not necessary to urge your support of additional loan authorizations and annual contributions for the use of the United States Housing Authority. * * * The program is vital to Pittsburgh and other communities in Pennsylvania, and we believe it should be continued.

The names of some of the wealthiest and most conservative Pittsburgh residents appear on Mr. Tuft's letterhead, indicating their support of this great program.

And let me add that dozens of private citizens, community councils, and similar groups have notified me of their support of this program.

I think Pittsburgh and Allegheny County probably are typical of the picture throughout the Nation. Let me summarize the situation there as best I can.

Forty percent of Pittsburgh's families, approximately 64,000 families comprised of adults and growing Americans, live in substandard homes.

Twenty-five percent of these families have no hot and cold running water. One out of four knows bathing as a luxury, cleanliness as a distant hope, sanitation as a word you hear in the schoolroom and read in the newspaper.

Twelve percent—one out of every eight—have no indoor toilets. Half of the other seven families have only partial use of water closets.

Almost 24 percent of these families have neither bath tubs nor showers.

Now what is private industry doing to defeat this condition?

Housing units built for families with incomes under $1,000 a year are negligible in number. An average of about 10,000 homes for families with an income from $1,000 to $1,500 a year are built in the entire Nation each year. And even these homes would be out of reach of many if not most of Pittsburgh's 64,000 badly housed families.

Not until you reach the income group of $2,000 and over, does private building assume significance, when it jumps to an average of some 200,000-odd units a year, according to the Bureau of Labor Statistics' average from 1929 to 1935.

You say, "Stop this Federal activity and private initiative will find a solution"? Experience shows that private building is spurred by public building in Europe and in America.

Other means of stimulating housing having failed, maybe it is time to try that. For activity in the home-construction field is vital to any stable prosperity at any time.

The New York City Housing Authority and the Works Progress Administration recently collaborated in compilation of an excellent report on housing construction there is in the United States today, with the amount there would be if we were proceeding as fast as some other foreign nations.

The Swedish Government aids in the building of an average of 3,073 dwellings each year, the equivalent to 140,554 family units in this country.

With federal aid England and Wales, by no means a socialistic or wasteful nation, is so far ahead of this country that government aid accounts for 71,161 homes a year, or the equivalent of 209,335 for the United States.

Germany—and I refer now to the Germany of 1928 to 1938—build an average of 138,833 homes a year with government aid, or the equivalent of 233,259 homes if Germany were as large as the United States.

And what was the American average? Three thousand six hundred and ninety-five houses a year.

The figures are even more illuminating, however, when compared with private industry.

Mr. Speaker, it is reasonable to conclude that in those nations where the most government-aid dwellings are built there also exists the highest rate of private construction.

Government aid built 4.7 homes for every 1,000 families in Sweden over the 1928–38 period.

Private aid built 30.6 homes for every 1,000 families.

In the same period in this Nation Government aid—and I grant the great New Deal housing program was not yet under way—built two-tenths of one house for every 1,000 families and private aid built only 9.4 homes for every 1,000 families.

Compare that with England and Wales. For our two-tenths of one home Government aid in that rainy island built 7 homes for every 1,000 families. Where our private industry and individual initiative built 9.4 homes their private industry built 18 homes for each 1,000 of population.

Poverty-stricken Germany's index of private building is the lowest among the nations studied and is the only one lower than this Nation's. But even Germany built 14 houses for each thousand German families against our 9.4.

The lowest, of course, is Soviet Russia, which yearly built 19 homes for every 1,000 persons in the 10-year average, of which an insignificant number were privately constructed.

But the fact remains that Sweden, Denmark, the Netherlands, Czechoslovakia—may she rest in peace—England and Wales, Switzerland, Norway, the Soviet Union, and Germany all built more homes in one way or another than did the United States for each 1,000 citizen families.

This 10-year period embraces the years when our depression-ridden Nation had the least money to pour into upkeep and modernization of the old buildings still serving as dwellings.

During the period when these European nations, so much poorer than we in material wealth, were outstripping our home-building activities, the United States Housing Authority estimates new construction was equal to one-third of the number of homes in this Nation utterly unfit for habitation and bore the same relation to the number of new houses needed for additional families between 1930 and 1938.

In other words, for every six houses needed in this Nation, public and private initiative combined supplied but one.

That rate of building will make us a nation of slum dwellers in a very few years.

These and other figures can be cited to show that the housing program will spur industry, aid labor, stimulate private construction, and make our cities better places to live. Other speakers in this House have presented the proposition more ably than could I.

I should like, however, to say a few words about Pittsburgh and Allegheny County, with which I am familiar.

The backbone of my district is the South Side of Pittsburgh, which lies in the low valley of the Monongahela River back of the water-front steel mills and factories and warehouses.

You realize when you pass through the district that it is poor. But the houses are, many of them, old, substantial-looking buildings erected by the thrifty inhabitants many years ago.

You do not see the back alleys, the hillside shacks, and unrepaired and insanitary interiors of the houses until you become friends of the south-siders, as I have.

Many of them are lovable people, battered and beaten by the break-down of an economic machine they knew nothing about, buffeted by fate until they are sore, bewildered, and weak.

Others still are strong and fighting, but they, too, are powerless in the face of continued depression, continued unemployment, and continued poverty.

The North Side, West End, East Liberty, Homestead, McKees Rocks, Braddock, North Braddock, Rankin, Turtle Creek, East Pittsburgh, Tarentum, Natrona, McKeesport, Duquesne, Clairton, West Homestead, and countless other districts, boroughs, and small cities within this great industrial area present a similar picture.

Almost one-half of the population of the entire county lives in substandard homes.

The tuberculosis rate in the slum district is about three times the tuberculosis rate in the better districts. Count, if you will, the dollars of public money you will save by lowering this tuberculosis rate as you will do with public housing.

The infant death rate is half again as high in the slum districts as it is in the better districts.

Can you set a price on babies' lives? If you can, compute what America will save by raising our standard of living.

Slum districts produce almost three juvenile delinquency cases for every one from the better residential districts. Will you continue to pay social workers, reformatory teachers and guards, judges' salaries, and other expenses of the juvenile court, or will you seek to get to the root of the problem and spread American hope and living standards and ideals into the poor sections?

Pittsburgh has almost two policemen in slum districts for every one in better districts; fire calls in slum districts are twice the number of those in better districts.

Mr. Speaker, if the minority in this House, the gentlemen of the Republican Party, sneer at pleas for happiness and an American standard of living for our poorer classes, if they despise the poor and would let them shift for themselves, possibly they would be willing to consider this program in dollars-and-cents terms.

Let them consider the saving in fire and police protection.

Let them consider the saving in hospitalization and lost man-hours of work.

Let them consider how much less they will have to give to their community funds, their hospitals, their municipal treasuries in taxes.

Let them consider the labor that will be created by public-housing programs, the materials that will be bought from manufacturers, the wheels of industry that will be turned by this great program.

Railroads, mills, mines, factories, architects, engineers, bricklayers, plasterers, masons, teamsters, taxpayers, all benefit by this program. All, Mr. Speaker, and more.

Every man, woman, and child in America stands to benefit in dollars and cents.

This bill will spread the benefits to the country districts, with the amount set aside for rural construction. And who can take a motor trip through our South, through New England, through western Pennsylvania, without acknowledging the need for rural-housing projects?

When I campaigned for Congress, I promised the people in my district I would be guided by the slogan:

The South Side is in America, too.

Today, Mr. Speaker, I would enlarge that slogan, to say:

The poorest one-third of the Nation is in America, too.

Let us forget party lines, let us forget class and sectional prejudices, and let us vote for this bill which, while just a beginning, probably constitutes a great permanent contribution to the morale, the civic virtue, the genuine patriotism, the happiness, hope, and ideals of this Nation than any other measure we have considered in Congress this session.

This is permanent, this is part of any cure you may solve for the Nation's ills.

Let us pass this bill so we can turn our attention to a bigger and increasing housing program next January.

Freight Rate Discrimination—On the Way out

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. BRYSON. Mr. Speaker, in these closing moments of the first session of the Seventy-sixth Congress, I hasten to call attention to an important announcement just made by the Interstate Commerce Commission. The newspaper article I have in hand reads as follows:

I. C. C. HOPES TO MODERNIZE FREIGHT RATES—GENERAL INVESTIGATION OF RAIL AND WATER CLASS TARIFFS ORDERED

The Interstate Commerce Commission announced yesterday it would attempt to bring the Nation's complicated freight-rate structure up to date.

It ordered a general investigation of rail-and-water class rates, except in Mountain Pacific territory and on transcontinental traffic, and also an investigation of freight classifications by rail and water. One official indicated that he thought the investigation might require several years.

The commission said the investigation would be made "with a view to prescribing such rates and classifications as may be found to be justified."

The investigation will cover the intra- and inter-territorial class rate structures in northern, southern, southwestern, and western trunk-line territories.

FREQUENT CRITICISM

Class rates apply to all shipments which do not move under commodity rates. They apply to traffic generally called merchandise, while commodity rates apply generally to heavy, low-rated commodities such as coal.

One Commission official estimated that about 50 percent of the tonnage in northern territory moved on class rates, but that the percentage was considerably smaller in other territories.

The present class-rate structure frequently has been criticized. The South especially has objected to the class rates applying to shipments into the North. These interterritorial rates are considerably higher than the rates within the North. The South contends it should have the same rates on its shipments into the North, mileage considered, as apply on shipments entirely within the North.

There can be no doubt about the fact that the drive against freight-rate discriminations which was launched early in this session of Congress is gaining momentum. Under pressure of this open thrust at freight-rate discriminations, concessions to our demands are being made while sentiment for outright removal of unjust rate differentials is rapidly crystallizing.

At this time I am firmly reasserting my determination to press on for further justice to our southern manufacturers, industrial workers, and farmers. The fact is not disputed: Southern industry has too long been subjected to the retarding force of this man-made artificial economic barrier. The breaking point has been reached; sectional freight-rate discriminations must go.

To reinforce the position I have taken in this matter, I should like to have inserted in the RECORD the following:

[Newspaper article, February 1, 1939]

BLYSON ASKING FREIGHT PARITY—SOUTH CAROLINA CONGRESSMAN PRESENTS BILL TO WIPE OUT PRESENT RATE DISCRIMINATIONS

WASHINGTON, February 1.—A bill to wipe out existing freight-rate discriminations was presented to the House today by Representative JOSEPH R. BRYSON, of the Fourth South Carolina District.

The first bill he has sponsored since entering Congress January 3, Mr. BRYSON declared that removal of the unjust rate burden was one of the most important issues facing the South.

The proposal specifies that the Interstate Commerce Commission "shall revise existing rate structures for the purpose of establishing and thereafter maintaining sectional and intersectional uniformity in rates, permitting the free and unfettered flow of commerce between different sections and States of the United States."

Mr. BRYSON is also a Member of the large House bloc which last week, under the leadership of Representatives WARREN, of North Carolina, and RAMSPECK, of Georgia, unanimously adopted a resolution asking that legislation equalizing freight rates be included in the rail-relief bill now before the House Committee on Interstate and Foreign Commerce.

The Bryson proposal and others sponsored by Mr. RAMSPECK will probably form the nucleus of a new legislative program which will be pushed in the House if the committee fails to act on the group resolution.

STATEMENT TO PRESS, APRIL 28, 1939

There are two approaches to the freight-rate problem:

First. Legislative: Congress can enact legislation making it mandatory for the Interstate Commerce Commission to eradicate existing freight-rate differentials.

Second. Administrative: The Interstate Commerce Commission itself, in disposing of complaints filed with the Commission by carriers and shippers, can readjust existing rate structures so as to eliminate differentials.

Action by the first method would result in a curtailment of the I. C. C.'s authority, which the I. C. C. is anxious to avoid. The value of present efforts being made by certain Members of Congress to have such legislation passed is that it assures the South of more sympathetic treatment by the Commission. Already Commissioner Lee has submitted a recommended report to the Commission which would lower rates on a number of articles moving through southern territory.

My bill, designed to eliminate freight-rate discriminations, is like several similar measures introduced by other Members of the Congress still pending before the Committee on Interstate and Foreign Commerce. Some of these bills may or may not pass; but, regardless of their final outcome, they exert a favorable influence over the present situation.

[Remarks recorded in CONGRESSIONAL RECORD, July 22, 1939]

THE SOUTHERN PLEA FOR ABOLITION OF FREIGHT-RATE DISCRIMINATIONS

[In the House of Representatives Saturday, July 22, 1939]

Mr. BRYSON. Mr. Speaker, no part of this transportation bill is more deserving of our consideration than section 6, which strikes a blow at sectional and intersectional freight-rate discriminations.

While those of us in this House who have been pressing for the enactment of legislation to wipe out freight-rate discriminations against industry in the South and West cannot say that the provisions of section 6 give us all that was asked for, we do feel that it represents a partial victory—a precious concession to our demands.

Section 6 of this measure amends section 3, part I, of the Interstate Commerce Act so as to make it unlawful for any common carrier either to give any undue advantage to any particular region, district, or territory, or to subject any particular region, district, or territory to any undue disadvantage. Under this section authority is also given the Interstate Commerce Commission to investigate rate structures throughout the country to determine instances in which unjust, unreasonable, or unlawful rates exist.

BILL INTRODUCED

The inclusion of this section in the transportation bill recalls efforts at this session of Congress, which began with the meeting of a large group of southern and western Members of Congress on January 20. Representatives of 20 Southern and Western States participated in this meeting and plans to attack the problem of freight-rate discrimination were considered at length.

The week following this conference I introduced a bill designed to wipe out existing freight-rate discriminations. This bill was referred to the Committee on Interstate and Foreign Commerce on January 30. Making it unlawful for any common carrier to maintain rates unduly disadvantageous to any particular region or territory, my bill would also require the Interstate Commerce Commission to revise existing freight-rate structures "for the purpose of establishing and thereafter maintaining sectional and intersectional uniformity in rates, permitting the free and unfettered flow of commerce between different sections and States of the United States."

Similar measures, aimed at the eradication of freight-rate differentials between different sections of the country, have been introduced by other Members of Congress. In an interview with the press on April 28, I stated that the introduction of these measures had made an impression on the Interstate Commerce Commission that was being reflected in a more sympathetic treatment of the complaints of southern shippers. In support of this view, I pointed to a recommended report which Commissioner Lee submitted to the Commission on February 27. This report recommended lower rates on a number of articles moving out of southern territory, stating that:

"The maintenance of rates reflecting territorial differences in rate levels, thereby creating rate walls along the borders of rate territories, tends to prevent a Nation-wide development of industry, and is not conducive to the promotion of the best interests of either the carriers as a whole or the country as a whole."

PRESIDENT'S SUPPORT

At that time I also predicted that the President's action in calling upon Congress to give special study to the subject of freight-rate discriminations would strengthen the position taken by the southern group in Congress. Last November I had an opportunity to briefly discuss the freight-rate situation with the President, and he left no doubt in my mind as to his readiness to support the South in this struggle.

Legislation to eliminate freight-rate differentials, which impose an unfair tariff on goods manufactured in the South, is long overdue. I wish to call to the attention of the Members of this House certain portions of a recent report on economic conditions of the South, which reads as follows:

"In addition to absentee ownership and the high cost of credit, the major problem which faces almost all industry in the South is that of freight-rate differentials. The present interterritorial freight rates which apply on movements into other areas of many southern manufactured and semifinished goods, and some agricultural products and raw materials, handicap the development of industry in the South. This disadvantage works a hardship particularly with regard to shipments into the important northeastern territory. This region, containing 51 percent of the Nation's population, is the greatest consuming area. The southeastern manufacturer sending goods across the boundary into this region is at a relative disadvantage of approximately 39 percent in the charges which he has to pay as compared with the rates for similar shipments entirely within the eastern rate territory. The southwestern manufacturer, with a 75-percent relative disadvantage, is even worse off. Such a disadvantage applies to the southern shipper even when, distance considered, he is entirely justified on economic grounds in competing with producers within the eastern territory.

DIFFERENTIALS CREATE MAN-MADE WALL

"In effect, this difference in freight rates creates a man-made wall to replace the natural barrier long since overcome by modern railroad engineering. Both actual and potential southern manufacturers are hampered because attractive markets are restricted by the existence of a barrier that is now completely artificial. The southern producer, attempting to build up a large-scale production on the decreasing cost principle, finds his goods barred from the wider markets in the Nation's most populous area. In marketing his products over the wall he is forced to absorb the difference in freight charges.

"Two chief reasons for higher freight rates have disappeared. One was the greater expense of railroading in the South due to physical difficulties. This has geen minimized by modern engineering. Another was the comparative lack of traffic that prevented the spreading of the cost. This no longer is the case, since many important southern roads have as great a traffic density as those above the Ohio River. The operating costs of southern lines today are lower than those in the eastern territory."

Despite the fact that all reasons for higher freight rates have disappeared, glaring examples of rate discriminations still exist. For instance the distance between Charlotte, N. C., and St. Louis, Mo., is 801 miles, and the cost per 100 pounds for shipping goods first class is $1.98. On the other hand, while the distance between New York City and South Bend, Ind., is 803 miles, the cost per 100 pounds for shipping goods first class is only $1.42. This means in this instance that the manufacturer in Charlotte must pay 56 cents more—an outright 56-cent tariff—on every 100 pounds of goods which he ships to St. Louis in competition with the New York manufacturer.

Looking at this matter of rate discrimination from another angle, we find that the distance between Atlanta, Ga., and Louisville, Ky., is only 449 miles, while the distance between New York City and Louisville is 852 miles, or almost twice as great as the distance between Atlanta and Louisville. Yet the transportation cost for the 852 miles between New York City and Louisville is only $1.49 per 100 pounds first class, while the transportation cost for the 449 miles between Atlanta and Louisville is $1.51 per 100 pounds first class. This means that the southern manufacturer must pay 3 cents more than the New York manufacturer to ship every 100 pounds of his goods about half the distance of the New York shipper.

MANUFACTURERS, INDUSTRIAL WORKERS, AND FARMERS SUFFER

There can be no denying the fact that the industrial development of the South has been retarded and is being hampered today by the presence of discriminatory freight rates. All the people of the South have felt the oppressive effects of this great injustice. The manufacturer has been forced to meet competition from other sections of the country with one hand tied behind his back; the mill worker has seen his opportunities for employment limited and he has often been expected to bear the burden of this freight rate tariff while the farmer has had to place his product on sale in a restricted market.

I know that the Members of this House hold to the vision that this Nation can, and will, if it so orders its affairs, attain the ultimate in productive genius and human happiness, and I appeal to each of you in a spirit of fair play to go forward with us in this effort to wipe out all freight-rate discriminations.

Thomas Jefferson

EXTENSION OF REMARKS

OF

HON. CLYDE L. GARRETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

ADDRESS BY HON. LON A. SMITH

Mr. GARRETT. Mr. Speaker, recently I received an address delivered by Hon. Lon A. Smith, chairman of the Railroad Commission of Texas, which address was delivered on the occasion of the celebration of the birthday of Thomas Jefferson, author of the Declaration of Independence, and third President of our country. I believe that this address should be printed in the CONGRESSIONAL RECORD for the historic value which it has and for the significance of its utterances.

The address is as follows:

I am happy to be a guest of your patriotic organization and to appear on your program this evening.

A brief word regarding the Thomas Jefferson Society of Texas under whose auspices we gather: Your organization is founded on principles of government as eternal as the stars that sing in the heavens above, as constant as the sun in its orbit, as consistent as the teachings of the Decalog; an abiding belief and faith in God; a purpose, fundamental and glorious, teaching and expounding the philosophy of the liberty and freedom of our Republic; a declaration of vigilance and watchfulness of the interests of our Nation, having ever uppermost in mind and heart the faith of the fathers of the Declaration of Independence; inculcating a living appreciation of the real value and sacred obligations of American citizenship; exemplifying benevolence, promoting the general welfare, and inspiring loyal cooperation of the whole people. Builded upon such a foundation, launched under such auspicious skies, your organization should live as long as the American heart beats in rhythmic unison with the eternal principle of government proclaimed by the Sage of Monticello in the Declaration of American Independence.

In all the far-reaching range of illustrious names—soldiers, statesmen, patriots—of whom we proudly boast, whose glorious achievements are recorded in history, poetry, story, song, and legend, the subject assigned me this evening has gathered about it a halo resplendent, refulgent, inspiring, prophetic, glorious—Thomas Jefferson.

Born in Albemarle County, Va., April 13, 1743, on his father's farm surrounded by the simplicity of country life in the Virginia colony, Jefferson grew to manhood in an environment conducive to the development of statesmanship, in an atmosphere whose every breath told of the struggle for independence. Broad acres reflected his earthly possessions, and many slaves were at his command. His lands were tilled under the most improved methods of agriculture. He did not believe in the system of slavery, refusing to buy slaves in the market, never adding to the number he inherited from his father's estate and those added to the number by his marriage to Mrs. Martha Skelton.

His life does not abound in the spectacular and outwardly glorious deeds of generals and conquerors, yet he showed a courage of thought and action that would entitle him to the name of hero, and by the stroke of a pen and with broadness of vision he added to the United States a territory larger and richer than the conquests of Genghis Khan or Attila, adding to our domain all the territory west of the Mississippi except the empire of Texas and lands acquired by conquest and by treaty with Mexico.

It required heroism of the sublimest sort for a man to take the chairmanship of the committee and to draw up with his own hand the Declaration of American Independence from the British Empire. Well did he write, "We mutually pledge our lives, our fortunes, and our sacred honor," because if the effort had ended in failure, the leaders would have died ignominiously, and one of the first to pay the price would have been the man whose hand drafted that declaration.

It is not my intention to go into detail concerning the life of Thomas Jefferson for it is a subject with which all of us are familiar from school days. After being taught by a private tutor the subjects that were standard in his day—Latin, Greek, French, and mathematics—the youth enrolled in William and Mary College. It is interesting, indeed it was prophetic of the greatness to which he was destined, that Jefferson, though not yet 20 years of age, was a member of a little group of men. The other three were far older and more experienced than he—George Wythe, the eminent lawyer; Gov. Francis Fauquier, gay and accomplished man of the world; and Prof. William Small, a profound scholar. It was indeed a great good fortune that the slender, raw-boned, read-headed boy in the semiwildnerness of the new world should have been privileged to come under the influence of Professor Small, a man of learning and of thought, who had taught in British universities and had won recognition as being among the ablest of educators and philosophers. With these three men, the eminent attorney, the gay and witty Governor, and the profound scholar, young Tom Jefferson discussed weighty problems of philosophy and government.

Yet, he was a human sort of fellow, too. He liked to play the fiddle and he took an active part in the social life around him; especially was he fond of attending the dances and other elaborate social affairs.

In 1765, 22-year-old Jefferson stood in the hallway of the House of Burgesses and heard eloquent Patrick Henry offer his famous resolution against the Stamp Act. This stirred his liberty-loving spirit. Earlier than that, when he was just a boy, Jefferson had engraved on a seal his motto, "Resistance to tryants is obedience to God."

In swift review, consider the many offices that this remarkable man held—member of the House of Burgesses, of the Virginia conventions, of the Continental Congress, and of the Virginia Legislature; Governor of Virginia; Member of Congress; Minister to

France; Secretary of State; Vice President; and President of the United States. From 1769 until 1801, a period of 31 years, he was continuously in public office.

And after he retired to private life and to his beloved Monticello, Jefferson continued to give thought to the problems of the Nation and to serve his fellow man. For 17 years people came from all over the world to consult the "Sage of Monticello." Often the housekeeper had to provide beds for 50 guests. And when Jefferson died, he died a bankrupt because of his hospitality—a bankrupt in worldly goods but rich beyond price in achievement and service for mankind.

Reference already has been made to his authorship of the Declaration of Independence. As a member of the Virginia Legislature he destroyed primogeniture and entail, heritages or relics of the feudal ages, and he was responsible for the passage of one of the best laws the world has ever seen for public education—an ideal system from primary department to university. He wrote the statute for religious freedom in Virginia. He planned our decimal monetary system. As Secretary of State in the administration of George Washington, he clashed with Alexander Hamilton, who favored a strong centralized government, while Jefferson wanted the National Government to exercise only the powers clearly stated in the Constitution. In 1793, he resigned from the Cabinet and returned to Monticello, and on his plantation, which had grown to more than 10,000 acres, he did much to improve methods of farming, and he established a manual-training school among the Negroes on the plantation.

In the Louisiana Purchase his political enemies said he was disregarding his "strict construction" theory of the Constitution because the Constitution did not specifically provide for adding territory. Jefferson acted in order that the United States might control the Mississippi River and the port of New Orleans; further that the United States might not be hampered by European countries in the development of a republican form of government.

In his second term as President, the United States waged war on pirates of Tripoli who were plundering American commerce, and this successful war increased the influence of the United States among the nations of the world.

It has been said that Jefferson gave to the world more broad principles of government than any other man. If you think this statement too sweeping, let us consider the fact that he stood for the sovereignty of the people in an age of kings and despots. In the United States when only landowners were allowed to vote, he urged the ballot for every man who might be subject to military duty; he was for universal education and for circulating libraries. Jefferson was opposed to bounties and monopolies; he favored economy in government; he was for peace; for a well-trained militia and a small standing Army; he believed in rotation in office and local self-government.

While Secretary of State, he enunciated the principle that later was to become known as the Monroe Doctrine.

The great utterances of this mighty thinker are still a bugle call to men who love freedom today more than a hundred years after his death. I cannot forbear quoting these familiar words of the Declaration of Independence: "We hold these truths to be self-evident—that all men are created equal; that they are endowed by their Creator with certain inalienable rights; among these are life, liberty, and the pursuit of happiness."

Jefferson had a sense of humor, too. One of his best known sayings was concerning public officials and employees: "Few die and none resign." "When a man assumes a public trust he should consider himself as public property."

In this day when dictatorships are again in the ascendancy in some parts of the world and the peak of mankind is threatened by autocratic, ruthless power, Jefferson's remarks are again timely. He declared, "It is error alone which needs support of government. Truth can stand by itself." When we consider the subservient and shackled press of some lands these words of Jefferson's are truly impressive: "Were it left to me to decide whether we should have a government without newspapers or newspapers without a government I should not hesitate to prefer the latter."

"The mass of mankind," he declared, "has not been born with saddles on their backs nor a favored few booted and spurred, ready to ride them."

"The care of human life and happiness, and not their destruction, is the first and only legitimate object of good government."

What would Jefferson do if he were living today? What would be his attitude touching problems that confront us? It would be the presumption of prophecy for me to attempt to answer such questions, but I believe that his fundamental principles would be the same. The greater density of population, the unoccupied land, the undreamed-of growth of our cities the elaborate systems of communication and transportation, and the tremendously complicated industrial development—all these in contrast with the simplicity of Jefferson's day might cause him to change his views, however, as to specific methods.

Jefferson asserted, "The only orthodox object of the institution of government is to secure the greatest degree of happiness possible to the general mass of those associated under it."

"A wise and frugal government, which shall restrain men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned—this is the sum of good government."

That Jefferson would apply his general principles in the light of conditions as they exist at a given time is shown by his statement that "the present generation has the same right of self-government which the past has exercised for itself."

"I know no condition happier than that of a Virginia farmer, his estate supplying a good table, clothing himself and his family with ordinary wearing apparel, furnishing a small surplus to buy salt, sugar, coffee, and a little finery for his wife and daughters, enabling him to visit his friends, and furnishing him pleasing and healthy occupation. To secure all this, he needs but one act of self-denial—to put off buying anything until he has money to pay for it."

Looking back over many brilliant achievements, Jefferson wrote to a friend: "I had rather be shut up in a very modest cottage with my books, my family, and a few old friends, dining on simple bacon, and letting the world roll on as it liked, than to occupy the most splendid post which any human power can give."

At Monticello, the Mecca of Democracy, the American shrine of liberty, he died on July 4, 1826, just exactly 50 years after he wrote the Declaration of Independence and on the same day that his old political rival, John Adams, passed away.

The modesty which characterizes the deepest and truest greatness was revealed in the inscription that Jefferson asked be placed on his tomb. He did not request that it be carved in marble that he had been President of the United States or that he had added a magnificent sweep of territory to the Nation, but he asked simply that these words be inscribed: "Author of the Declaration of Independence; of the Statute for Religious Liberty in Virginia; and Founder of the University of Virginia."

As long as democracy endures, as long as human liberty lives, men will honor the memory of Thomas Jefferson.

The declaration, "All men are created equal," is the summum bonum of consistency in democracy. This is not a high-sounding phrase of political philosophy. The unfaltering simplicity of this great man is the eternal support of the platform of the party he founded. Jefferson was an aristocrat in birth, in fortune, in intellect, but a plain American citizen in the simplicity of his life, possessing the demeanor of distinction but manners and habits most democratic, making him deservedly popular with the masses, as shown in the demonstration and ovation given as he rode on horseback to his inauguration as President of the United States, requesting he be addressed as Mr. Jefferson and not "His Excellency" as was the custom in addressing the Presidents.

He was assisted in drafting the Declaration of Independence and the Constitution of the United States by those stalwart Americans, Adams, Franklin, Sherman, and Livingston. Gladstone, England's greatest statesman, declared our Constitution presents a degree of wisdom akin to Deity.

"Breathes there a man * * *." Such is the epitaph the generous hand of the consecrated patriotic poet would carve on the tomb of an American citizen destitute of love for country—patriotism. Loyal devotion to patriotic principles of government is absolutely essential to the life of any nation. As a people we have enjoyed such liberties for more than 150 years. This glorious heritage was bequeathed to us as a nation by Thomas Jefferson, the wise statesman, the devoted patriot, the typical southern gentleman, whose birthday we celebrate and whose memory we enshrine anew in our hearts.

Art, science, and literature have contributed most generously to the glory and glamour of this outstanding American. But when the poet's muse shall have lost its charm, when paintings shall have faded from time-worn canvas, and when inscription on marble has corroded, the wisdom, philosophy, and teachings of Thomas Jefferson will continue to abide in every loyal American heart.

Centralization of Power Defeats Recovery

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. PITTENGER. Mr. Speaker, one of the most interesting discussions having to do with our business depression and the problem of recovery for agriculture and industry is set forth by Mark Sullivan in his column in the Washington Post for July 27.

Mr. Sullivan calls attention to a bank which can no longer pay interest on savings deposits because the bank cannot find people who will borrow money for carrying on business and industrial enterprises. Mr. Sullivan said:

I am going to write today about President Roosevelt's lending program. I have in my hand 31 newspaper clippings about it. I have on my desk 6 copies of the CONGRESSIONAL RECORD containing 54 arguments pro and con. And I have in my own head some ideas.

But I am going to dismiss most of that. For the most illuminating comment on the lending program I turn to the Des Moines (Iowa) Register of one day last month. The comment is not on the editorial page—though the Register editorials give exceptionally sound discussion of national questions.

But the story that most illuminates Mr. Roosevelt's lending program is on the news pages. It is a dispatch from the little town of Booneville, some 15 miles west of Des Moines. I quote and condense:

"BOONEVILLE, IOWA.—There is practically 'no sale for money' here. The Booneville Savings Bank is going out of business September 1. * * * It has $267,000 of its depositors' money, and has been asking them to come and get it since May 29. * * * The reason for the bank's going out of business is inability to use the money. The bank has been paying 2½-percent interest on deposits and can't make sufficient loans to earn it. 'We are going to pay off our depositors and quit business September 1,' says C. C. Cook, the affable gray-haired cashier who runs the bank. 'The principal reason we are quitting is that we do not know what to do with your money,' depositors were told in letters when the decision to liquidate voluntarily was made. The bank has been open every business day in 33 years except during the 1933 bank holiday."

WHY CAN'T BANK LOAN ITS MONEY?

Now reader, ask yourself the question: If the Booneville bank could loan its money, would it shut up shop? That question hardly needs to be answered. If you insist on an answer, it is in the words of the dispatch quoted above: "The reason for the bank's going out of business is inability to use the money." The answer is in the letter of the Booneville cashier to his depositors. "We do not know what to do with your money."

Next, ask yourself this question: Why can't the bank loan its money? The answer is obvious. It is because no one wants to borrow; that is, no prudent businessman wants to borrow, nor prudent farmer, nor prudent other person. No doubt there are plenty of willing borrowers in Booneville and thereabouts, as everywhere else. The Booneville cashier can find them on any street corner. But they are not prudent businessmen.

No one wants to borrow who is the type that won't borrow unless he can see his way clear to paying back. There is no one to borrow who sees how he can make prudent use of the money, make enough to pay interest, make a profit for himself, and pay back the principal when due.

PRUDENT BORROWERS DIFFICULT TO FIND

True, Booneville is a very small town. Conditions there may be extreme—I do not happen to know. But if the Booneville conditions are extreme, they are not unusual. On the contrary, they are common. Booneville is a microcosm of the country. Practically every bank official in the United States who reads this story of the Booneville bank will recognize that, to some degree, he is up against the same situation. His bank is overflowing with money, potential credit, for which he can't find use. He can't find borrowers. That is, he can't find prudent borrowers—he can't find borrowers of the type who won't borrow until they can see their way to pay back. Officials of big city banks tramp the streets looking for borrowers. Vice presidents of city banks nowadays have become salesmen; they ring doorbells with almost the ubiquity and pertinacity of a soap salesman.

If the banks can't find borrowers, that is, prudent borrowers, then where is the administration going to find borrowers for that two and one-half billion lending fund, after and if Congress passes it? If the Booneville bank can't find borrowers, where can the Government find them?

The administration will find borrowers all right—no need to worry about that. But will they all be prudent borrowers? That question, I imagine, the reader can answer for himself.

FEAR IS CAUSE OF CREDIT RESTRAINT

The final question, and the nub of the whole matter, is: Why do prudent borrowers not borrow the money that is already in the banks begging to be borrowed? Why do businessmen and shopkeepers and manufacturers refrain from extending their operations? Why do men not in business refrain, if they are prudent, from going into business? In short, why does business not recover and go forward?

Mainly the answer is fear. Some of the fear, such as fear of European war, is not within the administration's power to help.

But much of the fear existed before the war scares. Largely it is fear of the administration, of things the administration has done and other things it may do. Just what these things are, there is not space here to set down in detail. If the administration really wants business to recover, the true path is to remove these fears, and thus set business free to borrow the abundance of money that is already in the banks and looking desperately for prudent borrowers to borrow it.

Ill fares the land, when power accumulates at Washington, while the Boonevilles decay.

Royal C. Johnson

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

STATEMENT BY THE NATIONAL COMMANDER OF THE VETERANS OF FOREIGN WARS

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the national commander of the Veterans of Foreign Wars of the United States, Commander in Chief Eugene I. Van Antwerp, in tribute to Royal C. Johnson, former Congress Member from South Dakota:

Immediately upon his return from the American Expeditionary Forces, Royal C. Johnson, member of C. C. Croal Post, No. 17, Aberdeen, S. Dak., served as judge advocate general of the Veterans' of Foreign Wars of the United States. We honor him, not only as a former national officer and as a comrade in arms, but for his great contribution to the cause of veteran welfare as chairman of the House Committee on Veterans' Legislation while a Member of Congress during the years preceding his retirement in 1933.

When Royal Johnson was a first lieutenant with the Three Hundred and Thirteenth Infantry, Seventy-ninth Division of Montfaucon, France, he performed an act of heroism that was subsequently recognized by the War Department with a Distinguished Service Cross. As an officer, he constantly exposed himself to enemy fire, setting a brave example to his men by his fearlessness. When severely wounded by shell fire, he assisted two men of his company to the rear and refused to occupy space in the ambulance until these men had been provided for.

This particular incident symbolizes Royal Johnson's career in Congress as the chairman of the House Committee on Veterans' Legislation immediately following the World War. Under his leadership this committee laid the foundation for the Federal Government's present veteran-welfare program—including compensation, hospitalization, and vocational training.

Every Government hospital for disabled veterans in the United States stands as a monument to the memory of Royal C. Johnson and his devotion to the welfare of America's disabled veterans and their dependents.

Federal Spending

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. ANDERSON of Missouri. Mr. Speaker, 7 years of spending is enough. In the beginning of the era of spending, even those of us who had little faith in the back-door method of stimulating business, were willing to go along and give the spenders a chance to prove their theories. We had just been through the most ruinous depression of our history and we were willing to experiment.

But after 7 years of spending, no material improvement can be shown. There are just as many unemployed now as then. We are still "priming the pump" and after all these years I think we might just as well come to the conclusion that the well is dry.

Today the expenses of our Government are greater than at any time in our history. Our revenues are greater also. But, nevertheless, our debt is also becoming more burdensome. Taxes are mounting with every session of Congress,

and yet the problem we are asked to solve by all this spending remains unanswered.

It was Chief Justice Marshall who said, "The power to tax involves the power to destroy"; and we are rapidly reaching a point where, through ever-increasing taxation, the liberty, the initiative, and the enterprise of our people is being destroyed. The incentive to save, to accumulate over a period of years, in the hope of investing in productive enterprise, is being discouraged and destroyed by the burden of taxation. Every conceivable source of taxes is being explored and claimed in order to sustain this orgy of spending. Generations to come will still be paying interest on the debts we are thus acquiring.

In attempting to sustain these spending programs for year after year we must necessarily add new taxes. In so doing we are discouraging initiative and thrift. We are encouraging a growing tendency in millions of our people to look upon themselves as the special wards and obligation of the Federal Government. Such a program and such a policy, unless halted now, will inevitably break down our standards of living and there will remain but two classes of people—the very rich and the very poor. The great middle class that pays the Nation's bills is being destroyed quite effectively by the ever-increasing burden of taxes and more taxes.

This Government cannot continue to spend more than its revenue and remain solvent. No other business has ever been able to accomplish the impossible and neither will this Government of ours. There remains but one alternative—repudiation.

If ever the day should come—and it can if we continue to spend more than we collect in revenue—when the Federal Government defaults on its obligations, then democracy in America has reached its darkest day. It will not survive the storm. The whole structure of our Government and the very life thereof depends upon the continued confidence of the people. What chance will there be to retain that confidence if the Government defaults on its obligations?

There is going to be a stop to this era of wild and uncontrolled spending; make no mistake about that. Now is the time to begin. What further arguments can the spending theorists hold out to entice us when, after 7 years in the saddle, their theories remain without proof? Are you satisfied to experiment further?

Let us remember that this Nation was built and is maintained upon initiative and enterprise. When that spirit is destroyed, so is America. It will be destroyed unless this Congress has the courage to call a prompt halt to a policy which permits and encourages the continued spending of far more money than we can possibly hope to collect.

We can stand here for days on end and debate this bill, but there is still only one argument: Can this Government continue to spend billions of dollars every year above, over, and beyond its revenues? I think the answer is obvious.

The experimenters and theorists have had their day, and it has been a long one with a lot of headaches. Let us give up this policy of reverse economy and make a real effort in the right direction to get people back to work and to improve business by removing a lot of unnecessary boards, bureaus, and taxes that shackle and intimidate American business and the American citizen.

Cost of Production to the Farmer

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. GEHRMANN. Mr. Speaker, everybody seems to be agreed that the foundation for prosperity is in the soil. Even though we have had what appeared to be prosperous times when agriculture was in a slump, it was never lasting. Shortly after the war, in the early twenties, agriculture started its downward plunge. Farm commodity prices had been fairly high, land values, of course, followed and skyrocketed beyond ability to produce enough to pay interest on the investment. Farmers were urged to produce more than they ever produced before. They were almost compelled to plant every available foot of land and millions of acres of soil that had never been plowed before were turned over and planted to crops. Money was not only made available to farmers, it was virtually forced on them to buy what the bankers and those "dollar-a-year men" said was "modern equipment" so that they might produce more to help win the war.

In the early twenties, farm-commodity prices started downward so fast that everybody believed it to be only temporary and could not last more than a few months or a year, but it turned out otherwise. While prices paid to the farmer dropped to new low levels, consumers' prices remained up there nearly as high as they had been at any time during the war for several years later. Some things like foodstuffs were gradually lowered, while others, especially farm machinery and other needed manufactured goods, were not only never lowered but actually cost more today than they did during the war when wages and raw materials were much higher than they are now.

Then the international bankers and financiers started their squeeze play on the farmer. After forcing him to borrow money, and I absolutely mean forcing, if for nothing else than to buy Liberty bonds, they demanded payment of their obligations. The poor farmer could not pay these notes that he had signed so that he might not be branded a traitor or pro-German, because the price for his produce was so low that it was in many instances a drug on the market. That is when the wholesale mortgaging really started. That ended the normal purchasing power of one-third of our population and the only natural consequence was the crash or total collapse in 1929.

Since then we have been tinkering and experimenting with all kinds of schemes. Hoover realized that agriculture had to be lifted up to where the farmers would have purchasing power again, and many boards were created for the purpose of recommending a remedy. Under him the Farm Board was created, headed by one of the International Harvester Co. officials. I am not criticizing him. I believe he was a good man and tried his best. Even from a selfish standpoint, it would have benefited his company to help agriculture, but it turned out to be a flop, and it cost the Government hundreds of millions of dollars. Then came the present administration and with it the A. A. A. and processing taxes. When that failed other things were tried, and now we are working under the Soil Conservation and Agricultural Adjustment Act passed last session, which recognizes only five commodities. I do not intend to find fault with any of the experiments that have been made and are now carried on, but they have definitely proven to be of little or no benefit, and we must now get down to the only possible solution left—namely, cost of production—meaning that the minimum price for all major commodities consumed at home shall be fixed by the Secretary of Agriculture as directed by Congress.

I have introduced a bill to that effect, which is H. R. 2376. While this will be a new undertaking for agriculture, it is by no means a brainstorm of some economist or professor. Many years of study by some of the best minds of the country have been devoted to this type of Government control of agricultural prices, and up until now was sponsored by the National Farmers' Union for more than 10 years. If the farmers as producers were properly organized, no Government legislation would be needed. But they are not so organized and, therefore, I believe that the Government must step into the picture and protect the largest of all industries in this country from utter ruin and pauperism.

The unorganized farmer cannot have any voice in what his product should sell for, as do the manufacturers and processors. The farmer cannot stop producing more than consumption demands because not only is he an individualist, but he has to take more chances than any other type of industry. There is no production control necessary, except that it is necessary to prorate each farmer's share for which he is to be paid the average cost of production. That portion not needed for home consumption will be stored until it is possible to dispose of it to the best advantage, or some of it may be given away to the needy.

The consumer is told by the enemies of this plan that the costs of living will greatly increase if this is enacted. That is the voice of the gambler and speculator talking to them, because those unnecessary middlemen will not be able to hide their profits from the public as they have thus far done. The laborer must be protected by minimum wages and maximum hours, and this would do the same thing for the farmer. Why the farmer and laborer do not see by now the absolute necessity for cooperation for their own protection is a mystery to me. As long as both groups believe the false propaganda constantly spread to keep them apart, just so long will the speculator and gambler be able to enrich himself at the expense of both producer and consumer. The city consumer thinks that the farmer gets at least 10 cents out of the 12 cents or 13 cents she pays for a quart of milk, which, of course, is not so. The farmer is lucky to net 2 cents or 3 cents out of it. The New York housewife joined with others last year in a meat-buyers' strike. She felt that the 40 cents to 44 cents per pound for pork chops was too much. Of course, she thinks that the farmer gets at least three-fourths of that, when the fact is that about that time the farmer was getting 10 cents for hogs or around 12 cents for dressed pork. Mrs. Consumer does not know that the farmer only gets 9 cents out of every dollar she pays for bread. If this bill becomes a law, the consumer will know what the farmer gets, and if the spread is too great, she will want to know who gets the rest of her dollar.

There are many unnecessary speculators that add no value either in goods or services that should and would be eliminated by the enactment of the cost-of-production bill.

The Senate committee reported the Frazier cost-of-production bill without a dissenting vote. The House committee refused to let the Members vote on an identical bill and killed it by a 17-to-6 vote.

If our national farm leaders would have remained neutral instead of opposing it, I believe the committee report would have been reversed. These leaders criticized and picked it to pieces instead of going into the committee hearings to help work out a bill most of us could agree on. But, back of it all, who is really fighting this proposal?

It is none other than the grain gamblers and commodity speculators who, like leeches sucking the blood of their victims, fatten on the ruination of agriculture. Why in the name of common decency and good judgment should a gang of speculators set the price for what we, as farmers, produce? Is it more fitting for the Chicago Board of Trade to prescribe what the farmer is entitled to for his long hours of labor or shall our Congress not assume this great responsibility and set a minimum price for our foodstuffs, a price fair to consumer and producer alike?

Has not the United States Steel Corporation decreed for years the cost of steel f. o. b. Pittsburgh? Does not General Motors set the price on their cars? Does International Harvester consult the board of trade as to the price for farm machinery the farmer must buy? Coal costs the farmers so much per ton, whether they can afford to buy it or not. Has not the price of a loaf of bread remained very nearly the same, whether I receive $1.50 per bushel for my wheat or 50 cents? Everything the farmer buys is manufactured by factories and sold at a profit, or these factories could not remain in business.

Our great Nation can better afford to adopt the cost-of-production bill, unanimously recommended by the Senate Committee on Agriculture, than to see our great farming industry, the greatest one profession in America, continue its slide, greased by foreign imports, downward toward peasantry.

May I request of you people to think about this vital subject? Decide for yourselves whether or not the farmer of our Nation is entitled to be paid what it costs him to produce the food for our 130,000,000 people. Decide for yourselves if it would not be good business to give agriculture a push along the road to recovery, and take with it into honest employment the millions now subsisting on a dole. Ask yourself these questions, people of America, and if you agree, why not urge your Congressmen and Senators to back up this measure? Give them an opportunity to know your opinion.

Give the farmer cost of production, a fair price for the goods you consume, and he will be able to stay on the tax roll and off of W. P. A.

Give agriculture the same rate of interest that industry enjoys by refinancing the farm mortgages rather than foreclosing on the home, and we will prove that the farmer's long years of work leads elsewhere than to poverty. Far better, people of America, to enable a farmer to preserve the ownership of the farm that has been his for years than it is to ruthlessly knock his family out of their homes, to be resettled later on at some far-distant point at the taxpayer's expense.

In closing, let me say that I will do all within my power to have the dairy industry included in the present agricultural bill by having it designated a basic commodity. I have fought for that ever since I have been in Congress, believing it to be very unfair to disregard the largest and most important of all the agricultural commodities.

But that still will cover only 6 commodities, and will still leave nearly 100 other commodities out of the picture, and will still not help even these 6 commodities unless Congress appropriates from five hundred million to a billion dollars annually for parity payments. That, I can assure you, will not be easy to accomplish.

The cost-of-production principle must and will be adopted, and the more interest you people in this Nation take in this vital legislation the sooner will the leaders follow your wishes, and then there will be no question but that Congress will carry out your demands.

Veterans' Legislation

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

LETTER AND RESOLUTION OF THE MILITARY ORDER OF THE PURPLE HEART, DEPARTMENT OF MINNESOTA

Mr. ALEXANDER. Mr. Speaker, under previous consent to revise and extend my remarks in the RECORD, I insert herewith a letter from the commander and four resolutions from the Military Order of the Purple Heart, Department of Minnesota, and commend them to the consideration of the Members of Congress and to the public in general.

THE MILITARY ORDER OF THE PURPLE HEART,
DEPARTMENT OF MINNESOTA,
St. Paul, Minn., July 29, 1939.

Hon. JOHN G. ALEXANDER,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN: Enclosed herewith are copies of resolutions adopted at our recent department encampment, having to do with veterans' legislation. I am instructed to submit them to you.

As you know, the Military Order of the Purple Heart is composed entirely of veterans who have been wounded or gassed in combat with an armed enemy of the United States. The patriots of our order have a conviction that this class of veteran has not been accorded the benefits he is entitled to.

Yours very truly,

L. C. CHRISTENSEN,
Commander, Department of Minnesota.

Resolution 1

Whereas under the present regulations and laws in effect governing the estates of incompetent veterans there is no limit placed upon the size of the estate that they may accumulate from compensation received from the United States Government; and

Whereas this procedure has resulted in the building up of large estates, many of which are already valued at $20,000, solely from compensation and pension benefits; and

Whereas it is felt that such an estate will in no way be of any benefit in providing additional comforts or happiness to the incompetent veterans; and

Whereas under our present laws these estates, in event of death, will become payable to brothers, sisters, or distant relatives; and

Whereas experience has taught us that very few, if any, of this class of relatives have any particular interest in their incompetent veteran relatives; and

Whereas the amount of money thus paid these veterans results in building up large estates and causing the veterans as a whole to be subject to a great deal of criticism: Now, therefore, be it

Resolved by the Military Order of the Purple Heart, Department of Minnesota, in convention assembled, That we recommend to our National Congress and the Director of the United States Veterans' Administration that regulations be issued prohibiting payment to incompetent veterans in cases wherein they have no immediate relatives, such as wife or children, upon the estate reaching the sum of $1,500, and payments not again be reinstated until the veteran's estate has been decreased to $500. Providing further that upon being restored to capacity this regulation shall be ineffective.

Resolution 2

Whereas the Congress of the United States has passed laws granting compensation upon the theory that a disability would be presumed to have been incurred in service if shown to have existed within a definite time after release from service;

Whereas it is felt that such type of law without taking into consideration the length and type of service is unfair: Now, therefore, be it

Resolved, That the Military Order of the Purple Heart, Department of Minnesota, recommends and urges that the Congress of the United States pass laws providing that for each month that a veteran was in service in the United States only he should be entitled to 1 month's presumption for each month in service; be it further

Resolved, That in cases wherein veterans served outside the United States that they be granted a 2 months' presumption for every month of service performed; be it further

Provided, That in cases wherein a veteran performed service in combat with the enemy of the United States that he be granted a 4 months' presumption for each month of service; be it further

Provided, That veterans who saw front-line service in combat with the enemy of the United States and are now suffering from bronchitis or from a nervous disorder—that is, should be conclusively presumed that these disabilities had their origin in and the result of their military service; and that copies of this resolution be sent to the national commanders and legislative chairmen of the Disabled American Veterans of the World War, the American Legion, the Veterans of Foreign Wars, the Military Order of the Purple Heart, and to all United States Senators and Representatives from the State of Minnesota, and Frank Hines, Director of the Veterans' Administration.

Resolution 3

Whereas the present plan of selecting members of rating boards results in many inequities, particularly to actual combat veterans, and to effect the proper organization: Be it

Resolved, That two members of each board must have had combat service, one of whom shall be suffering from a combat disability, members of such boards to be appointed from the permanent personnel of the Administration.

Resolution 4

Whereas the amount of compensation or pension allowable to veterans suffering from disabilities incurred in service in combat with the enemy of the United States, wherein Congress has passed laws and the Veterans' Administration issued regulations granting the statutory allowance for veterans suffering from certain types of disabilities; and

Whereas Congress has passed laws granting a rating of permanent partial 25 percent for anyone suffering from arrested tuberculosis; and

Whereas Congress has passed a law granting a statutory allowance of $50 for anyone that is suffering from inactive tuberculosis; and

Whereas Congress has passed a law granting the statutory allowance of $25 per month for the loss of use of a creative organ irrespective of whether the veteran is sterile or not; and

Whereas statistics show that a large group of men suffering from combat disabilities are not receiving any compensation, or a much smaller amount of compensation than that granted veterans whose disabilities were not incurred in front-line service; and

Whereas it is felt that any man who was wounded or gassed in front-line service has, and will continue to suffer, a considerable degree of disability from such service: Now, therefore, be it

Resolved, That the Military Order of the Purple Heart, Department of Minnesota, in convention assembled at Hinckley, Minn., on June 3 and 4, 1939, go on record recommending to the President of the United States, the Congress of the United States, and the Director of the Veterans' Administration, that Executive orders and regulations be passed and promulgated granting any veteran that was wounded or gassed during the period of his military service while in combat with the enemy of the United States compensation independent of any other compensation that he may be in receipt of or monetary benefits that he may be in receipt of, the statutory allowance of $10 per month: *Provided,* That in cases wherein a veteran received two or more wounds or was wounded and gassed in military service, that the amount of statutory allowance shall not be less than $25 per month, independent of any other compensation or pension that he may be in receipt of; and a copy of this resolution be forwarded to the national commanders and legislative chairmen of the Disabled American Veterans of the World War, the American Legion, the Veterans of Foreign Wars, the Military Order of the Purple Heart, and to all United States Senators and Representatives from the State of Minnesota, and Frank T. Hines, Director of the Veterans' Administration.

The Agricultural Merry-Go-Round

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. MURRAY. Mr. Speaker, during the past 6 years, $2,500,000,000 has been distributed to help improve agriculture through the A. A. A., but the only result, as I observe it, is that the farmers of America are worse off financially than they have ever been in the history of our country.

Large loans have been made by the Government to agriculture on the basis of normal agricultural value of the farms, and then these loans have been followed by an agricultural policy that has resulted in the lowest farm prices in history.

Wheat on the world market today is the lowest in 325 years. Cheese is 43 percent lower in price today than the average price during the last 6 Republican years.

Over 900,000,000 pounds of lard are begging for a market, and the price is the lowest it has been for 72 years.

We surely have an agricultural merry-go-round. Congress has appropriated this session $500,000,000 to control crop production under the guise of soil conservation, $225,000,000 for parity payments because the control did not raise the price sufficiently, and $113,000,000 to dispose of the surplus because the crops were not sufficiently controlled.

In addition, we have appropriated $64,000,000 for reclamation, including power and irrigation, and another $90,000,000 is expected from the lending bill to put more land under cultivation.

We have also appropriated $163,000,000 to the so-called Farm Security Administration to increase production, and the administration has asked for $600,000,000 for so-called farm security in the spending-lending bill.

This shows that $917,000,000 may be appropriated to "increase production" and $838,000,000 to control production. This kind of a program does not make sense.

It may make a very good political program, but every farmer in America will lose his farm if it is continued, as no farmer can continue to produce crops at from 50 percent to 75 percent of what it costs to raise them. The large increase in farm foreclosures offers conclusive evidence of this fact.

The agricultural merry-go-round will ultimately ruin every farmer, laboring man, and businessman in America if it is continued.

Royal C. Johnson

EXTENSION OF REMARKS

OF

HON. WILLIAM P. COLE, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. COLE of Maryland. Mr. Speaker, the late Honorable Royal C. Johnson was a member of the Seventy-ninth Division

of the American Expeditionary Forces and I was, also. Royal served in the Three Hundred and Thirteenth Infantry, while I served in the Three Hundred and Sixteenth Infantry. I was not a Member of Congress prior to the World War, serving with Royal Johnson, and, therefore, did not know him so well during the war, even though we were in the same division, passing through several major battles together, but I soon became quite close to him when I was elected to Congress in 1926. At that time I found him the active, able leader of the Veterans' Committee of the House and occupying a place of real distinction in what was then the majority side of the House. I shall remember always the genial personality and the soldierly bearing that Royal Johnson always maintained, and even above the splendid record he made in France will I recall the manner in which he handled the initial and most important legislation dealing with the veterans and their dependents while he presided over the Veterans' Committee of the House. This legislation will live for all time as a monument to the ability, fairness, and loyalty Royal Johnson displayed as a veteran, a citizen, and a great statesman.

As one of his buddies and, I expect, the only other Member of Congress who served with him in the Seventy-ninth Division, I am sure I speak for all the officers and men of the Seventy-ninth Division when I say that no one occupies a higher place in the memory of the men of the Seventy-ninth Division and no one deserves a more conspicuous place in the enviable record of that division than our late colleague Royal C. Johnson.

Mr. Speaker, I admired Royal Johnson and greatly enjoyed his association and was proud to have soldiered with him. I take advantage of this brief opportunity to join with many of my colleagues in an extension of remarks following the announcement of his very sudden and sad death on yesterday.

Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

RADIO ADDRESS BY R. W. BLACKBURN, SECRETARY OF THE AMERICAN FARM BUREAU FEDERATION

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Mr. R. W. Blackburn, secretary of the American Farm Bureau Federation, delivered August 2, 1939:

Those who oppose the changes that farmers are asking in the wage-hour law have grossly misrepresented the views of farmers and of farm organizations. I am therefore grateful to the National Broadcasting Co. for the opportunity to tell you the viewpoint of agriculture and the reasons why we consider it necessary to clarify the wage-hour law by passing a bill introduced by Congressman BARDEN, of North Carolina.

The wage-hour law was passed last year as a remedy for intolerable urban sweatshop conditions. It was not intended to impose any regulation or hardship upon rural America. Small businesses of various kinds were exempted such as retail stores and two classes of exemptions were written in for the benefit of farmers.

The first of these exempted the work done on a farm upon the products produced on that farm. The second covered establishments located off the farm such as butter-making plants and fruit-packing sheds where farm products must be prepared for market and whose costs are direct charges against the farmer's income from his products.

Congress endeavored to prevent abuse of this second exemption by providing that the exemption applies only to those establishments which are located in the area of production. However, Congress left it to the discretion of the Wage-Hour Administrator to define the term "area of production." That is where the trouble arises and the whole controversy over amendments of the wage-hour law at this time results from what in our opinion was a very unreasonable and capricious definition of area of production by the Administrator.

Instead of defining the term "area of production" in terms of an area or a geographic locality the Administrator first decided that any establishment which employs seven persons or less is in the area of production while any establishment which employs more than seven persons is outside the area of production and hence not entitled to the exemption.

This decision of the Administrator was immediately protested by the American Farm Bureau Federation and by others as being entirely too restrictive and not in line with the meaning of the phrase.

The Administrator then amended his definition by providing that any establishment located in a town of 2,500 or less population and obtaining its agricultural products from farms within 10 miles was to be regarded as being within the area of production, but any establishment which receives its products from a distance greater than 10 miles is to be regarded as being not within the area of production and hence subject to his jurisdiction.

While there are many agricultural establishments located in towns with less than 2,500 population few of them will draw their products from so short a distance as 10 miles. It is a rare establishment that does not have at least 1 farmer patron located at a distance of more than 10 miles. The amended definition, therefore, carries no relief whatever and makes congressional action necessary to bring about clarification and certainty. The restriction to 7 employees, the population limit of 2,500, and the mileage limit of 10 miles all are arbitrary methods of defining a very simple phrase "area of production."

These are the facts which have been so badly distorted by bureaucrats who, through newspaper statements, congressional speeches, and radio addresses, are trying to make the American public believe that the farmers are engaged in some kind of subversive campaign to nullify the wage-hour law.

This is untrue. Every Member of Congress from an agricultural constituency knows that farmers are justified in asking for clarification of the phrase "area of production." Moreover, the Members of Congress in our judgment are ready to pass the Barden bill, which will accomplish this clarification just as soon as they are given an opportunity to vote upon it. But during the past few weeks we have all been witnesses to a most amazing campaign to prevent the House of Representatives from having an opportunity to vote upon the Barden bill.

We who represent farmers are asking nothing more than that the Barden bill be laid before the House of Representatives and an opportunity be presented for a vote to be had upon the subject.

The effect of the definition of "area of production" which the Administrator has issued and as it has been amended, has the effect of nullifying the exemptions which Congress wrote into the law. Let me illustrate: If there are more than 7 employees employed in a butter-making establishment, or if it is located in a town of more than 2,500 population, or if even in a smaller place, and draws its supplies from a distance of more than 10 miles, such establishment would not be exempt. The number of employees has nothing to do with the phrase "area of production." The Bureau of the Census in 1937 reported the number of establishments making butter, classified according to the number of wage earners. This report shows that there were 198 butter-making establishments which employed no wage earners; 2,680 employing from 1 to 5 wage earners; 4,703 establishments employing from 6 to 20 wage earners; 1,077 establishments employing from 21 to 50 wage earners; 475 establishments employing from 51 to 100 wage earners; and 6 establishments employing in excess of 100 wage earners. By limiting the exemption to establishments employing seven or less persons engaged in the making of butter, more than half of the butter-making establishments in the United States have been denied exemption. Plants engaged in making butter are invariably located in the "area of production." Many are located in towns larger than 2,500 population, but are supplied by farmers in the surrounding country. The definition, therefore, has operated to discriminate between plants with less than seven employees as against plants with more than seven employees, while both groups are located within the "area of production" under any reasonable construction.

Numerous other illustrations of like character could be recited on the basis of similar statistics which the Bureau of the Census has published. Time does not permit me to give illustrated material on other types of agricultural commodities.

The problems presented by the duty and power placed in the Administrator to define the term "area of production" have been recognized by the Administrator and he has commented in respect thereto in a letter addressed to the chairmen of the House and Senate Labor Committees. I quote from the letter of the Administrator to the committee chairmen in respect to the "area of production" problem: "The duty and power to define area of production and thereby to determine when such operations are exempt and when they are not exempt is given the Administrator. Prior to the exercise of this power the Administrator considered the possibility of mapping producing regions for each of the several agricultural and horticultural commodities. Such procedure would have led to discrimination against plants on the border lines of areas."

Referring to the general definition which the Administrator has issued, he says: "This general definition did not exempt all the employers believed by some to be entitled to the exemption under the law, but it was believed that a broader definition should not be granted except after investigation or hearings for particular industries, so that any resulting disturbance in the competitive relationships of employers similarly situated could be minimized." In con-

cluding his discussion of this point the Administrator said: "This procedure of investigation and redefinition for individual industries will not produce satisfactory results. In each instance it is clear that no amount of care and study can result in a definition of 'area of production' which will not create a discriminatory situation. * * * Cotton handlers consider the area of production for cotton to be the entire area. * * * Some canners interpret it as the extreme limits from which it is practicable to draw produce for canning. Others would confine 'area of production' to the 'general vicinity' where the products in question are grown, or would confine it to 'rural regions.'

"The difficulties of arriving at any approximate definition of what constitutes the 'general vicinity' or 'rural regions' are apparent. All of these considerations lead to the conclusion that any precise, definite, uniformly applicable and at the same time equitable and justifiable definition of 'area of production' as used in the act cannot be found. Its elimination or clarification of its meaning by the Congress therefore appears necessary."

What is the scope of the Barden agricultural amendments? We believe they constitute a restatement of the exemptions now in the law. They cover the same list of commodities which the existing law covers. They do not extend into the milling of wheat, corn, rye, barley, and other grains for the making of flour, breakfast cereals, starch, corn sirup, etc., nor does the existing law. The commodities included are in the main of highly perishable and seasonal nature, such as milk, sugar beets and cane, fresh fruits and vegetables, the handling of which must be prompt. They give relief in the employment of persons in tobacco-stemming operations, an operation in which several thousands in the tobacco areas obtain employment following the harvesting of the crop.

The charge has been made that the Barden bill emasculates the Wage-Hour Act. We deny this unwarranted statement. In the Administrator's report dated January 14, 1939, he estimates that the total number of employees in all trades and industries covered by the act for September 1938 was 11,000,000. The exemption of those engaged in only a part of the agricultural trades which service farmers cannot by any stretch of the imagination accomplish so devastating a result as has been stated.

Why have we opposed the Norton bill with its agricultural amendments? The answer is a simple one. Because it takes away exemptions now prevailing under the existing law. This has made the issue clear as to whether the amendments to the Wage-Hour Act shall extend its scope into fields now exempt, as does the Norton bill, or whether the law shall be clarified as to the Administrator's power to nullify its exemption provisions by unreasonable and unwarranted definitions.

In conclusion, let me say that agriculture presents a united front on this issue. Practically every farmers' organization is behind the Barden bill. Failure to enact it will increase the costs of distribution of perishable farm commodities, and many farmers may suffer complete loss of market outlets.

A Résumé of My Activities in the House of Representatives During the First Session of the Seventy-sixth Congress

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. O'CONNOR. Mr. Speaker and Members of the House, I do not think it is out of order to take this means of acquainting my colleagues and my constituency with activities as a Member of Congress during the first session of the Seventy-sixth Congress.

At the very outset of my remarks, I want to express my deep appreciation to Members on both sides of the aisle who have cooperated with me in behalf of major projects so important to the State of Montana. Accordingly, I shall always feel obligated and indebted to Members of the House, regardless of party affiliations. If at any time, on account of rising temperatures in the discussion of matters before the House, I have injured any Member's feelings, I humbly apologize.

I introduced the following bills for the benefit of my constituents during the session:

H. R. 1968. To amend title I of the act approved August 25, 1937 (Public, No. 354), to provide for the expenditure of the unexpended balance of $70,000,000 for public buildings outside of the District of Columbia during the calendar year 1939.

H. R. 2185. To provide for the construction of a fish hatchery on Blue Water Creek near Fromberg, Carbon County, Mont.

H. R. 2373. To regulate interstate and foreign commerce in agricultural projects; to prevent unfair competition; to provide for the orderly marketing of such products; to promote the general welfare by assuring an abundant and permanent supply of such products by securing for the producers a minimum price of not less than cost of production, and for other purposes.

H. J. Res. 117. To confer jurisdiction on the Court of Claims to adjudicate claims of the Crow Indians.

H. R. 2775. To confer jurisdiction on the Court of Claims to adjudicate claims of the Arapahoe and Cheyenne Indians.

H. R. 2776. To confer jurisdiction on the Court of Claims to adjudicate claims of the Assiniboine Indians.

H. R. 2777. To credit the Crow, Fort Belknap, San Carlos, Apache, Klamath, and Fort Hall Indians, and others, with sums heretofore expended from tribal funds on Indian irrigation works.

H. R. 2185. To authorize the addition to Glacier National Park of certain property acquired for the establishment of a fish hatchery.

H. R. 2786. To provide for the erection of a public historical museum in the Custer Battlefield National Cemetery.

H. R. 2849. For the relief of Mrs. Guy McConoha, of Poplar, Mont., $425.50 in satisfaction of claims sustained when dispossessed by the Government of an automobile.

H. R. 2850. To authorize the Secretary of the Interior to issue a patent for certain lands to Jordan N. Bean, of Bridger, Mont.

H. R. 2851. For the relief of Maurice J. O'Leary, to correct his military record.

H. R. 2852. For the relief of Charles F. Kegel, of Turner, Mont., $450 in satisfaction of claim against the Government for the loss of his truck in a fire.

H. R. 3371. To empower the President to create additional and make additions to existing National forests from unappropriated lands owned by the United States in Montana.

H. R. 2379. To restore citizenship to Harry Ray Smith, of Sweet Grass, Mont.

H. R. 3480. For the relief of Major M. Reynolds, who shall hereafter be held and considered to have been honorably discharged from the military service of the United States on October 30, 1918.

H. Con. Res. 7. To establish a congressional investigation of working conditions in the metal mines of the United States.

H. R. 3699. To provide funds for completion of school building at Wolf Point, Mont.

H. R. 4709. To credit the Crow Indian tribal funds with amounts expended on irrigation works.

H. R. 4097. To provide for the use of buildings and other facilities of national parks and national monuments for elementary-school purposes.

H. R. 4143. For the relief of George Francis Burke, placing him on the emergency officers' retired list of the Army, and to pay him retired pay at the rate of 75 percent of the pay to which he was entitled as a second lieutenant.

H. J. Res. 181. To authorize the Attorney General to bring such action to assert title and possession of the United States to petroleum deposits underlying submerged lands along the coast of the United States.

H. R. 4535. To add 35,500 acres of public-domain land to the Rocky Boy Indian Reservation.

H. R. 8979. For the relief of John M. Grady pertaining to his honorable discharge from the Army in March 1903.

H. R. 4965. For the relief of Harry Walker, of Poplar, Mont., pertaining to burial of Indians.

H. R. 4994. To amend the Bankhead-Jones Farm Tenant Act to return 50 percent instead of 25 percent of fees collected by the United States to the counties.

H. R. 5360. To take the profits out of war by steeply graduated income and other taxes.

H. R. 5477. For the benefit of the Crow Indians, permitting sales of allotted and inherited lands to members of Crow Tribe.

H. R. 5493. For the relief of Burr A. Davison, of Roundup, pertaining to postal funds lost in the failure of a bank.

H. R. 5506. To authorize the Secretary of the Interior to contract with the Montana State Water Conservation Board and the Tongue River Water Users' Association for participation in costs and benefits of the Tongue River reservoir project, for the benefit of Tongue River Indian Reservation.

H. R. 5533. To authorize advance of amounts due on delinquent homestead entries on Fort Peck, Pine Ridge, and other Indian reservations.

H. R. 5581. To amend the National Park Service Act empowering the Secretary of the Interior to take over hotels, lodges, transportation services, and other facilities in national parks upon terms he may deem proper.

H. R. 5590. For establishment of Woody Island Wildlife Refuge in Blaine County.

H. R. 5621. To divide Montana into six judicial districts, and accommodations for terms of court.

H. R. 5632. Making income from securities issued by the United States or any State or Territory subject to the income-tax laws of the United States or any subdivision thereof.

H. R. 5655. To authorize the suspension of assessment work on mining claims held by location.

H. R. 5879. To provide for Federal courtrooms at Livingston and Miles City.

H. R. 6164. To provide for the restitution of the Peak's Park fairgrounds at Roundup.

H. R. 6176. For the relief of Otis Pewitt, of Whitefish, who was injured while fighting a fire in the Little Rocky Mountains.

H. R. 6372. Permitting the development of farm units on public lands under Federal reclamation projects with funds furnished by the Farm Security Administration.

H. R. 6975. To provide for the reconveyance of 3,820 acres to the State of Montana from within the boundaries of Yellowstone Park, in the State of Montana.

H. R. 7054. To relieve the Bowdoin Oil & Gas Co., of Glasgow, Mont., from any liability to the United States.

H. R. 7097. To except the hours of service of persons employed on the Government-owned Wiota-Fort Peck railroad from act of August 1, 1892, limiting hours of daily service employed on public works.

H. R. 7112. To amend the 1939 relief act to restore prevailing wage scale.

H. R. 7309. For the relief of Emmett Shaw, of Great Falls, who was injured while in the employ of the United States Forest Service.

Of the above measures, I was successful in securing passage in the House of the following bills:

To authorize the addition to Glacier National Park of certain property acquired for the establishment of a fish hatchery—signed by President.

To provide for the erection of a public historical museum in the Custer Battlefield National Cemetery.

To empower the President to create additional and make additions to existing national forests from unappropriated lands owned by the United States in Montana.

To provide funds for completion of school building at Wolf Point.

To provide for the use of buildings and other facilities of national parks and national monuments for elementary-school purposes.

For the relief of Harry Walker, of Poplar, Mont.

To authorize the Secretary of the Interior to contract with the Montana State Water Conservation Board and the Tongue River Water Users' Association for participation in costs and benefits of the Tongue River Reservoir project, for the benefit of the Tongue River Indian Reservation.

Providing for terms of Federal district court at Livingston and Kalispell.

A bill permitting the development of farm units on public lands under Federal reclamation projects with funds furnished by the Farm Security Administration.

In addition to the preceding legislative items, I have taken an active interest and given my full support to measures providing for the improvement of irrigation and reclamation facilities in the West, in addition to all legislation pertaining to agricultural interests.

As a member of the House Committee on Irrigation and Reclamation and as a Representative of a State where irrigation and reclamation play such an important role in the agricultural picture, I gave full support to the enactment of the bill providing for a variable payment of construction charges on Federal reclamation projects. The main purpose of the bill was to provide flexibility in the annual construction charges under repayment contracts, so that repayment obligation each year will move up or down contemporaneously with increases or decreases in the crop returns realized by the farmers.

An excerpt from my remarks on the floor of the House July 27 in support of the bill follows:

> In other words, it (the reclamation bill) gives the farmers some chance, in case of a complete loss, so that their rights will not be imperiled or in anywise foreclosed. Other provisions of the proposed legislation provide for simplifications and economies in administration of the reclamation program and provide a sound basis for undertaking new construction.

My major activity during the first session of the Seventy-sixth Congress centered on an attempt to amend the Sugar Act of 1937 and to permit United States beet and cane growers to produce more than 30 percent of the sugar needed annually for domestic consumption. After the Ellender sugar bill, amending the Sugar Act, passed the Senate and was shelved by the House Committee on Agriculture, I filed a discharge petition to take the bill out of committee and place it before the House for consideration and a vote. However, an insufficient number of signatures was placed on the petition to permit this procedure.

In several addresses on the floor of the House I discussed the situation facing Montana beet farmers and pointed out the unfairness of curtailing the beet acreage in Montana or any other State. Although no action was obtained, nevertheless I believe that a feeling was crystallized in Congress which will be reflected at the next session when a new sugar act is written. We have served notice that the new sugar act will be written from the standpoint of the American farmer not from the standpoint of the welfare of foreign countries.

My efforts in behalf of the construction of the Shirley-Terry-Fallon unit of the Buffalo Rapids projects in Montana were rewarded on May 31 when President Roosevelt approved an allocation of $1,100,000 for the construction of the project. The President pointed out in his approval announcement that—

> I know well the great need of this section for an irrigation development, and you have very effectively presented the matter to me.

The Department of the Interior, including the Bureau of Reclamation, advised me they were "favorable" to the construction of the Saco Divide project and considerable attention was devoted to the project during the entire session. I also took an active interest in the furtherance of the Dead Man's Basin project, the Marias River project, the Milk River project, the Big Horn Dam project, the Yellowstone Basin development, and other programs of utmost importance to the future of Montana's agricultural industry.

I devoted utmost efforts to enactment of my bill providing for cost-of-production returns to farmers. I appeared before the House Committee on Agriculture and joined with a bloc of Congressmen from agricultural States in efforts to bring the bill before the House. The House committee, however, failed to take favorable action at this session.

In connection with the cost-of-production bill, I pointed out to the committee that the farmer is the only person unprotected in the channels of trade today. The farmer is forced to pay an established price, generally far above cost of production, for every article he purchases, and at the same time must throw his products on the market and receive what is offered.

Following conferences with the Secretary of Agriculture and officials of the Agricultural Adjustment Administra-

tion, I was instrumental in obtaining a schedule of protein premiums to be added to the 1939 wheat loan basic rates for hard red spring, hard red winter, and hard white wheat, in cases where the wheats show a 13-percent or more protein content. This schedule is of the greatest importance to Montana, where high-protein wheat is produced.

I have endeavored during the session just closed as well as preceding sessions to devote as much time as possible to my work on the House Committee on Indian Affairs in an attempt to better the economic position of the Indian on reservations in my own congressional district as well as over the Nation.

I feel that the Indians have suffered an injustice and I believe that they are entitled to every benefit which Congress can bestow on them. In addition to introducing many pieces of legislation for the benefit of Indians, I served as chairman of a number of subcommittees of the House committee, and throughout I attempted to give all assistance possible toward the cause of the American Indian.

I voted for and devoted untiring efforts to enactment of the Townsend National Recovery bill. I appeared before the House Ways and Means Committee during hearings on the bill and urged favorable committee action on the bill, which is "a step in the right direction toward the solution of our economic problems." I was one of the 101 Members of the House who voted for the bill and spoke on the floor in support of the measure.

During consideration of House Joint Resolution 83, providing additional funds for the Works Progress Administration, on January 13, I voted for the Cannon amendment to the bill to keep the W. P. A. deficiency appropriation at $875,000,000, as requested by President Roosevelt. Following the passage of the 1940 appropriation bill for work relief, I introduced a bill in the House to amend the act to restore the prevailing-wage scale, as well as providing for the reemployment of persons dropped from relief rolls.

On June 29, when the House had under consideration the neutrality bill of 1939, I voted for the retaining of the arms-embargo clause which would prevent the shipment of munitions of war to any country engaged in combat. An excerpt from my remarks made on the floor of the House the night of June 29 will clarify my position in this matter:

My objective is to do everything I can to keep my country out of European squabbles. I will fight to the finish the enactment into law of this bill as written because I feel that it means war to my country.

Mr. Chairman, let us tear the mask off of this bill and look it squarely in the eye and drag the thing before the House as it really is. This not a neutrality bill; it is an intervention bill. What power is given the President of the United States under this bill? The power is given him to permit the lending of credit and money to England, France, and other countries under the operation of this act. Do you want to again lend money to nations that, after you had furnished them the best blood of American manhood, and after we had furnished them billions of dollars of our people's money, that refer to us as the greatest Shylocks on the face of the earth when we suggested repayment? The great principle is whether or not the House of Representatives tonight is going to commit itself to a desire for profits and gold and sacrifice the blood of American youth over and above the desire for peace throughout the world.

When the transportation bill to amend the Interstate Commerce Act was before the House the week of July 24, I attempted to amend the bill to provide a greater security for the employees of the railroads in the section devoted to consolidation. Excerpts from my remarks on this legislation follow:

The railroads of the country are indispensable. We must have them. We must have them not only in peacetime, but we must have them in wartime. They are in financial stress. We are either going to give them a square deal with other means of transportation, or they will go into the hands of the Government and we will have Government ownership.

I am not defending the railroads. The present operators of railroads are now compelled to answer for the sins of their fathers, committed 60 or 75 years ago when they exploited this country, but nevertheless we are confronted with a condition which demands action to protect not only employees but innocent investors as well.

On April 25, when the House had under consideration the strategic-metals bill, I worked for enactment of the legislation and for the inclusion of the "buy American" provision in the bill. In my remarks in support of the bill, I said:

I am going to support this measure, but not because I feel it is an emergency war measure. Personally, I do not believe we are in danger of going to war with any foreign country if we keep our feet on the ground. [Applause.] I am for this bill because it will give encouragement to the development of our mines in the United States, and particularly in my own State of Montana. We produce in Butte, Mont., alone, as my colleague from Montana will verify, in the neighborhood of 70,000 tons of manganese ore per annum.

I also described the chrome deposits in my congressional district.

I voted against H. R. 5138, the so-called Smith alien bill, because I considered the legislation anti-Christian in that it permits no opportunity to forgive unfortunates for their past faults. A portion of my remarks pertaining to this bill follows:

You cannot legislate morals into people. That was demonstrated by the eighteenth amendment. You cannot legislate patriotism into people any more than you can legislate morals into people. You have to feed the people. Let us find a way of taking care of a third of our population that needs care and quit spending our time trying to pass laws to put them in jail and to deport them. Let us try to make them love our country, instead of hate it, by giving each man, rich or poor, a square deal.

On January 19, when the House was considering an appropriation for the control of grasshoppers, Mormon crickets, and other insect pests, I assumed an active part in the debate in pointing out the necessity for the early approval of the appropriation. I have worked diligently each session of Congress in behalf of funds for the control of the crop-destroying insects. Among other statements, I said on the floor of the House:

A few dollars spent early in the spring will accomplish much more than perhaps five times that amount spent later.

However, when control funds were exhausted I was instrumental in obtaining early House action on a special appropriation, and I made an appeal to the President to expedite the placing of his signature on the measure.

The United States Government Housing Program Should Have Been Carried Forward

---

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. RANDOLPH. Mr. Speaker, had we been given the opportunity to debate a housing bill it was my intention to speak briefly in favor of such a measure. I sincerely regret that this body was not used as a forum on that subject. Since I was unable to address the membership, I am taking this opportunity to give my views on this important subject.

There is one thing that I have been particularly proud to do whenever I have been back home during the past 2 years. That has been to be able to tell my constituents—all of them, not just the home owners—that the Federal Government is doing something to help them live in decent homes in the midst of healthy environments.

And, as all of you know, some of my constituents, and yours as well, are badly in need of such help. All too many of them are living under conditions that are downright disgraceful. And, as I said, we all know it. The folk back home in all walks of life know what the living conditions are in substandard dwellings, and they are rapidly awakening to the fact that the lowest-paid one-third of them have not been given the proper attention.

VALUABLE WORK IS BEGUN

The Congress of the United States began to take cognizance of housing perplexities back in the early 1930's. A

very loud outcry arose when mortgage holders began foreclosing on homes in wholesale lots. We of this Congress came to the rescue by establishing the Home Loan Bank Board and the Home Owners' Loan Corporation.

No one can deny that these organizations performed one of the outstanding services of our generation in saving thousands of homes from loss through foreclosure. These organizations, however, were saving the homes of rich and poor alike, wherever possible. But the lowest-income people did not own any homes and were not touched by this great service.

Next, this Congress established the Federal Housing Administration. There is no question but that that Administration has functioned admirably in its field. That field, however, like the first, did not reach down to where the slum dweller suffered in misery in his dark and ill-kept basement or his bleak and bare-walled tenement. The F. H. A. has assisted in bringing into being excellent apartments and homes for families of moderate means. Moderate, mark you; not the lowest.

Well, gentlemen, we are not wagging our heads in shame, exactly. But this seems to have been the old, old story of getting around last and least to the families of lowest income, the inarticulate, misery-burdened, one-third of our Nation who have no spokesman, no champion, no powerful friend to whom it could appeal in its hour of need.

FORGOTTEN FAMILIES AIDED

After years of turning our heads, of ignoring the plight of the millions crowding our slums, we at last got around to them in 1937. In that year the Congress passed the United States Housing Act, and actually did something for the most unfortunate families of the Nation—the forgotten families, if you please.

We established the United States Housing Authority and told it to go ahead with a slum-clearance and rehousing program. And, frankly, gentlemen, we limited its funds to an amount only sufficient to develop a program and to show how slum clearance and low-rent housing should be accomplished.

This Congress, my friends, gave the slum-dwellers and the alley-dwellers, the lowest-income groups, a ray of hope in a bleak and hostile world, as far as they are concerned. And now, can we go back among them and say we have changed our minds? I say we cannot do it.

HELP TO THE POOR

What kind of punishment could be worse than to offer these millions of poor families the opportunity eventually to live in clean, decently equipped homes, dangling before them the picture of happiness and health and cleanliness such as they have never enjoyed, and then suddenly to snatch away their hopes?

This is no time, gentlemen, to cut short a program so full of promise. This is no time to destroy the greatest single mass-housing movement this country has ever undertaken. To do this just when the rehousing and slum-clearance program is making itself felt throughout the country and is gaining the admiration and approval of the large majority of our unselfish citizens, I say, would be the most foolish thing we ever have done.

And, gentlemen, I sincerely hope you will not go back on the promises we have given our low-income one-third, but will vote for the continuation of this program.

Spending-Lending Bill

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. ALLEN of Pennsylvania. Mr. Speaker, the 47 Democrats who voted against consideration of the spending-lending bill were consistent in their stand and conformed to the platform of the Democratic Party and the campaign pledges of President Roosevelt.

In Sioux City, Iowa, on September 29, 1932, President Roosevelt spoke the following words:

I accuse the present [Hoover] administration of being the greatest spending administration in peacetimes in all our history. It is an administration that has piled bureau on bureau, commission on commission, and has failed to anticipate the dire needs and the reduced earning power of the people. Bureaus and bureaucrats, commissions and commissioners have been retained at the expense of the taxpayer. * * *

If we do not halt this steady process of building commissions and regulatory bodies and special legislation like huge inverted pyramids over every one of the simple constitutional provisions, we shall soon be spending many billions of dollars more.

The truth of those words is as vital today as it was then.

Again in his message to Congress on March 10, 1933, President Roosevelt made the following statement:

And on my part I ask you very simply to assign to me the task of reducing the annual operating expenses of your National Government. We must move with a direct and resolute purpose now. The Members of Congress and I are pledged to immediate economy. When a great danger threatens our basic security it is my duty to advise Congress of the way to preserve it. In so doing I must be fair not only to the few but to the many. It is in this spirit that I appeal to you.

The 47 Democrats who helped to defeat the rule on the spending-lending bill were absolutely loyal to the pledges and promises of the leader of their party. No apologies are necessary.

New Deal Propaganda

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. HAWKS. Mr. Speaker, in my remarks on the Farm Security Administration, which appeared in the Appendix of the CONGRESSIONAL RECORD at page 3700, I said:

We are sure that here is one Federal agency that will have to be more careful of the political propaganda it is sending out if the Hatch bill is signed by the President.

It is a well-known fact that the New Deal administration conducts and maintains at the expense of the neglected and overburdened taxpayers of the country a gigantic system for the dissemination of political propaganda. This propaganda handles the truth carelessly which it pours forth from every nook and cranny of the manifold New Deal ramifications to bolster the rapidly fading glamour of New Deal policies.

Well, the President did sign the Hatch bill, reluctantly, and in his extraordinary message to Congress on yesterday he sought, among other specious interpretations of that bill, to preserve and safeguard his New Deal propaganda system by a flank movement of setting up a straw man of fear that somebody at some time will attack his precious offspring.

The President said the Hatch bill—

Raises the interesting question as to whether all Government officials except the President and Vice President, persons in the office of the President, heads and assistant heads of executive departments, and policy-determining officers appointed by and with the advice and consent of the Senate, must remain mute if and when they or the work with which they are concerned is attacked and misrepresented in a political campaign or preliminary thereto.

The President falsely assumes that all criticism of New Deal officials and their acts would be in the "form of charges, misrepresentation, falsification, or vituperation" and could not be replied to "except by a handful of high executive officials." The President could not have better nor more correctly described the character of the New Deal propaganda that daily aud hourly is spewed forth to the public, which misrepresents and falsifies the operations of the many New Deal agencies set up and multiplied during the last 6 years.

Suppose they are attacked and criticized in a political campaign or preliminary thereto, as certainly they will be, and such criticism is more apt to be just than otherwise and not false, would it not be enough for a handful of high executive officials to reply to such criticisms, for are not those high executive officials responsible, not only for New Deal policies but for the acts of their subordinates?

The President then goes on to say that it is the considered opinion of himself and Attorney General Murphy that all Federal employees, from the highest to the lowest have the right publicly to answer any attack or misrepresentation, but not as part of active participation in political campaigns.

"To rule otherwise," said the President, "would make it impossible for the people of the United States to learn from those who serve the Government, vital, necessary, and interesting facts relating to the manifold activities of the Federal Government," and "to give a monopoly, to originate and disseminate information to those who, primarily for political purposes, unfortunately have been given to the spreading of false information."

This, gratuitously, is nothing more than a big red herring which the President drags in and throws across the trail. What greater "monopoly" exists than that within the Government itself for the dissemination, not of vital facts relating to the manifold activities of the Federal Government, but for the dissemination of propaganda "primarily for political purposes?" It is this propaganda machine the President seeks to protect and preserve. Before the advent of the New Deal, and even under the restrictions of civil-service rules and regulations, the public had no difficulty in obtaining accurate information concerning "the manifold activities of the Federal Government."

During the consideration in Congress of the Hatch bill there was no intimation or interpretation that its provisions would restrict any legitimate function of Government.

The President's comment was both politically ingenious and mentally disingenuous.

The United States Housing Program Is a Communistic Scheme and Is Being Used to Exploit the Taxpayers and Especially to Oppress the Poorest People of Our Nation

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. SMITH of Ohio. Mr. Speaker, the distinguished and able chairman of the Banking and Currency Committee [Mr. STEAGALL], just prior to my testimony before his committee opposing the extension of the United States housing program, voiced the commonly expressed belief of one school of political thought that the blame for our present economic distress is excessive concentration of wealth.

He indicated that the Federal Government intends to use its taxing powers to decentralize the wealth of the Nation by drawing upon the hoarded store to build houses for the "ill housed," supply food for the "underfed," and so forth.

I should like to call the attention of the gentleman to the fact that the Federal Government can hardly be said to be using any of its taxing powers for any such purposes. I believe if he will give the matter some thought, he will discover that while Federal taxes have increased enormously since the inauguration of the spending program, regular Government operating costs have also increased proportionately.

The increase in Federal taxes is being used largely to pay the cost of hundreds of thousands of new Federal political jobs, and the multitude of boards and bureaus that have been established under the spending program. If the science of taxation has established any one fact and grounded it more firmly than any other, it is that the burden of taxation falls upon the masses in direct proportion to the total cost of government. The premise upon which this truth rests is that the real and ultimate source of all taxes is in production. Since no less than 85 percent of all the necessities of life are produced by the wage earners, farmers, and the other lower-income groups, it follows as a law that these groups must in the end bear the same proportion of taxes. The figure of 85 percent is based on a study of my own of the individual incomes as given by the National Industrial Conference Board.

The following figures show how the increase in Federal taxes in the last 6 years has added to the burden of taxes which must be borne by the working classes and the poorer people in general:

Total amount of ordinary taxes collected for the 6-year period from 1928 to 1933, inclusive [1]	$19,529,000,000
Total amount of ordinary taxes collected for the 6-year period from 1934 to 1939, inclusive [1]	27,232,000,000
Amount of increase in the last 6 years over the previous 6 years	7,703,000,000
Increased burden of Federal taxes borne by working groups in last 6 years over former 6 years, 85 percent of $7,703,000,000	6,548,000,000

[1] 1938 Treasury Report and 1939 Preliminary Treasury Report.

Bear in mind also that the average annual income during the former 6 years was $3,000,000,000 more than the latter 6 years. Thus it is seen that the Federal Government is using its taxing powers to enlarge its functions and promote its own growth.

I do not know what effect the great increase in Federal taxes is having in the way of decentralizing the Nation's wealth. Two things, however, appear to me to be certain: One is that if there is any such dissemination, none of it is reaching the masses. The other is that the masses are paying the bulk of the increase in taxes.

In its lavish use of credit the Federal Government is decentralizing the Nation's wealth. Here there is a distribution of temporary benefits which reaches a section of the masses, but only a section. But when the bill will finally be paid, and paid it will be, whether in dollars and cents or in the agonizing pains of a national bankruptcy, who but the masses will do the real paying?

Not only is the present abuse of Government credit storing up for the toilers of this land an added burden of taxation and laying the ground for something far worse, but it is destroying the industry of our Nation, the very lifeblood of labor itself.

The able chairman of the Banking and Currency Committee also strongly protested his faith in property and human rights.

I do not reckon—

He said—

that there is anyone here who has any more respect for property rights than I have * * *. I believe they are inseparably linked with human rights.

As will be seen from further remarks in the hearings, Mr. STEAGALL defended this so-called slum-clearance program as a humanitarian act. I thoroughly respect his sincerity and belief in the matter. But I cannot agree with him that the United States Housing Act has the least respect for property or human rights, or that there is anything whatever humanitarian about it. I look upon it as the most flagrant violation and disregard of property and human rights, and as one of the most hurtful measures to the poor that can be conceived.

Five-thousand-dollar houses are being built for an arbitrarily selected group in the middle-income third of our population. Where is there any respect for property rights in arbitrarily taxing the people in the upper income third, many of whom cannot afford homes costing more than $3,000 or $4,000, to build $5,000 houses for the middle-income group?

Where is there any respect for property or human rights in arbitrarily taxing the middle-income group, who cannot afford to own or rent homes costing more than $2,000 or

$3,000, to build $5,000 houses for an arbitrarily selected number of families of their own income group?

Where is there any respect for property or human rights, or even a sign of humanitarianism in arbitrarily taxing the lower income third, who must live in houses costing from a few hundred to a thousand or two thousand dollars, many of whom have by toil and sacrifice laid by enough to provide themselves with little homes they can call their own, to build $5,000 houses and furnish free rent for their more fortunate brethren whose incomes are from 2 to 5 times more than their own?

Where is there any compassion for the poor, or even a scintilla of regard for their rights, in permitting a highly centralized political bureaucracy like the United States Housing Authority, whose responsibility to the communities in which it operates is so indirect and distant that it is practically nil, armed with the power of eminent domain, to descend upon a community and throw the people living in it out of their homes into the streets without even consulting them about it? To deny this is being done is merely defending the deed, for it is well known that it is taking place all over the country. I personally saw the U. S. H. A. try to do this very thing in my own city, Marion, Ohio.

To answer that the people living in the so-called slum areas are paid for their properties, where they own them, is merely a confession of utter disregard for any of their rights. Has our civilization really reverted so far that human beings are again to be evaluated in the terms of dollars and cents? How far is this from actual human slavery? Russia arbitrarily shifts her people from one section of the country to another. We call that communism and bitterly condemn such action. Mussolini is now doing the same thing in the Tyrol. We condemn his conduct as being the work only of a brutal dictator. But the United States is also doing the same thing. In many sections where the Federal Government is building dams it is being done. It is taking place on a large scale in the operation of the U. S. H. A. Is it any less barbaric if we do this than if Russia and the other absolutist powers do it?

The power of eminent domain is a very dangerous weapon unless its use is most carefully restricted. It should never be applied until all other means for attaining the end sought have been exhausted. It is a power that is subject to the most flagrant abuse of human rights. Applied in the wrong place, it becomes one of the most effectual instruments for exploiting the taxpayers and oppressing the people. In the hands of the U. S. H. A. and certain other selfish interests, the power of eminent domain is now being used to exploit the taxpayers and oppress the people.

The scheme grossly violates all the honest and just principles of taxation, as they were so classically stated by Adam Smith in his four maxims of taxation, especially in the first two, which follow:

1. The subjects of every state ought to contribute to the support of the government, as nearly as possible in proportion to their respective abilities; that is, in proportion to the revenue which they respectively enjoy under the protection of the state. In the observation or neglect of this maxim consists what is called the equality or inequality of taxation.
2. The tax which each individual is bound to pay ought to be certain, and not arbitrary. The time of payment, the manner of payment, the quantity to be paid, ought all to be clear and plain to the contributor, and to every other person. The certainty of what each individual ought to pay is, in taxation, a matter of so great importance, that a very considerable degree of inequality, it appears, I believe, from the experience of all nations, is not near so great an evil as a very small degree of uncertainty.

The United States Housing Act arbitrarily exempts an arbitrarily selected number of families in the middle-income group from paying property taxes. These people are exempted from "contributing to the support of government, as nearly as possible in proportion to their abilities * * * in proportion to the revenue they respectively enjoy under the protection of the State." They live in comparative luxury, receive free rents, enjoy the benefits of police and fire protection, janitor service, as well as education, at the expense of other taxpayers. They enjoy the extraordinary and revolutionary special privilege of being permitted to exercise the right to vote on matters affecting real-estate taxes, which they themselves are exempted from paying.

For what reason—

Asks John Stuart Mill—

ought equality to be the rule in matters of taxation?

For the reason, he says—

That it ought to be so in all affairs of government. A government ought to make no distinction of persons or classes in the strength of their claims on it. If anyone bears less than his fair share of the burden, some other person must suffer more than his share. Equality of taxation, therefore, as a maxim of politics, means equality of sacrifice. It means apportioning the contribution of each person toward the expenses of the Government, so that he shall feel neither more nor less inconvenience from his share of the payment than every other person experiences from his.

The inherent wrong in the scheme is the arbitrary levying of taxes. It was the arbitrary levying of taxes by the sovereign power of the state that has been at the bottom of every major revolution that has taken place.

It was the arbitrary taxation of his subjects by Louis XIV that reduced them to human wretches and laid the basis for the French Revolution.

It was the arbitrary levying of taxes by King John upon the baronial order that caused the latter to revolt and wrest from him Magna Carta, out of which grew the entire English parliamentary system.

Indeed, the whole parliamentary system is based on the principle of keeping the powers of taxation in the hands of the people, so as to prevent the government from arbitrarily exercising them.

It was the arbitrary taxation by King George of the colonists that was so largely responsible for the American Revolution.

Nor can the United States expect to long escape the same evil consequences if we continue to pursue the iniquitous course of permitting the arbitrary taxation of our people as embodied in such socialistic schemes like the United States housing program.

What To Do About Pollution

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. MUNDT. Mr. Speaker, inasmuch as this session of Congress is about to adjourn without taking action on the various pollution and antipollution measures now before us, it is my hope that during the recess each of us may find occasion and opportunity to give some study to the perplexing problem of pollution which has been gradually but surely ruining the clean streams and the pure waters of America since the advent of the first white man on this continent.

I realize that the busy session of a typical Congress permits of little opportunity to study and analyze all the legislation which confronts us, and such a matter as pollution control is all too likely to be shunted aside without a careful study of its consequences or the procedures leading to its cure. Let us hope that the next session will find us confronted with fewer items of major legislation, so there will be more time for our deliberative consideration of the whole problem of pollution.

Inasmuch as it now appears that both Senate bill 685, the so-called Barkley bill, and H. R. 6723, the so-called Mundt bill, will be before us for consideration sometime in January, I am inserting at this point under permission granted me by the

House a radio interview on this whole subject which was recently broadcast over the Mutual Broadcasting System's network under auspices of the American Wildlife Institute, which group is actively working for the passage of H. R. 6723:

NARRATOR. America's wildlife!

(Fanfare.)

ANNOUNCER. America is a land of rapidly diminishing natural resources.

NARRATOR. Ugly erosion sores eat into our fertile lands.

ANNOUNCER. Many of our widespread forests have been hacked and burned to the ground.

NARRATOR. Once-plentiful birds and animals are threatened with the fate of the extinct passenger pigeon and the buffalo.

ANNOUNCER. Great fish runs that once gave sustenance to thousands have been destroyed.

NARRATOR. The country's wildlife is in danger.

(Music in—theme—fade to background.)

NARRATOR (behind music). This program is brought to you through the cooperation of the American Wildlife Institute.

ANNOUNCER. The purpose of these broadcasts is to awaken greater interest in the country's wildlife.

NARRATOR. To the end that a priceless American heritage—the right to enjoy the great out of doors—may be restored.

ANNOUNCER. To the end that our country may become a better place in which to live.

(Music up to end.)

ANNOUNCER. Pollution, or the despoiling of our waters, is one of the greatest menaces to wildlife in our country. Today this subject will be discussed by the Honorable KARL E. MUNDT, a Member of the United States House of Representatives from South Dakota, and former national vice president of the Izaak Walton League of America. Congressman MUNDT will be interviewed by C. M. Palmer, Jr., acting secretary of the American Wildlife Institute. Congressman MUNDT and Mr. Palmer.

Mr. PALMER. Congressman MUNDT, just to get the records straight, what is pollution?

Mr. MUNDT. Mr. Palmer, pollution, which, generally speaking, means the despoiling of water, is roughly divided into three classifications. First, we have individual or petty pollution; then, although not necessarily in that order of importance, municipal and industrial pollution of waters. Under the first heading would come the thoughtless and unnecessary throwing of papers, cans, and refuse into streams by campers and picnickers. This comparatively—and I say comparatively unimportant, mind you—form of pollution can be corrected by public education in common decency and correct outdoor behavior. The second type I mentioned is the raw sewage from municipalities, perhaps carrying some industrial wastes, entering rivers through our sewerage systems. This waste is generally alkaline in nature and heavily laden with bacteria and disease germs. Such pollution often seriously depletes the oxygen content of a stream or river, killing fish and other aquatic life. The third type covers the waste from different industries. This varies widely in character and effect. In general, industrial wastes are acid and many are highly toxic and poisonous. Except when highly diluted, many industrial pollutants kill all forms of aquatic life. Sometimes even abandoned industries continue to pollute our rivers and streams. The acid effluent from abandoned coal mines is the largest and most destructive source of pollution from abandoned industries.

Mr. PALMER. Mr. MUNDT, why is the control of pollution an important problem?

Mr. MUNDT. The control of pollution is such a vital question it is very difficult to answer that question in the short time we have for this discussion. In fact, many programs much longer than this one could be devoted to describing some of the horrible effects of pollution. It may be said briefly, however, that pollution, while commonly referred to as a public-health matter, is not alone a health matter nor do certain types of pollution directly involve health—although this is an important phase of the problem. Organic wastes, such as municipal sewage, may not always be detrimental to fish life, but they are a menace to public health, and the water must be treated to kill typhoid and other bacteria. On the other hand, some industrial wastes in a water supply may not be considered detrimental to public health, but because of their toxic nature readily kill fish and other aquatic life. Sometimes, too, the pollution is not strong enough to be a menace to public health nor directly kill fish, yet may blanket the bottoms of streams, killing the minute organisms that are the foundation of the aquatic food supply on which fish are dependent for their existence. Such streams and rivers will be practically barren of fish, although they may pass the requirements of both public health and fish. Most public-health departments have been concerned primarily, perhaps solely, with the product that comes through the water faucet to the ultimate consumer. As long as it is possible to purify the water for drinking, it is of little or no moment to the public-health authorities that a river may be so vilely polluted as to be absolutely dead biologically.

Mr. PALMER. Mr. MUNDT, how can this pollution problem be remedied?

Mr. MUNDT. Mr. Palmer, you and I and everybody else who has studied this problem know it can be effectively dealt with in only one way—by proper control. We don't need any further study of the problem to realize how important it is to the country. What we need now, and right now, is effective control of pollution. This control must be eminently fair to those now polluting our waters. It must give them time to work out pollution control for their individual operations, but it must require that pollution be controlled. I think such pollution control may best be achieved through a bill which I introduced in the House this session.

Mr. PALMER. What does your pollution-control bill propose, Mr. MUNDT?

Mr. MUNDT. The bill I introduced, known as H. R. 6723, if passed by the Houses of Congress, will absolutely outlaw pollution. For 150 years now we have done nothing about pollution except perhaps to talk a great deal about it. During that time billions of gallons of water have been polluted and millions of dollars have been wasted by our failure to take definite action. I think it is high time we did something, and the bill I introduced should solve the problem. It is a pollution-control measure with teeth in it—something the need for which has been growing from the very moment the first white man set foot upon this continent.

Mr. PALMER. Aren't there other pollution measures now being considered by Congress?

Mr. MUNDT. Yes; but these measures not only lack teeth, so far as controlling pollution is concerned, but they are actually harmful. Let me explain. Two other bills were introduced—one, known as the Spence bill, is being practically neglected at the present time; another, introduced by Senator BARKLEY, the majority leader, while called a pollution-control bill, is anything but that. As a matter of fact, there is no mention of pollution control anywhere in the bill, except in its title. This bill would merely provide for further study of pollution by the Public Health Service—at a cost of $1,000,000 a year. That's all there is to it. It absolutely would not control pollution. We don't need any further study of pollution to know the damage it is doing and the dire necessity of controlling it. What we need now is actual control of pollution.

Mr. PALMER. If the Barkley bill is not effective, why was it introduced and why does it have supporters, Mr. MUNDT?

Mr. MUNDT. The Barkley bill is a red herring, Mr. Palmer, and that's what makes it so dangerous. Everybody realizes that something should be done about pollution, even the polluters themselves. One witness stated flatly before one of the House hearings on the subject that unless something was done about pollution, in another 10 years there wouldn't be a stream left in the United States in which any self-respecting fish would live. All of those responsible for pollution admit something must be done, and practically all of them endorse the Barkley bill. It is very significant that those responsible for the damage are lobbying for this innocuous bill, and very much opposed to the bill I introduced, which would actually end pollution. You see, those responsible for pollution know that public opinion is demanding some action in the matter. They think that if the Barkley bill can be rammed through, that will silence public opinion, as a great many people unacquainted with the facts will believe that at long last Congress has actually done something about pollution. That will silence some of the public and make it even more difficult for us to get a real pollution-control measure passed later. That's why I described the Barkley bill as a dangerous red herring.

Mr. PALMER. How would your bill act to end pollution?

Mr. MUNDT. Pollution control, under the bill I introduced, would be administered by the Chief of Engineers of the United States Army. He would be advised by a committee, consisting of the Surgeon General of the United States Public Health Service, the Chief of the United States Biological Survey, and the Commissioner of Fisheries. The Chief of Engineers would also cooperate with the States, thus preserving States' rights. The Chief of Engineers would be charged with the duty of ending pollution, taking action on specific instances as they arose. The Mundt bill would not become effective until 2 years after passage. This should give most polluters time to work out solutions to their problems. However, just to give everyone a fair chance and to keep from imposing hardships or asking the impossible, there is yet another clause in the bill. This clause allows the Chief of Engineers to grant an extension of time, not exceeding 5 years, wherever a public hearing has shown that compliance with the standards of purity fixed by the Chief of Engineers cannot be complied with before the effective date of the act. The bill further provides that a reasonable time shall be allowed for the completion of treatment works. In other words, if a municipality or industry is making an honest effort to solve the problem, it will not be arbitrarily punished. The bill I introduced would be far more economical than the Barkley bill. It specifically states that not more than $500,000 shall be appropriated each year to carry out its provisions, and in all probability it will cost much less than that.

Mr. PALMER. What can the general public do to help in this fight for pollution control?

Mr. MUNDT. The general public can help a great deal by realizing that the Barkley bill is a harmful substitute for a real pollution-control measure and by getting solidly behind H. R. 6723, which is the bill I introduced, with certain amendments giving polluters more time to work out answers to their problems. I am firmly convinced that the people of America realize the necessity of pollution control. Now they must realize that that is possible only if a law with teeth in it is enacted—and get behind that law.

Mr. PALMER. The Mundt bill, or H. R. 6723, is just such a measure. I understand it will come before the House some time this session. I can only add my pleas to those of Congressman Mundt and ask all

our listeners to get solidly behind this legislation. Make your wants known by wiring or an air-mail letter to your Congressman. And now our time is up, and I must say thank you, Congressman MUNDT, and thank you, listeners, for your attention.

ANNOUNCER. You have just heard another in a series of broadcasts on American wildlife brought to you through the cooperation of the American Wildlife Institute. Today pollution was discussed by Congressman KARL E. MUNDT, of South Dakota, who was interviewed by C. M. Palmer, Jr., of the American Wildlife Institute. Copies of this broadcast may be obtained by writing the station to which you are listening or direct to the American Wildlife Institute, Washington, D. C.

Let me point out one additional reason why it is imperative that all of us study most carefully the sources of support and the eventual consequences of all forms of legislation which will confront us in the next session on this problem of pollution.

It has long been a source of embarrassment to early supporters of S. 685, many of whom have accepted it as a bona fide antipollution bill from its title, without analyzing its contents, that as the hearings developed before committees of both Houses of Congress it soon became apparent that every "polluter" who testified opposed H. R. 6723, every nationally known conservation organization went on record for H. R. 6723 and in opposition to S. 685, whereas, to the consternation of many sincere legislators who were first attracted to the Senate bill, they found the "polluters" themselves in many instances urging Congress to adopt that bill. This "kiss of death" from the lips of those most vehement in their denunciation of all previous antipollution legislation led many Congressmen to investigate further and to switch their support away from the Senate bill and in favor of H. R. 6723.

For example, in the RECORD for August 2, a distinguished and able Member of this body inserted a list of supporters of S. 685 under the heading of "Stream pollution bill—Every public-health body in America worthy of the name is for the Barkley-Spence bill." A headline reader would surely be impressed by such inclusive adulation for the Barkley bill. But I hope every Member will take the time to read this list of "public-health bodies worthy of the name," because the seventh name on the list is the Brewers' Association of Greater Cincinnati, which will itself, I feel certain, be surprised to find it elevated to the rank of a "public-health body" in the pages of the CONGRESSIONAL RECORD.

The ninth name on the list is the Chamber of Commerce of the United States which organization may have much to commend it but this is the first time I have found it masquerading before us as a "public-health body." Other imagination-stretching names on this list of humanitarian organizations dedicated to the health of man and the purity of his streams and rivers are the Dayton Business and Civic Association, the Great Miami Valley Taxpayers' Association, and other industrial and commercial groups until we even find our old friend of pollution fame, the Independent Petroleum Association of America, proudly displayed in this list headed "public-health bodies" and offered as testimony of groups unselfishly fighting a bill which would admittedly control pollution and favoring a bill which actually in the form it passed the other body of this House offered a bounty to individuals and municipalities whose pollution proved most offensive. A reading of S. 685 will indeed prove a diverting and a revealing pastime for those enjoying games of "hunt and seek" and wanting to entertain themselves trying to find one word or phrase in the bill which would in any way, at any time, or in any place "control pollution."

It is only fair and frank to state, however, that the list of "public-health bodies" inserted in the RECORD for August 2 did contain the names of many State boards of health. These legitimate health-serving groups have almost universally been lead to support S. 685. Whether the fact that S. 685 sets up a special fund to be collected from the taxpayers each year to the extent of $700,000, annually "to be allotted and paid to the States for expenditures by or under the direction of their respective State health authorities" had anything to do with these endorsements, it would not be nice to suggest and it is not my purpose to contend.

But two facts cannot be denied: First, many State health boards have endorsed S. 685. Second, if it passes, an annual "take" of $700,000 will be available to these boards from the Federal Santa Claus. A third fact may be argued, but I doubt if it, either, can be denied: Third, pollution would still go on uncontrolled if the bill passed in its present form, but the tax collector would reach down a little deeper into the pocket of each taxpayer to the Federal Government.

A curious fellow might have cause to wonder why so many State health boards have endorsed the identical pollution bill which is endorsed and enthusiastically supported by some of the biggest "polluters" in America. Frankly, it causes me to wonder! I make no implications and intend no criticisms and am willing to take the charitable position that many of the health boards have not studied S. 685 but have hastily endorsed it on a pretty much of a "sight and unseen" basis at the recommendation of somebody else. Either the "polluters" or the health boards are being badly fooled or the taxpayer is being taken for a ride, because a bill which finds twin support from those who profit from pollution and those who should be its greatest enemies cannot be both fish and fowl at the same time.

Mr. Speaker, my only purpose for these remarks is to point out the confusion and misinformation which surrounds the entire problem of pollution. I do not question the sincerity of anybody in this House in his desire to stop pollution. I do not impugn the motives of our public-health bodies nor, for that matter, of our "public-health bodies," despite their unnatural masquerade.

It is my hope that when we return fresh from our recess we can all get together on a rational and laudable antipollution bill which conservationists, health authorities, taxpayers, and public-spirited industrialists can all support to the end that what remains of the clean streams and pure waters of this country may be preserved for future generations.

Eggs in the New Deal Basket

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. JOHNS. Mr. Speaker, one more fallacy of the New Deal agricultural program is clearly demonstrated in the huge losses that have been incurred by the egg producers of this country.

The following figures are reported by the United States Department of Agriculture:

Price of eggs—cents per dozen

1921	28.3
1922	25.0
1923	26.5
1924	26.7
1925	34.0
1926	28.9
1927	25.1
1928	28.1
1929	29.8
1930	23.7
1931	17.6
1932	14.2
Average price for last 12 Republican years	25.6
1933	13.8
1934	17.1
1935	23.4
1936	21.8
1937	21.3
1938	20.3
1939	(1)
Average price for first 6 New Deal years	19.6

[1] Fill in price you get for your eggs today.

Eggs averaged 6 cents more per dozen during the last 12 Republican years than in the first 6 New Deal years, and 10.1 cents per dozen more than the price of 15.5 cents today.

Wisconsin produced 799,100,000 dozens of eggs in the past 6 years. If Wisconsin farmers had received the additional 6 cents per dozen that eggs averaged during the last 12 Republican years, the egg producers of Wisconsin would have had $47,946,000 more than they did with the New Deal egg prices. Eggs averaged 31 percent more under the last 12 Republican years than during the first 6 New Deal years. These 15.5-cent-per-dozen eggs show:

Egg producers of the United States received $1,059,445,000 less during the last 6 New Deal years than they would have received if they had been paid the prices they obtained under the last 12 Republican years.

The price of eggs was 27 cents per dozen the day the New Dealers were voted into power, and are 15.5 cents per dozen today.

Mr. Congressman, how many dozen eggs did your constituents produce the past 6 years, and with a 6-cents-per-dozen loss, what was their total loss?

Mr. Farmer, how many dozen eggs did you produce the past 6 New Deal years? How much money would you have in your pocket if you had the additional 6 cents per dozen for the eggs you have produced during this time?

Secretary Wallace's suggestion for improvement of egg prices is to have Congress lend and spend and increase the public debt.

The egg producers of this country not only need the rich home market but they should not be subjected to Federal competition in their business, where thousands of chickens are being furnished to beginners to compete with poultrymen already established in the business.

The first 5 months of 1938, 88,304 dozen shell eggs were imported, and during the first 5 months of 1939 there were 149,424 dozen, or an increase of 70 percent, even during the prevailing low prices.

The Farmer Pays the Freight

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. MURRAY. Mr. Speaker, the Federal Surplus Commodities Corporation is supposed to operate for the benefit of the farmer and also to furnish food to the underprivileged third of our population.

This program has been carried out for the benefit of the relief rolls, but I can see little, if any, benefit, so far as agriculture is concerned.

First. Agricultural products are purchased as cheaply as they can be bought, and given away now through the blue-stamp process.

Second. Agricultural products purchased do not seem to represent the importance of the agricultural industry. For example, not one pound of cheese has been purchased during the past fiscal year, though the price of cheese has been only 11½ cents per pound, or only a little over one-half the cost of production. The sum of $3,000,000 has been spent for fluid milk, and $12,000,000 of milk could have been distributed through purchases of cheese.

CONCLUSIONS

First. The farmer by having his products purchased at from 50 to 75 percent of the cost of production is contributing from 25 to 50 percent of the cost of feeding the people on relief as well as the whole population.

Second. No man can say that this administration is feeding the poor, when the farmer is making such a large contribution to the feeding of the poor as well as the rich.

Third. No one can expect to stabilize agricultural prices with funds from the United States Treasury that represent 1 to 1½ percent of the national farm income when we are importing agricultural products that represent 10 to 21 percent of our national farm income. We may "save at the spigot but lose at the bunghole."

Fourth. The orange and blue stamps may be of political value and may have some vote appeal, but I am sure the farmer would like to see a program with a little more of a red, white, and blue basis.

Fifth. Let us use this food for our 2,240 foster homes, with a population of 242,000 dependent children, on a nonsectarian basis if we really wish to follow a nonpolitical feed-the-needy program.

Sixth. Let us give the farmer what it costs him to produce this food supply before we give his whole market away.

The Housing Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. MILLER. Mr. Speaker and Members of the House, I voted for the resolution to make in order the consideration of the so-called housing bill.

I voted for the resolution for at least two reasons: First, because I feel that real slum clearance is badly needed and that the Federal Government should aid in such a program even as it has aided in our road program. I feel that when the social benefits are taken into account this program will pay big dividends, not only in dollars saved but in an improved standard of living. Second, and more important than any other reason, I voted for the housing resolution because I have assured the people of my district that I would vote for a housing program.

I did not bring much to Washington with me but I did bring a reputation for keeping my promises. I intend to take that reputation back to Connecticut with me unimpaired. It was stated on the floor that a vote against the resolution was a vote against the housing bill, and I believe that that statement is correct.

The bill as reported out of the Banking and Currency Committee was not perfect but I honestly believe that this House, sitting for 4 hours in the Committee of the Whole, could have amended the bill so that it would have been workable.

The housing bill, in my humble opinion, is not as bad as it was painted by Members who spoke against it during the debate on the rule. Certainly most of the $800,000,000 appropriated for Housing will be returned to the Government when the housing bonds are retired. No one will claim that these bonds will be permitted to default.

The subsidy amounting to 3½ percent of the amount allotted for slum-clearance projects will, of course, be an expense to the Government. But that is the Government's contribution to make possible conditions such that those with low incomes may live in decent homes. The cities make their contributions by granting tax exemption and services on such projects.

I for one intend to give extensive study to the subject of slum clearance during the coming recess of Congress. I hope to visit England in order that I may study their housing program. I intend to investigate some of the ugly rumors relating to the administration of the United States Housing Authority, as only by honest and efficient administration can this program be continued. We will deal with this subject

early next year and I am hopeful that the Banking and Currency Committee will bring in a bill that will be approved by the House and by the country.

Embargo on Sale of War Supplies to Japan

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

LETTER FROM THE CHINA AID COUNCIL

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include a letter from the China Aid Council, of Los Angeles, Calif. This letter is an indication of the trend in public sentiment toward the United States withdrawing her support from a violator of treaties.

CHINA AID COUNCIL,
Los Angeles, Calif., July 29, 1939.

Hon. LEE E. GEYER,
Congressman, Seventeenth District of California,
Washington, D. C.

MY DEAR CONGRESSMAN GEYER: We herewith wish to advise you that we have recently forwarded another batch of petitions to Washington requesting that an embargo be placed on the sale of war supplies to Japan. To date 44,729 persons residing in Los Angeles and vicinity have signed these petitions. This is exclusive of the petitions which have been forwarded by church and other groups. The action of these 44,729 citizens has been followed by 118 labor, civic, fraternal, and patriotic organizations in this city and vicinity which have signed resolutions asking similar action.

These petitioners and organizations speak in behalf of 300,000 of our local residents. We are again asking that when the neutrality legislation again comes before Congress you will vote in favor of such legislation as shall place an embargo on the sale of war supplies to Japan.

Yours very truly,

CHINA AID COUNCIL,
By IRVIN E. CLINE,
Executive Secretary.

The Nation's Balance Sheet

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 3, 1939

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

The Nation's balance sheet, June 30, 1939

(From July 1, 1938, to June 30, 1939)

The Federal Government collected	$5,667,823,625.59
The Federal Government spent	9,268,338,030.54
Leaving a gross deficit of	3,600,514,404.95
From the gross deficit deduct:	
Statutory debt retirement	58,246,450.00
National bank note retirements	5,497,305.45
Surplus in trust funds, gold increment, silver seigniorage, and Government checking accounts	884,286,173.36
Leaving a net deficit of	2,652,484,476.14
Increase in public debt	3,274,792,095.66
Debt as of June 1939	40,439,532,411.11
Pre-war debt, Mar. 31, 1917	1,282,044,346.28
First post-war peak, Aug. 31, 1919	26,596,701,648.01
Increase since 1930	24,413,445,324.04

James A. Farley

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, August 4 (legislative day of Wednesday, August 2), 1939

ARTICLE BY JAMES E. DUNNE ENTITLED "THE STAR OF FARLEY"

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by James E. Dunne relative to Hon. James A. Farley.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STAR OF FARLEY

Neptune is supposed to control the seas. To Mars is imputed responsibility for wars and disasters. When these planets are opposite each other in their orbits, a struggle for dominance is reputed to take place. Lately those planets are said to have been in this contending position, and some astrology students have been led to attribute the three recent mysterious submarine disasters to that "war" in the great space of the universe.

Undercurrents of the seas are indeed rough and uncertain.

The political seas no less so.

Many brave hearts are asleep in the political deep, to be joined anon by others.

The planets of Washington, for the most part, are opposite one another in their orbits.

So far as insurance goes, there is one planet in the Capital galaxy shining out more effulgently than all the rest. For all we know, the course of this planet may be mapped in the great chart that orders the inscrutable travels of the worlds out there in the vague unknown.

James A. Farley!

Despite contention from other political planets, that star is on rise.

CARTER GLASS speaks of James A. Farley as "one man who keeps his word."

CARTER GLASS' words are always appreciated, and the record of James A. Farley speaks for itself. Farley has never been known to break the faith.

The Gallup polls, authoritative in the past as barometers of public sentiment, show James A. Farley the choice of many to carry the Democratic banner in the next national election. Yet James A. Farley has not indicated his candidacy.

James A. Farley is a proven friend of the insurance business.

We turned back the pages of the years in the Index the other day, and this last fact—James A. Farley's good will toward the insurance business—stood out like a beacon in lowering clouds of black.

That is why it can be said that, so far as insurance goes, there is one planet in the capital galaxy that is burning into the public consciousness.

In October 1936, James A. Farley wrote a special article which was copyrighted by the Index.

His words of those days are worth repeating now.

It will be recalled that certain prominent Republicans induced a national case of jitters by casting doubt upon the credit of the insurance business if they lost the election.

Spoke Farley:

"The statement has been made and repeated often during this campaign * * * that the policies of the * * * administration had threatened the insurance structure of the United States.

"Granting that it was made not in all honesty but for campaign purposes it was, nevertheless, an indictment of an industry which has a larger stake in the future of America than any other and for that reason it was dangerous and inflammatory. It was, I am glad to say, recognized as such by insurance men generally, so that explanations and alibis have been the order ever since.

"Explanations cannot, however, undo the damage that was done. Every insurance man knows, through the testimony of his own files, that a considerable number of persons became alarmed when the attack upon the safety of insurance was first made, and that despite the general disclaimers some scars have undoubtedly been left in the public mind."

James A. Farley said in that copyrighted article in the Index for October 1936 that he did not believe the utterance of such statements contributes to the national welfare. He did not believe that a national political campaign is an excuse for attacks upon the credit and reputation of any person, "much less a business which

through the investment of billions of dollars has aided the progress of the Nation." Mr. Farley warned that we must remember that even in election years, we cannot tear down the advances which have been made for the sake of any party or group of men.

"No wonder," he observed then, "that in other years business of all sorts went into a decline during the season of greatest political activity."

Mr. Farley continued:

"I would like to return for a moment to the question of insurance stability. Insurance men realize even more than laymen, I believe, how close to disintegration their industry was in 1932 and 1933. We are all familiar with what happened to the banks. Those in the insurance field know that their companies could not have resisted the waves of the depression if they had swept in much longer."

The Postmaster General said, "The work of rehabilitation of the banking structure * * * prevented the insurance companies from suffering a similar fate. Every thinking man knows that this is true, for if our banking system had collapsed beyond repair the next to go would have been insurance. The two are too closely intertwined for one to stand without the other."

Mr. Farley described the situation which necessitated bringing relief to "our insurance companies." He recalled that in the spring and summer of 1933 the mortgage-loan field was not only paralyzed but in extremis. Millions of home owners who had bought homes in good faith and in expectation of that "prosperity" which they were promised by President Hoover, found that they could no longer meet payments on their residences. In the spring and early summer of 1933 foreclosures were getting progressively worse. In June of that year 1,000 homes a day were going under the hammer of the auctioneer.

"A large proportion of insurance funds has been for years and still is invested in first mortgages," Mr. Farley remarked. "Not even the strongest companies could have continued protecting themselves against the forced sales that were going on. Had nothing been done to check the volume, insurance company portfolios would have been loaded down with frozen assets.

"Into this breach was thrown the Home Owners' Loan Corporation. The homes of more than 1,000,000 Americans have been refinanced by the Government and an equal number of investments that were causing insurance men sleepless nights have been replaced by Government interest-bearing bonds."

In the farm-mortgage field similar aid was extended. Here, too, Mr. Farley reminded, in the period before the depression the investments of insurance companies had been heavy. Agricultural values had been boosted to unsound levels by thoughtless national administrations. The farmers could not keep up their obligations and the insurance companies could not realize on the loans they had made.

"More than one insurance man," wrote the Postmaster General, "has reason to remember that period when indignant farmers not only halted foreclosure proceedings but threatened physical violence to insurance men who were merely carrying out their duty to the policyholders of their companies.

"* * * Through the Farm Credit Administration the log jam in this lending field was broken. Thousands of farm mortgages have been refinanced and benefited not only the owner of the land but the company which held the mortgage. The policies of the Department of Agriculture have, moreover, enabled insurance companies to get some return out of farm properties which they were forced to take in through nonpayment."

Mr. Farley concluded that in the light of facts revealed in his article, it was fundamental that the administration, rather than having damaged the credit of any insurance company, had saved every company in the United States from a fate which they would not like to contemplate. He said specific action had helped insurance, that general action up to that time "helped us all," and it is as a nation that we go forward.

Politics is a word that has dropped into disrepute, but it really means "the science of government." James A. Farley is today's greatest governmental scientist.

In his own circle there are those who resent his matchless candor, his unassailable honesty, his admirable truthfulness, his insistence upon old-line American principles and his unshakably solid views on important fundamental subjects, which have adorned his reputation so nobly and won for him the trust of the rank and file of the American people.

Mr. Farley's record, reputation, and character are such that might well be expected to arouse political jealousy among ambitious bigwigs who could not by the farthest stretch of imagination claim the same attributes for their own. It is these who would attempt to edge Mr. Farley more and more into the background—Jim Farley, without whose great efforts not one of those who insensibly envy him would be in the public eye today.

In the public eye * * *.

A number of those who ungratefully obscure the light of the Postmaster General are but cinders in the public eye.

The average man does not long suffer such cinders.

The average insurance man, as well as the average layman, knows that Farley is sound, trustworthy, faithful to his word at every turn.

With leadership vested in him, the country would be safe.

For, as he has said, it is as a nation that we go forward.

And that does not mean in groups, one group against another, with rights of one curtailed, the rights of another expanded unjustifiably.

Mr. Farley thinks in terms of what is best for the whole Nation.

Solid, clear thinking, representing the true measure of a great man, propels his star zenithward.

Lutheran Youth at New York World's Fair

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, August 4 (legislative day of Wednesday, August 2), 1939

ADDRESS BY HON. HENRIK SHIPSTEAD, OF MINNESOTA, JUNE 25, 1939

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very illuminating address delivered by the senior Senator from Minnesota [Mr. SHIPSTEAD] before a national gathering of Lutheran youth at the New York World's Fair on June 25, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I am highly honored by your invitation to be in this forum to address you this afternoon.

Living as we do in the mightiest democracy of the world there has been brought to this world's exposition in this city the contribution of practically every nation of the world, bringing the best man has produced in all lands and what he plans or dreams to do for the world of tomorrow.

What tomorrow has in store for the world we can only surmise by what we know of the history of the past. Great advancement has been made in human endeavor, in the arts and sciences, in the field of production. We have mass production of goods and crops as well as of ideas. We seem to be better equipped to distribute ideas than our production of goods.

We have the record of ancient civilizations and ancient culture, the magnificence of Greek and Roman cities of centuries ago. The modern American skyline of our cities gives testimony to the constructive genius of our artisans.

The story of ancient civilization so far as they are recorded in history gives us some indication of the reasons for their fall and decay.

It is evident that the message of nearly 2,000 years ago "bringing peace on earth to men of good will" has cheered the hearts and lightened the paths for millions of human beings.

Nevertheless the doctrine of the brotherhood of men has still a long way to go before it will control the relations between nations.

If we can believe the records of history, we can only come to the conclusion that some advancement has been made to invoke the doctrine of good will among men and little to extend peace among nations.

The oldest treaty of peace among nations, of which there is a record, was signed in the twenty-first year of the reign of Rameses II which date is Tybi 21, and seems to correspond to November 28, 1279 B. C. The treaty is now nearly 42 centuries old and in view of recent events shows there is very little new in diplomacy and in international relations.

For instance, in that treaty there was to be "open diplomacy, openly arrived at." The treaty goes on to say "there shall be good peace and brotherhood between us forever" and also their descendants and successors to the throne.

Next comes the clause for military alliance. The Egyptian Government should come to the aid of the Kheta, in case they are attacked and vice versa.

"The king of either nation need not personally enter the conflict, but shall send his soldiers and chariots to help the Hittites."

This treaty was signed between Tarte Sebu and Rameses, the ambassadors of the King of the Hittites and the King of Egypt, respectively, who negotiated for the principals. This treaty of peace, for mutual security forever, lasted 30 years, which is an unusually long time in such cases.

Since that time up to the present, the rule of force, with very few exceptions, has been a controlling factor in all peace treaties on international relations, instead of justice and mercy.

We often wonder why the message of the Prince of Peace has not reached further into the acts of men and nations. However, we must remember we have had a long way to go.

We have come a long way in 2,000 years, and we have still far to go. We must remember that 2,000 years ago 90 percent of humanity was in slavery.

The people were vassals of rulers who owned and controlled the government, held all the wealth, and exploited 90 percent of their populations as slaves.

Into that state of society came the revolutionary doctrine of the Prince of Peace, born in Bethlehem, that all men were the children of the same Divine Father and therefore were brothers.

That message said that all men, before the judgment seat of the Almighty, must answer on the basis of equality for their thoughts and deeds whether their station in life was high or low, rich or poor, freemen or slaves.

This meant equality in divine law for the slave as well as for the freeman. This doctrine struck at the very foundation of existing economic, religious, and political institutions of that time.

It became the religion of the lowly. It gave hope and consolation in this life and assurance of eternal salvation.

This doctrine resulted in centuries of religious wars and the soil of every land drank the blood of the millions of martyrs who have died for their faith.

As time passed on, this religious doctrine, of the Prince of Peace, the brotherhood of man, became more or less accepted by humanity and having been accepted, it led to the next step which was the desire for political equality and freedom.

Men said, if all men are equal before the judgment seat of the Almighty, why should they not stand on the basis of equality before the law of the land?

This question resulted in more centuries of war for political freedom. Again the soil of every land drank the blood of the martyrs who died for human freedom and equality before the bar of civil law.

The first settlers coming to America, came here to escape the persecution of governments who denied them religious and political freedom.

They settled in various parts of the country and it is a strange paradox that after they had settled here, they started religious persecution and were in many respects as intolerant as had been their persecutors in Europe.

For 300 years there was no religious liberty on American soil. There was, to some extent toleration in some of the colonies, such as in Maryland and Pennsylvania, due to the influence of Lord Baltimore and William Penn.

But real political and religious freedom was not known until after the American Revolution and on a week from next Tuesday, it will be 163 years since the Declaration of Independence was written on July 4, 1776.

This is the first time in history that a political document had been agreed to by a political government recognizing the right of an individual to have political freedom on the basis of equality with all men.

I quote:

"We hold these truths to be self-evident that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

Following the Revolution the Constitution of the United States was ordained and established.

However, religious intolerance and persecution had continued and the Constitution could not be ratified by several of the States until assurances were given that the first amendment should be adopted, guaranteeing religious liberty and freedom for all men.

This provision ventured upon a new experiment and established a principle for the relation of church and state, which had never before been incorporated into a national constitution.

For the first time in the world's political history, freedom of conscience, the right to worship God according to dictates of one's own conscience was guaranteed protection for all men by the Government of the United States.

I sometimes wonder if later generations have fully realized the price that humanity paid down through the ages for this political and religious freedom that we enjoy here.

I sometimes think that having cost us nothing, we do not prize it as highly nor cherish it as we should.

We believe this provision of the constitution to be in complete harmony with Divine law and to be the same principle that we find proclaimed in the Lutheran Confession of 1530, and if, consistently adhered to, guarantees religious liberty to every form of religion which is not in violation of public morality.

Having inherited it and being permitted to enjoy it under the Constitution, let us not forget our responsibility in preserving these liberties at a time when they are again being challenged throughout the world.

We are protected in our own country by a Constitution that limits the power of the majority. If the majority should at any time wish to persecute any faith or race, the duty of our Government under the Constitution, is to protect all and determine for none.

Whatever political and religious liberty men enjoy upon this earth has been achieved through the teaching of the lowly Nazarene.

Under the benign influence and the fulfillment of these liberties, humanity was set free to follow the dictates of its own conscience in religious matters as well as in government.

As a result humanity has been lifted out of the dark ages. The arts and sciences and education have flourished, and man's opportunity for the pursuit of happiness, while not as yet complete, has advanced to a greater height than ever before in human history.

However, we still have a long way to go. Avarice and greed still corrupt the hearts of men and nations.

As a result we have both domestic and international strife in every land, resulting in wars, depression, persecutions of minorities not protected as we are by a form of government under a constitution.

The foundation of human freedom is threatened now throughout the world. Nations that have taken much by force want to keep what they have taken. Nations who have little and from whom has been taken, want to take what they do not now have.

In either case the power to take is sanctioned by international law. While a great deal of justice has been established in the various countries between individuals, international law is still the law of the jungle, because it grants to him who can take the right to take.

We must not overlook the fact that the present conditions in Europe and much of the world elsewhere are distinctly the product of the war and peace treaties, so-called, that ended the World War.

The conditions in Germany to which so many object were conceived at the Treaty of Versailles and were finally developed in the hard treatment given the prematurely born Weimar Republic.

Had common sense ruled at Versailles, all mankind would have been spared much trouble. Billions spent for armament after a war that was to end war would have been put to better use.

This world, indeed, would have been a better place in which to live. Democracies, instead of being now beset by many powerful enemies, would have gained in the German Republic a fine pillar of support.

The hateful persecution of minorities now going on in Europe is undoubtedly the fruit of the seeds of hate planted by the majority at Versailles and spread in the fertile soil of the oppressed minority by the administration of the treaty.

These cruel persecutions we now abhor in others and rightly so. We do abhor these things as emphatically as the American people and their representatives in the Senate abhorred and repudiated an effort to make us a party to a treaty of oppression that would threaten western civilization and jeopardize the sovereignty of the United States.

We abhor no less the present dictators in control of government that make these purges and persecutions possible and are determined that such ideas shall not find root on American soil.

The question forced upon us is how shall we keep these ideas of government from finding root in American soil.

Many people in this country, speaking over the radio and through the press, would have us believe that the way to save democracy is to go to war again to save democracy.

The propaganda to get us into the next war, if and when it comes, has been carefully prepared and as ably executed in the last few years as it was during the period of 1915, 1916, and 1917.

I cannot see how our going into that war saved democracy. There is less democracy in the world now than before the war.

It is true we got rid of the Kaiser, who was supposed to be an autocrat, and in getting rid of the Kaiser we had the help of the Russian Czar and the Emperor of Japan.

We were told they were fighting for democracy, too. The dictators we got in place of the Czar of Russia and Kaiser Wilhelm II, I do not think are an improvement over those we got rid of.

In my opinion another World War would destroy whatever democracy there is left in the world.

I found that to be the opinion of many statesman in Europe and therefore they are trying to solve some of their problems by peaceful means.

In so doing, injustice will be done. Persecution of minorities will occur. But a world war will multiply these by a million times more.

Many good people say we must do something to stop dictators. Very well, but how are we going to do it without going to war?

We ask these people what they will have when the war is over.

Will everything then be peaceful and serene?

In my opinion we will then have more dictators than now, and a thousand times more debt than now. Millions of young men dead, and more persecution of minorities than now. The present troubles of the world are due to the last war.

The problems following the next war will be much more difficult and human suffering far worse.

Of course, these people tell you they don't want war. They say they want peace, but they are so anxious for peace they want war to prevent a future war.

That is the kind of war we had last time. That is the kind of a war they would get us into now.

Every day on the radio we have these peace people stirring up emotions of the people, preparing them to accept the theory of necessity of war—in order to have peace.

Europe has its own peculiar problems that only Europe can solve. We hope they can solve these problems without war.

We, too, have our own peculiar problems. We do not ask Europeans to come over here and settle our troubles. We must do this ourselves.

We have plenty to do here. We have ten or eleven million people out of work. In the neighborhood of 20,000,000, young and old, directly or indirectly, are on relief.

Our debts are increasing by the billions. Farmers are, generally speaking, going bankrupt. Business houses are being supported by customers on relief rolls.

This has all to be paid for, so taxes are eating like a cancer on the body politic.

Haven't we enough to think about and do here? I think we have.

Nevertheless the war propaganda persists. Our own troubles are no longer regarded as of first importance.

Our first duty is said to be to save democracy in Europe. To do this they say we must go to war.

I believe the best way to save democracy abroad is to save it first at home. That the best way to discourage the dictators is to make our own democracy secure by solving our own problems—to show the world how well democracy can be made to work.

And so by force of example, as well as by the power a sound prosperity builds, to discourage dictators by demonstrating a better way of life to the unfortunate people who suffer under tyranny.

And to some of us it seems further that unless we do this and do it without waste of time we can be of but little service to democracy or civil and religious liberty.

I believe that by putting our own house in order we can best discharge our responsibility and duty to ourselves, to democracy, and to world peace.

We can best do this by practical application of the Sermon on the Mount, which, in my opinion, is the foundation of democracy.

The Paramount Problem

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, August 4 (legislative day of Wednesday, August 2), 1939

ADDRESS OF HON. STYLES BRIDGES, OF NEW HAMPSHIRE, ON UNEMPLOYMENT

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the RECORD an able and interesting address by my distinguished colleague [Mr. BRIDGES] on the subject of the unemployment problem.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The paramount problem which this Nation faces today, is the problem which has existed since the present administration came to power in 1933. It is the problem of unemployment.

Until that problem is solved, until the vast army of idle men and women are restored to useful work, there can be no real prosperity in the United States.

According to the figures of the American Federation of Labor, there are today more idle workers in the country than there were in 1935, 4 long years ago. These figures show that the average number of unemployed for the 12 months of 1935 were 10,652,000. During the brief revival of 1937 unemployment dropped to 7,706,000.

Today the number of unemployed has increased to an average of 11,403,000 for the first quarter of the present year.

That, to my mind, is the greatest indictment that can be brought against the policies and the performance of the New Deal.

When we say that a man is unemployed, we say two other things. A man out of employment is a man who has ceased to produce useful goods or services. Also, a man out of work has ceased to be a consumer for the products of workers who are still employed.

Unemployment is a disease that feeds upon itself. It prostrates the unemployed worker himself and, by reducing purchasing power, it causes other workers to lose their jobs.

Like the Old Man of the Sea, unemployment has hung round the neck of the New Deal from the day it came to power.

No administration ever entered upon its duties under better hopes. While business and the public still believed in the promises which had been made, there was a surge of public hope and confidence.

Because of that confidence between March 1933 and September 1933, at a period when we were in the darkest days of the depression, unemployment dropped from 13,600,000 to 10,108,000.

The failure of the New Deal is summarized in the fact that today, in the seventh year of the New Deal policies, there are more men out of work than in the September of the first year after the New Deal came to power!

For 6 years this administration has been treating the symptoms of a disease and has done nothing to cure the disease itself. Why? Because in the name of reform we have seen millions of workers turned out in the street. In an effort to get rid of the rats we have burned the barn. Such destruction can never be a constructive policy and I condemn it.

To secure work the worker must find an employer able and willing to employ him. Labor cannot be prosperous unless the employer is prosperous.

Yet for the past 6 years we have seen policies pursued which struck at the confidence, and the prosperity of business, both great and small.

The New Deal created unemployment when it imposed on business new and vexatious taxes; when it created bureaucratic control of business processes; when it destroyed business confidence by incessant attacks on business practices; when it tried by every means in its power to create ill will and misunderstanding between management and labor; when it adopted the program of "tax and spend" as the goal of the apostles of the New Deal.

I should like to quote to this body from the report of the executive council of the American Federation of Labor, at its midwinter meeting last February.

Said the council: "The executive council, numbering many millions, is seriously affected by the continuation of unemployment and adverse business conditions.

"We are firmly convinced that various forms of Government spending, either in the distribution of relief, or in the development and maintenance of work projects designed to supply relief wages to unemployed, can only serve as temporary measures. They cannot and do not provide a permanent solution for unemployment. * * *

"* * * This leads to the inevitable conclusion that private industry and business generally should be stimulated so that the facilities of production may be increased and millions more working men and women may be employed.

"The executive council is firmly of the opinion that this issue should be met squarely. All should understand that no new rules or stipulations will be promulgated by some administrative bureau other than the rules and regulations definitely set forth in regulatory statutes enacted by the Congress of the United States. Such action will serve to help business, labor, and the people generally. Under such a plan industrial management would be accorded the widest opportunity to render service in the solution of our unemployment problem."

After all the emphasis that has been laid on the hours and wages of labor, after the Wagner Act, and the Walsh-Healey Act, after all the bias and activity of the National Labor Relations Board, this statement by the governing committee of the American Federation of Labor is illuminating.

It shows that labor itself realizes that it has been given only the shadow of help by this administration, and that it has been denied the substance.

To me it recalls the truism that you can't fool all the people all the time.

In every other depression of which I have knowledge business suffered and employment suffered. But in every other depression the native genius and energy of the American people was responsible for bringing the Nation back to an increased prosperity.

In not one of the previous depressions was employment less 10 years after the depression began.

The difference between this depression and those that went before is that in this depression the Government stepped in to demand recovery on its own terms.

I am not one of those who would deny that there is merit in any of the proper reforms which the New Deal has instituted.

Yet with all the earnestness at my command, I insist that these reforms and the methods which have been used to put them into effect have actually hindered the recovery which the Nation sought.

No man in this body is more opposed to the exploitation of labor than I. I have always believed in the American theory of quantity production, high wages, and low prices.

Yet the New Deal, in pursuit of theoretical ends, has turned from the exploitation of labor to the exploitation of those who give the worker employment.

Legitimate business today walks in doubt and fear. It regards its Government not as the arbiter of fair play but as an unstable tyrant intent on the destruction of private business. Not only is business laboring under a multitude of new taxes; not only is it buried under a mass of reports, questionnaires, investigations, and abuse but it finds itself with a steadily decreasing market.

We have heard a lot about the strike of capital. By that, of course, is meant the unwillingness of men and women to put their savings today into new enterprises.

That fact alone is a biting commentary on the policies that have held sway during the past 6 years.

Yet we all know human nature well enough to know that money can always be found for ventures with a reasonable certainty of profit.

Capital itself is in the same state as business. It now knows enough about the New Deal to be fearful of the future. It will not play in a game where the rules are subject to change without notice.

There is, however, another strike which is far more serious. It is the consumers' strike, for which the New Deal itself is responsible.

The public today is restricting its purchases to the simple necessities of life. The 11,000,000 unemployed, of course, have no option. They cannot become real consumers until they are restored to gainful employment.

The remainder of the public are conserving their resources against the day when the spreading tide of unemployment may engulf them.

As an example of the effect of New Deal policies, let us take a glance at two of our key industries. The New Deal glories in the fact that it has stimulated a rise in wage scales. Yet, what use are high-wage scales to the worker if his weekly income does not increase?

For example, today in the steel industry the worker is working only 24 hours a week. Today in the automobile field the worker is working only 3 days a week.

This is a striking example of the effect of New Deal policies which have resulted in cutting down the production of the individual worker.

This country was built and made great on the theory that the more the individual produced the more he could earn for himself.

That was the program which gave to the American worker the highest living standards of any worker in the world. It gave automobiles and pianos, radios, and purchasing power to the American worker, to make him the envy of workers of other lands.

Studies conducted by students of economics show that during the present century, at least, the worker's annual income has kept pace with the value of the goods he produced, in season and out of season.

All the New Deal has done is cut down the productivity of the worker while it increased the army of the unemployed.

While this strange and alien program has been in full swing, the New Deal has increased the national debt more than $20,000,000,000 in a wild attempt to spend itself into prosperity.

With that part of the debt which has been used to relieve distress no man can justly quarrel.

But for that larger part of the debt, which has been used to create duplicating and multiplying boards, bureaus, and commissions; with that part used to control and whip business, to create competition with private industry, and to harass the employer, the unemployed and the employed worker alike, have a just grievance.

Every dollar added to the national debt must some day be paid out of the pocket of the worker, the consumer, and the employer.

The only way that business can pay high wages and high taxes and stay in business is to add its taxes to its operating cost and reflect this in higher prices to the consumer. And every worker, whether employed or unemployed, is a consumer.

While taxes have been mounting too little attention has been given to the fact that money paid out by business to the Government in taxes, is money that cannot be used to increase pay rolls or to give useful employment.

With 11,000,000 workers unemployed, it is high time that those who have the responsibility for national policies should recognize the folly of the path that has been followed during the past 6 years.

It is time that we call a halt to half-baked experiments on business and the worker, and devote sincere attention to getting back on the road to sanity and safety.

The policy of the New Deal has been to give lip service to legitimate business while it was stabbing business in the back in the dark alleys of the New Deal's "kitchen cabinet." And 11,000,000 unemployed workers have been the victims of the continuing plots against American business.

To continue the course we have been pursuing is to invite disaster. It is a tribute to the good sense of labor and management alike that, in spite of every obstacle and every discouragement, they have kept the wheels of industry turning through the 6 hectic years we have passed through. It is true that the wheels have been turning at slower speed and with increasing difficulty. It is true that there have been heavy casualties in the ranks of business as well as in the ranks of labor. But the great machine of American business has continued to function.

Yet there is a limit to the strain that can be borne by every mechanism.

The cushion which business once had in its surpluses and its reserves has been worn thin by taxes. Its markets have decreased as the purchasing power of the worker has decreased.

Before the ranks of the unemployed are increased by further additions, those who have the interest of their country at heart must stand together to change the policies that have brought us to this pass.

Labor, management, and the public alike demand that government should confine itself to governing, and leave industry free within the law to solve the problems of business.

That has been the policy which has brought the Nation out of every previous depression, and it is the policy which the New Deal has flouted at every turn.

A great President once said at another crisis in our history that no nation can exist half slave and half free.

Today it is true, as is proved by the critical condition of industry and by the army of the unemployed, that business cannot prosper half slave and half free.

The chains which the New Deal has wrapped about American business and American labor must be stricken off. The energies of government must be devoted to restoring to useful production the millions now suffering the heartache of unemployment and to preserving the security of those who are now employed.

We have about us all the means for recovery. We have a nation which is rich in the products of farm and factory. We have an abundance of wealth to draw on for the expansion of existing industries and the creation of new ones. We have a great army of workers ready and willing to produce more so that there may be more to divide.

For 10 long years there has been an accumulation of work to be done, of new houses to be built, of factories to be modernized, of new inventions to be merchandised. All that is lacking is confidence in the stability and honesty of government.

The New Deal has forfeited that confidence.

It has proved its incompetence to grapple with unemployment.

It has persecuted business.

It has split labor into warring camps.

It has arrayed class against class.

It has said one thing and done another.

It has assailed the cherished ideal of a government with coordinate powers.

It has preached a gospel of scarcity to the farmer so that Nature itself has rebelled.

It has repudiated its own contract on its gold notes, and it has tried to divert attention from its own failures by its meddling in the affairs of Europe.

All over this land a cry is rising to restore to the halls of state a government which the Nation can trust—a government which will honestly carry out the pledges which it makes when it seeks its mandate.

When such a government releases the energies and the hopes of America, then, and only then, will discontent and unemployment disappear.

Governor Aiken of Vermont

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, August 4 (legislative day of Wednesday, August 2), 1939

ARTICLE IN THE BELLOWS FALLS (VT.) TIMES OF JULY 13, 1939

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the Bellows Falls (Vt.) Times of July 13, 1939, entitled "Vermont Speaking."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VERMONT SPEAKING

One of the reasons why Vermont continues to arrest the attention—and receive the affection—of the citizens of other States is because Vermonters seem to have absorbed the staunchness of their hills and mountains. They have the gift of brief and pointed speech. Stubbornly and proudly they cling to the old virtues—as witness their rejection in 1936 of the New Deal—a vote which won for them the honor of the charge that the Union had seceded from Vermont.

A combination of pithiness and taciturnity seems to be bred in the bones of most Vermonters. For a while the hard common sense of these Vermonters may be brushed aside. But in the end it triumphs. Governor Aiken, like the late President Coolidge, has absorbed these qualities which seem to be so enduring. Because the American people are still in an era of illusions, and still have fond hopes that panaceas will be found which will solve their problems, such blunt words as were spoken by Governor Aiken at the world's fair on Sunday will fall on many deaf—or, at least, reluctant—ears. "We don't believe in building the world of tomorrow on a foundation of debt," he said, referring to his people in the Vermont hills. Hard work, thrift, and the duty and privilege of being self-supporting he held up as personal ideals.

Cynics may say that Governor Aiken is playing the role of the typical anti new dealer—that he is consciously building up for himself the "character" of being the exact opposite of the President. This might be true of some one other than a native Vermonter. But Governor Aiken by nature and inclination is the personification of all that Vermont stands for. This in itself is the antithesis of New Deal America. In fact, even his method of earning a living is typically Vermont, for it required ingenuity, persistence, and energy, as well as frugality and thrift, to create a business which had never before been successfully exploited on a large scale in his State, the propagation and distribution of wildflowers. The story is that he started on a borrowed $100. Today he boasts that he and his family still live on much less than the $5,000 salary which he receives as Governor.

This augurs badly for any political ambitions which he may cherish. The professional politicians will resent him. Who ever heard of a Governor who would publicly admit that he could live on much less than the State was paying him? Such a man might even try to reduce salaries and other expenses drastically. No wonder the new dealers would like to see Vermont expunged from the Union. The vote in 1936 was bad enough. But here is a Governor who has succeeded through thrift, self-reliance, self-respect, energy, and self-denial. This is a personal affront to the Great White Father in Washington, with all his munificence and paternalism.—New York Herald Tribune.

Mexican Oil Probe

EXTENSION OF REMARKS
OF
HON. CARL A. HATCH
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Friday, August 4 (legislative day of Wednesday, August 2), 1939

ARTICLES ON RESOLUTIONS PROPOSING AN INVESTIGATION OF THE MEXICAN OIL SITUATION

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the RECORD three brief newspaper articles relative to the action of the Committee on Foreign Relations on resolutions proposing an investigation of the Mexican oil situation.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MEXICAN OIL PROBE RESOLUTIONS KILLED BY SENATE BODY—NO FACTS GIVEN TO JUSTIFY EXPROPRIATION INQUIRY, PITTMAN REPORTS

The Senate Foreign Relations Committee killed today two resolutions for an investigation of conditions surrounding the expropriation of American oil properties by Mexico.

Chairman PITTMAN, Democrat, of Nevada, said the committee reported both resolutions, by Senators BRIDGES, Republican, of New Hampshire, and NEELY, Democrat, of West Virginia, adversely for the following reasons:

1. "Neither of such resolutions was properly before this committee.

2. "There were no facts stated that justified making such an investigation."

Senator PITTMAN said the motion for the adverse report was adopted unanimously by the committee virtually without discussion.

The resolutions grew out of newspaper accounts Senator BRIDGES read to the Senate last week linking the name of Senator GUFFEY, Democrat, of Pennsylvania, with persons who negotiated the sale of Mexican oil seized on American properties.

Senator GUFFEY, who had said he desired a full investigation, was absent from the committee room, Senator PITTMAN said, at the time of its decision.

SENATORS REJECT OIL SEIZURE PROBE—FOREIGN RELATIONS GROUP FINDS NO REASON FOR MEXICAN INQUIRY

By unanimous action, the Senate Foreign Relations Committee today rejected two resolutions which would have created a special Senate committee to investigate expropriation of American-owned oil lands by Mexico.

The resolutions, sponsored by Senators NEELY (Democrat) of West Virginia and BRIDGES (Republican) of New Hampshire, came after BRIDGES read newspaper stories in the Senate in which Senator GUFFEY (Democrat) of Pennsylvania and officials of the Government were mentioned in connection with Mexico's seizure of the oil lands.

SET ASIDE IN 2 MINUTES

Senator PITTMAN (Democrat) of Nevada, chairman of the committee, said that the resolutions were indefinitely set aside "in less than 2 minutes" after the postponement motion was entered by Senator BORAH (Republican) of Idaho.

PITTMAN said the committee ruled out the resolutions on two points:

1. "That neither of the resolutions were properly before the committee.

2. "That there were no facts stated that justified this committee in making such an investigation."

PITTMAN explained that the committee felt that the assertions read by BRIDGES from newspaper stories and editorials did not justify a special Senate committee making "an investigation of our foreign affairs."

SENATE GROUP BARS GUFFEY OIL INQUIRY—PROBE OF MEXICAN DEALS UNJUSTIFIED BY FACTS, COMMITTEE HOLDS

WASHINGTON, August 2.—With Senator BORAH (Republican, Idaho) taking the lead, the Senate Foreign Relations Committee today killed two resolutions for an investigation of circumstances surrounding the seizure of American oil property by the Mexican Government.

The committee decided unanimously, on BORAH'S motion, that neither of the resolutions was properly before it and that no facts were stated which justified an investigation.

FOLLOWS BRIDGES' ACTION

The resolutions were introduced after Senator BRIDGES (Republican, New Hampshire) read to the Senate last week newspaper reports linking the name of Senator GUFFEY (Democrat, Pennsylvania) with persons who negotiated the sale of oil by Mexico from the seized properties.

Wool Products Labeling Bill

EXTENSION OF REMARKS
OF
HON. JOHN A. MARTIN
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 4, 1939

Mr. MARTIN of Colorado. Mr. Speaker, Congress adjourns with H. R. 944, which is titled "Wool Products Labeling Act of 1939," pending before the Committee on Rules for a rule for consideration of the legislation by the House. The rule requested is an open rule, with such allotment of time for general debate as the committee may fix, and with unrestricted privileges of amendment. A companion bill, S. 162, by Senator SCHWARTZ, of Wyoming, has passed the Senate since the filing of the report on the House bill, and a wool-labeling bill also passed the Senate in the last session of the Seventy-fifth Congress.

Wool-labeling bills have been pending in the House and Senate the past 3 years. Extensive hearings have been held on these bills before the Senate and House Committees on Interstate Commerce. The Senate comittee hearings comprise nearly 400 pages, and the House committee nearly 700 pages. All parties interested were given ample time in which to present their views. The demand for truth in fabrics, or fiber-identification legislation, has been growing for 25 years, and in ever-increasing measure. This is shown by statements made before the committees by representatives of the National Federation of Women's Clubs, the American Federation of Labor, the American Farm Bureau Federation, the National Farmers' Union, the Naticnal Grange, the National Farm Guild, and various consumer organizations. The demand in the last two Congresses has been Nation-wide and persistent.

It was hoped that the Committee on Rules would see fit to report a rule before the adjournment of this session of Congress, enabling consideration of the legislation at the incoming of the next session, but this hope was not realized. It was objected to in the committee that the legislation is very controversial. It would be singular if it were not. It has been the history of all legislation designed to protect the consuming public from fraudulent and dishonest business practices that it was very controversial.

The original Pure Food and Drugs Act was enacted only after a long and Nation-wide controversy over that type of legislation. After being 30 years on the statute book the act was materially strengthened by the last Congress, but only after a fight in the committees and on the floor of the Senate and House extending over a period of 3 years. "Wheresoever the carcass is, there will the eagles be gathered together." The powerful shoddy-clothing industry will not submit tamely. The history of this legislation in this Congress is ample proof of their ability to fight back. They want to label their goods but they do not want to stand behind the label. All this legislation proposes is to make them stand behind it, as the manufacturers and distributors must now do in the food, drug, and cosmetic industries, and in the stock and bond industry. Congress at this session passed a pure-seed bill, much more drastic than the wool-labeling bill, and for which legislation there was much less need.

Under leave granted I shall insert the committee report on H. R. 944. As the report carries in it the bill as it now appears on the calendar, an analysis and explanation of the bill

section by section, and excerpts from statements of the representatives of the great national organizations endorsing the legislation as to the demand and need for the legislation, I shall not go into these matters in my introductory remarks. I shall, however, under leave granted insert a letter from the Chairman of the Federal Trade Commission to Senator SCHWARTZ in answer to two objections made by opponents of the legislation, one being that the provision against importation of woolen manufactures in violation of the law would be impossibly burdensome and unenforceable, and the other being the claim that the legislation would be detrimental to the cotton industry.

While it may renew man's faith in his fellows to see the manufacturers and distributors of shoddy-wool clothing in which there is no cotton shedding tears before a congressional committee over the injury the legislation may do to cotton, the sponsors and endorsers of the legislation are to be warned that no misrepresentation will be overlooked by the profiteers in dishonest clothing. The cotton argument is simply a red herring.

The House of Representatives should be given an opportunity to consider these and other objections on the floor. The action of two great committees of the House and Senate in reporting the legislation after 3 years of study, the action of the Senate in twice passing such legislation, the endorsement, year after year, of the farm, labor, women's, and consumers' organizations of the country, representing many millions of people, entitle the legislation to consideration.

IMPORTATION OF WOOL RAGS FOR AMERICAN CLOTHING

I desire to make one correction in the report on the bill. Under the heading, "Need for the Legislation," which will be found in the early part of the report following a copy of the bill, is the statement that the volume of wool rags imported from Great Britain into the United States for use in the textile industry, had increased from 170,261 pounds for the first 4 months of 1938 to 2,817,113 pounds for the first 4 months of 1939, an increase of 1,654 percent. This increase is attributed in the report to the trade treaty with Great Britain and a reduction of 50 percent in the tariff.

My attention has been called by the Secretary of State to the fact that during the first 4 months of 1937, and before the tariff reduction, imports of wool rags from Great Britain amounted to 3,336,551 pounds. The Secretary attributes the increase and decrease of rag importations to a corresponding rise and fall in the consumption of raw wool in the United States, and he supports his claim by tables of which I give herewith only the summary:

Summary table

	January to April, inclusive—		
	1937	1938	1939
	Pounds	*Pounds*	*Pounds*
Imports of wool rags	3,226,551	170,261	2,817,000
Consumption of raw wool	110,300,000	47,800,000	89,070,000

It will be noted that raw-wool consumption practically doubled in the 4-month period of 1939 over 1938, while wool rags went up to nearly the figures in 1937. I accept the Secretary's figures. The important fact they disclose is the enormous consumption of imported wool rags in the manufacture of wearing apparel for the American people—wool rags gathered up from the slums of European cities and worked up and sold as wool garments to be worn by the American people. These rags could be garmented and sold as 100-percent wool.

It is confidently anticipated by the supporters of the legislation in the House and in the country that once it is given a place on the calendar it will pass overwhelmingly.

[H. Rept. 907, 76th Cong., 1st sess.]

WOOL PRODUCTS LABELING BILL

Mr. MARTIN of Colorado, from the Committee on Interstate and Foreign Commerce, submitted the following report (to accompany H. R. 944):

The Committee on Interstate and Foreign Commerce, to whom was referred the bill (H. R. 944) to protect producers, manufacturers, distributors, and consumers from the unrevealed presence of substitutes and mixtures in spun, woven, knitted, felted, or otherwise manufactured wool products, and for other purposes, having considered the same, report favorably thereon with an amendment and recommend that the bill, as amended, do pass.

The amendment is as follows:

Strike out all after the enacting clause and insert in lieu thereof a substitute.

The substitute is as follows:

"That this act may be cited as the 'Wool Products Labeling Act of 1939.'

"DEFINITIONS

"SEC. 2. As used in this act—

"(a) The term 'person' means an individual, partnership, corporation, association, or any other form of business enterprise, plural or singular, as the case demands.

"(b) The term 'wool' means the fiber from the fleece of the sheep or lamb or hair of the angora or cashmere goat (and may include the so-called specialty fibers from the hair of the camel, alpaca, llama, and vicuna) which has never been reclaimed from any woven or felted wool product.

"(c) The term 'reprocessed wool' means the resulting fiber when wool has been woven or felted into a wool product which, without ever having been utilized in any way by the ultimate consumer, subsequently has been made into a fibrous state.

"(d) The term 'reused wool' means the resulting fiber when wool or reprocessed wool has been spun, woven, knitted, or felted into a wool product which, after having been used in any way by the ultimate consumer, subsequently has been made into a fibrous state.

"(e) The term 'wool product' means any product, or any portion of a product, which contains, purports to contain, or in any way is represented as containing wool, reprocessed wool, or reused wool.

"(f) The term 'Commission' means the Federal Trade Commission.

"(g) The term 'Federal Trade Commission Act' means the act of Congress entitled 'An act to create a Federal Trade Commission, to define its powers and duties, and for other purposes,' approved September 26, 1914, as amended, and the Federal Trade Commission Act approved March 21, 1938.

"(h) The term 'commerce' means commerce among the several States or with foreign nations, or in any Territory of the United States or in the District of Columbia, or between any such Territory and another, or between any such Territory and any State or foreign nation, or between the District of Columbia and any State or Territory or foreign nation.

"(i) The term 'Territory' includes the insular possessions of the United States and also any Territory of the United States.

"MISBRANDING DECLARED UNLAWFUL

"SEC. 3. The introduction, or manufacture for introduction, into commerce, or the sale, transportation, or distribution, in commerce, of any wool product which is misbranded within the meaning of this act or the rules and regulations hereunder, is unlawful and shall be an unfair method of competition, and an unfair and deceptive act or practice, in commerce under the Federal Trade Commission Act; and any person who shall manufacture or deliver for shipment or ship or sell or offer for sale in commerce, any such wool product which is misbranded within the meaning of this act and the rules and regulations hereunder is guilty of an unfair method of competition, and an unfair and deceptive act or practice, in commerce within the meaning of the Federal Trade Commission Act.

"This section shall not apply—

"(a) To any common carrier or contract carrier in respect to a wool product shipped or delivered for shipment in commerce in the ordinary course of its business; or

"(b) To any person manufacturing, delivering for shipment, shipping, selling, or offering for sale, for exportation from the United States to any foreign country a wool product branded in accordance with the specifications of the purchaser and in accordance with the laws of such country.

"MISBRANDED WOOL PRODUCTS

"SEC. 4. (a) A wool product shall be misbranded—

"(1) If it is falsely or deceptively stamped, tagged, labeled, or otherwise identified.

"(2) If a stamp, tag, label, or other means of identification, or substitute therefor under section 5, is not on or affixed to the wool product and does not show—

"(A) the percentage of the total fiber weight of the wool product, exclusive of ornamentation not exceeding 5 percent of said total fiber weight, of (1) wool; (2) reprocessed wool; (3) reused wool; (4) each fiber other than wool if said percentage by weight of such fiber is 5 percent or more; and (5) the aggregate of all other fibers: *Provided*, That deviation of the fiber contents of the wool product from percentages stated on the stamp, tag, label, or other means of identification, shall not be misbranding under this section if the person charged with misbranding proves such deviation resulted from unavoidable variations in manufacture and despite the exercise of due care to make accurate the statements on such stamp, tag, label, or other means of identification.

"(B) the maximum percentage of the total weight of the wool product, of any nonfibrous loading, filling, or adulterating matter.

"(C) the name of the manufacturer of the wool product and/or the name of one or more persons subject to section 3 with respect to such wool product.

"(3) In the case of a wool product containing a fiber other than wool, if the percentages by weight of the wool contents thereof are not shown in words and figures plainly legible.

"(4) In the case of a wool product represented as wool, if the percentages by weight of the wool content thereof are not shown in words and figures plainly legible, or if the total fiber weight of such wool product is not 100-percent wool exclusive of ornamentation not exceeding 5 percent of such total fiber weight.

"(b) In addition to information required in this section, the stamp, tag, label, or other means of identification, or substitute therefor under section 5, may contain other information not violating the provisions of this act or the rules and regulations of the Commission.

"(c) If any person subject to section 3 with respect to a wool product finds or has reasonable cause to believe its stamp, tag, label, or other means of identification, or substitute therefor under section 5, does not contain the information required by this act, he may replace same with a substitute containing the information so required.

"(d) This section shall not be construed as requiring designation on garments or articles of apparel of fiber content of any linings, paddings, stiffening, trimmings, or facings, except those concerning which express or implied representations of fiber content are customarily made, nor as requiring designation of fiber content of products which have an insignificant or inconsequential textile content: *Provided*, That if any such article or product purports to contain or in any manner is represented as containing wool, this section shall be applicable thereto and the information required shall be separately set forth and segregated.

"The Commission, after giving due notice and opportunity to be heard to interested persons, may determine and publicly announce the classes of such articles concerning which express or implied representations of fiber content are customarily made, and those products which have an insignificant or inconsequential textile content.

"AFFIXING OF STAMP, TAG, LABEL, OR OTHER IDENTIFICATION

"SEC. 5. Any person manufacturing for introduction, or first introducing into commerce a wool product shall affix thereto the stamp, tag, label, or other means of identification required by this act, and the same, or substitutes therefor containing identical information with respect to content of the wool product and other information required under section 4, shall be and remain affixed to such wool product, whether it remains in its original state or is contained in garments or other articles made in whole or in part therefrom, until sold to the consumer: *Provided*, That the name of the manufacturer of the wool product need not appear on the substitute stamp, tag, or label if the name of the person who affixes the substitute appears thereon.

"Any person who shall cause or participate in the removal or mutilation of any stamp, tag, label, or other means of identification affixed to a wool product with intent to violate the provisions of this act is guilty of an unfair method of competition, and an unfair and deceptive act or practice, in commerce within the meaning of the Federal Trade Commission Act.

"ENFORCEMENT OF THE ACT

"SEC. 6. (a) Except as otherwise specifically provided herein, this act shall be enforced by the Federal Trade Commission under rules, regulations, and procedure provided for in the Federal Trade Commission Act.

"The Commission is authorized and directed to prevent any person from violating the provisions of this act in the same manner, by the same means, and with the same jurisdiction, powers, and duties as though all applicable terms and provisions of the Federal Trade Commission Act were incorporated into and made a part of this act; and any such person violating the provisions of this act shall be subject to the penalties and entitled to the privileges and immunities provided in said Federal Trade Commission Act, in the same manner, by the same means, and with the same jurisdiction, powers, and duties as though the applicable terms and provisions of the said Federal Trade Commission Act were incorporated into and made a part of this act.

"The Commission is authorized and directed to make rules and regulations for the manner and form of disclosing information required by this act, and for segregation of such information for different portions of a wool product as may be necessary to avoid deception or confusion, and to make such further rules and regulations under and in pursuance of the terms of this act as may be necessary and proper for administration and enforcement.

"The Commission is also authorized to cause inspections, analyses, tests, and examinations to be made of any wool products subject to this act; and to cooperate with any department or agency of the Government, with any State, Territory, or possession, or with the District of Columbia; or with any department, agency, or political subdivision thereof; or with any person.

"(b) Every manufacturer of wool products shall maintain proper records showing the fiber content as required by this act of all wool products made by him, and shall preserve such records for at least 3 years.

"The neglect or refusal to maintain and so preserve such records is unlawful, and any such manufacturer who neglects or refuses to maintain and so preserve such records shall forfeit to the United States the sum of $100 for each day of such failure, which shall accrue to the United States and be recoverable in a civil action.

"CONDEMNATION AND INJUNCTION PROCEEDINGS

"SEC. 7. (a) Any wool products shall be liable to be proceeded against in the district court of the United States for the district in which found, and to be seized for confiscation by process of libel for condemnation, if the Commission has reasonable cause to believe such wool products are being manufactured or held for shipment, or shipped, or held for sale or exchange after shipment, in commerce in violation of the provisions of this act, and if after notice from the Commission the provisions of this act with respect to said products are not shown to be complied with. Proceedings in such libel cases shall conform as nearly as may be to suits in rem in admiralty, and may be brought by the Commission.

"If such wool products are condemned by the court, they shall be disposed of, in the discretion of the court, by destruction; by sale; by delivery to the owner or claimant thereof upon payment of legal costs and charges and upon execution of good and sufficient bond to the effect that such wool products will not be disposed of until properly stamped, tagged, labeled, or otherwise identified under the provisions of this act; or by such charitable disposition as the court may deem proper. If such wool products are disposed of by sale, the proceeds, less legal costs and charges, shall be paid into the Treasury of the United States.

"(b) Whenever the Commission has reason to believe that—

"'(1) Any person is violating, or is about to violate, sections 3, 5, 8, or 9 of this act; and that—

"'(2) It would be to the public interest to enjoin such violation until complaint is issued by the Commission under the Federal Trade Commission Act and such complaint dismissed by the Commission or set aside by the court on review, or until order to cease and desist made thereon by the Commission has become final within the meaning of the Federal Trade Commission Act,'

"the Commission may bring suit in the district court of the United States or in the United States court of any Territory, for the district or Territory in which such person resides or transacts business, to enjoin such violation, and upon proper showing a temporary injunction or restraining order shall be granted without bond.

"EXCLUSION OF MISBRANDED WOOL PRODUCTS

"SEC. 8. All wool products imported into the United States, except those made more than 20 years prior to such importation, shall be stamped, tagged, labeled, or otherwise identified in accordance with the provisions of this act, and all invoices of such wool products required under the act of June 17, 1930 (c. 497, title IV, 46 Stat. 719), shall set forth, in addition to the matter therein specified, the information with respect to said wool products required under the provisions of this act, which information shall be in the invoices prior to their certification under said act of June 17, 1930.

"The falsification of, or failure to set forth, said information in said invoices, or the falsification or perjury of the consignee's declaration provided for in said act of June 17, 1930, insofar as it relates to said information, shall be an unfair method of competition, and an unfair and deceptive act, or practice, in commerce under the Federal Trade Commission Act; and any person who falsifies, or fails to set forth, said information in said invoices, or who falsifies or perjures said consignee's declaration insofar as it relates to said information, may thenceforth be prohibited by the Commission from importing, or participating in the importation of, any wool products into the United States except upon filing bond with the Secretary of the Treasury in a sum double the value of said wool products and any duty thereon, conditioned upon compliance with the provisions of this act.

"A verified statement from the manufacturer or producer of such wool products showing their fiber content as required under the provisions of this act may be required under regulations prescribed by the Secretary of the Treasury.

"GUARANTY

"SEC. 9. (a) No person shall be guilty under section 3 if he establishes a guaranty received in good faith signed by and containing the name and address of the person residing in the United States by whom the wool product guaranteed was manufactured and/or from whom it was received, that said wool product is not misbranded under the provisions of this act.

"Said guaranty shall be either (1) a separate guaranty specifically designating the wool product guaranteed, in which case it may be on the invoice or other paper relating to said wool product; or (2) a continuing guaranty filed with the Commission applicable to all wool products handled by a guarantor in such form as the Commission by rules and regulations may prescribe.

"(b) Any person who furnishes a false guaranty, except a person relying upon a guaranty to the same effect received in good faith signed by and containing the name and address of the person residing in the United States by whom the wool product guaranteed was manufactured and/or from whom it was received, with reason to believe the wool product falsely guaranteed may be introduced, sold, transported, or distributed in commerce, is guilty of an unfair method of competition, and an unfair and deceptive act or practice, in commerce within the meaning of the Federal Trade Commission Act.

"CRIMINAL PENALTY

"SEC. 10. Any person who willfully violates sections 3, 5, 8, or 9 (b) of this act shall be guilty of a misdemeanor and upon conviction shall be fined not more than $5,000, or be imprisoned not more than 1 year, or both, in the discretion of the court: *Provided*, That nothing herein shall limit other provisions of this act.

"Whenever the Commission has reason to believe any person is guilty of a misdemeanor under this section, it shall certify all pertinent facts to the Attorney General, whose duty it shall be to cause appropriate proceedings to be brought for the enforcement of the provisions of this section against such person.

"APPLICATION OF EXISTING LAWS

"SEC. 11. The provisions of this act shall be held to be in addition to, and not in substitution for or limitation of, the provisions of any other act of the United States.

"EFFECTIVE DATE

"SEC. 12. This act shall take effect 6 months after the date of its passage.

"SEPARABILITY CLAUSE

"SEC. 13. If any provision of this act, or the application thereof to any person, partnership, corporation, or circumstance is held invalid, the remainder of the act and the application of such provision to any other person, partnership, corporation, or circumstance shall not be affected thereby.

"EXCEPTIONS

"SEC. 14. None of the provisions of this act shall be construed to apply to the manufacture, delivery for shipment, shipment, sale, or offering for sale any carpets, rugs, mats, or upholsteries, nor to any person manufacturing, delivering for shipment, shipping, selling, or offering for sale any carpets, rugs, mats, or upholsteries."

FOREWORD

Throughout the lengthy consideration of H. R. 944, titled the "Wool Products Labeling Act of 1939," both in the hearings and in the committee's consideration of the bill, it has been the constant aim of the committee to produce practicable and workable regulatory legislation entailing as little burden as possible on the various branches of the industry affected.

A comparison of H. R. 944 as introduced, and the bill as reported by way of an amendment, both of which will be before the House for such comparison, will show the marked success resulting from the fair and thorough treatment of the legislation by the committee. Many suggestions and amendments proffered, not only by the industry, but by Members opposed to the legislation no matter how liberal it might be made, were accepted by the committee, and are embodied in the pending bill. The committee assures the House that nothing has been left undone to make this a fair, workable, and practicable piece of regulatory legislation.

It is submitted that it may be left to the very able Federal Trade Commission, with its extraordinary record of support by the Federal courts, to fairly administer the act and search out defects and inequities for the further consideration of the Congress.

HISTORY OF THE PROPOSED LEGISLATION

Representatives of numerous large national organizations—the National Federation of Women's Clubs, American Federation of Labor, American Farm Bureau Federation, National Grange, National Farmers' Union, National Farmers Guild, National Wool Growers' Association, home economics and consumers' organizations, and the United Textile Workers of America—stated at the hearings that for the past 20 to 25 years they have been endorsing and urging legislation requiring truth in fabrics or fiber identification in order that the consumer might know what he was purchasing and be protected, insofar as law may be able to protect him, against the imposition of shoddy and reused materials, and materials other than wool, being sold under the guise of pure or virgin wool.

The campaign for fiber identification took active and concerted form 3 years ago with the introduction in the Seventy-fifth Congress of wool-labeling bills in both Houses, and extensive hearings were held on such bills. The Senate passed a wool-labeling act near the close of the last Congress and a House Subcommittee on Interstate Commerce favorably reported a House bill, but too late for action.

Bills were again introduced at the incoming of the Seventy-sixth Congress and extensive hearings have been held by the committees of both bodies. The House hearings occupy 500 pages, added to nearly 300 pages in the preceding Congress. The Senate Committee on Interstate Commerce has favorably reported what is known as the Schwartz bill, S. 162, a companion bill to H. R. 944.

NEED FOR THE LEGISLATION

Heading the list of materials used in the manufacture of garments as in widest use and most subject to the use in manufacture of shoddy, rags, and reclaimed or reused wool fibers, the testimony shows that of some 500,000,000 pounds of wool fabricated into garments annually nearly one-third of it comes under the heading of reused wool. This percentage threatens to increase through the greatly augmented importation of rags under the trade treaties and a reduction of 50 percent in the tariff. As an example, the volume imported increased from 99,000 pounds in January 1938 to 1,119,000 pounds in January 1939, or an increase of 1,100 percent.

Recent figures obtained from the monthly report of the Bureau of Foreign and Domestic Commerce of rag importation from the United Kingdom for the use of the textile industry in the United States, show the rapid growth of such importation, as follows: First 4 months 1938, 170,261 pounds; first 4 months 1939, 2,817,113 pounds; percentage of increase, 1,654.

The legislation, while strongly endorsed by wool and stock growers and farm organizations generally, is not simply or even mainly to benefit the wool industry, but to protect the 90 percent of the American people who must, as the hearings disclose, purchase garment suits at a cost of $25 or less. The legislation is not needed for people who can pay $75 or $100 for a suit of clothes. It is the workingman, the farmer, the millions of clerks and office workers, and the great miscellany of employment in the lower-income brackets who need protection.

The movement originated, not with the groups pressing for this legislation, but with unfair and deceptive acts and practices originating in the industry. The legislation is a logical and necessary part of the growing body of legislation to protect the consuming public in the field of food, drugs, meat inspection, honest weights and measures, and only recently by the passage by the House of a seed-labeling act much more drastic than the pending bill.

NEED FOR THE LEGISLATION AFFIRMED BY THE FEDERAL TRADE COMMISSION

It is objected to the legislation that the Federal Trade Commission now has ample power under existing law to deal with the unfair competition and deceptive acts and practices aimed at in the bill and that therefore it is not needed. The committee's answer is that a representative of the Commission appeared before the committee on all these bills, including the pending bill, in support of the legislation. Letters from the chief counsel and the Chairman of the Commission will be found on pages 6 and 7 of the hearings, and on pages 11 to 23 the testimony of Mr. Henry Miller, assistant director, trade practice conferences of the Commission.

In answer to a question from the committee as to the need for the legislation, Mr. Miller, on page 17 of the hearings, said:

"The present power of the Federal Trade Commission does not go to the extent, nor is it implemented to the extent, that this present bill will implement it, and which it is believed is necessary in order to cure the evil resulting in nondisclosure, as distinguished from the evil resulting from an actionable disclosure or a false disclosure."

Mr. W. T. Kelley, chief counsel, in his memorandum for the Commission (hearings, p. 6), states:

"The bill is designed to protect producers, manufacturers, distributors, and consumers from the unrevealed presence of shoddy, substitutes, and mixtures in spun, woven, knitted, felted, or otherwise manufactured wool products. The evils which it is the purpose of this bill to correct occur in connection with 'wool' and 'part wool' products and in relation to fabrics and articles which simulate wool or part-wool products. The evils to be corrected by the bill also relate to the unrevealed use or presence of reclaimed wool or shoddy in fabrics. In my opinion, the bill, if enacted into law, will accomplish the desired purpose."

Hon. R. E. Freer, Chairman, in answer to a letter of inquiry for Mr. LEA, chairman of the committee, as to the cost of the legislation, among other things (hearings, p. 7), states:

"By way of partial explanation, I may point out that matters covered by the measure are the source of many complaints coming to the Commission from the public and from businessmen; and a substantial part of our regular personnel and funds is necessarily required for handling these matters in the work of effecting as much relief as is possible under existing law. It appears that the bill, if enacted, would so clarify the situation in respect to destructive or harmful practices in the marketing of wool products as to simplify and facilitate the administration of the laws relating to transactions in interstate commerce. A larger proportion of voluntary compliance may also be expected, and a consequent diminution of the types of complaints now required to be handled by the Commission would probably result. A more effective utilization of the Commission's present facilities for protecting the public interest could no doubt be accomplished."

Such statements from the authority charged with the administration of the law should dispose of the contention that it is not needed.

IMPROVEMENT OF THE LEGISLATION

As the result of the successive hearings, and close analytical study of the proposed legislation, several revisions of prior bills have been made, and it is the opinion of your committee that the result is a greatly improved bill, more definite, workable, and liberal than the original bills. Many liberalizing and clarifying amendments were made in the pending bill (H. R. 944) and on all of them the committee agreed.

If the Congress is to enact the fiber-identification legislation under the principle laid down in the bill, it is agreed that the pending bill fairly achieves the objective. The division in the committee occurs over the question whether any such legislation should be enacted. The Federal Trade Commission approves it. A majority of the committees of both Houses approve it. Organizations representing practically all the workers', farmers' women's, and consumers' organizations of the country testify that it should be enacted. No such organizations have appeared against it.

ANALYSIS OF THE LEGISLATION

Section 1 titles the legislation the "Wool Products Labeling Act of 1939."

Section 2 deals with definitions. The major controversy over the legislation centered on the proposed definition of wool, and the crux of the controversy was over the use of the word "virgin" wool, and the classification of wool as "virgin wool" and "reclaimed wool." The objection of certain manufacturers and distributors to the use of the term "virgin" wool is significant. It is not in dispute that the manufacturer and dealer likes to have his product known as "virgin" wool, as "pure" wool, as "all" wool, or as "100-percent" wool. They want it on the label but some do not want it in the law. It is conceded that the fiber of wool has no satisfactory substitute. It was claimed, among other things, that the virginity of the wool was not a true test of its superiority; that there were many grades of

virgin wool, the lowest of which were inferior to the better grades of reclaimed or reused wool.

Section 2 eliminates the terms "virgin wool" and "reclaimed wool." The section defines three classifications of wool, to wit: "wool," "reprocessed wool," and "reused wool."

"Wool" is defined as the fiber from the fleece of the sheep or lamb or hair of the angora or cashmere goat (and may include the so-called specialty fibers from the hair of the camel, alpaca, llama, and vicuna), which has never been reclaimed from any woven or felted wool product.

In prior bills wool which had been spun or knitted was excluded from the definition of wool, but in the pending bill, spun and knitted wools are included in the definition, as are the various forms of wool waste which have never been woven or felted.

The term "reprocessed wool" means wool which has been woven or felted into a wool product and subsequently reduced to a fibrous state without having been used by the ultimate consumer.

The term "reused wool" means the resulting fiber when wool or reprocessed wool has been spun, woven, knitted, or felted into a wool product and subsequently reduced to a fibrous state after having been used by the ultimate consumer.

The committee especially stresses as an achievement in definiteness and simplification the three classifications of wool, reprocessed wool, and reused wool, and the requirement of the percentage of each classification on the label. All bills which have been introduced, and all endorsements of the legislation, aim at fiber identification by some formula distinguishing between the original wool fiber, and reclaimed or reused wool fiber. The committee is in agreement that the definitions in this bill achieve fiber identification as far as practicable without encumbering the label with refinements which would make it burdensome to the industry and meaningless to the purchaser. The purchaser will at least know whether the garment came off the backs of animals or of humans.

MISBRANDING DECLARED UNLAWFUL

Section 3 declares unlawful and an unfair and deceptive act or practice the introduction, or manufacture for introduction, or the sale, transportation, or distribution in interstate commerce of any misbranded wool product.

The section excludes common and contract carriers and exportation to foreign countries of wool products branded in accordance with the laws of such countries.

WHAT CONSTITUTES MISBRANDING

Section 4 deals with the label and declares a wool product misbranded if it is falsely or deceptively labeled, and if the label does not show—

(a) The percentage of the total fiber weight of the wool product, exclusive of ornamentation not exceeding 5 percent of said total fiber weight, of (1) wool; (2) reprocessed wool; (3) reused wool; (4) each fiber other than wool if said percentage by weight of such fiber is 5 percent or more; and (5) the aggregate of all other fibers. Unavoidable variations are permitted where due care has been taken. The percentages must be shown on the label in words and figures plainly legible;

(b) The maximum percentage of the total weight of nonfibrous loading, filling, or adulterating matter;

(c) The name of the manufacturer of the wool product or the name of one or more persons subject to section 3, the section which prohibits misbranding.

The section carries a provision that it shall not be construed as requiring designation on garments or articles of apparel, of fiber content of any linings, paddings, stiffening, trimmings, or facings, or inconsequential fiber contents, provided they are not represented as containing wool. Section 14, at the end of the bill, excludes from the act carpets, rugs, mats, or upholsteries.

ENFORCEMENT RESTS ON LABEL

Enforcement of the act rests on the label, attached in the first instance by the manufacturer, and backed by the manufacturer's records. It is agreed that the manufacturer knows the identity and quality of the fibers going into his product, and keeps a record. Very considerable efforts were made by the opposition during the hearings to shift enforcement from the label to laboratory tests, which tests they claimed to be inadequate to detect reworked or reused fiber in the fabric, therefore enforcement will fail.

A witness from the Bureau of Animal Industry stated that the percentages of virgin wool and reworked wool in the fabric may be measurably determined by the laboratory test (hearings, pp. 407–408). A witness from the Bureau of Standards stated that this cannot be done (hearings, pp. 48–49).

If the reused fiber can be integrated in a garment beyond detection by the laboratory test, it is all the more reason for the legislation, with enforcement placed on the label, backed by the records of the manufacturer, under penalty for falsification.

In the case of numerous products required to be labeled under the Pure Food and Drugs Act and similar legislation, chemical analyses cannot determine, or cannot determine accurately, certain differences or the presence of certain adulterants. But in all these cases the maker knows his composition, and the law makes it an offense to falsely or incorrectly label the product.

PROTECTION TO DISTRIBUTORS, WHOLESALERS, RETAILERS

The provision permitting substitute labels in lieu of that of the manufacturer eliminated from the bill the controversy ranking next in importance to that of the definition of wool. It is highly desired by the wool trade that distributors, wholesalers, and retailers shall have the right to use their own label, and this they may do, provided it carries the required fiber identification under the law.

Much attention was given to the question of retailer protection and this was accomplished by eliminating "persons who receive any wool product from or through interstate commerce, and having so received, sell or deliver for pay, or offer to resell or so deliver to any other person."

RETAILER AMENDMENTS ADOPTED

Six amendments suggested for the protection of retailers by Mr. David R. Craig, president of the American Retail Federation, were incorporated in substance and effect in the bill. In offering the six amendments, Mr. Craig said:

"Retailers do not oppose the bill, but offer these amendments which they believe would make the bill more workable and practical (hearings, p. 359)."

Mr. Craig also suggested the classifications of "reprocessed wool" and "reused wool," instead of "reclaimed wool" (hearings, p. 360).

Objections raised by the Retailers National Council are completely cured by amendments.

AFFIXING OF LABEL

Section 5 relates to the affixing of stamp, tag, label, or other identification.

The person manufacturing, or first introducing into commerce a wool product, shall affix the label, and the same, or substitutes containing identical information, must remain affixed to the product until it is sold to the consumer. The name of the manufacturer need not appear on the substitute label. Removal, except for lawful substitution, or mutilation of the label, is declared an unfair method of competition, and an unfair and deceptive act or practice under the Federal trade laws.

ENFORCEMENT OF THE ACT

Section 6 invests the Federal Trade Commission with jurisdiction of the act and the power to make rules and regulations and prescribe procedure; authorizes and directs the Commission to prevent violations of the act in the same manner, by the same means, and with the same powers it possesses under the Federal Trade Commission Act; and subjects persons violating the act to penalties, and entitles them to the privileges and immunities of the Federal Trade Commission Act.

The Commission is authorized to cause inspections, analyses, tests, and examinations to be made of any wool products subject to the act; and to cooperate with any department or agency of the Government in the enforcement of the law.

The manufacturer is required to maintain proper records showing the fiber content of all wool products and to preserve such records for at least 3 years. It was stated repeatedly to the committee that manufacturers now regularly keep such records.

CONDEMNATION AND INJUNCTION PROCEEDINGS

Section 7 provides for condemnation and injunction proceedings, and for seizure for confiscation by process of libel, but the person affected is given the opportunity after notice to comply with the provisions of the act.

Condemned wool products are to be disposed of, in the discretion of the court, by destruction, by sale, by delivery to the owner upon payment of costs and charges and the giving of bond to observe the provisions of the act in the further handling of the products, or by charitable disposition.

The Commission may bring suit in the district court of the United States or any territory for the district where the accused persons resides or transacts business, to enjoin such violation, and on proper showing a temporary injunction or restraining order may be granted.

IMPORTED WOOL PRODUCTS

Section 8 provides for the exclusion of misbranded wool products from the United States, except products made 20 years prior to such importation unless stamped, tagged, labeled, or otherwise identified in accordance with the provisions of this act; and all invoices of such wool products are required to set forth the information required under this act and under the act of June 17, 1930.

The section also deals appropriately with falsification of invoices, or failure to furnish the required information, or perjury in the consignee's declaration, and such persons may be prohibited from importing any wool products, except upon filing, with the Secretary of the Treasury, bond in double the sum of the value of the products and duty thereon. A verified statement from the manufacturer or producer of the products showing their fiber content may be required by the Secretary of the Treasury.

GUARANTY

Section 9 relates to guaranty, a subject to which much consideration was given. The section provides that no person shall be guilty under section 3 (misbranding) if he establishes a guaranty received in good faith, signed by the manufacturer or person from whom the wool product was received.

The guaranty may be either a separate guaranty specifically designating the wool product guaranteed, or a continuing guaranty may be filed with the Commission applicable to all wool products handled by a guarantor.

CRIMINAL PENALTIES

Section 10 provides that any person who willfully violates sections 3, 5, 8, or 9 (b) of the act shall be guilty of a misdemeanor and on

conviction subject to a fine of not more than $5,000, or imprisonment of not more than 1 year, or both.

Whenever the Commission has reason to believe a violation exists it shall certify all pertinent facts to the Attorney General for appropriate proceedings.

Section 11 provides that the act shall be in addition to and not in substitution for or limitation of other acts.

Section 12 fixes the effective date as 6 months after the date of passage.

Section 13 is the usual separability clause.

Section 14 exempts carpets, rugs, mats, or upholsteries, as heretofore noted.

STATEMENTS OF ENDORSERS SUPPORTING THE LEGISLATION

The need and the demand for fiber-identification legislation, as well as the history of the movement to secure such legislation, are touched upon in the various group statements made at the hearings. It is considered of value to members to subjoin excerpts from a few of these statements.

Mrs. Ernest William Howard, department chairman of the legislative committee of the District of Columbia Federation of Women's Clubs (hearings, p. 297):

"I wish to record the support of the District Federation of Women's Clubs for the Martin wool-labeling bill, in accordance with the action, February 17, 1939, of the legislative committee, composed of representatives from 31 individual clubs in the District of Columbia.

"This support is in line with the past declarations of the General Federation of Women's Clubs, with which the District federation is affiliated.

"The general federation, however, did not approve this particular bill, H. R. 944, which is now before you, because the federation does not endorse bills by name nor number because that would be committing the general federation to the support of amendments and changes in the bill. Its policy is to endorse principles of legislation. Thus, it endorsed the principle of fiber identification at the convention at Kansas City in May 1938. Every woman at that convention understood from the discussion that differentiation of virgin wool and reclaimed wool, shoddy, was involved in that resolution. In support of this I quote from the statement made on July 9, 1938, before the House committee holding hearings on the Schwartz-Martin bill, page 103, of Mrs. Roberta Lawson, at that time president of the General Federation of Women's Clubs (reading):

" 'We women are deeply concerned over knowing the truth about fabric content, whether it be virgin wool or substitutes for virgin wool, and this concern extends to all other fabrics.'

"Furthermore, the delegates to the Kansas City convention came authorized by their individual organizations to vote on this resolution. Every one of the 14,500 affiliated clubs voted on the fiber-identification resolution. Every one of the 2,000,000 women received a copy of this resolution for fiber identification and had an opportunity to vote on it in connection with the instructions to the delegates to the Kansas City convention. And the Kansas City convention voted in favor of this resolution by a vote of 106 to 1. Mrs. Ketterer, chairman of the legislative committee of the General Federation of Women's Clubs, has sent me a copy of the resolution, which I wish to insert in the record.

" 'RESOLUTION NO. 9. FIBER IDENTIFICATION

" '*Resolved*, That the General Federation of Women's Clubs in convention assembled, May 1938, commend the Federal Trade Commission for the protection which it has afforded to consumers and urge its continuance of this work until fibers in common use are accurately identified; and be it further

" '*Resolved*, That Congress be urged to supplement the powers of the Federal Trade Commission so that the Commission may extend further protection to the consumer by bringing about fuller informative labeling.' "

Hon. John M. Baer, former Member of Congress, publicity director of the union label trades department, American Federation of Labor:

"The union label trades department of the American Federation of Labor urges the passage of this measure, as it has supported previous bills aimed at protection of the consumer, especially the provisions that would force disclosure of the reclaimed wool or shoddy content of wool products.

"Our department represents 51 directly affiliated international unions of the American Federation of Labor, with a membership of over 1,000,000. In addition, our department's activities have the loyal support of the 4,500,000 members of the American Federation of Labor. Furthermore, the American Federation of Women's Auxiliaries of Labor, representing 2,000,000 women, is organized under our department (hearings, pp. 295-296)."

Miss Julia K. Jaffray, chairman, department of economic adjustment, New York City Federation of Women's Clubs, Inc.:

"On behalf of the New York City Federation of Women's Clubs, which includes over 200,000 women living in Greater New York and the majority of whom purchase supplies for their households, we submit the following resolution which was adopted at a convention of the federation held at the Hotel Astor, New York City, on February 3, 1939. The resolution is as follows:

" 'Whereas the Schwartz bill which was passed by the United States Senate last June and the Martin bill which is the corresponding House of Representatives bill and which was favorably reported by the committee to which it was referred, have been reintroduced in the present Congress; and

" 'Whereas these bills provide for the identification of virgin and reclaimed wool and instruct the Federal Trade Commission to require the accurate labeling of all wool products, which provisions are in harmony with the principle endorsed by the New York City Federation of Women's Clubs that all fibers in common use must be accurately identified: Therefore be it

" '*Resolved*, That the New York City Federation of Women's Clubs in convention assembled endorses the principles of these bills; and be it further

" '*Resolved*, That copies of this resolution be sent to Senator HARRY H. SCHWARTZ and Representative JOHN A. MARTIN' " (hearings, p. 265).

Mrs. Katharine McFarland Ansley, executive secretary, American Home Economics Association:

"For some 15 years the association has stood for the general principle of fiber identification. To confirm this stand the following resolution was passed at the 1937 annual meeting of the association:

" 'Whereas various agencies are engaged in efforts to secure identification of fibers in fabrics and garments: Therefore be it

" '*Resolved*, That the American Home Economics Association endorse this movement and that its members lend their assistance in every way possible.

" '*Resolved*, That a copy of this resolution be sent to the Federal Trade Commission' " (hearings, p. 249).

Mr. W. R. Ogg, in charge of the Washington office of the American Farm Bureau Federation:

"The American Farm Bureau Federation is a national organization of farmers, supported by membership dues of farmers, composed of members in State organizations located in 40 of the 48 States. The American Farm Bureau Federation has been advocating legislation such as is now involved in the Schwartz-Martin bill since 1920. I have here a resolution adopted at the annual meeting of the American Farm Bureau Federation in 1920, which resolution is as follows:

" 'We urge the prompt enactment by Congress of a law which will compel garments or fabrics containing shoddy or other substitute for fiber to be plainly marked as such' " (hearings, p. 437).

Mr. Edward A. O'Neal, president, American Farm Bureau Federation, in a lengthy and informative statement (hearings, pp. 496, 497, 499), says:

"For nearly 20 years the American Farm Bureau Federation has consistently urged action by Congress to protect wool growers and consumers against misrepresentation and deception in the sale of woolen goods. In 1920 the annual meeting of the American Farm Bureau Federation adopted the following resolution:

" 'We demand of Congress the prompt enactment of a law which will compel clothing and fabrics containing shoddy or other substitutes for virgin wool to be plainly marked as such.'

"The American Farm Bureau Federation strongly supports the Schwartz-Martin bill and urges its speedy enactment by this Congress. We oppose amendments that will weaken and injure the effectiveness of this measure. We likewise oppose inadequate substitutes such as S. 1496."

Mr. Fred Brenckman, Washington representative of the National Grange:

"For more than 20 years the National Grange has advocated and strongly supported truth-in-fabric legislation which would require woolen manufacturers to disclose the fibers used in their products, including the use of virgin wool and of substitutes including reclaimed wool, or, as it is more generally known, shoddy.

"Records of past hearings on previous bills similar in purpose to H. R. 944 now before this committee show that authorized representatives of the Grange appeared before House and Senate committees as early as 1919, 1920, 1921, and in 1924, and in subsequent years, including 1938. In each instance the National Grange advocated strongly the enactment of this legislation because it believes that once it becomes a law it will result in the same benefits to the consuming public that followed the passage of the Pure Food and Drug Acts, meat-inspection, and other laws, all of which the Grange has actively sponsored and supported" (hearings, p. 157).

Mr. Edward E. Kennedy, representing the National Farmers' Guild:

"I am here representing the National Farmers' Guild. This national organization was formed in February 1939, and is made up of the 10 Farmers' Union State organizations which I have represented here for the past 2½ years.

"I wish to also say, by way of further identification, that for 5 years prior to that I was secretary of the National Farmers' Union and represented that organization here in Washington.

"Mr. Chairman, we have for these many years favored the adoption of wool-labeling legislation, and we are in favor of the passage of Congressman MARTIN'S bill, H. R. 944, not only from the standpoint of our people as producers but from the standpoint of our people as consumers of wool and woolen products" (hearings, p. 447).

Mr. G. F. Holsinger, president, Virginia Farm Bureau Federation:

"HARRISONBURG, VA., *April 8, 1939.*

"Hon. CLARENCE F. LEA,
"Chairman, House Interstate and Foreign Commerce Committee, House of Representatives, Washington, D. C.

"DEAR CONGRESSMAN LEA: I am enclosing you a copy of a resolution passed by the delegate body of the Virginia Farm Bureau Federation at their annual convention in Staunton, Va., on March 17, endorsing the Martin bill (H. R. 944) which is before the House Interstate and Foreign Commerce Committee.

"We hope you will report favorably and the bill will be passed at this session of Congress" (hearings, p. 501).

Mr. J. B. Wilson, legislative representative, National Wool Growers' Association:

"I want at this time to present the resolutions passed by the National Wool Growers' Association at their seventy-fourth annual convention in San Angelo, Tex., on January 26 of this year. This is resolution No. 36 (reading):

"'36. We urge the prompt enactment of S. 162, introduced by Senator SCHWARTZ, and H. R. 944, introduced by Representative MARTIN, known as the truth-in-fabrics bill.

"'We especially urge that fabrics containing reworked wool be labeled to show the exact amount of such reworked wool'" (hearings, pp. 418–419).

Mr. Francis J. Gorman, president, United Textile Workers of America:

"I have supported the principles of this legislation for 20 years. Our organization first became interested in the problem of truth in fabrics many years ago. It has been part of our legislative program for a long time, and our officers have repeatedly appeared before legislative committees and the Federal Trade Commission in favor of the same" (hearings, pp. 404–405).

MANY MANUFACTURERS FAVOR

The Senate subcommittee hearings on S. 162, companion bill to H. R. 944, lists by name 29 woolen manufacturers as having written letters favorable to wool-labeling legislation in answer to inquiries sent out by the New York City Federation of Women's Clubs. The list does not contain the name of the Forstmann Woolen Co., Passaic, N. J., whose assistant to the President, Mr. Glen Gardiner, testified at length in behalf of the legislation (hearings, pp. 466–481). Mr. Kirt E. Forstmann, executive vice president of the Forstmann Co., testified before the subcommittee in behalf of the wool-labeling bills in the Seventy-fifth Congress (hearings, pp. 108–138), as did Mr. Charles F. H. Johnson, president of the Botany Worsted Mills of New Jersey (hearings, pp. 387–404). These manufacturers recognize that wool labeling will protect their industry against the shoddyists and sweatshoppers.

COST OF ADMINISTRATION

The cost to the Treasury Department is estimated by Mr. John W. Hanes, Acting Secretary, at $55,200 annually. The Federal Trade Commission states that no additional cost will be entailed on that agency.

[Letter of the Chairman of the Federal Trade Commission]

JULY 28, 1939.

Hon. H. H. SCHWARTZ,
United States Senate, Washington, D. C.

MY DEAR SENATOR SCHWARTZ: I have received and presented to the Commissioner your letter of July 27, 1939, referring to the wool-products labeling bill (S. 162) and propounding two questions: First, as to whether the bill will adversely affect cotton; and, second, whether the provisions of the bill will be effective with respect to imports from foreign countries.

The Commission has considered the matter in the light of its many years of experience respecting commercial practices in the sale and distribution in commerce of fabrics and fabric merchandise; and responding to your first question, it is the opinion of the Commission that the legislation under consideration will have no adverse effect upon the sale or use of cotton.

WOOL LABELING SHOULD HELP COTTON

As a textile fiber, cotton has distinctive qualities and intrinsic merits; and the bill, requiring truthful disclosure, would undoubtedly tend toward having these meritorious qualities of cotton brought to the attention of the buying public. Moreover, in mixed fabrics, those not composed wholly of virgin wool, cotton may reasonably be expected to be employed in place of cheap shoddy or low-grade, second-hand wool fibers which are at present used in such mixed products without disclosure of such fact to the consuming public. Under all the circumstances, it appears quite possible that as a result of the legislation the trend will be toward a greater use of cotton in mixed goods in lieu of certain types of shoddy.

The bill does not prohibit the use of any fiber, but is aimed at having the respective products marketed under nondeceptive conditions of truthful disclosure in the interest of maintaining fair competition and consumer protection. Experience has demonstrated that honest disclosure of a meritorious fiber does not hurt, but, on the contrary, helps its sale. Cotton with its many distinctive and desirable properties could not, in our opinion, be adversely affected in such situation.

HOW LAW AGAINST IMPORTATION MAY BE ENFORCED

Respecting your second question, as to whether the bill will be effective in the matter of imports from foreign countries, the measure is applicable to such foreign imports as well as to domestic wool products. In addition, the bill provides means for excluding from the country foreign merchandise misbranded under its terms. It also provides for sworn declaration of contents on so-called consular invoices as required in the act of June 17, 1930; also the falsification of or the failure to set forth such information in such invoices is made an unfair method of competition under the Federal Trade Commission Act. If done with willful intent, it is also punishable as a misdemeanor. Moreover, the guilty party may be prohibited from importing or participating in importations of wool products into the United States except upon filing bond with the Secretary of the Treasury in the sum double the value of the wool products and the duty thereof conditioned upon compliance with the provisions of the act. Under general administrative procedures through treaty arrangements, information may be obtained from the original sources in the country of origin of the goods. Likewise, through scientific tests, the presence of the most objectionable types of shoddy in the fabric can be sufficiently detected for purposes of enforcement.

Upon consideration of the matter as a whole and in answering your question specifically, it is the opinion of the Commission that the provisions of the bill will be effective with respect to imports from foreign countries.

By direction of the Commission.

Yours very sincerely,

(Signed) R. E. FREER, *Chairman.*

Young Democrats of the Fifth District of Virginia

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

ADDRESS BY HON. ROBERT L. DOUGHTON, OF NORTH CAROLINA, JUNE 24, 1939

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the gentleman from North Carolina [Mr. DOUGHTON] to the Young Democrats of the Fifth District of Virginia on June 24, 1939, at Galax, Va.:

I esteem it a very great honor to have been invited to address this enthusiastic meeting of militant young Democrats. Your attendance in such large numbers evidences a keen interest in the welfare of America, and your confident belief that you can best serve your country through affiliation with the great Democratic Party.

I appreciate very much the generous words that my kind friend and your very able Representative, TOM BURCH, has said about my public service, although his praise is far more gracious than I deserve. In point of ability, assiduity, industry, and fidelity, no district has a finer Representative than the Fifth District of Virginia. He is universally respected and loved by each and every one of his colleagues.

Taken as whole, no State in the Union has a stronger delegation in Congress than Virginia. Each of its nine House Members has a major committee assignment: Mr. BLAND, of the First District, is chairman of the Committee on Merchant Marine and Fisheries; Mr. DARDEN, Second District, Naval Affairs; Mr. SATTERFIELD, Third District, Judiciary; Mr. DREWRY, Fourth District, Naval Affairs and also chairman of the National Democratic Congressional Committee; Mr. BURCH, Fifth District, ranking Democratic member of the Committee on Post Office and Post Roads, who will doubtless be chairman at an early date, if retained in Congress; Mr. WOODRUM, Sixth District, ranking Democrat on Committee on Appropriations, and now its acting chairman; Mr. ROBERTSON, Seventh District, Committee on Ways and Means, where he is rendering great service; Mr. SMITH, Eighth District, member of the Committee on Rules; Mr. FLANNAGAN, Ninth District, member of the Committee on Agriculture.

In addition, Virginia's Senators hold key committee posts and rank among the foremost Members of the upper House in point of ability. Senator GLASS is chairman of the Committee on Appropriations, the ranking member on the Banking and Currency Committtee, and is a member of still other important committees. Senator BYRD, your distinguished former Governor, is a member of the Committee on Finance, Naval Affairs, Rules, and other leading Senate committees. Every patriotic Virginian can take great pride in the high standing of the State's delegation in the National Congress and the wonderful service it is rendering, not only to Virginia, but to the entire Nation.

It is always a pleasure to me to renew my youth by the association and fellowship with young people, especially when they are of my own political persuasion. The meetings of young Democrats are characterized with a certain zeal and enthusiasm that I find contagious and especially invigorating and inspiring.

May I say to my young friends gathered here that, to my mind, the words "youth" and "democracy" are synonymous. Almost all of the attributes of the one are equally applicable to the other. Youth has high ideals and noble purposes, and so has the Democratic Party. Youth has enthusiasm, vitality, and optimism. They are also virtues of democracy. Youth believes in progress and action. These are two of the foundation stones upon which our party is built. Youth advocates its convictions with indomitable vigor and unrelenting courage. These are two of the chief characteristics of our party's activities.

As a matter of fact, regardless of the year which may appear on our birth certificates we are all young Democrats together. There

is an axiom I have often stated, and my years of experience have amply verified its truth. It is this: "There are no old Democrats nor young Republicans." Being a Democrat keeps one young and being a Republican tends to make one old. One promotes longevity and the other decrepitude.

Youth does not list the word "impossible" in its vocabulary. On many occasions youth has converted the impossibilities of the past generation into the glorious realities of the present. The cause of good government has been tremendously advanced on numerous occasions by young men and women who simply would not believe that the particular obstacle which confronted them could not be overcome if they fought with determination and courage.

As an instrument for the enlightenment and molding of public opinion, as well as translating it into effective and constructive public service, your organization is worthy of the highest praise. The things you have wrought are in no small way responsible for the interest and success in their solution.

It is an extremely interesting fact that many of the most constructive movements in the early history of our Nation were begun and consummated by very young men. As an example of the effectiveness of youth in the realm of public affairs, let me recite from the history of Virginia, in whose sacred soil the roots of democracy first took hold, a brief chapter or two that deals with the accomplishments of young people.

Our minds immediately turn to the record of Thomas Jefferson, father of the Democratic Party, who entered public life at the age of 26 by being elected to the Virginia House of Burgesses. He became a member of the Continental Congress at the age of 32, and 1 year later, at 33, wrote the greatest document ever to come from the mind or pen of any American, the Declaration of Independence, and as chairman of the committee charged with its drafting, he presented it to the Continental Congress. And Jefferson became Governor of Virginia when he was but 36. Then, in succession, he served as Ambassador to France, Secretary of State, Vice President of the United States, and at the age of 57 became President of the Republic he helped to found.

A second striking example is that of James Madison, fourth President of the United States, another renowned son of the Old Dominion. He became a member of the First Assembly of Virginia in 1776, when he was only 25. Before he became 30, he was a member of the Continental Congress, and at the age of 36 he served as a delegate to the Constitutional Convention and had more to do with the drafting of our Federal Constitution than any other man, although many of his colleagues in the Convention were his seniors by many years. And his wonderful career in public life was climaxed by two successful terms as Chief Executive of the Nation.

James Monroe, another illustrious Virginian, became a United States Senator at the age of 32. Before he reached middle age he had served as Governor of Virginia, as an Envoy to France to negotiate the Louisiana Purchase. He served as Ambassador to England and as Secretary of State. He later became President of the United States and served two terms.

John Randolph, of Roanoke, entered the National Congress at the age of 26. John Tyler, the tenth President of the United States, also entered the Congress in his twenty-sixth year. Gen. Sam Houston, whose heroic conquests in Texas cause many of us to forget he was a Virginian, entered Congress at the age of 30. Edmund Randolph became aide-de-camp to General Washington in 1776, when Randolph was only 23; 3 years later he became a Member of the Continental Congress, and at 34 was appointed to the Federal Constitutional Convention.

Then, the greatest of all Virginians and, at the same time, of all Americans, George Washington, who outdid even these other famed sons of your State in his useful service while yet a young man. At 23 he was appointed commander in chief of the colonial forces of Virginia, after he had already become an outstanding Indian fighter and surveyor. At 26 years of age he commanded a markedly successful campaign to Fort Duquesne in the Indian wars. At 43 he was unanimously chosen Commander in Chief of the Army which the Colonies had raised to wrest their liberty from Great Britain. So outstanding and acceptable were his services to his country, he was elected first President and reelected without any opposition. Of whom it was truly said, "He was first in war, first in peace, and first in the hearts of his countrymen."

There are innumerable other instances where your brilliant fellow Virginians have rendered outstanding public service at tender age. Many of them were famous ere they reached the early thirties.

You younger Democrats are a very important component part of our party organization. In its make-up, the wisdom born of experience must emanate from the older group, but this is not more important than the zeal and energy contributed by the younger members. Young Democrats have before them a golden opportunity to render a vital public service. The time is not so far away when a great many of us who have been in the forefront of the battle for democracy must lay down our arms, and they, in turn, will be taken up by you younger men and women. Your work in connection with the activity of the Young Democratic Clubs will prove to be a valuable preparatory experience. Let me urge you to maintain your keen interest in governmental affairs, and to continue your active support of and devotion to our great party. Its future lies in your hands. Whether its star shall rise to still greater heights or shall sink into obscurity will soon depend on you. Study its history, revere its traditions, respect its high ideals, fight for its principles and perpetuity.

I know you take just pride in being members of a party that predominated in 93 of the 100 counties in your State, and in the last election was triumphant in 46 of the 48 States in the Union.

The Democratic Party is not, or never will be, a single individual or a single ideal. It is a flexible, living, and growing body, made up of persons from every station in life and from every field of endeavor. It has never depended, and does not now depend, upon hackneyed labels and stereotyped phrases for its existence. It seeks to meet the needs of today by attempting to mold the functions of government so as to conform to rapidly changing economic and social conditions. At the same time it bends every effort to bring about such changes in an orderly manner so as not to disrupt the stability of our established institutions.

For the purpose of more clearly charting our future course, and appraising the aims and work of the Democratic Party, let's briefly examine a few of the concrete accomplishments of our party in the recent past and compare them to anything or everything achieved by the Republican Party since the days of Hamilton which would benefit the average American citizen. I can honestly state to this fine gathering of Young Democrats that no monuments, in the way of service for all the people, have been built by that unfortunate succession of reactionary administrations, and I'm sure you will agree that the public improvements and worthy reforms which directly affect your daily walks are products of liberal Democratic rule.

Under the administration of Grover Cleveland the Democratic Party brought about the establishment of the Department of Agriculture with its multitude of aids and services to farmers. It also inaugurated the free delivery of mail to rural residents.

Under the administration of President Wilson, another of America's immortals who claimed Virginia as his native home, we set up the Department of Labor which has contributed so much to the welfare, the security, and the income of working men and women throughout the Nation. It was under this same administration that the Federal Reserve System, fostered by your own CARTER GLASS, was established, and the Federal Farm Loan System came into operation. During this period the Federal Government began the expenditure of funds for the building and maintenance of public roads, and since this legislation was enacted into law the National Treasury has expended more than $54,000,000 for highways in the State of Virginia and nearly $3,000,000,000 for roads throughout the United States. Another important step of the Wilson administration was the establishment of our Parcel Post System.

Our accomplishments have been no less outstanding during the present Democratic administration. In the years that have elapsed since March 4, 1933, under the leadership of a President imbued with a belief that Government is responsible in some degree for its subjects, the welfare of the masses of the people has been further advanced than during any period of twice that length in the history of our Nation.

The present national administration inherited an enormous burden of evils. Banks had failed by the thousands, and at the rate they were going there would not have been a bank that could have stood the strain 30 days longer, factories were closing hourly, agriculture was prostrate, ships of commerce were idly rusting in the harbors of international trade, millions of farmers and city dwellers were losing their homes, and there was a Nation-wide epidemic of suicide. These conditions were not confined to any section of the country nor to any class of people, but were Nation-wide and affected every group, calling, and occupation from the Atlantic to the Pacific and from the Great Lakes to the Gulf. Moreover, social injustices and economic maladjustments were widespread and universal. These conditions had continued for 4 long years and were getting worse hourly, when on March 4, 1933, President Roosevelt took charge of the affairs of the Government.

Under this present Democratic administration banks have been made safe for the people's money. Hardly a bank failure has occurred since Federal deposit insurance came into being. The income of farmers has more than doubled since March 1933, and the same is true with reference to factory pay rolls. The national income has increased from $39,000,000,000 in 1932 to $64,000,000,000 in 1938. Those farmers who have not been able to pay off their mortgages with the increased prices they have received under this administration have had their loans extended and their interest payments reduced. The Home Owners' Loan Corporation has saved the homes of millions of urban dwellers, the United States Housing Authority has built modern apartments for a multitude whose lives have been spent in drab tenements "across the tracks," and the Federal Housing Administration, through its insured mortgage plan, has made it possible for thousands of American families to enjoy the comfort and dignity of home ownership.

Agriculture, our great basic industry, has been revived by dozens of progressive Federal measures and restored to a profitable basis. Labor has been greatly benefited by reduced working hours and increased wages, and sweatshop conditions, long a cancer in our social life, have been eradicated.

The Reconstruction Finance Corporation, developed from a doubtful agency of Republicanism (best remembered for its loan of $80,000,000 to a certain Chicago bank) has provided credit facilities to all types of businesses at low rates of interest.

The Civilian Conservation Corps has provided employment and a new lease on life to more than 2,000,000 youths and unemployed war veterans, who found haven and useful work in hundreds of camps broadcast over America.

The regulations of the Securities and Exchange Commission have succeeded in putting to an end the once-popular sport of stock-

buccaneering, and is now adequately protecting American investors from such synthetic booms as that experienced during the Hoover reign. The T. V. A. and the Rural Electrification Administration have substantially aided in the program of generating electricity at reasonable cost, and making it available to every hamlet, crossroads, and rural home.

The Social Security Act, through its program of unemployment insurance, old-age pensions, and benefits, has done more to relieve the hardships and vicissitudes that are byproducts of our highly industrialized society, than any other single program ever undertaken by the Federal Government.

The Committee on Ways and Means, upon which I have the honor to serve as chairman, has recently completed a 4-months' study of proposed amendments to this act. Our study resulted in a thorough revision of the program which will substantially liberalize and extend its benefits. The House of Representatives adopted our recommendations by an almost unanimous vote. Only two of the more than 400 members of the House cast dissenting ballots, thereby establishing to a very clear degree the regard which the American people hold for this humanitarian legislation.

And we mustn't forget that wide ribbon of asphalt that soon will link your beautiful Shenandoah National Park with my Smoky Mountains of North Carolina—that greatest of all eastern scenic highways, the Skyline Drive—which traverses more than 300 miles of the most beautiful scenery in God's creation.

We are still suffering to some extent from ailments inherited by this administration, but I am convinced that they can and will be entirely eliminated so far as it is possible for government to eliminate them. Our party has clearly demonstrated its strength and the wisdom of its leadership in rescuing this country from the depths of the greatest, most calamitous, and devastating depression it has ever known.

The traditions and accomplishments of the Democratic Party constitute a glorious heritage. It has and is fulfilling a wonderful mission in the advancement of the cause of good government in the Nation, in your State of Virginia, and my State of North Carolina. Many and furious have been the onslaughts made upon it by its enemies, but its principles are so fundamentally sound, its record so commendable, and its achievements so outstanding that it continues to grow and to flourish in spite of those who would destroy it.

Our party's concepts are broad enough and elastic enough to include and provide for the ever-changing needs of government. No rule of theory that has to do with the conduct of human affairs can be static. Like a great river the course of events is ever flowing and endlessly changing and adapting itself to varying conditions and circumstances. In this lies our party's greatest strength and surest claim to a continuing glory. It has kept itself alert to the needs of the people and to the appropriate functions of government under a progressive attitude that recognizes injustices and does not hesitate to correct evils when they are disclosed. The Democratic Party shows its faith by its useful works, while the Republican Party reveals its faith by empty words, vague promises, and criticisms of its progressive opposition. In fact, it has a patent on two things, boasting and criticizing, and I have no purpose or desire to infringe upon that patent.

No party has so consistently championed the cause of the underprivileged nor has done so much to improve the lot of the unfortunate and downtrodden as has the Democratic. No party has labored so effectively to bring about constructive improvement or to legislate needed reform both in the relationships between our citizens and their Government and in our economic and social structure.

Next year we will have another general election, and it is but natural for Democrats to disagree as to those best suited to fill the various offices. Where there are contests let me adjure you to be tolerant with those Democrats with whom you differ as to candidates. Accord to them the same right of choice you reserve for yourself. Avoid harsh words and unkind thoughts, and especially bitterness, so that when the primary is over we can present a united and determined front in our battle with the common enemy.

Never fear the result of honest differences of opinion. It is only by the free and open discussion of these differences that sound decisions can be reached and worth-while policies formulated and followed. We may not agree absolutely with some of our party brethren, but we are much nearer in degree in our political philosophy than are either of us with those of the opposing ranks.

There is but one way to keep our party useful, and that is to keep it strong and in power. There is but one way to keep it strong, and that is to keep it united and clean. There is but one way to keep it clean, and that is to be ever vigilant in a scrutiny of its standard bearers and its aims and purposes.

The Democratic Party cannot retain its efficiency—it cannot serve this Nation—and it is doomed, and justly so, if it becomes wildly radical or if it adopts a policy of reaction or inaction. Either of these courses would prove fatal, and no right-thinking American would wish otherwise. Our course, it seems to me, is clearly indicated.

This, my young Democratic friends, is the road of orderly progress—the road of reform and change, tempered by reason.

The Democratic Party has fought and is fighting a good fight for all the people; it has kept the faith; but it has by no means finished its course or completed its work. Its future task is to continue to serve and save America.

My Report to the People of the Third Congressional District of Washington

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 4, 1939

Mr. SMITH of Washington. Mr. Speaker, it must be very gratifying to us to note the substantial improvement in general business conditions throughout southwest Washington. My mail, which has been very heavy this session, and almost every newspaper from home which comes to my desk brings evidences of increased industrial operations and larger pay rolls, higher farm prices, record-breaking building construction, better retail trade, and greater business activity. The lumber, shingle, and forest-products industries are the most active they have been in many years. Since 1932–33 truly remarkable improvement has taken place in our lumber and shingle industries as disclosed by the increase in prices, production, and volume of unfilled orders. In 1938 the average price received for west coast lumber was $19.14 per thousand board-feet, and is now $19.20, as compared with $11.50 in 1932, an increase of approximately 70 percent. Unfilled orders on July 1, 1939, were 366,684 thousand board-feet as compared with 202,889 thousand board-feet in 1932, an increase of approximately 80 percent.

Production in 1932 was 3,114,000,000 feet as compared with 5,182,000,000 feet in 1938, an increase of 65 percent, and was 1,443,000,000 feet for the first 3 months of this year, which, if maintained for the remainder of this year, will show a still further increase. (Figures furnished by Forest Products Division, Department of Commerce, and as reported by West Coast Lumbermen's Association in Industry Facts.) The yearly average price for red-cedar shingles in 1938 was $2.75 per square and is now $2.90 as compared with $1.05 in 1932, an increase of 160 percent. Production of red-cedar shingles has increased from 172,000 squares in December 1933 to 434,000 squares in December 1938, an increase of 245 percent. Both prices and production are continuing this year at a level far in excess of 1932–33. (Authority: Bureau of Census, Department of Commerce, U. S. Red Cedar Shingle Bureau.)

This spiral of improvement will continue to climb as labor, industry, agriculture, business, finance, and our Government cooperate and work together in harmony and unity. Our Government is continuing its constructive policies to surmount the difficulties and aid in the solution of the serious social and economic problems which faced the Nation. This task has proved to be extremely difficult but that substantial progress has been and is being made is obvious to everyone. Even the most partisan critics of our Government would not dare to propose the repeal of the major legislation which we have enacted and which has the approval of the majority of our people.

In the concluding paragraph hereof I am calling attention to an interesting and significant comparison of economic conditions during the Roosevelt and Hoover administrations.

WE ARE KEEPING OUR COUNTRY OUT OF WAR

I consider by far the most important and solemn duty to be performed by our Government and our Congress at the present time to be that of keeping our country out of war. We have made every effort to avoid any and every action which might involve our country in war. We have surrounded our country with every possible safeguard to prevent war. My attitude on this momentous issue is well known to the people of my congressional district. I continue to strongly favor a policy of absolute and complete mandatory neutrality and am opposed to allowing the desire of a few of our citizens for commercial profits or to extend credit to belligerents to expose us to the danger of a foreign war. Those of our citizens who wish to travel or trade in war zones should do so

at their own peril. I feel that I express almost the unanimous views of the people of southwest Washington when I declare that we value peace and the lives of our young men and women above the profits of international trade and finance.

On the other hand, in these troubled times, it behooves our Nation to be adequately prepared for peace and to be in a position to properly defend and protect the lives and property of our own people against foreign attack. I have, therefore, supported heartily every appropriation for the Army, Navy, and Air Corps. It is with a feeling of pride that I say that as a result of our national-defense program we will be better prepared to successfully defend our country than we have ever been during our entire previous history.

THE GENERAL WELFARE ACT, H. R. 6466 (H. R. 2)

We finally succeeded in this Congress in obtaining full and extended hearings on the Townsend old-age pension and national-recovery plan before the Committee on Ways and Means of the House of Representatives, which we have sought for 5 years. We also secured the first record roll-call vote which we have ever had in the House of Representatives on this proposal. Consequently, the vote of every Member of Congress is now a matter of record and known to his constituents and they can judge whether he kept his campaign pledges or not and act accordingly.

Needless to say, I testified at length in support of the legislation during the hearings before the Ways and Means Committee and actively participated in the debate in favor of the bill on the floor of the House and voted for its passage. I shall continue to give this meritorious proposal my active support until it is enacted into law. In modified and varied form the tax formula of the Townsend plan is proving a success in the Hawaiian Islands, in the State of Indiana and 26 other States, in New York City, in France, in Germany, in Hungary, in Russia, and elsewhere. It is only a question of time when a broader tax formula will be adopted in the United States and displace the present complex multiple-tax levies and bond-debt-interest system. More liberal old-age pensions should and will be financed upon a national pay-as-you-go basis.

MY PROGRESSIVE VOTING RECORD

In this first session of the Seventy-sixth Congress, I have continued my progressive voting record, of which I am proud, and have voted for the following important measures:

(1) House Joint Resolution No. 83 to provide appropriations for work relief. I voted for the amendment to increase the amount from $725,000,000 to $875,000,000, the sum requested by President Roosevelt in order to give unemployed men and women work on worthy community projects and thus increase consumer purchasing power in the local communities.

(2) The National Defense Act of 1939, authorizing 5,500 airplanes and 3,000 officers for the Air Service.

(3) Act to continue the Reconstruction Finance Corporation and the Electrical Home and Farm Authority to January 15, 1941. The R. F. C. has made loans to numerous business and industrial firms in southwest Washington and thereby made possible the employment of much labor, and through various lending agencies met the needs of many of our farmers. The Electrical Home and Farm Authority has made loans in cooperation with local dealers upon electrical appliances in rural and urban homes and been very helpful to householders who find it necessary to buy on installment.

(4) The Commodity Credit Corporation Act, to make loans to farmers and producers and finance the marketing of farm products and protect them against forced and seasonal sales, which has been beneficial to dairy and grain farmers and prune and nut growers in southwest Washington.

(5) Naval aviation bill, providing for construction of naval air bases and aeronautical engine and materials laboratory buildings as a part of the national-defense program.

(6) War Department appropriation bill, providing for the Military Establishment 565 army planes, ordnance, military posts and barracks, the National Guard, Organized Reserve officers, training of 30,000 in citizens' military training camps.

(7) Reorganization bill of 1939, to reorganize the departments of the Federal Government in the interests of efficiency and economy and to eliminate red tape, as was advocated by every President for the past 40 years and has finally been accomplished by President Roosevelt.

(8) Interior Department appropriation bill, 1940, containing items for Bonneville and Grand Coulee projects, which have given employment to thousands of our citizens and will prove vital factors in the future progress and development of our State. Transmission lines are now in course of construction in many of our counties and providing jobs for numerous citizens.

(9) Labor Department appropriation bill, 1940, appropriating funds for the National Labor Relations Board, Federal Employment Service, Wages and Hours Division, Children's Bureau, Bureau of Labor Statistics, and other activities for the special use and benefit of the workers and wage earners of the Nation.

(10) Additional appropriations for work relief; for those of our citizens whom private industry has failed or refused to employ. Also appeared and testified before the Appropriations Committee and urged that full sum of $150,000,000 requested by President Roosevelt be appropriated. I stressed permanent value of school, street, sewer, road, diking, school gymnasium, playground, and sewing-room projects in the local communities and cited survey of disbursement of wages paid on work-relief projects to butchers, grocers, bakers, clothiers, dry goods stores, shoe shops, property owners for rentals, ice and coal dealers, tobacco stores, gas and electricity firms, auto repair shops, loan organizations, insurance-benefit societies, druggists, doctors, and churches.

(11) Amendments to the National Housing Act, legislation which I have sponsored and supported very actively on account of its being strongly favored by organized labor and the building materials industries. It has been of vast benefit to the workers in the building trades, the lumber, plywood, veneer, shingle, and other allied industries and to manufacturers generally. A recent report shows that 9,374 families in my congressional district have had loans insured to the extent of $5,217,266. Officials of the Red Cedar Shingle Bureau and the Shingle Weavers Unions declare that this legislation has caused the shingle industry to flourish.

(12) H. R. 2320, to provide domiciliary care, medical and hospital treatment, and burial benefits to certain veterans of the Spanish-American War, the Philippine Insurrection, and the Boxer Rebellion.

(13) H. R. 2296, to restore certain benefits to World War veterans suffering with paralysis, paresis, or blindness, or who are helpless or bedridden, and for other purposes.

(14) H. R. 289, the Spanish-American War Philippine travel-pay bill, for the payment of travel pay to the officers and enlisted men of State volunteer regiments who served in the Philippine Islands beyond the period of their enlistment in the same sum as was paid to enlisted men of the Regular Army who were discharged in the Philippines, as a fulfillment of the promise which was made to them by our Government 40 years ago, which bill I had the honor to introduce in this Congress.

(15) H. R. 805, extending further time for naturalization to honorably discharged alien veterans of the World War.

(16) The Stabilization Fund and Alteration of the Weight of the Dollar Act, extending to June 30, 1941, the time within which the powers of the President relating to the stabilization fund and alteration of the weight of the dollar may be exercised.

(17) Act for the Acquisition of Stocks of Strategic and Critical Materials, which contains the proviso that purchases under the act shall be made in accordance with the Buy American Act of 1933, and a reasonable time, in the judgment of the Secretary of War and the Secretary of the Navy, shall be allowed for the production and delivery from domestic sources. I collaborated with a group of my colleagues in securing the inclusion of this proviso because of its importance to citizens of our district who are interested in the development of minerals, particularly manganese.

(18) Naval Aviation Reserve Act of 1939, providing for the training and commissioning of a minimum of 6,000 of our young men in the Naval and Marine Corps and thus furnishing a splendid opportunity to many young men in southwest Washington.

(19) H. R. 2875, providing that, notwithstanding any provision of law or veterans' regulation, awards of death pension shall be effective as of the date of death of the veteran of the Spanish-American War, including the Boxer Rebellion and Philippine Insurrection, if claim is filed within 1 year after the death of such veteran.

(20) H. R. 5452, providing pensions and increased benefits to widows and dependents of veterans of the World War, and eliminating the so-called misconduct clause.

(21) Navy appropriation bill, 1940, providing for battleships and equipment, naval air bases, and items of maintenance of Naval Establishment as part of the national-defense program.

(22) War Department civil functions appropriation bill, 1940, providing funds for rivers and harbors and flood-control projects, as a result of which approximately $2,500,000 will be allocated and expended in southwest Washington, in support of which items I appeared before the Appropriations Commitee during the hearings.

(23) The rivers and harbors authorization bill, authorizing new projects and surveys for the improvement of rivers and harbors and likewise containing several new items for southwest Washington, the Camas-Washougal project and the survey for Bay City, Grays Harbor, Wash.

(24) Department of Agriculture and Farm Credit administration appropriation bill, 1940, containing item of $113,000,000 for surplus farm commodities, including dairy products, as well as item of $225,000,000 for parity payments to cotton, tobacco, wheat, corn, and rice farmers. When the amendment to provide $60,000,000 for surplus commodities, contemplating $25,000,000 for dairy farmers, was defeated during the consideration of a previous bill, I joined with many of my colleagues in voting against the parity item of $225,000,000, and we succeeded in defeating it. With our dairy farmers included in this bill, we voted for this bill, and it carried. We thereby won our fight in the House for benefits for the dairy farmers, along with the cotton, tobacco, wheat, corn, and rice farmers. We also increased the item for Bang's disease over $2,600,000, also important to southwest Washington, and $25,000,000 for farm tenancy.

(25) S. 1369—to provide cutters and seaplanes for the Coast Guard.

(26) H. R. 6466 (H. R. 2)—the Townsend old-age pension and national recovery plan.

(27) H. R. 2310—A bill to provide national flags for the burial of honorably discharged former service men and women.

(28) Social Security Act amendments: Increased contribution by Federal Government for old-age assistance to $20 per month, so that if matched by the State of Washington would result in an increase of the old-age pension in our State to $40 per month; liberalized payments to the blind, crippled children and dependent children and mothers; reduced pay-roll taxes, causing considerable saving to employees and employers; abolished huge accumulated reserve fund.

(29) Work Relief and Public Works Administration bill, 1939, to provide $1,735,000,000 for work relief and loans, as requested by President Roosevelt. I voted for the amendments to increase the items for the National Youth Administration and the Farm Security Administration because of the outstanding merit of the work being done by these agencies and their soundness as an investment in the future of America. I voted for the Casey-Murray amendment, favored by many organizations in southwest Washington. I opposed in the Committee of the Whole the elimination of the prevailing-wage proviso, the 130-hour month, and the compulsory lay-off of those employed for 18 months.

(30) The revenue bill of 1939, repealing the undistributed-profits tax, reducing the capital-gains tax, providing for carrying net operating losses forward for 2 years, and otherwise equalizing taxation and removing business deterrents and tax irritants. Also extends the excise tax on imported lumber to June 30, 1941, a matter of importance to the lumber industry of southwest Washington.

(31) The Neutrality Act of 1939, legislation to keep our country out of war.

(32) H. R. 5479, granting annual and sick leave with pay to substitutes in the Postal Service.

(33) H. R. 2001, a bill for the equalization of letter carriers.

(34) Senate Joint Resolution 118, to provide for the establishment of the Franklin D. Roosevelt Library at Hyde Park, N. Y., as a gift by the President to the Nation for the use and benefit of the public.

(35) Civil Service Retirement Act, for the benefit of employees of the Federal Government. Voted for the amendment to strike out the provision to include Members of Congress, because I am opposed to the principle of retirement benefits for Members of Congress.

(36) S. 522, to provide pensions to members of the Regular Army, Navy, Marine Corps, and Coast Guard who became disabled by reason of their service therein, equivalent to 75 percent of the compensation payable to war veterans for similar service-connected disabilities, and for other purposes.

(37) H. R. 2900, to extend the program of the Civilian Conservation Corps to July 1, 1943, which has proven highly beneficial to southwest Washington.

(38) H. R. 7411, providing for surveys for new rivers and harbors projects, introduced following the failure of the Senate to act in this session on the omnibus rivers and harbors bill—No. 23 herein—in which these surveys were originally incorporated and which includes surveys for Grays Harbor with a view to constructing a channel into Bay City.

(39) House Resolution 286, for the consideration by the House of H. R. 7120, the so-called lending bill for financing of self-liquidating projects, to create business and industrial activity, and thereby furnish employment and consumer purchasing power in rural and urban areas by constructing sound and needed public and semipublic improvements in the local communities. This resolution was defeated in the House but can be reconsidered in the next session.

(40) House Resolution 266, for the consideration by the House of S. 591, the Housing bill, to continue the program of slum clearance and low-rent housing established under the United States Housing Act of 1937, as amended, and also to provide program for rural housing. This resolution was defeated in the House but can be reconsidered in the next session.

I signed discharge petition No. 5 to bring the cost-of-production bill for farmers before the House for consideration; discharge petition No. 4, on the Ludlow war-referendum bill; discharge petition No. 6, on the Frazier-Lemke bill; discharge petition No. 10, on the antilynching bill; discharge petition No. 15, on the General Welfare Act, H. R. 5620; and discharge petition No. 19, on H. R. 5074, providing for disability allowances for World War veterans and service-connected disability status.

BUY-AMERICAN LEGISLATION

During the past 6 years our Government has for the first time in its history taken measures to give preference to our own producers and manufacturers in the use of materials and supplies. We have enacted the following legislation of this type:

(1) The Domestic Origins Act of 1934.

(2) Provision in title 3, Treasury-Post Office Appropriation Act for the fiscal year 1934.

(3) Emergency Relief Appropriation Act of 1935, section 13 (A) and (B).

(4) United States Housing Act of 1937, section 6.

(5) Work Relief and Public Works Appropriations Act of 1938—title IV, rural-electrification loans.

This is a subject in which I have taken an active interest during my entire period of service in Congress. On February 18, 1939, I was advised by Hon. Leon H. Keyserling, Acting Administrator of the United States Housing Authority, of the

reenforcement of the proviso requiring local housing authorities to have their contractors use domestic-made materials and supplies, particularly lumber and shingles.

On May 13, 1939, I was advised by William A. Coleman, special assistant, Procurement Division, Treasury Department, of the policy to further enforce the Domestic Origins Act of 1934 by requiring that lumber used shall contain the label "Made in U. S. A." or inspection certificate that the lumber is "Made in U. S. A."

Hearings on my bill, H. R. 6718, to prohibit the use of funds expended, granted, or loaned by the United States for the purchase of materials which are not of domestic origin, were held before the House Ways and Means Committee on June 13, 1939. House Joint Resolution 325, to provide for negotiations with the Government of Canada to arrange a modification of the trade agreement entered into November 17, 1938; H. R. 5124, to restore the 25 percent quota on imported red-cedar shingles from Canada; and H. R. 5125, to reenact the lumber-marking provision, all companion measures to those introduced in the Senate by Senators BONE and SCHWELLENBACH, are pending before the Congress. My bills, H. R. 7034, for an excise tax on imported pulp, and H. R. 7312, an amendment to strengthen the Antidumping Act, have been assigned to the Ways and Means Committee for hearings in the next session of Congress.

The activity shown and results which we have achieved in behalf of the workers in the lumber, shingle, and forest-products industry during the past 6 years have never before been equaled, and I shall continue to cooperate with my colleagues in the House and Senate in regard to these matters. In addition to the benefits bestowed by the Federal housing and public construction programs, which have proved highly beneficial, we have provided the only protection against foreign competition in 25 years.
